FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY. }
SIX MONTHS, \$2.

NEW YORK, SATURDAY, JANUARY 4, 1896.

VOL. XLVI.—No. 1.
{ No. 318 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page v.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream one year and the set of four pictures, \$5.
Forest and Stream 6 months and any two of the pictures, \$3.

Price of the pictures alone, \$1.50 each; \$5 for the set.

Remit by express money order or postal money order.
Make orders payable to

FOREST AND STREAM PUB. CO., New York.

DOG EAR CROPPING.

THERE has been much misunderstanding of the recent action of the American Kennel Club in regard to cropping, a misunderstanding which has been fostered and broadened by the statements published in the daily press. In substance the press reports set forth that the result was a victory for the advocates of cropping. The misunderstanding could easily gain ground with those who had but a superficial knowledge of the issue.

The action of the American Kennel Club is, furthermore, presented in such a manner by the daily press as in most cases to imply that that club indorses cropping. Such statements are incorrect and misleading.

The American Kennel Club did not indorse cropping either directly or indirectly. So far as the sentiment of the club on the issue is concerned it was decidedly against cropping. The vote shows a majority in opposition to the practice. Many of the delegates who, under instruction of their clubs, voted in favor of cropping, afterward repudiated the action so far as they were personally concerned. Several of the clubs voting in favor of cropping were actuated by the belief that the question was one which should be left to the specialty clubs most directly concerned, and indeed this plea, broadened now and then so far as to question the jurisdiction of the American Kennel Club in the matter, was the main defense of the specialty clubs which were interested in the mutilated breeds. The question of cruelty was in the main touched on very lightly by the defenders of cropping. Many of them disapprove of it.

Thus the vote was most positively and plainly in opposition to cropping, while the minority vote, peculiar in its way, ignored the cruelty of the practice, but based its opposition on an evasive assumption of lack of jurisdiction on the part of the club and the exclusive power on the part of the specialty clubs directly interested.

The resolution was lost, not by a preponderance of sentiment against it, but by the restriction of the constitution which required a two-thirds vote to adopt it. Thus there was nothing whatever from the inception of the resolution to its final defeat which could be justly interpreted as an endorsement of the mutilation by the A. K. C.

It is not a probability that the recent action of the club is final in the matter. The opposition to the reform will serve to stimulate more positive opinions on the subject, and bring the matter more conspicuously before the public. It will thus be subjected to closer public investigation and criticism. Opposition to a public measure which is founded on firm and resolute public sentiment merely hastens the reform and gives it lasting vitality. This is a feature of the matter which those in favor of cropping should seriously consider. They can gain much credit by taking voluntary action in the matter and thus avoid possible compulsion.

The issue has more vitality since the recent action of the American Kennel Club than it ever had before, and it is not improbable that, instead of the last action being a final disposition of the issue, it will have to be again con-

sidered with all the added opposition to it which broader discussion, humane sentiments in action and more organized effort are sure to engender.

THE DUNRAVEN CASE.

WHILE it would seem that only good and sufficient reasons could have induced the special committee to hold the examination in secret, we believe that a serious mistake has been made, and one that cannot now be repaired. The object of the investigation of Lord Dunraven's charges is not to vindicate Mr. Iselin before the yachtsmen of New York or Boston or of the United States, as that would be unnecessary, especially in view of the very flimsy nature of the charges as thus far formulated by Lord Dunraven. The chief end, as we understand it, was to vindicate American yachtsmen before those of other nations, especially Great Britain. To this end it was essential that, in addition to the selection of a committee whose personnel should be above suspicion, the hearings should be public, or at least that the press should be properly represented and allowed to publish the full report of the proceedings from day to day. If the committee is looking only for the truth, and intent on bringing it to light, there can be no valid objection to publicity in regard to its methods and the testimony of both parties, and the publicity given through the full stenographic reports in the daily press is the surest means of convincing yachtsmen abroad.

Later on, in a week, a month or a couple of months, the committee will probably issue a complete report of the proceedings, and those who can obtain them and have the requisite leisure will be able to read the full reports of the special committee, the America's Cup committee and the regatta committee. These reports will probably settle the question of the collision in the second race and of Lord Dunraven's charges against Mr. Iselin, so far as all impartial yachtsmen are concerned; but the great trouble is that they will come too late and will fail to reach the great body of the public who are now interested in this international quarrel. In the interests of the defense, which, we believe, has nothing to conceal, the evidence presented within the last two days should be already in the hands of yachtsmen and the general public on both sides of the Atlantic.

SNAP SHOTS.

Is there in all America, from Alaska to Venezuela, another paper like it, so choicely good even in soporific qualities? For here comes a Connecticut correspondent who gives testimony that when the FOREST AND STREAM puts him to sleep it opens for him the ivory gates and blazes the trail to those delectable hunting countries of Dreamland where game is always plenty and the aim ever true. If then you chance to be a sufferer from insomnia, throw physic to the dogs and patronize the news stands. If you cannot straightway woo the drowsy god, do the next best thing, read FOREST AND STREAM, wrap the drapery of your couch about you and lie down to pleasant dreams.

We have been discussing for many years the interesting question, What is a sportsman? and probably the discussion will go on for as many more years to come. There is much talk about pot-hunting and pot-hunters. What is a pot-hunter? A Detroit duck shooter and his friend have made a run of 4,102 ducks, and the report of it says that if "anybody besides pot-hunters" made a better record this year, they have not been heard from. What and who are pot-hunters?

When Mr. Irland wrote in the FOREST AND STREAM of Dec. 14 of the lost man his party had encountered in New Brunswick wilds, it was suggested to him that the publication of the incident would probably bring to light further intelligence of the mysterious stranger. We were not surprised then to receive the letter from a Boston correspondent which is printed to-day. The season has now advanced so far that the lost man must have found his way out of the woods long before this or have perished. Can any one give us another chapter of his erratic wanderings?

Mr. Harry S. Page, while following the hounds of the Meadowbrook Hunt Club across country on Saturday, Dec. 28, was severely injured; at first it was considered that his injury was fatal. The ground was slippery and the riding dangerous. At a fence, near which was a ditch concealed by grass, Mr. Page's horse slipped in

the take-off, caught his toe on the fence, turned a summersault with his rider under him, and in struggling to rise rolled over Mr. Page, breaking his pelvis and otherwise injuring him. Latest reports are that he is recovering. In the same hunt Mrs. Kinsley Magoun had a narrow escape from death. In turning a corner her vehicle was upset and she was dragged under the seat a short distance, fortunately escaping injury.

The New York policemen are armed with revolvers, which they are expected to know how to use on occasion. How little some of them actually do know is now developing at the newly instituted school of shooting, where it is not unusual to see a man shut his eyes and pull the trigger, sending the bullet not into the bullseye, but wide of the mark or into the floor. There is no ground for supposing that the police of other cities are a bit more "handy with their guns" than the New York police force, and we look to see the police shooting school an institution elsewhere adopted with good results.

There should be a large attendance at the winter meeting of the New York State Association in Syracuse next week, Thursday, Jan. 9. The time has not yet gone by when voluntary clubs and associations may give over their activity in game protection. If the official State protectors are to be dismissed because the Commissioners cannot afford to pay their salaries, the beheaded districts must still be taken care of by unofficial activity.

The game preserve and its trespass sign are live topics in the sportsmen's questions of the day in California. The conditions of land holding in that State are such as to encourage the game preserve system. Immense tracts are devoted to grazing, and the owners or lessees are accustomed to grant individuals or clubs the exclusive shooting privileges on these territories. The tracts are posted and trespassers are warned off; but the human nature in California is the human nature which prevails elsewhere and rebels at exclusion from shooting privileges enjoyed so long that they have come to be regarded as rights. There is a constant conflict between preserve holders and shooters outside of the clubs. San Francisco has a Sportsmen's Protective Association, whose purpose is to maintain and enforce what the members believe to be their legal rights as to shooting and fishing. As in certain instances the definition of these privileges depends upon the determination of riparian rights, it will be understood that there is abundant occasion for protracted disputation.

The interesting fact is that we have been printing from week to week in FOREST AND STREAM—that is to say, every week—a store of good reading which in volume is equivalent to the amount of matter in a monthly magazine, and in quality is unapproached by any other literature accessible to the sportsman of the day. Another interesting fact is that we shall continue the programme for the fifty-two weeks of the New Year. This present issue is Number One of the Forty-sixth Volume—twenty-three years. And there are names on the subscription list to-day which were there in 1873 for Volume One, Number One. A Happy New Year to all, old readers and new; even to that unfortunate individual whose plaint is that as for him he cannot be happy because he cannot go fishing; and he cannot read the FOREST AND STREAM because its reports of other people's outings make him all the more unhappy that he cannot have an outing of his own.

We are told that in some parts of North Carolina there have been extensive shipments of quail to markets outside of the State, the notion prevailing that the law forbidding export of game had been repealed. No notice of such repeal is given in the *Game Laws in Brief*, no such act is contained in the printed volume of the laws of 1895, and the old law there appears still to be in force. Under these circumstances we trust that some public-spirited citizen will take upon himself the duty of putting a stop to the market industry instantaneously. A New York sportsman who has just returned from one of the districts of the State where game has always been abundant reports that the market-shooters have effectually cleaned out the supply.

The capercailzie is attracting much attention as a game bird for importation to America. We shall print next week a description of the bird by Hon. W. W. Thomas, Jr., who while Minister to Sweden had abundant opportunity to study the capercailzie in its home,

The Sportsman Tourist.

UNCLE LISHA'S OUTING.—VIII.

The Canada Boat.

WHEN the dinner of one course was finished the simple service of iron and tinware was left unwashed without fear of disparaging feminine comment, and the voyagers embarked, Sam and Antoine at the oars, Uncle Lisha steering with a paddle, and Joseph as passenger and general observer. In these capacities he took his ease so far as he could with a hand on either gunwale and hitching from side to side at every slight lurch of the stanch craft. This he continued to do after the black depths of the creek were passed and they voyaged across the shallow head of the bay, where the oars grated on the sandy bottom and the golden mesh of reflected sunshine twisted and tangled its elusive threads among the caddis worms and mussels, a half-arm's length beneath the rippled surface. One of the rowers leaned over the side to watch a shoal of minnows and slightly careened the boat, when Joseph frantically pulled on that gunwale and hitched toward the other side.

"Good airth an' seas! I du b'lieve if you was sot in the middle of a' islan' you'd be afear'd o' tippin' over, Jozeff. Du, for massy sake, set still, erless lay daown in the bot-tom."

"I tell ye what, Uncle Lisher," and Joseph let out a long-held breath, "sech a mess o' water makes me kinder skeery. I do' know as it's skeery ezactly, but kinder narvous. I don't seem tu hev no use for no more water 'n what I want'er drink an' wash me in, an' that hain't sech a turrible sight. But it does look dreffle neat," and his eye dwelt with satisfaction on reflections of the painted shores flickering downward on the rippled lake like many colored inverted flames blazing into a nether sky.

Over among the red maples of Lewis Creek could be seen the naked mast of the Canadian craft, its gay pennon lost in the brilliant foliage that it flaunted against. But the incessant gabble of the crew and their snatches of French songs would have guided our voyagers to the vessel without any visible indication of its whereabouts, and following it up the stream a little way beyond its last bend, they came to the boat at its moorings.

The jolly little captain was very polite, and welcomed them as possible apple sellers, in English quite as good as Antoine's if somewhat different from it, having evidently been drawn from a well not entirely undefiled with h's.

"Mek youse'f welcome, mah frien'," he cried, with his shoulders lifted to his ears and his palms hospitably spread, "Go hall hover mah boats. He was you boats, han' 'e was good boats, hif Hah say hit mahse'f. Oh, 'e good sloops. Han' if you gat happle for sol' Hah ready for bought she han' paid you ten cen' pour baskeet 'f she was mos' hall red happle, han' medij him mah baskeet, hant 'ol' more as tree peck," and he gave a contemptuous kick to a basket which could hold at least a bushel and a half.

The visitors gave the odd-looking and not very cleanly craft as complete inspection and as unstinted praise as could satisfy their curiosity and her captain's pride, smothering themselves in the garlic-reeking cabin as long as they could hold their breath and then stumbling forth into the fresh outer air.

"I hain't got no apples tu sell myself," said Sam to the little captain, "but I do' know but what I c'd send you a man 'at has. Come aout this way a minute, won't ye? Say, captain," he continued when they had got beyond the hearing of the others, "haow long afore you're a goin' back to Canady?" Sam picked up a stick and began whittling it, wherefrom the shrewd Canadian, having had some experience of Yankees, augured that a trade was impending.

"Wal, Hah don't mos' know, me. Mos' likel' Hah go day hafter nex' day hif de peop' brought dey happle. But," he continued, curiously watching the shavings curl slowly away from the keen knife, "hif you can sen' it me some very good red happle, Hah could wait hanoder one day."

"No, guess I don't want tu keep you waitin'," said Sam, "Be you goin' stret hum? Goin' tu stop anywhere on the way?"

"Ah, no, no, no, bien no. Hah han' goin' let mah happle rot 'fore Hah cood sol' she. Hah go fas', Hah cood."

"S'pose you c'd take 'long a passenger toll'able cheap?"

"Wal, seh, mah fren'," said the captain after some consideration of the proposal, "hif de mans was clever for behave hese'f, han' paid me one dollah 'fore 'e go, Hah will took it, me, han' dat was more sheaps 'e can go hin stimboat, yas, bah t'undert yas, more sheaps 'e can go 'foots."

"Yes, if you feed him, that's reasonable 'nough," Sam assented.

"O, no, no, no," cried the captain, "for dat 'e mus' heat 'ese'f. Hif Hah heat 'im, Hah mus' hask more as dat."

"Wal, then, we'll hev him eat himself," Sam agreed with a chuckle. "I sh'd want'er betoll'able well paid myself if I'd got tu eat him. All right, captain, I guess he'll be here 'bout the time you start," and having concluded the negotiation he threw away the neatly whittled stick and pocketed his knife.

"Mos' likel' your frien' was be goin' on Canada for 'ees 'ealthy," said the captain, shrugging his shoulders and winking at Sam.

"He's a goin' there tu extend the ary of freedom," Sam answered with an imperturbable countenance.

"Oh, yas, yas," and the little captain tried to cover his pockmarked visage with a mask of profound wisdom as he inwardly phrased the words, "send de hearing freedom," and mentally inquired of himself, "What says the holy tall Bostonais?"

Sam and the captain returned to the boat, where Antoine and his compatriots—who, though not old acquaintances, had mutual knowledge of some—were swimming with violent gesticulations in a babbling torrent of gossip, on whose brink Uncle Lisha and Joseph sat in gazing, wondering silence, now turning their puzzled faces upon the Canadians, now slowly upon each other. Their amazement increased when the captain also plunged in and contributed his full share to the confusion of tongues.

"Good airth an' seas!" Uncle Lisha gasped in a loud whisper to Sam, "it hain't no more like talk 'an a passel o' hens hevin' a cacklin' bee in the mornin', an' I can't pick nothin' aout on't on'y now an' then a 'wee' an' a 'sackeree.' I b'lieve the dumb'd critters is jest pertendin' they're a-talkin' an' don't understan' one 'nother no more'n they would if they was a-whirlin' hoss fiddles at one 'nother."

"Wal, they 'pear tu git ahead wi' the vis'tin' some way," said Sam, regarding the animated group with an amused smile.

"I do' know fer sartain," Joseph remarked, after deliberate consideration, "but I kinder callate the heft o' the conversin' is done by signs, an' the gab is jest heft in for sort o' fillin'. Seems 's 'ough that was the way on't, but mebb'y 't hain't."

"Wal, they beat ten women tu a quiltin'," said Uncle Lisha, "an' I give it up. Say, Samwil, you be'n a-buyin' the boat?"

"Wal, no; on'y a sheer on't. Cal'lated it 'ould be handy for Joseph to go huntin' an' fishin' in."

Their attention was attracted to a heavily laden wagon that came jolting over the rough pasture, announcing its approach with a rumble and creak that began now to be heard above the voices of the Canadians, till at last their interested attention was called to the fact that a customer was arriving.

"Wal, if there hain't a load of apples comin' a'ready," said Sam, "I guess this feller sent on word ahead 'at he was a-comin'. We'll wait an' git a pocketful an' then be off."

While the captain and his customer were pitting Canuck and Yankee shrewdness against each other in sharp bargaining, Sam and his comrades tasted and selected their pockets full of the mellowest and least sour of the common fruit, that but for the advent of the Canada boat would have gone to the cider mill, and they then departed. Antoine went most reluctantly, for he was still oppressed by unspoken words.

As they fared forth on their return voyage, Joseph, slowly withdrawing his lingering gaze from the alien craft, remarked:

"So that 'ere 's a he boat, is 't? Wal, I swan I can't make aout haow on airth a feller's agoin' tu tell which 'f m't'other. I ruther guess 'at boats is julluk fish; the he ones an' the she ones looks jest alike tu the onedicated, or'nary eyes; seems 's 'ough that must be the way on't."

When they were at home again—for so they at once began to call their temporary abiding place—they fell to picking their ducks—a task whereof many hands made light work—beguiled by Sam's and Antoine's relation of the circumstances of the day's incidents.

"Naow," said Sam, laying apart a couple of the finest ducks, "if the hain't no objection, I b'lieve I'll take them 'ere up tu Mr. Bartlett. There's more'n we c'n use anyway. Mebb'y it 'll be kinder late afore I git back, but you needn't tew, if it's dark fust, on'y jest set aout the lantern tu one o' the landin's." There being no demur he embarked at once on this mission. ROWLAND E. ROBINSON.

HOW FUR IS CAUGHT.—VI.

Hard Sledding.

WE were to have a taste of trappers' transportation in our journey from Laura Lake over to Buckatabon. The trail was new to all of us, and none too good at its best. Joe and Mr. Saynor found it hard sledding with the heavily loaded toboggan, and I know my pack got heavy before we found a place to set it down under anything but a tree. We thought it was about eight miles, not more, to Buckatabon Lake, but we lost our way and went wandering away above the head of the lake over a logging road. We must have traveled ten or twelve miles at least before we found out where we were. This we ascertained at a logging camp to which our road led us. At the camp we got a hearty meal and soon made the mile and a half over to the head of the lake. Here we had good hauling on the ice and so Mr. Saynor left us, seeing that Joe and I could make the rest of the distance in time to get into camp that evening.

A Second-hand Camp.

Joe Blair and I pushed on as fast as we could across Buckatabon Lake, going through the narrows which divides that lake into two bodies of water. Straight ahead of us on the distant shore, some three miles perhaps from the point where we took the ice, we saw the log building of an old lumbering camp, and this we determined to look into; for though the country we wished to trap in was still six miles beyond, and though we had tent, stove and every means of making camp, we knew the comforts of a log camp were not to be despised in weather such as we were apt to have.

We found our deserted house a rude log building of two rooms and plenty of ventilation. One room looked like a stable, and this we knew to have been that occupied as dormitory by the lumber hands. This we avoided, and set up our home in the room that had been the dining hall. Here the cook had left behind him the frame of a bunk which he had occupied. There was also an empty pork barrel, and a few boards, nailed together, but hingeless, had obviously posed as a door. It was easy to see that we had right at hand all the ingredients of a comfortable winter camp, much better than we could make out of a tent in the snow. We promptly turned up the pork barrel and put our sheet-iron stove on top of it, so that the pipe would reach up beyond the roof. We found a prop for the door, unearthed a bench for a table, and made a very fine easy chair out of some hay wire and a half barrel which had been left lying about. Then Joe went down to the lake to chop a hole through 3ft. of ice, so we could have a well, and I went out after pine boughs for the bed. Before dark we had everything easy and comfortable. To be sure, owing to the exalted position of the stove on top of the barrel one had to stand on his head to warm his feet, but this could be managed. And Joe baked some adorable flapjacks. And we had beans and meat and coffee—Joe was one of the few woodsmen I ever knew who did not care for tea. We had plenty of blankets and passed a comfortable night, dividing our quarters with a family of skunks which had located under the floor before we came. That afternoon there was a "double sun." At night the Northern lights danced and played long and brilliantly. From far across the lake came the vague but thunderous rumbling of the ice, that singular and sinister sound known

only to the winter wilderness-goer. Surely we were in a very wild and wintry scene. The thermometer must have been far below zero that night. In the morning our blankets were white with long spires of frost.

Exploring the Country.

On our way between Laura and Buckatabon lakes we had seen a great deal of fur sign, and we thought one bear trail, to say nothing of dozens of deer trails, which we didn't want. We did not stop, however, to put out any traps there. Joe had heard, in that strange way in which news travels in the wilderness, that there were some otter working along a spring creek that ran into the Wisconsin River a few miles from Buckatabon Lake. The country was described to him as a good one for other fur also. This was the country we were bound for and to reach which we had made a journey of between thirty or forty miles in all. I describe this journey at length in order to supplement the trapping story. In the Turtle waters trip, with Buck and Brandis, we saw the work of running the lines of traps after they were laid out. Here with Joe Blair I saw perfectly the method necessary for the trapper in going into new country, exploring it and laying out his traps. In some ways this was even more interesting than the first half of the trip—which chronologically ought to have been the second half. In Joe Blair I found probably as good a trapper as there is in that country, a man devoted to the woods life and skillful in the ways pertaining to it. The FOREST AND STREAM luck held all through this trip, as it always does, so that only the best sort of men were met, good at their business, and pleasant in telling of it and showing it to the stranger and visitor.

We had only "grub" enough for about a week, and it was resolved to put in most of the time in exploring the new country, setting out a few traps, but not expecting to take much fur. As Joe would be obliged to return home for more "grub" in so short a time, and as my own trip would then be at an end, we wanted most especially to set traps, not to run them.

Plenty of Sign.

It was a nipping air on the morning of our first day at Buckatabon camp, but we set out clad as lightly as possible, knowing what heavy clothing means on a long steady tramp. We did not know where our spring creek was except by the compass, but we figured that if we should go straight north for six miles we must surely strike it. Then if we went due east we must strike the Wisconsin River, and if we went down that stream we must find the mouth of the creek which flowed out of Buckatabon River, up which to our camp could not be over four or five miles; so that our day's voyaging would not take us over more than 15 or 20 miles at most. Our courage was of sturdy pork and beans sort as we started out and went clumping off through the woods on the showshoes. It was a lovely day, bright and clear. We saw some crows and some eagles. We also saw a dead horse, which pleased Joe very much, for he thought a bear would probably come to it in the spring. "A bear moves around everywhere when he first comes out of his hole," said Joe, "and if there is a bear anywhere near a dead horse, he is bound to come to the horse. I am glad the lumbermen left this one here."

About four miles from our camp we got into a dense spruce thicket, and here we began to see a great deal of sign—fox, fisher and lynx. We also started deer, and saw plainly where four wolves had been following a deer trail. There was more sign on this little bit of country than I saw on three times its size elsewhere. I impatiently wondered why Joe did not go to scattering out traps, but he did not. He took it slow and easy, carefully studying all he saw, but not saying much. He wanted first to go over the country well and see what fur it showed, and also—a very wise and important precaution—to learn whether anyone else was trapping there.

Felis Catus.

Later on we did find some traps, set by a sort of amateur at a logging camp which we discovered later. Joe expressed much contempt for this trapper's skill, but we kept off of the stream where he was trapping. In one of his traps, set for an otter under an old logging dam, we found an enormous black house cat, fast by the front foot and suffering very much. This cat fought worse than a lynx, but we set it free, whereupon it hid beneath the timbers of the dam. These domestic cats are often left behind when logging camps break up and move away, and they then become practically wild animals. I rather coveted this fellow's black hide, but could not bear to kill it, and moreover Joe said that would not do, as it was caught in another trapper's trap. He thought we ought to leave the cat in the trap where it was, but to this I could not consent, so we left a note in the trap instead—which I suppose some French-Canadian pondered over vainly later on. Then we departed, anathematizing people who took up a good otter stream, and caught cats instead of otter.

Good Otter Country.

Beyond any doubt we had found our otter country. We were walking slowly along through the heavy thicket mentioned above when all at once Joe stopped and gave vent to a low exclamation. I saw him looking at a trail in the snow, which looked as though an animal had dragged something along with it as it traveled. At first I thought a fox had been pulling a bird or piece of meat along, but I could see the trail lay in two lines, that the feet were roundish, and that the drag lay between the foot tracks.

"Here's your ctter," said Joe, "and he's a good one. Yes, an otter always makes this sort of a trail, at least part of the time. He's a funny critter. He don't walk on the snow or ice, he just sort of skates about half the time. He will walk a while, and then he will double his forelegs back under him, and skate himself along on his belly, pushing with his hindlegs. See, he will go a long way in that fashion, never once standing up straight on his legs. Yet he will travel for miles, and go fast too. You don't see any shyer or wilder animal than an otter, and if he takes a notion things are not just right, he'll travel plumb off out of the country. This sign is fresh—see his toe nails—and I shouldn't wonder if we found him in here yet somewhere."

Along the Trail.

Now began one of the most exciting little hunts I ever had. We followed our otter into the densest part of the almost impenetrable swamp. He took us to the little

spring creek. He went into the creek, and came out of the creek, and crossed the creek, and traveled along the creek on top of the ice or underneath, just as he pleased. He met another otter, and they journeyed widely through the forest. He started off for the Wisconsin River, and then turned back and led straight away in the direction from which we had come. Seeing this, we abandoned him, and set on further into the wilderness, which now lay ahead of us—heavy thickets of tamarack, cedar and spruce, with boggy places showing springs near by. Joe still would not put out a trap.

We found the Wisconsin River a small stream here, not over 40 to 60 ft. in width, and crossed by a series of dams about two miles apart. We went up the river and found a big spring creek with plenty of otter sign along it. All along the main river, too, we found otter slides, and in several places saw their breathing holes. Joe said he had hardly ever seen a better chance for otter. He thought there were six or eight at least in the neighborhood, and that they had not been disturbed. And still I importuned him to put out traps; and still he wouldn't do it, but calmly wandered on, a little further and a little further, not in the least excited over the prospect which set me very much a-tingle with eagerness. For the small fry like lynx, fox and marten he had no eyes at all. I think Joe would rather trap otter than anything else. It brings more money than almost anything else, and it takes fewer traps. And surely it is an interesting game to play at.

An Artistic Otter Set.

This, then, is what a good and wary old trapper does on going into a new country. He establishes his camp. He gets in his supplies. He studies his region carefully and thoroughly. Then he begins to put out his traps, not promiscuously, but sparingly, carefully. I shall not weary readers with descriptions of our several days of wanderings over that wilderness of swamps and forests while we were learning the Buckatabon country, but will tell the method employed by Joe Blair in setting an otter trap, which, as I first witnessed it, was one of the most interesting little operations I ever saw.

We had seen some otter slides on the river near where our cat trapper was operating. At an open place in the river, where an otter had been going into the water, this man had set a trap, leaving the pole to which it was fastened sticking up by the bank. At seeing this, Joe gave a snort of professional contempt.

"That fellow won't catch an otter in a hundred years," said he. "See how old that sign is? Well, all the otter had to do was to take a look at that pole planted there, and that satisfied him. He left for somewhere else. An otter can take a hint, I expect. Now, you come along with me and I'll show you how to set a trap right!"

We went back down the river about three or four miles, away from the cat trapper's field, to a point we had noticed before, where a big spring emptied by a short channel into the river. The spring-hole was open for about 30 ft. square, though it was very shallow. The little stream of water flowing from it was also open clear down to the edge of the ice on the river. In the angle formed by the river and the rivulet there was a big snowdrift, and down this, about 15 ft. in length, an otter had indulged the odd fancy of his race, and laid him out a fine toboggan slide. The slide ended in the shallow open water of the little stream. Evidently the otter came out from under the ice of the river by way of this little warm water tunnel. He climbed up the bank where the water was not a foot deep, and when he got enough of sliding he went back the way he came, into the water of the river, where he no doubt did his day's work at fishing.

The slide was perfectly fresh and plain, and it looked the easiest thing in the world to bury a trap in the snow on the slide, catch the otter, skin him and get \$10 for him. So say the advices of some manuals. But Joe did not set his trap the way any book says it should be done.

In the first place he never went near the spot where the otter was working. We laid off our packs 50 yds. from the spring. Then Joe went 25 yds. further yet into the woods to cut his poles—two of them, though I could not see why he needed two or why he went so far to get them.

"You don't want any twigs, chips or choppings around where you're trying to catch an otter," said he. "He has the sharpest nose and eyes on earth. Always get your poles from a place out of sight and smell of the trap."

But Joe had two poles, evidently. I was silent, but watched closely. He took one long pole, about 15 ft. long, and standing away off from the spot began prodding around in the bottom of the spring rivulet. This I saw was to learn what kind of bottom it had, so he could tell how far he would have to drive down his trap stake. He thought it would have to go down about 5 ft. in this soft mud before it would be firm enough to hold so strong an animal as an otter.

Joe next went away from the hole and fixed his trap fast to the other pole. This he did by driving the ring up along the pole, from the small end, until the ring was jammed fast. This was, thanks to his judgment, about 4 ft. from the small end. Then, to my great surprise and curiosity, he proceeded to cut with his axe, squarely across the pole, at a point about 2 in. above where the ring was stopped. He didn't cut the pole off and he didn't leave it on, and I thought he must be crazy. But he didn't say anything, only just cut about one-third through on each side, and left one-third solid just above the ring of the chain.

Joe now took both poles, and we went over to the otter slide. Handing me the cut one with the trap fastened to it, he took the other and began to stir around in the mud about a foot or two from the bottom of the slide, between the slide and the river. He made a nice bed for the trap in the bottom of the creek, where the water was only about 5 in. deep. Into this bed he dropped the trap, handling it all the time deftly, at the end of the pole, and settling it with the pole. He never got closer than 8 or 10 ft. of the water, but worked with the pole.

Now I saw the reason of the cut in the trap pole. Standing off the full length of the pole, Joe drove down the sharpened end into the mud until the trap ring and part of the chain were sunk down with the descending pole, the mysterious cut place on the pole being thus about a foot below the bottom of the water. The sunken end of the pole was now quite firm. Still standing back 10 ft. from the bank, Joe now worked the free end of pole

back and forth. There was a submerged crack, and off broke the pole at that cut place, a foot below the water. So there was the trap held fast by an invisible post, hidden entirely by a man who had never come within 10 ft. of touching the post.

This was pretty good, but it was not all. Joe carefully carried away his pieces of pole, and warning me not to expectorate anywhere near the trap, went away into the woods again. He came back with four long willow wands, a little thicker than a lead pencil. He leaned out and thrust one down into the mud at each corner of the trap. Then he worked them back and forth, and I perceived that each had been cut precisely like the trappole, for each broke off just below the surface of the water this time, and about 2 or 3 in. above the jaws of the trap. And again I wondered, for this I had read in no book.

"Old Mr. Otter comes a-crawling and a-swimming along up this run, out from under the ice of the river. The run isn't going to freeze over, you see, so he comes here to play. He is bound to come through this narrow place where the trap is. He's half walking and half floating when he gets there, and he feels a little stick or snag sort of stick him on the breast, you see—one of these we've put up around the trap. When this stick touches him as he moves along, he just drops down a paw, instinctive-like, to get a foothold, so he brushes over the top of the stick which is in his way. He drops that foot down, of course, and pop! the trap's got him. An' then," said Joe, after a pause, "I guess they's goin' to be the biggest circus right here for a while there ever was in this spring hole."

"Now, is your trap all done?" said Joe, after I had seen in my mind's eye the full meaning of this unique, crafty and deadly contrivance of the twigs. I told him I supposed it was. Joe snorted again.

"You'd catch an otter in about a hundred years," said he. "It ain't near done."

So now he took his long pole again and began very softly to stir about in the bottom of the run. There was

OUR CAMP AT BUCKATABON LAKE.

a lot of green, slimy moss along this spring water, and among this moss Joe stirred softly, not jabbing holes in the mud, and not tearing loose any large pieces of the mossy slime. He stirred softly, slowly, until some of the green stuff floated in the sluggish current, which was only a few inches deep. The current carried it down over the trap, and a touch of the pole draped each fresh-cut twig until it looked like a clot of slime. The chain disappeared. The trap disappeared. The outlines of the bottom of the tiny pool were as they had been. Not a splinter had been broken from the snow crust where it overhung the water. Not a footprint was within two paces of the bank. Not a shaving, not a twig, not a scrap of tobacco or of pipe ashes was near. Not the least sign or scent of the human agency was at the water's edge. Apparently the calm of nature had not been disturbed in any way. Yet man, the cunningest and most tireless, the fiercest and most insatiate of all beasts of prey, had been there. I did not like to think of that bitter, solitary, hopeless struggle, out there in the winter wilderness, which all this meant—that struggle in which the jaws of steel would not relent nor relax, and which could end only in the death of a creature beautiful and cunning—too beautiful, but not cunning enough to live.

But this was trapping. And though we read and travel much, you shall never see described and I shall never see executed, I am sure, a finer piece of trapper's art than this shallow-water otter set of Joe Blair's. It was successful. After I had returned to the city Joe wrote me that he had taken two otter. He also later trapped two bears. So it may be seen that our winter journey of exploration into the Buckatabon wilderness was not without results.

Incident and Accident.

We set only a few traps for otter during our stay, and did not put out any at the deep spring holes, such as are recommended by most of the authorities on trapping, Joe seeming to prefer the shallower creeks where the otters were at that time working. I recall that we put one trap right in the middle of an open reach of a little creek up and down which the otter were traveling quite often. This trap was set with the same carefulness that I have above described, its location being decided upon because there was a broken limb lying in the water there, around which the otter would crawl if he came through that way. No bait was used at any of the otter traps. I felt when I left that region that I knew something about trapping otter, and question whether one could well find a better teacher than Joe Blair.

Nothing of great interest happened during our wanderings through the region about Buckatabon, except that one day Joe broke through the ice on the Wisconsin River and fell in up to his waist. We were then about four miles from camp, and made a hurried march home, though fortunately it was not very cold that day. Joe was not hurt by the accident and did not even freeze his toes.

When we left our camp on Buckatabon Lake Joe made a cache of his tent, some of his blankets, and such of his stuff as he would not need to take along, hiding it out in the woods against his return. We therefore had a light load for our toboggan when we started for the railroad and made good time to the first lumber camp. Here we got dinner and left our toboggan, taking up our load in the form of packs so that we could travel faster. We were directed to a short cut through the woods to Laura Lake, but our directions proved as usual confusing, and we went astray. At 4 o'clock in the afternoon we were all at sea in the big pine woods, with night almost at hand. Joe could not tell on which side of Laura Lake we were, the east or the west side. In either case, if we went on north past the lake, we might walk forty miles before coming to any place or any trail. This bid fair to be interesting for awhile—lost in the wilderness and all that sort of thing—but it was only a promise. We kept on north by the compass, and at last crossed a trail which we took to be that running between Star Lake and Laura Lake. Hazarding a guess we kept to the right and soon saw we were correct, as we raised Laura Lake in half an hour. We had gone quite beyond it and walked about three times as far on our "short cut" as we would have walked had we come back the way we went in. We camped on Laura Lake again in our deserted summer resort, and here we were met by Mr. Saynor, the "kid," and the kid's dog sledge express. After that it was easy to get back to Star Lake the next day, and at that point I took the train for Woodruff and so home to stay, saying good-by to Joe and Mr. Saynor at Star Lake, where they separated to go to their homes on Big St. Germaine and Plum lakes. It is now nearly a year since I left them, but I hear from them once in awhile, and often wish I were up there again on the snowshoes, breathing again the free air, enjoying again the free life of the followers of fur, and living in a "blanket camp" instead of a steam-heated house.

The Value of Fur.

Such are some of the methods of modern trappers. It will be noticed that in trapping, as in shooting, the general law of the day obtains—that of growing scarcity of the game and increasing difficulty in getting it in quantities. Good trapping ground is hard to find to-day. The trappers will go almost anywhere to get at it. Frank Brandis had been all through the Rainy Lake region of Minnesota looking after fur country. Old man Buck had trapped one season in Arkansas. Joe Blair was thinking of going out to Washington to try it there. Not one of them, however, said anything about giving up the trapper's life, and I presume all of them will follow the fur until it has grown still scarcer.

My lady may well value her furs. They mean lifetimes spent in solitude and in persistent effort under the hardest of conditions. Is it any wonder we admire furs so passionately? Is it wonder that when we see a handsome garment we fall to asking ourselves where the furs came from, how they were caught, who caught them and when? We admire these beautiful fabrics of nature because the look and the touch and the smell of them take us out of the houses and back into the wild free air again—back into that savagery of which we all have some left in us still, albeit embryonic or dwarfed or atrophied. I prefer to think we admire furs because through the touch, the look, the smell of them, we feel ourselves kin to the trapper, who is a man.

Deadfalls and Wooden Traps.

I have spoken heretofore of the use of steel traps in the pursuit of fur, but shall like to speak briefly on the making of a few of the wooden traps or deadfalls used by some trappers who do not have steel traps at hand. The deadfall has played quite a part in the capture of fur and can still upon occasion do so. For instance, my trapper, Joe Blair, depends largely upon deadfalls in taking bears, and as I have above stated, took two bears by this means after I left him. We built one bear deadfall, and it may be of interest to mention the method of its construction when speaking of other wooden traps. E. HOUGH.

909 SECURITY BUILDING, Chicago.

A BEAR HUNT IN THE SIERRAS.

A chapter from "Hunting in Many Lands," the second book of the Boone and Crockett Club.

A FEW years ago a friend and I were cruising for our amusement in California, with outfit of our own, consisting of three pack horses, two saddle animals, tent and camp furnishings. We had started from Los Angeles; had explored various out-of-the-way passes and valleys in the San Bernardino and San Rafael Mountains, taking care the while to keep our camp supplied with game; had killed deer and exceptionally fine antelope in the hills adjoining the Mojave Desert; had crossed the San Joaquin Valley and visited the Yosemite, where the good fortune of finding the Half Dome, with the Anderson rope, carried away by ice, gave us the opportunity for one delicious climb in replacing it.

Returning to Fresno, we had sold our ponies and ended our five months' jaunt. My friend had gone East, and I had accepted the invitation of a member of the Union Club in San Francisco, to whom I bore a letter of introduction, to accompany him upon a bear hunt in the Sierras. He explained to me that the limited extent of his ranch in the San Joaquin Valley—a meager and restricted demesne of only 7,000 acres, consisting of splendid pasturage and arable land—made it necessary for the sheep to look elsewhere than at home for sustenance during the summer months.

Many of the great ranches in the valley possessed prescriptive rights to pasturage over vast tracts in the high Sierras. These, although not recognized by the law, were at least ignored, and were sanctioned by custom. The land belonged to nobody—that is, it belonged to Uncle Sam, which, so far as a Texas or California stockman was concerned, amounted to exactly the same thing. The owner of such a right to pasturage zealously maintained his claim; and if, for any reason, he could not use it himself during a particular season, he formally gave his consent to some one else to enjoy the privilege in his stead. It was considered a gross violation of etiquette for a stockman to trespass upon that portion of the forest habitually used by other sheep. Such intrusions did occur, particularly upon the part of Mexicans with small flocks—"tramp sheep" they were called; but when the intruder was shot, small sympathy accompanied him to the grave, and the deep damnation of his taking off, in more senses

than one, served as a salutary reminder to other gentlemen with discourteous tendencies to maraud. The consequence of all this was that a big ranchman spoke of his summer range with the same sense of proprietorship and security of possession as of his alfalfa field or pits of ensilage.

We arrived at my friend's ranch in the evening, and the next morning but one were in the saddle and on our way—it having been arranged that the younger brother of my host was to take his place upon the hunt. As we were to arrive at the sheep-herders' camps on the fourth day from the ranch, no elaborate preparations were necessary; we took but a single animal for the pack, besides the horses we rode. A Mexican herder, Leonard, was the third member of the party—cook, packer, guide, general storehouse of information and jest. The first night we camped in the foot hills, in a grove of big-cone pines, curiously enough in the exact place where, a fortnight before, my friend Proctor and I had pitched our tent on the way from the Yosemite to Fresno, and which we had left without the slightest expectation, on the part of either, of ever seeing again.

Little of the journey to the mountains remains in my memory. We passed a great timber chute of astonishing length—twenty or forty miles, or something of the sort—down which timber is floated from the great pine and spruce forests to the railroad, with little trouble and at slight expense; the water being of commercial value for purposes of irrigation during the summer, and bringing a good price after it has fulfilled its special function as carrier. The drinking water for my friend's ranch was taken from this, a supply being drawn in the cool of the morning sufficient to last throughout the day, and most grateful we found it during sultry August days in a part of the country where ice is not to be procured.

Each of the four days of our journey we were climbing higher among the mountains into a thinner and more invigorating atmosphere. The days were hot so long as one remained exposed to the sun, but the shadows were cool and the nights most refreshing. Upon the last morning of our journey, crossing a mountain creek, my attention was called to a rude bridge, where had occurred a battle of the ranchmen upon the occasion of an attempted entry by a "tramp" owner with his flock into somebody's "summer range." The intruder was killed, and I believe in this particular instance the possessor of the unwritten right of exclusive pasturage upon Government land found the laws of California awkward to deal with; not so deadly, it may be, as a six-shooter, but expensive and discouraging to quiet pastoral methods.

Another point of interest was Rattlesnake Rock, which we rounded upon the trail. This was a spot peculiarly sheltered and favored by the winds, the warmest corner that snakes wot of, and here they assemble for their winter's sleep. In the mild days of early spring, when the rest of the world is still frozen and forbidden, this one little nook, catching all the sun, is thawed and genial. From beneath the ledge crawl forth into the warmth great stores of rattlers, big and little. Coming out from the Yosemite Valley, I had killed one quite 4ft. in length and of exactly the same girth as my wrist, which I was assured was not at all an extraordinary size for them "in these parts." Near this rock, in an unfeeling manner, I shot the head off another big one, and he will no longer attend the yearly meeting of his kind at Rattlesnake Rock.

Upon this stage of our journey we met no one, yet the noble forest of spruce through which we were traveling bore only too plainly the signs of man's presence in the past, and of his injurious disregard of the future. Everywhere were the traces of fire. The trees of the Sierras, at the elevation at which we were—an altitude of 8,000 or 10,000ft.—grow more sparsely than in any forest to which we were accustomed in the East. Their dry and unpaved spaces seem like heaven to the hunter familiar only with the tangled and perplexing undergrowth of the "North Woods," where the midday shadow, the thick underbrush, the uneven and wet, mossy surface, except upon some remote hardwood ridge, are the unvarying characteristics. In the Rocky Mountains, and that part of the Sierras with which I am familiar, it is quite different. In California the trees do not crowd and jostle one another, but have regard for the sacredness of the person so far as the mutual relation of one and all are concerned. Broad patches of sunshine beneath the trees encourage the growth of rich grasses, none so sweet as those which are found at a great altitude; and, although the prevailing tint under foot is that of the reddish earth, tufts of succulent food abound sufficient to repay the sheep for cruising everywhere, while occasional glades furnish the most delicious and abundant pasturage. As in every forest, the processes of nature are slow—it takes a long time for the dead past to bury its dead. On every side lie fallen trees; and a generation of rain and snow, sunshine and wind and tempest, must elapse before these are rotted away and by the enrichment of the soil can furnish nourishment and life to their progeny and successors. Naturally these trees are a hindrance and annoyance to the sheep-herder; they separate his flock and greatly increase his labors. The land is not even his master's, whose one idea is temporary gain; hence there is no restraining influence whatever for their preservation. "So long as it lasts my lifetime, what matter?" is the prevailing sentiment.

As there is no rain during the summer months, the fallen trees become perfectly dry; a handful of lighted twigs is all that is required to set fire to them, when they blaze or smoulder until consumed. Owing to the absence of underbrush forest fires are far less common than would be expected, but of course the soil is impoverished by the deprivation of its natural enrichment, the decaying wood, and the centuries to come will there, as well nigh everywhere in our country, point the finger of scorn at our spendthrift forestry.

Although this is the chief economic injury, the beauty of the woods is sadly marred; all large game is frightened away except the bear, which is half human and half hog in his methods, and minds it not at all—in fact, finds the presence of man perfectly intelligible, and his fat flocks a substantial addition to his own bill of fare. Leonard pointed out to us a certain mountain shrub, a rank poison to sheep. Every cluster of it in his range is known to the herder, who keeps the sheep in his charge at a safe distance. This is one of his important duties, for if a sheep eats of this plant he is a "goner."

In one particular the pasture of the high Sierras has greatly suffered. The ranchmen naturally wish to get the sheep off the home range as early in the spring as

possible—in fact, the last month there is one of starvation. The new crops have not yet grown; nothing remains standing of the old but a few dead stalks of weeds; the supply of alfalfa cut the year before has long since been exhausted, and, metaphorically speaking, the sheep and cattle have to dine, as the hungry Indian is said to do, by tightening his belt half a dozen holes and thinking of what he had to eat week before last. Only the weaklings die, however; the others become lean and restless, and as eager as their masters to start for the mountains. The journey supplies them with scant pickings, just enough to keep body and soul together, but morally it is a relief from the monotony of starvation at home, and they work their way stubbornly and expectantly up the mountains and into the forest as soon as the sun permits and anything has grown for them to eat. The consequence of this close grazing is that certain species of the grasses upon which they feed are never allowed to come to flower and mature their seed; hence those with a delicate root, the more strictly annual varieties, which rely upon seed for perpetuation of the plant, have a hard time of it. Where the sheep range, the wild timothy, for example—a dwarf variety and an excellent, sweet grass—has almost disappeared, although formerly it grew in abundance.

The forest glades through which we passed had the appearance of a closely-cropped pasture, as different as possible from the profusion of tall grasses and beautiful flowering plants which grow in similar openings untroubled by sheep. So far as the grasses are concerned—or "grass," by which, I take it, is ordinarily designated the foliage of the plant—I doubt if it is molested to any great extent by deer. Their diet is mainly the tender leaves of plants—"weeds" to the unscientific person. The heads of wild oats and of a few of the grasses might prove sufficiently sweet and tempting to arrest their fancy; but, as for grazing as sheep or cattle do, it is not their habit. When deer shall have come to trudge up hill in the plodding gait of the domestic beasts, and shall have abandoned their present method of ascending by a series of splendid springing leaps and bounds, the very embodiment of vigor and of wild activity, time enough then for them to take to munching grass, the sustenance of the harmless, necessary cow. At present they are most fastidious in their food, and select only the choicest, tenderest tips and sweetest tufts of herbage, picking them here and there, wandering and meditating as they eat. I will not say that they never touch grass, for I have seen deer feeding among cattle in the open, but it is not by any means the chief article of their diet, and when they partake of it under such circumstances, it is more as a gratification of their social instincts, I think, than from any particular love of the food itself.

A little before noon upon the fourth day, we arrived at one of the sheep camps, to which we had been directed by a stray herd, and where we were to find the foreman of the sheep gang. At that hour of the day there were naturally in camp but a few men. The cook was there, of course. His functions were simple enough—to make bread, tea, and boil mutton, or bake it in a Mexican oven beneath the coals. With him was the chief herder and a half-witted Portuguese, who upon the day following, in the plenitude of his zeal and mental deficiency, insisted upon offering himself as live bait for a grizzly, as will be narrated.

During the afternoon I strolled further up the mountain with my rifle, in the hope of a shot at a stray deer, and to have a look at the lay of the land. Bear tracks I saw and a little deer sign also, but it was too early in the day regularly to hunt. All nature nodded in the dozy glare of the August afternoon, and after the hot journey in the saddle I found a siesta under the clean spruce trees refreshing. Toward sunset I awoke to find a pine martin in a tree across the gulch reconnoitering, and evidently turning over in his mind the probabilities whether the big creature curled up on the hillside "forninst" him were of the cast of hunter or hunted. I soon brought him out of that, and upon my return to camp the hide was graciously accepted by the chief herder, who converted the head of it into a tobacco pouch with neatness and dispatch. At the evening meal there were good-natured references to *chile con oso*—bear's meat cooked with red peppers—regret expressed that the camp's larder could at present afford none, and expressions of confidence that this delicacy would soon beset before us—all most politely and comfortably insinuated. They had the gratification of their desire; it was on the next day but one.

That night there was a great jabbering of bad Spanish around the camp-fire. Had this been the rendezvous of Sicilian brigands, it doubtless would have a slightly more picturesque appearance, but the difference would have been only of degree, not at all of kind. The absence of rain made tents unnecessary. Piles of bedding, of cooking and riding equipment, defined the encampment. Around the fire a dozen Mexicans clustered, of whom, except the chief herder and Leonard, not one spoke English. They wore the broad hats of their race, and were arrayed for protection against the cool night winds of the Sierras in old and shabby cloaks, some of which had been originally bright in color, but now were subdued by age and dirt into comfortable harmony with the quiet tones of the mountain and the forest. Old quilts and sheepskins carpeted a small place where we had been invited to seat ourselves upon our arrival. Then, as throughout our stay, every possible mark of hospitality was shown us—a delicious, faint survival of Castilian courtesy.

Long after I had turned in, somewhere in the dead vast and middle of the night, I was aroused by the sound of scurry and scampering among the bunch of sheep which was rounded up near the camp. Experience has taught these creatures to efface themselves at night, and they are only too glad to sleep quietly, as near as possible to humans, with no disposition to wander after dark. They realize their danger from bears, yet the protection which a Mexican affords is a purely imaginary thing, as unsubstantial as the baseless fabric of a vision, of as little real substance for the protection of the flock as the dream of mutton stew and fat bear, by no means a baseless fabric, which engrosses the sleeping shepherd, body and mind. The disturbance upon this occasion soon subsided. One and another of the shepherds sleepily moved in his blankets—perhaps swore to himself a hurried prayer or two—but not one of them spoke aloud or indicated the slightest intention of investigating the cause of the commotion. Only too well they and the sheep knew what it signified. Quiet reigned again, and, attaching no importance to the incident, I was promptly asleep.

In the morning I learned that the disturbing cause had been the charge of a grizzly into the flock within a stone's throw of us, a sound too familiar to occasion comment at the time. There were the tracks, to leeward of the sheep, of a she grizzly and two cubs. Their approach had been without a sound; not the snap of a twig, or the faintest footfall, had given any signal of their presence. The mother had critically overhauled the flock in her mind from a slight rise of ground, on a level with their backs or slightly higher, and made deliberate choice of a fat wether, having a discriminating eye, and being too good a judge of sheep flesh to take any but such as are in prime condition. A single quick rush and she has secured her victim, in an instant, before the rest are fairly upon their feet, and is off, carrying the sheep in her mouth as easily as a cat would her kitten, her delighted cubs trotting behind. Every two or three nights this occurrence was repeated, with no interference upon the part of the Mexicans. "What reck's it them?" "The hungry sheep look up and are not fed." On the contrary, the bears are. As for the Mexicans, they have "lost no bear!" To have seen the intruder would have been only a gratuitous anxiety, since nothing in the world would have tempted them to fire at it. Should they risk life and limb for a sheep? and that the *patron's*, who had so many! It was not their quarrel! The charge of the grizzly was a thing as much to be accepted as an incident of the Sierras as the thunderbolt—equally dangerous to him who should interfere as the lightning stroke to one daring to interpose his rifle between the angry heavens and the fore-doomed tree.

We may feel sure that the lesson is not lost upon the cubs. They are taught energy, sagacity, craft in maturing their plans, courage and promptness in their execution. They are taught reverence for the ursine genius, unbounded admiration for their mother's leadership and steadiness of nerve, at the same time they are taught contempt for the stupidity of sheep and the pusillanimity of humans. It may be that an apologist for the latter might find a word to mitigate their too severe sentence. A she grizzly of the Sierras, at night, with hungry cubs to feed, is not an altogether pleasant thing to face when infuriated by wounds, none of which may be bad enough to cripple her, yet combined are amply sufficient to make her pretty cross and dangerous. The Mexican is a poor shot, but what can you expect? His vocation is a humble one. Were he of more positive and determined temperament, he would be a *vagüero* of the plains, or *boyero* (*Anglicè* "bull-whacker") on the Santa Fe trail or down in old Mexico; and not the dry nurse of these "woolly idiots," in whose race, for innumerable centuries, man has elaborately cultivated stupidity, and, by systematic process of artificial selection, has faithfully eliminated every sign of insubordination and the last trace of individuality of temperament, and that which in our race is called character. No native-born white man in this country can be induced to follow, for any length of time, the vocation of shepherd. The deadly monotony of the occupation drives him either to imbecility or desperation. It is well known that men who habitually care for any animal come in time to resemble him. Stable boys, bred to the vocation of groom, become horse-faced and equine of disposition, eventually they wheeze and whistle like a curry-comb. Cowboys partake of the scatter-brained recklessness of the Texas steer which they tend. No one can admit dogs to be daily and familiar companions without absorbing into his system somewhat of their sense of humor and faithfulness. The lion-tamer, who enters unscathed the den of his charge, must share the robustious courage and determination of the beast with which he associates. The rat-catcher, whether he be ferret or man, partakes of the fierce slyness of the game he follows; and I remember that, years ago, before I ever heard mention of this peculiarity of resemblance, I could detect, plainly writ in the face of the attendant of "Mr. Crowley," when he was kept in the old arsenal building in Central Park, the reflected temperament and animalism of the poor, indolent, captive chimpanzee, whose fellow and all too sympathetic friend he had made himself. Naturalists are well aware of this phenomenon.

If this be so, and stupidity catching, what more potent influence of fatty degeneration of the intellect could there be than the uninterrupted society of sheep, with nothing in the world to think of except their care—without even the stimulating influence of gain to redeem the paralyzing service. The sheep are not their own, and if the bears eat them up the keepers do not feel the stimulating ache in their money-pocket that might tempt them, however feebly, to resist aggression. Moreover, as a rule, they are wretchedly armed. Each of these men carried an old six-shooter of an outlandish and forgotten pattern, good enough to try a chance shot at another Mexican with, but only a source of more or less pleasurable titillation to a bear, were one ever to be discharged at him, and about as effective as pelting an alligator with strawberries. If the last stage of misery for a horse be to drag, along its rigid road of stone and iron, the city horse-car with its thankless freight of fares, the corresponding degradation of the "gun" is to rest upon the hip of a degenerate sheep-herder, half Spaniard, half Indian and half coyote. Any self-respecting weapon reduced to such straits would be conscious of its low estate; its magazine would revolve in a creaky, half-hearted reluctant fashion; it would doubtless fire an apologetic bullet; its report would be something between "scat" and "beg your pardon," to which a bear would pay but slight heed. Others of the Mexicans were armed with old muskets, somewhat rusty and ramshackly, but with a furry longitudinal perforation throughout their length, along which—it could not creditably be called a bore—a ball could after a fashion, if you gave it time enough, be propelled. Leonard was exceptionally fortunate in this respect; he carried an old rim-fire .44-40 Winchester, the action of which occasionally worked and occasionally did not. Comparatively speaking, he was rather a swell in the matter of firearms; but if one should put his trust in him in case of emergency as a sheet anchor to windward, there was always the remote possibility, were the strain too intense, that he might not be a dependence of absolute security.

The afternoon of this day, much against my real inclination, but in accordance with the prevailing desire, we started out, the whole rabble of us, to follow the she grizzly's trail. It could not be called a "still-hunt," for the reason that six men hunting in a pack are never still; however, it did not matter. We found in a neighboring gulch bits of the fleece, bones and hides of three sheep, and the sufficiently plain evidence upon the trampled and bloody ground of recent feasts. Yet this was the ban-

quieting hall, and not the children's nursery. A bear thinks nothing of a little stroll of ten miles or so before or after eating. It aids his digestion, and in case of a female, as this was, wards off an attack of the nerves. Particularly a bear with cubs would put at least that distance between herself and hunters. Moreover, they are so clever that I doubt not this one knew already by scent and subtle process of ratiocination how many of us there were in camp, where we were from, the color of our hair, what sort of rifles we carried, their caliber, how heavy a bullet and how many grains of powder they fired. This is said in the light of after events and of further experience.

That afternoon, in our unjustifiably sanguine forecast, we had hopes of finding this particular bear. The half-witted "Portugee," of whom I have spoken, showed especial zeal in the presence of the *patron*, and insisted, in spite of mild and repeated caution, in going ahead and scrupulously investigating every possible ambuscade where there was the remotest chance of finding the bear, or, which was more likely, of the bear finding him. In consideration of the fact that this was a she one which we were after, that she was proud and well fed, and on the lookout for pursuit, had the "Portugee" found her, she would in all probability have received his visit with cordial warmth. Not speaking his tongue fluently, I was unable to express my solicitude except by signs and admonitory gestures. The rest of the party apparently seemed to think that while the bear was interested and occupied with him, a good opportunity would be offered for getting in a shot; and as Portuguese were a drug in the market in that part of California, and grizzly bears, dead, a great rarity, he was suffered to contribute his mite to the success of *la chasse*, and all went merrily. Not a thicket or a den did he leave unprobed.

An hour or two were spent in beating up the gulch to its head. Then a barren mountain side presented itself, three or four miles of it, with no shelter. Leonard ran the trail here like a dog, literally ran it, and the pack of hunters tailed behind him for a half or three-quarters of a mile. A bit before sundown we were at the edge of the chaparral—a tangle of bushes and quaking asp—rather a baddish place in which to stumble upon her serene highness. However, my companions did me the honor to promote me to the "Portugee's" place and function. With rifle across the crook of arm, we stole as silently as might be—the United States army would have made more noise—into the jungle. Sunset overtook us up on the far edge with a stretch of open forest in sight, and, I doubt not, with Madam Bruin and her cubs miles ahead in some inaccessible snarl of bushes, where the crackling underbrush would warn her of approach as fully as could the most complete system of burglar alarms.

That night, leaving word that whoever might be the first to stir in the morning should call me, I unrolled my blankets under a spruce somewhat apart from the crowd and was soon asleep. Before daylight I was astir, had a cup of coffee and a bite, and was off. Upon the previous afternoon I had picked the direction I would take, which was to skirt certain openings in the forest below. Fresh sign I saw that assured me of the excellence of the range for bear, but I encountered nothing alive worth powder and ball, and returned to camp about 9 o'clock. I was greeted by Leonard with the joyful news that during my absence he had seen from camp a big bear cross the side of the mountain only a mile or so away, and disappear over the ridge. This happened about 7 o'clock. The chief herder and my companion received the information somewhat in a spirit of respectful incredulity, but Leonard assured me that it was so, and we made preparations to follow the trail toward night. Meanwhile I breakfasted and slept.

We left camp about 3 o'clock in the afternoon, and without the slightest difficulty found the beast's trail exactly where the Mexican had said we should. Before this time I had killed an odd bear or so in Colorado, and had had some little experience in unraveling the trail of game. It may be rather priding myself upon the accomplishment, but let me here acknowledge the superiority of professional talent. Leonard, to all intents and purposes, had been born and raised on a sheep range. His earliest recollections had been of the sheep camps of the Sierras, of the arch-enemy of the flock and of the havoc which he works. From infancy he, like all the herders, had been constantly upon the lookout for bear sign; it was his one keenest intellectual accomplishment and diversion. The result of this special training was such an acuteness of vision and nice discrimination of eye that he could clearly distinguish a bear's footprints upon the naked sand and gravel where at a quick glance I was unable to see any indication whatever. A single grain of sand displaced was sufficient to arrest his eye; he detected it instantly. To him the minutest particle had its weather-beaten side as well as a boulder. A bear could not put his foot upon the ground without leaving an impress which he could detect. His talent was so quick and unerring that we soon organized a division of labor. He was to concentrate his energies and attention upon the trail, while I, by his side or a step in advance, when the trail read itself and permitted such a course, was to watch ahead and around for both of us. Fortunately this arrangement was satisfactory to him. The hardest of the trail to decipher was where it was written in condensed short-hand across a mountain slide or *coulisse* of naked granite boulders. Here not one trace was to be found in a dozen yards. Fortunately we could trust in the genius of the bear; he was aware, as well as La Place, that a straight line is the shortest distance between two points. He undoubtedly knew exactly where he was heading. We had his general direction, and by beating about for a tuft of grass here with a blade displaced, a stray gooseberry bush there with a leaf awry, and yonder a patch of thicker vegetation, betraying interference, we soon succeeded, owing mainly to Leonard's genius as a pathfinder, in getting through a couple of acres of this most vague and illegible pedography. At last we had the trail upon the mountain side once more, where, after such difficulties surmounted, following it was a comparative luxury.

After having proceeded in this manner for perhaps two hours, we entered timber, and were obliged to advance with greater caution to avoid the slightest sound which might betray our presence and give the alarm. With two men the risk of doing this is increased in geometrical ratio. One person alone, traveling through the woods, may, and almost certainly will, break an occasional twig under foot. If game is within hearing, the sound will inevitably be detected; the deer, if it be a deer, will lift

its head and listen; but if the hunter stops and waits for a time, the chances are that the animal will, after due interval of silence, resume his feeding if so engaged, or his rumination, be it physical or moral, and the alarm may not prove fatal. Not so when companions are hunting together. It would seem as if the second man, with dreadful promptness, never failed to snap his twig also, which sounds as loud as a pistol coming upon the strained attention of the listening beast, who is off like a streak, leaving the disappointed hunter, as he hears him crashing away, to moralize that company in the chase halves the pleasure and doubles the sorrow. The only safety where union is necessary is to proceed with exaggerated and fantastic caution.

Leonard was a treasure in this. He had dreamt of grizzlies all his life, yet had never been in at the death. His heart was in the hunt—he fairly sighed for gore. We crept into the woods as silent as panthers and as "purry" in the ardor of the chase. After a mile or so our bear had come to an immense fallen spruce, lying across the trail, with the big butt, 5 or 6 ft. in diameter, to our right, the top pointing up the hill. Over the middle of this, at right angles, lay another large tree, with the point toward us. I felt that behind the first of these, if I had been the original and unmolested settler in these parts, as the bear was, with all the world before me where to choose, I should have made the bed for my morning nap. It was long after daylight when he had reached this covert. He had doubtless been stirring soon after sunset the evening before; he had, it is not unlikely, been traveling all night; had feasted heartily upon a sheep during that interval, and by the time he reached this place, which may have been in his mind from the start, was feeling comfortably lazy and inclined to the refreshment of sleep. Behind that tree, so admirably suited for the purpose, I trusted that he might still remain. The big end would protect a cool space from the heat of the morning sun, and we might yet be so lucky as to find him in his lair beneath its shelter. A signal to Leonard was enough, and we proceeded to circle the fallen timber, which fortunately the wind permitted, with all the cau-

"THE LOST MAN" AGAIN.

tion of which we were capable. Had the gentleman we were after been our dearest friend at the crisis of a fever, we could not have tiptoed about his bed with more solicitude lest we disturb sweet slumber. The big tree lay in front of us; by this we crept at a respectful distance, and then approached the further end of the tree lying across it. With great care I sneaked up until I could look over its trunk at the desired point. Alas! no bear had made his nest there.

Scowfully, but without a sound, I crawled upon the intervening log and slowly stood erect. There, directly beneath me, where I could have jumped into it most comfortably, was the deserted form of the bear, which he had dug in the morning within an hour after Leonard had seen him, and in which the greater part of the day had been spent, until he had stirred abroad for water, with which to wash down the recollection of his muttons. Although ardently hoping that he was behind the tree, I had not in the least expected to find his bed in this particular place. Had he stayed quietly there until our arrival, he would have given one of us a delicious surprise, and the mutual agitation of the moment might have induced a shot with unpremeditated haste, and possibly have caused me to get off that fallen spruce tree in somewhat quicker time than I had climbed it. One naturally would not feel any keen desire to display his acrobatic skill in walking a log for the entertainment of an infuriated grizzly. A few hairs proclaimed him a cinnamon, who is either a variety of the grizzly or his first cousin—authorities differ; at all events, he closely resembles him except in color, which, although of a uniform light, fady brown, might be an extreme type of the "sorrel top" of the Rockies. In size the cinnamon fully holds his own with the grizzly; I should say that his head was rather longer. The generous excavation which this one had made showed that he was no mean representative of his species.

Not 20 yds. away, and near the end of the big tree where I had expected to find him, was a little spring. To this, still without a word, we proceeded, saw where he had stood to drink more than once, doubtless long and deep. To our left, in the soft earth, lay his retreating footsteps—a continuation of the general direction of his previous course. A moment's pause for closer scrutiny, a smile and a whispered word exchanged—just to show that we were not bored; then, respectful of the silence of the darkening woods, we were again upon the trail. It was now easy to see why he had left his lair; it faced the

west, and the heat of the afternoon sun had annoyed him, warmly clad and irritable with high living.

We had proceeded only about a stone's throw further when I caught a glimpse of our bear. Within twenty paces, under the shadow of a tree at the edge of a cool, umbrageous thicket, between him and the setting sun, lay the beast we were after; or, as I for a moment thought, judging from the great inchoate mass of brown fur, a pair, perhaps male and female, or one, it might be, a yearling cub. With finger lifted I signaled Leonard to stop. A great head was slowly raised and turned my way. A bullet between the eyes and down it went again, and I threw another cartridge into the chamber, expecting to see the second bear spring to his feet, ready to do whatever, in his judgment, the occasion required, either to fight or to run. Whichever he might elect to do, it was well to be prepared. "Give him another shot," said the prudent Leonard, and I fired a second time, sending this ball quattering and, like the first, through the brain; then I realized that there was but one, and he of creditable size. We soon had him out in the open; for nothing is easier to roll about than a bear just killed. He is like a great jelly-fish, and I have seen a little terrier no larger than a rabbit worry and shake a great carcass four times as large as the most commodious kennel he could desire, provided he were a sensible pup and had the comfortable instinct of wild things for snugness rather than ostentatious display. Enough of daylight remained for us to get his pelt off, with head and claws unskinned and attached, and to hurry over the mountain by moonlight with our trophy, a junk of rank meat for such as might desire it not forgotten.

We were cordially welcomed back to camp, and, after the usual pow-wow, the cook, with due formality, with Mexican *chile* and Spanish politeness, proceeded to concoct the boasted *chile con oso*—a much overrated dish when made of a tough old cinnamon bear. After I had turned in I heard much laughter, and subsequently learned that it was at an incident of the day. As we were starting out in the afternoon, and before we had struck the bear's trail, in order to avoid any possibility of a premature shot I had casually inquired of Leonard if he wished to earn five dollars.

"Certainly, Señor, I am always glad to get the chance."

"Well, don't snoot then until I give the word, and you shall have it."

This circumstance Leonard had innocently narrated to the group around the camp-fire in the fuller elaboration of the hunt, and the story had an immediate success, the idea seeming to prevail that nothing in the world could have tempted him to fire before he was compelled to—which, as a matter of fact, I think was only prudent on his part, considering the arms he bore.

The next morning, to the infinite enagrin of some of us, the younger *patron* discovered that his presence was required at home, where, if he was mildly chid by my friend, his elder brother, who in generosity to his junior had yielded his own place and the leadership of this expedition, I should not greatly grieve.

Upon the third day thereafter we regained the ranch.

ALDEN SAMPSON.

"THE LOST MAN" FOUND AGAIN.

Editor *Forest and Stream*:

In your issue of Dec. 14 Mr. Frederic Irland gives an account of "A Lost Man," and at the end of the article asks: "What do you suppose became of him?" Well, the Lord only knows where he is now, but we picked him up, lost again, on the Upper Millnoke Lake in the extreme northern part of Piscataquis county, Me., one evening in the middle of last September.

We were paddling down the northern shore of the lake, just after nightfall, on our way to the home camp on the lake below. Happening to look over to the further shore we saw a fire on the edge of the woods, looking very much like a camp-fire. Puzzled to know who could be camping in such a place, for the shore at that point is low and boggy, we paddled over to investigate. As we came nearer we looked in vain for any sign of a tent or other habitation. Only the fire was visible, crackling and blazing and running up the trunk of an old dead pine, at the foot of which it was built.

As we landed we heard some one say, "Hello, boys," and we came in sight of Mr. Irland's friend, huddled up in front of the fire. And a hard-looking specimen he was. Tattered and torn, dirty and unshaven, he wore the wreck of what had once been a pair of trousers (now held together by strings), and on his feet were moccasins covered with swamp mud. We asked him who he was, where he was going, where he came from, but received only vague and unintelligible answers. He was lost, he said, and wanted to be put on his course again, that was all; was on his way to Moosehead Lake to get work. A lady and two men had come along in a canoe that day and given him some food, promising to send for him later and take him down to camp. He had had nothing to eat for twelve days. Now Moosehead Lake is seventy-five miles away in an air line from where we were, and it seemed to us that the man must be a lunatic. Finally we agreed to take him aboard and bring him down to camp with us.

We were not sorry to arrive there, for a crazy man is not the most desirable company in a canoe on a lake, and dark at that. Well, from what we learned from the old man on the way down, and afterward at camp, his story is something like this: His name is Cairns; Mr. Irland has given an excellent description of him, and we inclose a photograph, taken by us at the camp.

He came up the road from Oakfield, on the Bangor & Aroostook R. R., to Oxbow, a settlement on the Aroostook River, intending to turn off part way up, taking the road leading westward to Patten, and to go from Patten by tote roads to Moosehead Lake. He took the wrong fork of the road and went on to Oxbow, and from there followed the Millnoke tote road to Millnoke Lake, where it ends. This road runs through the wilderness, and there are no houses on it. When the old man arrived at the lake, still thinking he was on his way to Moosehead, he struck off into the woods, hoping to find the road again. He had lost count of the days of the week, but as nearly as we could find out he had been wandering about that desolate, shaggy wilderness for two weeks. He had a little food with him at first, but it was soon exhausted, and for the last twelve days he had eaten nothing but what he picked up in the woods. He knew it was twelve days, he said, because he counted thirty-six meals he didn't have!

The poor old fellow was evidently nothing of a woodsman, and was utterly destitute; having neither knife, gun nor axe, blanket, compass nor matches. (He kindled the fire we saw with matches given him by the party who had found him that day.)

After his food was gone he ate bunch berries, frogs and four little dead fish he found on the shore of a pond. The old man said he cleaned the frogs with his fingers, but "had to eat 'em with the rind on."

Once as he drank from a pool he noticed that a red-topped grass growing in it "smelled good," and he plucked and ate it, finding it warm and spicy tasting, and it seemed to do him good. Poor old Nebuchadnezzar!

He came often on moose and deer; and how his poor empty belly must have hungered for their savory meat! Once he saw a cow moose and calf standing on the further side of a little brook not 20ft. off. He said pathetically, "I thought of a fellow *did* have a gun, which one would he shoot first?"

Again he saw "a monstrous bull moose a-thrashing round in the bushes, tell yer I didn't go any nigher *him*."

In his wanderings he had gone far to the westward among and around ponds and streams inaccessible by canoe, and to which no trails have been cut. We found this to be so by comparing his description of the country with Hubbard's map.

On his arrival at camp every one took a hand at examining and cross-questioning the old vagabond, and some of his answers were intelligent enough, as when, for instance, he was asked why he did not stay in one place, instead of wandering about in this way, he replied, "You be more book-learned than I be, but there's many things ter know outside books, and I like to stay in a neighborhood till I know all the folks there and find out all I can, then I go on to some other neighborhood."

After being fed and warmed he seemed more rational and coherent in his speech, and we finally made up our minds that the old man was sane enough.

His speech ran much on religion; his talk was steeped in it; and he sometimes expressed himself forcibly and well.

Perhaps somewhat simple-minded by nature, his thoughts had been turned to the mysteries of the invisible world, and, as you cannot put the universe into a pint cup, it was too much for him, and he paid little attention to the things of the visible world.

The singular thing about the man was his complete indifference to the privations he had undergone. He did not once complain of his sufferings by cold or hunger; indeed, it did not seem to occur to him that he had anything to complain about, and old, poor, without friends or family, a piece of mere human driftwood, he was perfectly happy and contented.

Only one thing troubled him; he was so hungry, he said, that he ate the food the lady gave him that day without first giving thanks to God!

Well, the old fellow stayed in camp a couple of days, then everybody chipped in and gave him some money, clothes and other things, and he was set across the lake with provisions for two days and started down the tote road to Oxbow. And as the old Norse sagas say, "So he goes out of the story."

H. C. A.

CRUISE OF THE YACHT DUNGENESS.

In Two Parts—Part I.

THE sun was shining bright and warm as we weighed anchor and were off down the harbor of Fernandina, Florida, on Washington's Birthday, Feb. 22, 1895. Our party consisted of six, with fifteen in the crew to direct and care for us. The destination was in a measure unknown, as both Florida's extensive coast line with its many harbors offered numerous havens, not to mention the Greater and Lesser Antilles, besides the Windward and Leeward Isles. The sea was smooth and the sun so warm we had the canvas stretched over the bridge and sat there all afternoon as we ran down the shore by Amelia Island and across the mouth of St. John's River to St. Augustine's light. A pilot, wired to meet us, was seen rowing out from shore and soon came on board. The channel, though buoyed, is winding and admits of only 12ft. over the bar; so we with our 9ft. glided safely over, and as night fell let go anchor off Castle San Marco or Ft. Marion. St. Augustine has not changed greatly in the last five years since first Mr. Flagler touched the sleeping city with a magic wand.

Who can fitly describe the beauty of the Ponce de Leon and its adjacent glories, the Cordova and Alcazar? As one walks about amid their beauties, visions of the Alhambra come to you; but saddest of sights was the destruction Jack Frost had wrought with his too magic wand. No money nor prayers seemed to stop his devastation there last winter, and in fact in all Florida. Where of yore roses bloomed along old walls and banana trees and palms reared their graceful limbs, now drooping black leaves tell their own story. But I will not linger in the steps of those who have so vividly described all the wonders and beauty of St. Augustine, only saying that I advise all who can to visit this in very many respects our most foreign city, and see there the best types in America of the Spanish Renaissance. On the ramparts of the old fort we can see in memory's eye the grim armor-encased warriors of Spain when in her glory, for it was near here Ponce de Leon landed way back in 1512 searching for the fountain of eternal youth. Time works wonders indeed when it develops a fort and city, built for protection against Indians, into a winter home of all the twentieth century luxury.

No sentry watched our goings that Sunday morning as we steamed out past the tall black-striped tower of St. Augustine's Lighthouse. The gentle breeze of the night before had grown in twelve hours to a stiff norther, and dancing over the shallow bar twice we struck bottom. The pilot from his small boat near shore safely guided us out, however, by waving his hand, for he did not dare risk a row back in the small craft at his disposal. We found the wind had kicked up a big sea, and riding in the trough, some of us were soon *mal de mer*. Pointing S.E. by S. $\frac{1}{4}$ S., we skirted Anastasia Island and the low-lying shore past Ormond Beach with the thin strip of land between the ocean and Halifax and Hillsboro rivers down to Mosquito Inlet. The poor sick landlubbers studied the chart and longed for Cape Canaveral, behind which they hoped for anchorage, or at least a slight shelter from the wind. But vain hope, for no anchorage nor relief from the wind is there, and on we steamed.

Frank, our steward, would tell them breakfast, lunch, dinner and supper were served, and recount of the very long lists, each separate thing good to eat, but strange to say, few responded. I sat on the bridge long past midnight talking to our pilot, a most interesting and communicative old sea dog, whose papers made him pilot from St. John's bar around the coast to New Orleans. He had the reputation of being able to take ships drawing 9ft. over 8ft. bars, and carrying sinking hulks through hurricanes, and never had he lost a boat. To any yachtsman who chances to read this, if you are cruising in southern Florida, Havana or Nassau, take Capt. Canti, of Jacksonville.

From Cape Canaveral to Indian River Inlet is 58 miles, the only opening on that coast for 103 miles, and marking thus the lower outlet to Indian River. This strange river, a winter home for ducks and sportsmen, is at no time more than two or three miles from the sea, and runs along the shore, a veritable sound, and is so called from the Indian River Inlet to Santa Lucia Inlet, 22 miles below. By glancing at Florida on the map one cannot dream of its wonderful coast line, 472 miles on the Atlantic and 694 on the Gulf. In breadth this State is 360 miles and length 400, stretching from the marshes of Glynn near Fernandina westward to the rolling hills of Tallahassee, covered with cotton fields and pear orchards, and southward from the endless pine woods to the Coral Keys.

When Jupiter Light came within range it had been our intention to burn the signal lights, and be thus reported by wire thence to our Northern friends; but the sea did not admit of running near enough to shore, and we were obliged to proceed. What a convenience, though. The idea is thus to send a message by night or with signals by day even to the end of the world from that deserted spot. The cable from Nassau ends there, thus bringing the everyday's doings to the Bahama Isles.

The hours sped on, till over the ocean daylight broke and the sun rose out of the sea, a ball of red fire lighting a glorious day and the clouds of heaven like streaks of molten gold. High up on the beach loomed the tall new hotel at Lake Worth, the Royal Poinciana. We knew friends awaited us there and also mail, but the breaking surf prevented beaching a small boat, the only means of landing. I called the others at least to see the place, and for doing so was maligned by those who were so few hours since happy, jolly folk, but now were prostrate forms stretched about on sofas, or even the floor, bewailing their seasick lot and praying to be left alone.

When once we had passed this last and most southern tourist resort we felt indeed we were off on our cruise. The railroad and telegraph ended at Lake Worth, and the only connection thence to southern Florida was by sea, except for the stage and post route along the sandy road eighty-five miles to Biscayne Bay. On down the coast we passed, with its palmetto trees and sandy shore. By the House of Refuge, Fort Landerdale, we saw columns of smoke rising from the East Coast Dredging Company's machines, at work digging the canal which is eventually to connect Indian River and Biscayne Bay. As I understand it, this is another of Mr. Flagler's gigantic schemes; but hearsay says the company is well paid. They receive, as our Western railroads once did, for each mile dug 40ft. wide and 6ft. deep, a land bounty of 10,000 acres. When completed, for slight draft boats this will be a fine inland passage south.

A schooner ashore by the House of Refuge has its own melancholy tale to tell of lost ship, cargo and may be men. Along that shore the Government has built homes every twenty-five miles for shipwrecked sailors. For some poor man cast on the desolate sandy beach in that lonely world, to be welcomed and fed as Uncle Sam's ward till chance offers him a return home, is to my mind a most noble charity, and whenever hereafter I read of an increased appropriation by Congress for lighthouses or life-saving stations I will say well done.

The water now became a beautiful blue and green with sun spots of black and brown, the cloud reflections. Sharks, porpoises and flying fish, purple tinted Portuguese men-of-war and huge turtles floated on the top of the waves or swam by, and at our approach dove to the coral reefs below, along which in the clear water for many feet we could see them swimming down and down. Next came Biscayne Bay House of Refuge, which we reached about 11:30 A. M., Feb. 25, and then took course due south to Fowey Rock Light past Cape Florida. Fowey Rock Light, 111ft. in height, built to replace the deserted light on Cape Florida, four miles distant, towered high on its steel frame. It was built at a cost to the Government of nearly \$150,000, ranking fourth in that wonderful range of first-order lights starting at St. Augustine around the islands and capes to Dry Tortugas, including the lights of Mosquito Inlet, Cape Canaveral, Jupiter Inlet, Carysford Reef, Alligator Reef, Sombrero Key, American Shoal, Sand Key and Key West.

Beautiful Biscayne Bay now opened before us, while on shore smoke from the everglades rose to the sky in gray black curls. Twice as we slowly picked our own way, buoy to buoy, into that long and narrow entrance, we scraped bottom, leaving a milky wake where sand and soft coral were torn away. When once back of the reef which stretches from the cape to the light, all the sea was tranquil, and to the sick ones what a relief from thirty hours in the trough of the waves. There, having waited till late in the afternoon for high tide, where the channel widens into deep water close up to shore, we dropped anchor in as peaceful a spot as God ever made.

But one day this place was not so peaceful as it looked that afternoon. The lighthouse keeper and his attendant, a negro, were attacked by the Seminole Indians, many years ago, and just managed to escape into the brick tower which rises fully 70ft. from the ground. Their house was looted and burned, but the stout door leading into the lighthouse held out against the Indians for twenty-four hours. A fire kindled alongside finally broke it in and disclosed to the fiends a wooden staircase, which they of course dared not ascend. With no water or food the poor prisoners held out, having betaken themselves to the very top of the tower. At first a faint odor of smoke, then black volumes curled up the stairway, and to their almost maddened senses came the realization they were being smoked out. To appear at a window was almost certain death, for they were surrounded on all sides and rifle balls crashing through the glass had repeatedly warned them of this other danger. The negro, unable any longer to stand the intense heat and smoke,

crawled out on the iron balcony about the light itself and was immediately shot dead. The keeper was now nearly crazed with suffering, for the flames had mounted to the very entrance of his room, and the glass cracked and fell all about him. As the smoke in huge clouds burst out into the open air he dragged his attendant on to the iron grating and stretching the body flat he himself lay on top. To describe further the story as I heard it is awful. Suffice to say almost a day he lay there in a trance. When at last consciousness came he discovered the Indians had gone. Unable to descend alone he signaled to a boat which chanced to be passing and was rescued.

Cape Florida was like a view out of romance. The old deserted brick lighthouse, the forsaken keeper's home surrounded by big cocoanut trees, while close to the water, clear as Lake George, stood a light bungalow house like the pictures of such one sees in India or the South Sea Islands. This home is owned, but was not occupied, by a Mr. Davis, of Galveston, Texas. The yacht was hardly anchored before some of us were ashore in the dinghy to find ourselves when landed in a pineapple field. There stood an old dorky, hoe in hand, making his fortune. Darkness quickly fell as it does that far south, but how hospitable the climate. Clad in duck trousers, light shirt and slippers, and without coat or hat, we sat upon the deck discussing plans for the morrow, drinking in health, and in buoyant spirits congratulating ourselves that we were not in the frozen North.

Early to bed and early to rise, I found our pilot sitting astern smoking his long meerschau pipe. Ordering a boat we rowed ourselves to a nearby coral bank, and in a few minutes had the bottom of the boat filled with huge conch shells, pink as the sky. At 8 o'clock we were off, and proceeded up the bay about five miles to an anchorage three miles off shore. The bay, though thirty-five miles long and on an average perhaps five miles wide, is shoal over its greater part, ranging from one-fourth of a fathom to six in depth, and so clear is the water that bottom is visible everywhere. With three men in the gig the row to shore was quickly over.

At the Biscayne Bay Y. C. dock we were met by several gentlemen who escorted us to the club house, over which floated a flag with embroidered thereon, "25° North Lat., B. B. Y. C.," a most appropriate ensign, for 25° N. Lat. runs across Biscayne Bay. Shaded from the sun by large cocoanut trees, royal palms, bamboo, lime and orange trees, we walked through the grove to some pineapple and sisal hemp trees beyond. The pineapples were not ripe, but gave every promise of a crop; but unless told I should not have known the sisal from rows of century plants, as alike almost as two peas in a pod. There, away from home and country, I met two French gentlemen—one a Count who years ago chose the spot not alone for its natural beauty, but for its freedom from conventional life. Their house presents a plain exterior, but inside is full of curios brought from France and other parts of Europe. Hanging from the wall beside a magnificent book case, full of the choicest literature, I saw the full cowboy accoutrements which Count de Fontaville keeps as a reminder of cowboy days. This established a freemasonry between us, for once upon a time I also punched cattle on the Western plains. When last in France, two years back, the Count found at his grandfather's old castle in an old hair trunk some maps of France's possessions in America before the sale to us of Louisiana. These maps were made when John Law, that famous financier, was floating his Mississippi scheme, and everybody preferred Law's paper to gold or lands. Cleverly drawn were these maps. Etched here and there by a river bank grew strange and wonderful plants, and across the broad prairies roamed pictured herds of wild horses and cattle. Indians wearing what no doubt purported to be golden ornaments also filled their place in the drawing. Nothing better could have been done to excite the Frenchmen, to whom this new world was a gold mine or garden of roses—in truth, a Florida.

Cocoanut Grove, for so named is this out-of-the-way spot, is separated from the Everglades by three miles of pine wood and palmettos, all growing in a rocky soil. The whole woods is practically a coral reef, the roughest walking I ever chanced to come across. The coral had the appearance of huge white cheese, nibbled away to sharp points, and reaching as high as one's knees in places. Progress on foot is slow through such a country and I did not wander far, but sat down under a big live oak covered with air plants, much like overgrown artichokes. Where these grow one never dies of thirst, for in their cup formation, where each leaf joins the center, water collects from the dew, and one I emptied held at least a quart of good clear water. Coming back from the woods we walked through Mr. Kirk Monroe's place, a gentleman so well known to all for his charming stories of life in southern Florida that no eulogy of mine is necessary. A clear spring by the house, winter and summer, offers a tempting plunge. At the even temperature of 65° what could be more delightful; not too cool in December and just right in April, May and June. For shelter a large mangrove tree dropped its roots like organ pipes from the main trunk growing around. These are wonderful trees, carrying in the end of each drooping stem a long, thick radicle which pierces the mud when once it has grown long enough to touch the earth, or swaying in the wind to the water's edge, two or three branches will collect about themselves floating leaves or twigs, which in time settle or gather still more, and working thus as patient nature does, a few more feet is won to the land from the sea. But I hear the others calling, and much as I should like to day-dream there in the shade as a cool breeze came in from the sea, I had to be off.

Wishing for some fresh fish, we were soon across the Bay to Bears Out, an inlet from the sea just above Cape Florida. We greatly regretted not having brought a naphtha launch with us, but were fortunate enough to hire one from a Mr. Tuttle. To those going South, however, I caution yachtsmen to bring your own naphtha, for it was twenty-five cents a gallon at the Bay, and all else you buy in proportion, as I will tell later on. An hour's fishing sufficed, for we caught, I think, some twenty or twenty-five, and not one had I ever seen its like before. Blue and red polka dot, white and blackish, some like a bass, others a sunfish; some with gills and some without; some had fine teeth, and one, long sharp teeth like a squirrel. I have fished in many places, but I never caught in so few a number ten different kinds. The waters of the South are full of fish, and the strangest thing about it is one never knows what you are going to get, maybe a turtle, stinga-

ree, grouper, hog fish, shark or tarpon. This latter fish seeks those waters also, and though I did not have the good fortune to catch any, saw a big one weighing nearly 100lbs. floating by the side of our boat. They appear very susceptible to the cold, and during the cold snap in early February, when the thermometer dropped to 29°, a party counted fifty dead ones floating in the Bay. I look for the day when Messrs. Quay, Van Courtland and Hecksher will desert Pine Island and Punta Gordo and come to Biscayne Bay for their sport after this king of fish. This will be, I suppose, when Mr. Flagler extends his railroad from Lake Worth, and a line of ships conveys tourists across only about 150 miles to Nassau, a day's light run.

But night has gone, and another bright day follows old Sol out of the sea. Mr. Tuttle with his naphtha launch swings up to our starboard, and lowering the gangway we quickly embark for a five-mile run to Miami River, the principal eastern drainage to the Everglades. The mouth of the river is 150yds. wide and of sufficient depth in channel to admit a boat drawing 4ft. On one side lives Mr. Brickell, the most noted rare *reconteur* in Florida. Opposite on the northern bank Mrs. Tuttle, originally of Cleveland, whose son's naphtha launch we had, holds sway. At their house, formerly Ft. Dallas, they dispense true Southern hospitality. From the huge cocoanut trees which line the coral shores great bunches of nuts hang down beneath the waving green palms. Ripening all the year they fell like chestnuts in early autumn, but bringing the covering with them. Try some time to get a cocoanut from its outer sheaf and you won't believe all the stories you read about wild monkeys eating that strange fruit. Nothing short of an axe will do the work quickly. Loaded with nuts and oranges from the trees growing all around the house, we proceeded on up the river, past its mangrove-lined banks, frightening sleepy alligators from their stumps or beds off into the clear water, past other cocoanut groves to where the river narrowed into a rapids some four miles from Ft. Dallas. Some of us walked; the ladies in a small rowboat were poled up the rapids over the coral reef. Scarcely any earth protected our feet from the sharp rock, but the distance was short, some 300yds. Then rushing at a steeper slant the river broke into foam from its smooth and even bed in the old Fairy Tale Swamp, the Everglades of Florida. Like some huge prairie the famous glades stretched out before us, tree-lined at the shore, but widening out in the distance to what? Few have penetrated its wilds, but all who have tell of beautiful islands, clear water and unfriendly Indians, the remnant of the once powerful Seminoles. Unfriendly, I say—only such in that they will not guide a stranger to their happy hunting grounds. Unlike Florida or Georgia Crackers, they work, and live better than many of the white folk who look down on them as savages. Besides corn and other vegetables, this fast-disappearing race raise their own hogs and cattle. Born hunters, the deer and other wild animals feed them, and alligator hides have brought and do still bring them good revenue. One year's shipment of these, I was told, numbered 10,000, but for the truth of this I will not vouch. The storekeepers charge them an outrageous price for everything, and I hardly dare begin to figure how many hides the poor fellows have to give in exchange for the sewing machines they all covet. After taking a photograph of our party we all had lunch, watching meanwhile the black bass in the clear water, but we had no bait. It was dark when once again the electric lights on the yacht welcomed us back to the cabin, where as usual Frank had the music box playing "Do, Do, My Huckleberry, Do," or some such classic piece.

A strange interest attached itself to those far-away Everglades, and almost gladly would I have been one of Ingraham's party who crossed in March, 1892, with a surveyor's outfit. He started from Fort Myers on the west coast with five boats, but deserted two, and after three weeks, tattered and torn and completely exhausted, arrived at Mrs. Tuttle's place. He remained there two weeks, and though he was closely questioned, what he saw on that trip remained a secret. The penalty the tribe mete out to any of their number who shows a white man into the glades is death. They ask no help of Uncle Sam, and only occasionally come out to buy or sell.

In Mr. Brickell's eleven-ton sloop we went kingfishing next day out by the Fowey Rock Light, but the wind blew too gently to keep our skids whirling along in the clear water. Mrs. C. caught one big fellow weighing about 8lbs. We saw a great many strike at our hooks and miss, but with a stiff breeze to catch a boatload is no trouble, for they bite then with the line 40ft. astern, as fast indeed as bluefish on an August day off Fire Island, near New York. In shape and marking they are hardly distinguishable from a Spanish mackerel.

To vary our sport Mr. Tuttle suggested a trip up Arch Creek quail shooting; so on Friday, March 1, we took the launch and ran up the bay to its head, Dumfoundling Bay, past Lemon City (five houses) to Arch Creek, another outlet to the Everglades. Some five miles up, beneath mangrove trees which grew to a height of 40 and 50ft. in places, we were stopped by a natural bridge of coral which spanned the creek, leaving only sufficient room beneath for a rowboat to pass. With dog and gun we pushed back into the pine woods for quail. What hunting! Palmettos to one's waist and coral knee high, against which my poor shins continually scraped, causing our hunting fever, with profuse perspiration, to quickly run away. In a half-mile walk we got up two coveys, and out of my six shots I killed five. The two other hunters got the remaining seven of a round dozen. After Tallahassee, where I had hunted from a wagon during January in cotton and cornfields, that was about the toughest shooting I ever saw.

Back we steered along the moss-covered coral banks, with air plants growing from every tree, until after three hours' steady going we reached the yacht, the moon long since bright, also the stars, each giving a white and stranger light than the forest fires back in the Everglades. Glad enough, I assure you, were we for the comforts of our floating home. Our table looked very pretty with the great bunches of roses, kept beautifully on ice all the way from St. Augustine. Fine fresh turkey, rich milk and new beets excited no less comment. But turkeys, beets and milk at what a price! Sent out on an order from Cocoanut Grove Hotel without a definite price settled beforehand, the bill came later. Six turkeys, three or four chickens, a bunch of beets, two gallons of milk,

two dozen eggs; total, \$66. I don't think the Waldorf or the Ponce de Leon can equal Biscayne Bay Hotel for its prices.

Saturday we told the bay good-by and started south for Turtle Harbor, but on account of the wind had to put in at Caesar's Cove, behind Christmas Point. Here, among endless keys, the most famous of the pirates who infested that coast long held out against Uncle Sam, defeating all attempts at capture, until at last a whole fleet was sent after him. At his very home he was finally caught and hanged to pay the penalty of his many misdeeds. The storm blown over, at 6 next morning we were off past Carysford Reef, twenty-five miles from Cape Florida, to Alligator Reef, thirty-five miles away. Three miles in from Alligator Reef is Indian Key, where Perrine was given a 60,000 acre grant for an experimental station back in 1830 or thereabouts; but he, with his whole settlement, was killed by the Seminole Indians. Next Long Key, with its 30,000 cocoanut trees and pineapple plantations, was passed. Then came Sombrero Key Light, thirty-eight miles; next American Shoal Lights, twenty-six miles, and only seventeen from Key West, called in Spanish Cayo Hues or Bone Key—a run all told from Biscayne Bay of about 140 miles. All these keys or coral islands are shore lined with cocoanuts and mangroves; and inland, such as are inhabited, grow pineapples and early vegetables. Out to sea stretched Florida Reef, over 100 miles long, the left bank of the Gulf Stream, and though the wind blew strong we sailed as in a land-locked harbor, but a mile or two away from the huge breakers, stretching a line of white foam against a cloudless sky. A more beautiful cruising ground there cannot be, for to lie at anchor out in this channel, correctly buoyed and lighted from Biscayne Bay to Key West, and in a naphtha launch run in among the keys, where the water is not over 2½ to 3ft. deep, opens an enchanted archipelago. In the setting rays of the sun which sank into the sea of the Gulf of Mexico, we glided to anchor off Key West beside the Spanish cruiser Infanta Isabel. Have you ever felt, when long away and out of touch with the world, how it seems as if something strange and awful had happened? So I felt, and in haste sought the telegraph office and some recent newspaper to learn if all was well. No sad news came to blight our cup of happiness, and when we had seen the little there is to be seen at Key West next day, and had been robbed for coal at \$9 per ton, and 1½ cents per gallon for water, we yearned for the wind to subside in the Gulf and to be away to Havana. But the wind would not down, and another day was partly passed visiting the sponge market—one of the largest, we were told, in the world. I bought some beautiful big sponges for 50 cents (which would cost \$2 at home) from Samson Stamp, the old bumboatman whom everybody who goes down there must know. Strange to say, Mr. Ulmo, our engineer, who ran the blockade all through the war, recognized Samson as having been a cabin boy on his ship, and, in remembrance of those days, great tears trickled down poor Samson's cheeks.

Upon the arrival of the s.s. Olivette that night from Havana I went on the dock to hear the news about the insurrection, and quickly found myself in the midst of the most excited crowd I ever saw. The babble was deafening, and not understanding one word I wondered in what country I could be. Poor Cubans! many banished no doubt from home, they wanted to hear the latest whisper, if maybe they might see Cuba again. It is a wise precaution of Spain in putting a man-of-war to watch this half Cuban city of ours, for it is a short run, 110 miles, for a filibustering expedition across to Cuba. And this run we took the morning of March 5, steering S. by W. ½ W. across the Gulf Stream, there 40 miles wide and from 4,000 to 5,000ft. deep, escorted, it seemed, by schools of flying fish, until at 1:30 in the afternoon we slipped in past the forts La Cabana, La Punta and Castle Morro, the latter with its telegraphic flags flying, which we saw hauled up at our approach. We slowed down to take a pilot on board, though none is really necessary for guidance in that deep harbor, but only to give one a position when at anchor. I say at anchor, though in reality no one anchors there.

The harbor in Spanish Havana is quite deep and the tide of so small a rise and fall the drainage of the city is not properly carried away, but settles on the bottom, and not to disturb this accumulation of filth huge square red buoys with steel staples attached float about at various intervals. To these each foreign ship or yacht is moored. The Dungeness was the only yacht there at the time, but the bay seemed full of tramps and liners from Mexico, France, England and the United States, not to mention two men-of-war, both English, however. Against the stone wharfs were numerous steam and sail craft floating the yellow flag of Spain, gaining thus an advantage against the rest of the world. How? maybe you will ask. Well, as I understand the case, no foreign ship can load at the docks, but must do so entirely by lighters, thus giving those who ply that trade a livelihood, and in a certain way handicapping foreign commerce to the benefit of home industries, a sort of protection theory.

GRAHAM F. BLANDY.

[TO BE CONCLUDED.]

A Bear Experience.

Editor Forest and Stream:

I killed a bear once, but my bear did not act at all like Dr. Grinnell's.

My guide and I were riding along a ridge when a great dark animal jumped out of a ravine and ran off. It looked to me like a hog. My guide said, "It's a bear." I jumped off my horse and fired at it.

Of course I had heard how dangerous bears are, and as soon as I had shot I jumped on my horse, put spurs to him and rode away. My guide rode after the bear, but I did not want to get too close to him, and I rode the other way.

Now, what do you think that confounded bear did? He ran in a circle, and as I was galloping along, thinking that I was safe, I saw the bear running toward me, coming up the other side of a ravine I was approaching. In self-defense I had to dismount and fire at him, and he turned and ran off over the hill.

Presently the guide came up and we rode slowly over the hill after the bear, and down into the stream bottom, and pretty soon we saw the beast lying down there.

"Look out," said my guide, "he's alive."

He wasn't though. For some occult reason he had lain down and died.

VERITAS.

THE TALKING PINE.—II.

The Rain Song.

THE Talking Pine nodded in friendly greeting as I got out of the canoe and came up to my usual place at the feet of the great tree.

"Kla-how-ya, T'solo, the wanderer; it is well that you came to-day, for to-day the pines will sing the rain song and you shall sing with us, for it is a good song and one to know."

"So be it, wise one. I will learn the rain song, that I may know it when I am in other lands. It is a good song to know when the air is dry and you can get no water for your throat. I will learn the rain song of you, wise one."

"Come, T'solo, the wanderer, and sit at my feet, where I can spread my arms over you and keep the rain away."

"Now when the wind comes all the pines will sing the wind song and dance the wind dance before they sing the rain song."

"You know, my friend, T'solo, the wanderer, that the wind must always come to help the pines sing, so be not impatient to hear the rain song until the wind can help us."

So I sat down by the feet of the Talking Pine and smoked my pipe and waited for the coming of the wind, to see the wind dance and hear the rain song.

Soon the wind came slowly out of the southwest and the pines began to sing and the wind sung with them—at first so soft I could scarcely hear it; and I asked the Talking Pine, "Do you sing, wise one?"

"Yea, listen," answered he.

Then I heard the wind song, for it had gathered strength, as all the pines began to sing and I could hear it very plain.

Then the pines all began to dance and to swing their long arms in time with the song and to sway and sing until they were all mad with the dance, and I thought they would fall.

The song was wild and mournful, as it always is, and they sing it in the language of the pines, so one must know their talk to learn the songs.

I heard them calling the rain to come out from behind the clouds and sing with them.

The rain rode down with the wind and some rested on the pines, but most of it went on down and sung with the flowers and the grass; for the rain, you know, is restless and cannot stay long in one place.

The pines all love the rain and always sing the rain song when they see it coming on the clouds, so it will stop and sing with them.

For a long time the pines and the rain sung together, and then the rain went away and the wind went with it, and the pines were left all alone.

The wind, you know, is never tired and travels all the time, so the pines always call the wind to help them dance, and always go to sleep when the wind goes away, and the sun wraps his warm blanket around them.

"It was a good dance," said the Talking Pine when they had finished and the wind had gone.

"Come again, T'solo, the wanderer, and I will show you other things and sing other songs, but now I sleep."

Then I got into the canoe and crossed the Lake of the Mountains and left the Talking Pine to sleep out his sleep until another time.

EL COMANCHO.

A WINTER HUNT WITH JOCK DARLING.

IT was as a result of the game photographing trip last summer that Jock Darling and I arranged for our winter hunt. Even if the law had permitted there would have been no sport in killing the game we saw while photographing those July days, but the force of association is strong, and one cannot live a week with game at his very elbow—even if it is unseasonable game—and not catch the hunting fever. As there was only one possible cure, I packed up my warmest clothes, bought some additional heavy underwear, loaded twenty-five .40-82 Winchester cartridges and started for the woods.

I left New York by the Fall River Line the night of Nov. 22. The next day, Saturday, a cold, sleety rain was falling in Boston. At Portland it was snowing, though only in a half-hearted way. At Bangor there was a good tracking snow and plenty of it, but unfortunately it began to rain.

Those who have hunted on the snow will understand my interest in the weather and anxiety as the hunting grounds grew nearer and the rain continued to fall in increasing volume. At Sherman, ninety miles north of Bangor, where my railroad journey ended, the rain had stopped, but it had left a crust of snow that boded ill for still-hunting. This was the next worst thing to losing the snow altogether, but there was a grain of comfort in the fact that I was still a good long distance from my destination, and that the conditions might be different there.

As the hotel at the station was, to say the least, unprepossessing, and not being on the best of terms with the French lumberman's "little brothers," I got a man to drive me over to Paten, seven miles, where there is a good hotel. I arrived there some time before midnight, and finding Jock's name on the register, went to bed between clean sheets in a fairly comfortable frame of mind.

Sunday found us on runners, slipping along behind Herb Brown's black horses over a good sledding snow, and that night we slept in camp.

Game Sign.

The last part of our journey had been through an unbroken wilderness, unmarked even by the sleds of the lumbermen. While daylight lasted we had counted the tracks of sixty-four deer and thirteen caribou crossing the road, besides innumerable fox trails. At one place the silent evidence of the snow showed that half a dozen caribou had gotten out of the road just in time to let our sled pass. A man on foot would, no doubt, have run directly upon them, but the merry jingle of our bells gave the woods tramps due warning of our coming.

It was pleasant to be assured that the game was on hand and moving, but more pleasant still was the fact that we had gotten beyond the domain of the crust, and that the snow was still as a blanket and soft.

Uncle Jock's Log Cabin.

There were no hunters in camp upon our arrival, and no game in evidence; but before we left we atoned for this by piling up around the door a pyramid of trophies

that on the hoof had weighed the best part of a ton that had fallen to four rifles.

Moose, caribou and deer figured in that display, and that we had no small game was due only to the fact that we did not shoot it. Bear was the only item that rightfully should have been there and yet was missing; but the bears had gone into winter quarters, and could not be tempted out even to make a Roman holiday.

There are three lakes in the Sebois chain—White Horse, Show Shoe and Grand Lake. The main camp is situated on a bluff overlooking Snow Shoe, which is the middle lake.

It is a well-built log structure, two stories in height, and extremely comfortable in cold weather.

Jock has another camp on the upper part of Grand Lake, and this was occupied at the time of our arrival by two other hunters, Messrs. Stubbs and Staples. The latter part of our stay was passed at this camp, but for the first three days we hunted about Snow Shoe.

Hunting Around Snow Shoe Lake.

South and east of Snow Shoe is a piece of burnt land a mile in width and two or three miles in length. This is good deer country; in fact, it would be hard to find any in this neighborhood that is not, and it is also the sometime abode of a family of moose. All summer these moose had used in the burnt land, and the week before my arrival Jock had run upon them, four in number, at the eastern edge of the strip over toward Hay Brook.

Deer and caribou, of course, were of secondary consideration as long as there were moose to be secured, and accordingly our first hunt was planned solely with reference to the latter.

Footwear.

The thermometer stood at zero as we left the camp that Monday morning. Jock wore a pair of rubber boots, as there were many swampy places that the covering of snow keep from freezing, and that would soon have soaked buckskin moccasins. My feet were protected by high cowskin moccasins, that proved to be thoroughly waterproof for all ordinary purposes, and by far the most satisfactory hunting footwear I have ever tried. Under these I wore two pair of high woolen stockings that reached above the knees, and which kept my legs dry on several occasions long after my trousers had been soaked. Later I found one pair of these heavy stockings sufficient for the coldest weather we experienced. Probably this would not have been the case, however, if I had not also worn a pair of "arctic sock" slippers inside the moccasins. These are made of soft felt material, and kept my feet very dry on occasions when the moccasins were very damp inside.

Jock lost two of his toes years ago from freezing—he had killed a caribou late in the day and persisted in skinning it despite the biting warnings of a semi-arctic night—and he acknowledged that rubber boots were not the warmest footwear for such a cold day. He was obliged from time to time to stop and kick and stamp till he could rouse a circulation, and as long as there was no water to wade through the moccasins had decidedly the best of the situation; we soon found water, however; at the foot of the hill below the camp was a spring, and this had been backed up by the snow, and formed a wet place of considerable extent. Darling went straight through, but, as I did not want to test the moccasins too severely, I picked my way cautiously about the edge. A leather boot will not stand wading through pure and unadulterated water for any length of time, and neither will leather moccasins.

Moose Sign.

We kept the road down Sebois Stream to the head of White Horse Lake, which we crossed on the ice, and then struck up east into the burnt land. The old road which we followed was a maze of deer tracks, and we came upon frequent beds and signs of feeding.

Jock has hunting associations connected with every foot of wild land in this part of the State. Two years ago he met three caribou on this road, handy to the lake, and knocked over two of them, which was all the law allowed.

There is always the chance of meeting caribou on these roads. They are indefatigable travelers, and if one stays in the woods long enough he is sure to run across them.

But what interested us more than caribou talk or deer sign was the unmistakable evidence of the recent presence of moose. From time to time we came upon places where the young trees, moosewood and maple saplings, had been broken down, generally at a height of 7 or 8 ft. above the ground, and where other trees of the same variety had been stripped of a portion of their bark. These were the feeding grounds of the moose known as "workings." The trees had been broken down in order that they could browse off the tender growth at the ends of the branches, and this process was accomplished, not, as writers used to assert, by riding the tree down between the forelegs, but by means of a twist of the powerful neck of the animal. This is what Darling says and I see no reason to doubt it. We saw no trees that were bent over as they would have been if straddled and ridden down. They were all broken off, and always at the height of the moose's head from the ground. Darling says he has frequently seen them feeding and he has observed the process carefully.

A moose, like other deer, has no upper teeth, and the barking of the trees is accomplished by a long upward sweep of the jaw. Of course, as soon as the bark is started, at least in summer when it peels easily, it can readily be stripped from the tree.

We made a long circle around the edges of the burnt land and into the timber beyond, but we failed to locate the moose. No doubt they were snugly yarded in some nearby ridge, and we may have passed very close to them. We jumped deer on several occasions, but hardly gave them a second thought, and we crossed a number of fresh caribou trails. Near the head of Bach Brook we saw where one of these animals had walked along a fallen tree over a wet place, as a man would have done. "They're just like a goat," commented Jock. "Go anywhere over ledges and all kinds of rough places, and never slip or hurt themselves."

Darling as a Trapper.

The wild woods mice, which are twice as big as city mice, soon learn of the presence of human habitations in the woods, and as the shelter is comfortable and food abundant, they flock in from all sides till they become a pest. The second night of our stay in camp Jock set about getting rid of some of the surplus mouse population

that had accumulated during a short absence. He split out from a stick of firewood three flat pieces of wood, which he whittled into miniature representations of snowshoes, 1 in. high and perhaps 3 in. long. To the narrow ends of these he tied a piece of pork rind for bait, and then he set up on edge inverted tin pans resting on the snowshoe-shaped pieces of wood at their widest parts. The whole thing was delicately adjusted, so that when a mouse touched the bait the pan slipped from its support and made him a prisoner.

The first night the traps were set Jock caught two mice, the next night three, and so on till he had caught fifteen before I left. One poor little fellow was found sitting upright with his paws to his face, frozen stiff.

A Deer and a Caribou.

The second day we tried for deer, as there was no meat in camp and we were hungry. We crossed the dam and went up an old tote road to the east of the camp, and presently, before I really had a chance, I heard Jock's rifle. I had jumped my deer in the meanwhile, and was not loath to leave his trail for Jock's.

Jock had gone some distance along the road without crossing a fresh track, but I presently met him and asked, "What luck?"

"I got one," he replied.

"Buck?"

"Yes."

"What kind of a head has he got?"

"Homely," said Jock; "he lies back here about thirty rods."

We started in the direction he had indicated, and Jock told me he had seen the deer first running along with his nose to the ground, scenting his own track. He had

A SET OF MOOSE ANTLERS.

previously crossed the road several times at the same place. Jock blatted, and when the buck stopped he shot him. When we reached the deer I found him already dressed and hung up. He was a large buck, though rather poor, and despite Jock's uncomplimentary characterization had a magnificent head. The antlers were very irregular, but massive. There were nineteen points in all, including one stub projecting downward.

"He will be tough chewing," said Jock, "but I guess we can manage."

Jock had drawn the first blood, but he magnanimously ascribed his success to luck. Be this as it may, I have always noticed that the best hunters are lucky. The snow was quite noisy, for a rain and crust had followed the cold weather of the day before, and another man would no doubt have been seen by the deer first, and in all likelihood only had a glimpse of its flag as it disappeared from sight.

Later, on that same road, Jock saw the fresh track of a caribou. He kicked the impressions in the snow and found that it was still unfrozen. Seeing that the track led straight for a bog on Bach Brook he followed at a good speed, for he knew that the caribou would not stop to feed on the way. He saw where the caribou had crossed the brook on the ice and then gone up on the bog. Here he expected to find it feeding and he moved more cautiously. Presently he saw something white among the little spruces that dotted the bog and the next instant made out the caribou's head. The caribou was standing looking directly at him, but squarely in front of her nose—for it was a cow without horns—was a small tree trunk. Jock could see the ears on both sides, or he would hardly have recognized the head as distinct from the snow masses that hung on the branches of the evergreens all around. He brought up his 30 in. Bullard and that was the end of that episode.

A New Camp.

Messrs. Stubbs and Staples, the latter an old hunter and trapper of long experience about Sebois, turned up at camp that night.

They reported having found four moose yarded on a ridge east of the upper camp, which, owing to the crust, they had not disturbed.

As the neighborhood of the other camp was a better one for moose we decided to change our base of operations, and the following day we all moved up to this camp.

From here we made numerous excursions over the hard wood ridges which stretch in all directions about Sebois

Grand Lake, and on most of these we found moose sign and moose tracks.

After Moose.

One day, while following up some old tracks, we got very close to two moose. The tracks had been made the day before, and there seemed to be no immediate prospect of seeing the moose, as they were plainly traveling, but for some reason best known to themselves they had taken their back trail.

We jumped them during a flurry of snow, and the one I saw looked black as a bear against the fleecy background. It was a cow or young bull, for no horns were apparent.

Another day on the ridge north of Wadley Brook dam we found where a small bull had yarded. We did not disturb him at the time, as the crust continued very noisy, but later there came a rain that softened the crust temporarily, and we spent the greater part of a day trying, to the best of our ability, to circumvent the wary animal.

He was on the side of the ridge in a thick fir growth and no great distance above a bog. This bog was bordered in places by a nasty cedar swamp, and in circling to get the wind of the moose we found ourselves obliged to pass through the swamp. My recollections of the half hour spent in that swamp are not of the pleasantest. A wet cedar log is about the slimiest and slipperiest thing in existence—unless it be an eel—and when one tries to avoid a hole that is filled with ice water and slush by walking on such a log, it is not agreeable to suddenly change ends and land head first in the hole. A few experiences of this kind will soon convince a man that it is the safest policy to wade through everything.

Soon after emerging from the swamp we found the old tracks of the moose. We worked along the ridge in the direction we supposed him to be, pushing our way through the thick balsam growth and receiving copious showers from every tree, till we were as wet as if we had been in the lake.

We scoured every foot of this part of the ridge, keeping 50 yds. or so apart, but always within sight of each other, and at last found what we had feared, that we had jumped the moose. We had no doubt been close to him when this happened, but the growth was so thick that we had failed to see him when he made off.

Partly out of curiosity and partly with a view of locating him for another hunt, we followed the trail of the moose for a mile or more. At first he ran directly south, but soon we saw that he was heading more to the east, and evidently with a purpose. He swung around on the arc of a circle and then headed straight for the rapids at the dam on Wadley Brook. This was the only open water on the stream for a distance of perhaps five miles, and his course showed the perfection of his sense of direction. No doubt the place was familiar to him, and though badly scared, he would not attempt to cross on the ice.

We left his trail before reaching the open water, but one of the other hunters who came by the dam the next day said he had crossed there.

J. B. BURNHAM.

Camp-Fire Flickerings.

"That reminds me."

AND that reminds me, that back in the 70s there lived in Surprise Valley an old gentleman named McC., and his son, William. Old age and its attendant ills had put him past the bread-winning stage, and now in his son's home he took life easy.

That summer the Indians had been very turbulent. Night after night signal fires on one mountain had been answered by flashes on another. Ochebo's band had joined forces with the Bannocks, who were on the war path. The settlers had undergone a thorough Indian scare, and under these conditions the little models of '66 and '73 had given way to the latest in repeaters, the model of '76—.45-75. Winchesters cost money in those days, especially when an armed guard had to accompany the team that hauled them 200 miles from the railroad. But William was prosperous, and had bought one of the big guns.

Game was plentiful, especially waterfowl. The wild geese, in their semi-annual migrations, would tarry a few days to glean the stubble fields, and they were estimated by the acre instead of by the head or dozen, as now.

One warm October afternoon, when William and some of his neighbors were branding calves at the corral and the old gentleman was sunning himself in his chair in front of his house, he espied in a field half a mile away an immense flock of geese. The field was literally white with them. The old gentleman got out the new gun, took a rest over the fence, and when his palsied arms had pointed it in the general direction of the flock pulled trigger. A babel of honking and roar of wings followed the re-echoing explosion.

When the cloud had lifted all but one had gone. Our infirm friend hastened to the spot in triumph, lifted his prize and carried it to the corral. The bullet had struck just below the head and nearly severed the neck.

Holding up the bird so all could see, he said: "Bill, that new gun o' your'n seems to be a pooty good gun, but I do believe it shoots a leetle low."

L.

"What the Signs Did."

My subscription expires Jan. 1, and I inclose \$4 for the year 1896. I would not miss reading another piece of writing like "What the Signs Did," by El Comanche, for twice the amount. It is grand, and was written, I judge, by a true sportsman.

CALL DUCKS.

COLD SPRING HARBOR, N. Y.—*Editor Forest and Stream:* In your last issue a correspondent tells of three broods of call ducks being raised from one pair last summer, and an editorial note asks what kind of ducks "call ducks" are. As these birds are not as well known in America as they should be, I take pleasure in answering. They are dwarf or bantam mallards of two varieties, called white or gray. The smaller they are, if otherwise perfect, the higher they are valued by fanciers of water-fowl. They are bred to perfection in Holland for calling wild ducks and excel all other callers in this line. A female taken from her mate is clamorous all day long if not restored to him and the calling is surprisingly loud. In size they should not be over 20in. in extreme length, or about the size of a wood-duck. The "gray" variety are exact mallards in color, the female never having a white ring on the neck; the other kind are pure white. They are very tame and are great pets.

Some years ago I imported several pairs mainly for use in hatching wood-ducks, mandarins and teal, for they are light and are good mothers. I sold a few pairs and lost those which were kept and so have none. Your correspondent terms them "Long Island call ducks" and he may refer to mongrel black ducks, which are often kept for calling on the Island. In the poultry shows either the white or the gray calls are disqualified if the bills are yellow, but they may be of any other color; the feet and legs of the white calls must be bright orange and those of the grays the same with a tinge of brown. By the way, few men seem to know that of the species which make a loud "quacking" call, it is only the female which makes that sound.

FRED MATHER.

DEER AND LILYPADS.

Editor Forest and Stream:

When a man reads in FOREST AND STREAM statements to which he takes exceptions, I presume he will not be accused of presumption or a disposition to be captious if he ventilates his views; for I believe it is thus that we set on foot discussions which ultimately result in giving us exact knowledge concerning the habits of the creatures we love. No man "knows it all," but almost every hunter or fisherman occasionally stumbles upon some peculiar fact which he is able to authenticate and contribute to the general fund of information.

In reading the article published last week entitled "What Old Deer Hunters Say," I note that the writer states that it is a question whether or not a deer will eat lilypads. Now, I never saw a deer eat them; but, as Thoreau said, "There are some kinds of circumstantial evidence that are unanswerable, as when a man finds a trout in the milk;" and that sort of evidence I have, for I have seen where the lilypads have been eaten, and in such quantities as to demonstrate that the deer liked them and selected them in preference to other food.

In 1894 I camped for two or three days on the shore of a pond which was literally covered with lilypads, and the deer had been having fun there. My guide—Arthur Phelps, of Spring Cove—called my attention to the countless stems from which the leaves had been nipped off by the deer. We paddled all over the pond, and everywhere it was the same. Hundreds of lilypads had been eaten, and as nothing could have reached them excepting the deer, I was thoroughly convinced that they do feed very freely upon them.

Certainly there are those, with more experience than I can claim, who should be able to settle the question, and I trust we shall hear from them.

ARTHUR F. RICE.

MOOSE AND DEER WEIGHTS.

BANGOR, Me.—*Editor Forest and Stream:* Special's Boston salesman was correct when he spoke of the weight of moose being overstated in newspaper reports. We are constantly seeing reports of moose weighing from 800 up to 1,400lbs., when actually the most weigh 500 to 600. One was yesterday carried through Bangor which many set at 1,000lbs. Having seen a good many moose, I set it at 700. Later I learned that it weighed only about 500lbs.

The weight of caribou and deer is overstated in the same way. One resident here claims to have been in a party which shot a caribou weighing 600lbs., but the head only was saved. We see statements of deer weighing 350lbs. I have handled a great many hundreds of deer and never saw one yet which would weigh over 250. The heaviest deer I ever knew weighed tipped the beam at 273lbs. after it had been brought out over 100 miles. Of course, by leaving in the heart and liver the weight can be increased, but this is not what is called fair weighing.

Speaking of weights a recent lecturer here on "Picturesque Maine" showed us a photograph of a moose which he said weighed 1,440lbs. and stood 7½ft. high. Now I can prove positively that the moose there photographed was never weighed at all. It was a large moose, but never weighed nor measured as stated. The same lecturer said that same moose stood 9ft. high, and that a moose could smell a man five miles away. Also that a caribou could jump over an object 19ft. high. He also informed us that deer rose about half an hour after daylight and fed till noon, and then lay down, but always walked back on their track before lying down.

When one hears a man talking in this way, it reminds one of the story of Mr. Plummer. A man in Oldtown, Maine, had invented a mixture which he called eye salve and of whose wonderful virtues he was never tired of telling. One day a Mr. Plummer came into his shop. This was too good of an opportunity to lose, so he began, "Meestar Plummer, Meestar Plummer, at ye will put some of me eye sarve on yer eyes ye can see a crow a mile away."

"Pooh-pooh," says Plummer, "I can see one now two miles off without any of it."

"Meestar Plummer, Meestar Plummer, yer a leear."

Deer Antlers and Velvet.

Editor Forest and Stream:

Writing from the Adirondacks, Musset says that he has "seen no markings before October," in my Adirondack

cottage I have a stick rubbed by a large buck early on the morning of Sept. 12 a few years ago. My guide (a man of long experience in the woods) was starting dogs and found the young tree soon after the rubbing was done, while the buck track was still fresh, and cut the stick and brought it to me as a curiosity, saying the buck did it to rub off the velvet from his horns.

WISCONSIN NON-RESIDENTS.

IN FOREST AND STREAM of Dec. 21 your Chicago correspondent lets himself loose about non-enforcement of Wisconsin deer laws and the violation of same by Ohio and Indiana hunters. The general tone of the article is that these hunters have no right to shoot Wisconsin deer, and besides conduct themselves in ways that make their presence undesirable, bringing all their supplies with them, and chasing deer with dogs. It also blames the game wardens for not enforcing the laws.

Whom do these deer belong to? It would appear from the State legislating for their protection that they belong to the State, and the State law allows any one, from anywhere, to kill them between Nov. 1 and 20. The people of Wisconsin are not so narrow in their views as to try to shut out a sportsman because his home is not among them, but, as will be shown further along in this article, a man is welcomed by them in accordance with his behavior, and he is not asked whether he lives in Oshkosh or Cincinnati.

There is howling about non-resident hunters, of course, coming from market hunters and men hired to kill venison for lumber camps, and a few other fellows who don't want anybody but themselves to kill any deer. Does your correspondent want non-resident shooters kept out in order to save the deer from these wolves? It is difficult to see what other reason there can be, for these wolves will get them if the sportsmen don't. An attack on non-resident shooters does not come in very good taste, anyway, from a man who shoots in as many different States as this correspondent does. Maybe he lives in Wisconsin, Illinois, Indiana, Arkansas, Tennessee, Mississippi, Louisiana and Texas, Oi dunno. Sure, he tells us of shootin' in ivory wan of thim counthries, thot he did hisself!

Two of the recently returned non-resident shooters, one from Ohio and the other from Indiana, have been interviewed by the writer of this, one belonging to a party camping near Ingram, and the other near Glen Flora, both places being in the territory of the game warden at Prentice. They tell so nearly the same story that only one need be told.

The Hunter's Story.

"As our party was rather large, myself and one other went up three days in advance of the opening day, to look for a good location and get the camp ready for the rest of the party, who were expected in about a week. On arriving at Prentice, where we changed cars, we were met by the game warden, who introduced himself and cautioned us about shooting any deer before the time, about having more than two deer in possession of one man except at the camp, told us no dogs would be allowed at hunting camps under any circumstances, gave us some pointers about some good locations, and told us that all law-abiding hunters were welcome.

"So soon as we left for Glen Flora, the warden, as we learned afterward, wired his deputy at that point to be on the lookout for us. When our main party came, one of them brought a dog. It was not a deer dog, and its owner merely brought it as a camp companion, but the warden would not let it go to the camp, and was inexorable on this point; no dog big or little should be allowed in any hunting camp during the deer season. He made frequent visits to the various camps in his territory, explaining the law and warning hunters that violators would receive no mercy. In one camp he found half of a deer before the season opened, which the hunters claimed they had got from a native boy. The warden at once arrested the party for illegal possession, and they were roundly fined. The law, as explained by this warden, permitted the killing and having in possession at the camp any number of deer, but in transit or any place except at camp, or at one's home, no man could have more than two deer at one time. He might take out two and sell or give them away; then go back to camp and get two more, and repeat the operation as often as he liked. No deer were allowed to be shipped, except when accompanied by their owner.

"The intent of the law seemed to be that deer might be sold locally, and permitted any man from anywhere to take two home with him. We thought it the best law we ever knew of. It allowed us to kill what we wanted for camp use and to take two apiece home with us. It gave everyone all the privilege that could be reasonably asked, and effectually shut out the market hunter. We were more than pleased, too, with the vigorous policy of the warden. Had hounding been allowed, we would probably have got little or nothing. As it was, we had plenty of camp meat, and each man of our party took home two deer.

"As to our reception by the citizens, it was cordial. Everyone, except two market hunters, was ready to do us any favor, and did not want the last cent for doing it either. One teamster asked two dollars per load for hauling our stuff to camp. It was six miles over a road so bad that it took a whole day to make the trip and return. An Irish family were the only people living anywhere near the camp, and the first time any of us came near the house she hailed us with: 'Will, byes, Oi'm glad to see yees, sure Oi am. Coom in wid yees now an' be havin' some milk, fur sure it's tired and hungry yees be lookin'.' Anything those poor people could do for us they did and refused any pay. When we broke camp we had, perhaps, twenty dollars' worth of groceries, which we had the teamster unload at the door of their cabin. We left the old lady with tears streaming down her wrinkled cheeks. 'God bless yees for noble-hearted gintlemin, ivery wan of yees,' was her parting salutation. The railroad people treated us with the greatest courtesy from start to finish,

We had a good deal of excess baggage, but it all went free, as did each man's two deer."

"Did you read the Wisconsin deer article in last week's FOREST AND STREAM?"

"Yes."

"What did you think of it?"

"Well, of course there were camps of toughs and law-breakers, and no doubt a larger per cent. of them lived in Wisconsin than in Ohio or Indiana. Most of the men who go so far for the shooting are men of means and respectable people. I'm not surprised that some of the small newspapers of the State should have published what they did. Some of them get their ideas at the village saloon, but I'd like to know what good is achieved by collecting these adverse articles and publishing them in FOREST AND STREAM. This non-resident idea is all wrong. The constitution of our country says a citizen of any State shall have all the rights of a citizen of the State he may be in. Mr. Hough's article says there were probably 1,000 guns in a region fifty by sixty miles. That is one gun for 1,920 acres—three square miles. Probably the men hunted an average of ten days each. Nearly all of the non-residents were in strange territory, and two-thirds of them knew next to nothing about deer hunting and hundreds of them failed to get a deer, while the law prevented the expert hunters from killing more than two deer and camp meat. If no deer are killed illegally, they will increase instead of diminish."

AMERICAN.

NEW BRUNSWICK MOOSE AND CARIBOU

MR. WILLIAM CHESTNUT has just returned from a hunting cruise of over six weeks in company with the veteran trapper and guide, Henry Braithwaite. He would have been out long before, but owing to the Dungarvon portage not being used by the loggers this winter it was necessary after snow fell to swamp several miles of new road to the lumber camps on Rocky Brook. William brought with him two of the finest moose heads that have been seen in Fredericton for some years. William deserved to shoot these moose, for he is a good shot and a true sportsman; but he frankly says they are both to be credited to Braithwaite's rifle. Incidentally he remarks that he has a .40-82 Winchester repeater which he will dispose of at an extremely reasonable figure. "A porcupine gun" he calls it. He says it will kill a porcupine most every time, but when it bucks up against a moose it doesn't seem to disturb the harmony of the proceedings unto any vast extent. On several occasions moose that were hit good and hard and often with this rifle, or even with Braithwaite's .45-85 English express, at a range of 40 or 50yds., simply moved over into the next parish and refused to be overhauled, though followed on the snow for hours, and in one instance for two days. One moose escaped in this fashion that was hit three times. Both Mr. Chestnut and the guide know how to handle a rifle, and I can vouch for it just the same as if I had been there that no blame is to be attached to them because these wounded animals got away. The weight of testimony is inclining more and more every year to the view that nothing but the most powerful sporting rifles can be relied upon to do justice to a full-grown bull moose.

While encamped at the Crooked Deadwater, Chestnut and the guide ascended the County Line Mountain, where they dropped into a regular moose paradise. One day they started sixteen moose, including several immense old bulls. It is believed by Braithwaite that somewhere up in this region the king of all moosedom holds his court. William says it made a man feel solemn to look at his track, which resembled the print of a water pail in the mud. They named the patriarch Tim Lynch, for the reason that his territorial jurisdiction seemed to be confined to the timber lands of that well-known operator.

The finest, though not the widest, of the two heads brought in by William was secured on this County Line Mountain. Braithwaite administered to the noble patient three doses of lead from the English express, each of them labeled for an adult. Even then the moose took his own elegant time about passing in his checks. In the meanwhile another big moose appeared, but he was on the wing and Braithwaite scored a clean miss. After that a third old bull, fearing to miss the music, meandered in upon the scene and Henry knocked him over, but while Henry was hugging himself, behold! he straightway "riz up and gat." They followed him for the greater part of the day, but failed to overhaul him. I, the prowler, who have been there, would have given much for a glimpse of Henry that night, after he had adjusted the Captain Kidd bandana on his dome of thought, and as the fitful lights and shadows of the camp-fire scampered over his corrugated brow. It is not Henry's habit to miss the target, nor yet to hit and have the target run off with the score.

The head of the bull that was killed is exceptional for massiveness and beauty. It measures 47in. between the outermost prongs, has very wide, deep shovels and twenty-five points, all of them perfect. This head is also adorned with two well-developed bells (one of them 16in. long), which is unusual, though not unprecedented. The bell is a kind of whisker the moose wears, which, like the whisker of a man, makes the wearer even homelier than he was before.

The other moose was slain by Braithwaite at Jimmy Crangle's spring near Musquash Lake. Hearing a cow moose whine as though in protest against the rudeness of her lord and master, Henry, who was alone at the time, proceeded cautiously to investigate. At first he came upon a young bull, which he did not consider was the guilty party. Then he spied a much larger bull, with a wide spread of horns and his hair turned the wrong way. This time the guide was armed with a .45-90 Marlin half magazine. He worked the lever too slowly, with the result that the cartridge lodged when half-way into the chamber. The moose became uneasy and moved away. Henry was obliged to whittle a wedge-shaped stick to coax the cartridge into place, at the same time following the moose and grunting in a sociable manner so as to allay his fears. When he was again in sight of the moose and tried to shoot, the cartridge failed to explode, probably owing to the breach of the rifle having been thickly coated with vaseline, which deadened the impact of the firing pin. As the moose shambed off Braithwaite again resorted to his grunting tactics, and when a clear chance offered planted a bullet behind the shoulder. The moose made off choking or coughing through the brush, when a second bullet which struck within 2in. of the first

brought him down. I think almost any other man than Braithwaite would have lost this particular moose. He had an excellent set of antlers, measuring 49 in. across, but not so fine in other respects as the pair secured at the Crooked Deadwater.

William says they saw no caribou on the entire trip and very few tracks, which is partly owing to the extensive lumber operations now being carried on at Little Southwest Lake and Jack's Lake, where caribou have heretofore been very numerous.

One of the most impressive sights the Prowler has witnessed of late was the return of Mr. John Bodkin from his hunt on the caribou plains near Gaspereaux with the venerable guide, Joe Mitchell. They brought into town on a country wagon one rainy day the unskinned carcasses of three large bull caribou and a deer. One of the caribou heads was much above the average. Joe says the caribou were very plentiful and it would have been easy to kill a score of them.

Harry Chestnut returned to-day from his trip on Northwest waters with Arthur Pringle, bringing two caribou heads, one of them a good specimen. They saw no moose. Pringle shot a caribou with a remarkably large set of antlers.

PROWLER.

FREDERICTON, N. B., Dec. 23.

A HUNT FOR TEN CENTS.

Editor Forest and Stream:

The season now drawing to a close has been, in this section, rather below the average.

Woodcock have not been overabundant, while they who have been so fortunate as to bag a few quail are looked upon with more or less envy by their fellow sportsmen.

Partridges, however, I am glad to say, are reported to have been more abundant than usual. This, there can be no doubt, is directly attributable to the appointment of game wardens, who, soon after the law was off, succeeded in arresting one of the snarers with which the woods around here have been so thickly infested. While the outcome of this arrest was rather discouraging to sportsmen in general, still there can be no disputing the fact that it has had a rather salutary effect on the general contingent of snarers. The person arrested was caught with seven snared birds in his possession. It was expected that he would be heavily fined, but through a flaw in the law, which can readily be taken advantage of by discriminating rural justices, he escaped very lightly.

While a trip in the woods will reveal lines of snarers, on examination they will be found (most of them) to be old, broken down and unused. They are last year's. Very few will be found to have been recently constructed.

Now that the bird season is drawing to a close, sportsmen hereabout are looking forward with pleasurable expectations to the fox hunts, which in recent years have become so popular in this section.

These hunts are largely patronized by New Haven's most celebrated brush and trap-shooters and business men. Some time in the near future I hope to be able to send FOREST AND STREAM a description of one of these enjoyable occasions.

Shifting to an entirely different subject, if it will not be considered too much of an intrusion on your valuable space, I would like to tell of one of the most enjoyable hunts I ever engaged in. The most peculiar part of this hunt is it only cost 10 cents. The manner in which it came about was: I had been reading the evening papers, with their sensational headlines of portending war, whereupon, growing weary of their exaggerations of an already ticklish subject, I laid them aside for something better. When my eyes lighted on the familiar cover of FOREST AND STREAM it is needless to tell of the pleasant recollections it awoke in my mind. I realized that in a perusal of its pages the mind would be carried to scenes and thoughts more congenial than could be conveyed by war news, much of which is manufactured for the express purpose of increasing newspaper circulation.

Upon taking up the great sportsman's journal and opening it my eyes lighted on the article headed "Two Men in the Woods."

I settled myself comfortably on the lounge with mind fully prepared to enjoy a half hour's good reading, then, as the hour was rather late, to betake myself to bed.

I had read as far along as the sentence that tells of the "peculiar" sound of the hound's voice after he struck the trail, when, strange to relate, I actually became one of the party, and was engaging in my first bear hunt. I could hear the "peculiar" sound of that hound's voice as plainly as I would had he been in the room. Over marsh and meadow land, through thicket and glade, up hill and down, through dark cañons and along the base of steep, forest-crowned ledges, he led us. Then his voice, changing in the distance, came back to us soft and melodious as a fairy lute floating on the faintest of zephyrs.

Finally he led us to the banks of a turbulent stream, whose waters, rushing down a steep incline, were shattered into feathery lace works of foam against black-headed rocks and mossy islets that stood above the surface. The sun breaking through the fog at this instant touched this wild scene with such a dazzle of colors as to form a picture of grandeur too beautiful for description.

We had proceeded along the bank but a short distance, when we perceived the bear on one of the small islands, where he had evidently gained a foothold while endeavoring to cross the stream, the current of which had proved too strong for him.

Even while we looked the hound broke out of the thick pine and hemlock woods that lined the bank. Reaching the water's edge he paused for an instant, then plunging into the stream he gamely struck out for the island, where the bear stood upright and at bay.

Reaching the island the hound crawled out on its mossy bank, then crouching low for an instant, he made a sudden dive for bruin's legs, which he seemed content to snap at. He repeated this maneuver over and over, nimbly dodging the blows made at him by the bear. We watched him at these tactics until we reached a point opposite the island.

By this time the bear was thoroughly aroused. His breast was covered with flecks of froth, and even above the roar of the stream we could hear his surly growls and the barking of the dog.

Fearful lest in his blind rage bruin might injure the hound we all opened fire on him with our Winchesters. We fired so quick and fast that the reports mingled into one continuous r-r-r-r-r-r. When, before I could see

what effect they had taken on the bear, I awoke with a start in time to hear the last sound of the alarm clock as it mingled with the rumbling approach of the first trolley car of the day. Great Scott! I had dreamed it all. Nevertheless I can thank FOREST AND STREAM for a hunt, even if it was only a dream, that will always awaken pleasant memories. And all for 10 cents.

WILLIAM H. AVIS.

NEW HAVEN, Conn., Dec. 26.

MISSSES OF PLEASANT MEMORY.

OFTEN, when thinking over my many hunting excursions and other incidents thereto, I try to make up my mind what shot I regret missing the most. Such reflections bring back to me floods of happy memories of the times spent amid nature's grandest and best scenes and pictures of every kind of game animal in the United States. I can see them now (in my mind's eye) and how they stood amid their grand surroundings, for I have shot them all, with the exception of the mountain goat and sheep, and these I have often been close to, but not close enough. When I get to thinking about it I get fevered with excitement and long to go through it all again.

Sometimes I say it is my first bull moose, then again a grand bull elk, and anon it is that pesky black bear. Again, it is that finest blacktailed stag among a band of four beauties—and so on and so on; for, brother sportsman, I am not ashamed to say I have made many misses; yet in justice to myself I must say that my hits and kills have exceeded the misses.

Now, I know that the shot I regret missing the most (I know of no keener regret for the time being) was in the fall of 1894. It was on a wet day on the Grand Marshes near Grand Lake, Newfoundland. I had succeeded by careful stalking on almost open ground in getting within 75 yds. of one of the grandest caribou stags it has ever been my fortune to see. He had a monstrous head of antlers, fully sixty points. It is only in Newfoundland that one can see such stags and antlers. I certainly never saw anything like it before nor ever expect to see such again. There the old fellow lay, not more than 75 yds. away, but unfortunately his harem lay around him, consisting of some ten hinds. I feel sure I could have pinned him in the shoulders, but my guide insisted on my waiting until he rose, but when he rose his harem rose with him (as if to do him homage) and surrounded him. I couldn't get in a shot without hitting a hind, and the upshot of it was that I only got two running shots and scored a clean miss. I think I shall never cease to regret missing that shot, and it stands out in relief whenever I think of the shots I have missed. I wanted those antlers, and if ever a man coveted what belonged to another I was that man, as I stood up to my knees in mud on that large swamp with the rain coming down and drenching me. You see, I was selfish, having already a fine set of antlers in camp.

Accounts of moose hunting seem to be coming in. I would like to add my little say. Howard Fuguet and I spent three weeks on the headwaters of the Shelburne River, Nova Scotia, in September. We each got a bull moose with two fine sets of antlers, besides getting shots at others. Almost every day we "called" we had answers, and sometimes two bulls would start to come at a time, but the cows were so plentiful they would "call" them back. One morning I had two bulls coming nicely from opposite directions, but unfortunately they met at the edge of the green woods, and of all the answering and racket they made I have never heard the like. They were each large bulls and neither would advance into the open. After a while we heard some cows bellow out and they both went back as fast as they had come.

I know of no grounds on this continent that are so easy of access that offer so good a chance for moose. The only trouble is that the cows are so numerous that the bulls will not leave them until later in the season. The country is literally tracked up with moose. This would be a grand place for still-hunting after the leaves are off.

Quail are quite scarce here in Florida this season. Some attribute it to a wet spring and others to some disease. Last winter they were quite plentiful here.

MELROSE, Fla.

A NEWSPAPER ITEM.

Editor Forest and Stream:

All the enjoyment of sporting pleasures that I have had for several years past has been furnished by your FOREST AND STREAM. And, considering its excellence and the certainty that once a week I can have an evening of real pleasure in its perusal, I am not certain that I would exchange permanently this FOREST AND STREAM for those of the North Woods.

When I was a boy we had no sporting newspapers, and I well remember the first item of hunting news I ever saw in print.

The Utica Observer was our family paper and I always made it a point to look at the picture of a ship under full sail, and read the legend beneath, "Ten days later from Europe;" and then skip to the heading of the doings of the XXVIII. Congress in their strife with the President, John Tyler. But on one occasion there was an item that I knew something about, and which ran thus:

"One day last week, John Robinson, in Fulton county, killed a full grown female panther in the woods about four miles south of Northville. The State bounty on that kind of game is \$30."

I knew John Robinson well, and also knew all about his killing the panther. But to see an account of the matter in print, together with the name of a man I knew, was a circumstance that added greatly to the laurels of the hunter.

The event transpired on the 4th of May, 1843. During the night previous there had been a light fall of snow, as often takes place as late as that in that northern section of the country, and John with his dog and gun went out to track game, which the dog scented as soon as he entered the forest, and in a very few minutes he treed something which John seeing only a small ridge of hair thought to be a raccoon and fired at once. But instead of a raccoon tumbling from the tree, a hideous monster, such as Dr. Butt might have called *Americanus horribillus*, swung into full view hanging to a limb of the tree. Having only a single barrel muzzle-loading rifle, John had good reason to be alarmed for his own safety, and accordingly he climbed a tree and began to load his gun, but in his haste he got too heavy a patch—probably two or three thick-nesses instead of one—so that the ball stuck fast a few

inches down the barrel. Like a true woodsman, John had the habit of prompt action, so he dropped from the tree and ran for home, where he told his father and brother Will that he had shot the devil, but had not killed him, for he was hanging to the limb of a tree and spitting and snarling like forty cats.

His father and brother took their guns and then went to the woods, where they found a panther lying dead at the foot of the tree, while the faithful dog sat close by unharmed. The ball had gone diagonally through the body, piercing the lungs. That panther had a mate which remained in that vicinity for several months. He was seen several times, and I heard him scream on two occasions.

I have seen in FOREST AND STREAM some expressions of doubt as to whether or not a panther does scream, but if those writers had heard in the night the screams that I heard I think they would have been willing to admit that a panther does scream, or else that John Robinson was right in saying he had shot the devil.

My father and some of the other men did not believe there was a second panther about, and argued that the noise was made by screech owls; but when two of these unbelievers had heard the noise, a party of them went out with their guns loaded for big game, just to satisfy the women and children, but their hunt was unsuccessful, although no such noises were heard afterward.

It is now many years since I roamed in the woods of that part of the State of New York and fished and swam in the waters of the Sacunadagua—not Secondago, as some modern geographers have it. In my time the local pronunciation of the name of the river was "Sau-can-dauger."

The name is evidently of Indian origin, but I cannot form any idea of its signification, but have often wished for some authentic information concerning that river and the adjacent hills. The John Brown tract of wilderness is, as I believe, at the northwest of Northville, but historians and geographers seem to consider that whole section as a sort of unexplored region. Often have I looked in FOREST AND STREAM to find some enlightenment about the home of my boyhood, but so far in vain, for sportsmen and tourists reach the Adirondacks by going directly south from Saratoga Springs by way of Lake George. But, with the permission of the editor, I may get some information yet, by writing what I used to know, thus inciting some up-to-date writer to show how much I am off.

F. Z. M.

ERIE, Pa.

A ROCKY MOUNTAIN BEAR TRAP.

WHILE on a hunting trip in Deer Creek Park, Wyoming, in 1886, I saw some bear traps not less remarkable for their simplicity and ingenuity than for their effectiveness. A glance at the accompanying sketch will give an idea of their construction. A rude pen is built of ridge pole pines, nailed or notched at the corners and thrown together on the same principle that a log cabin is built, except that as the work progresses each tier is laid a little closer to the center. When the pen is completed it is in the form of a truncated pyramid, 8 or 9 ft. high, and possibly 12 or 14 ft. square at the base, and with an opening at the top 8 ft. across. The last logs at the top are sometimes placed so as to turn upon their axes easily.

The pen is baited with a deer or part of an elk carcass and left for the keen-scented bear to discover.

When Mr. Bruin comes along he soon finds that there is no way to get at the meat except through the open top of the pen, and as the distance is not great he generally has no hesitancy in dropping down inside.

The old motto "Look before you leap" would be especially applicable in his case, but bears as a rule are unacquainted with proverbs, their time no doubt being occupied too fully with the exigencies of existence.

Hardly has the bear ceased congratulating himself upon his good fortune in running across such a well-ap-

pointed little dinner when he becomes aware that he is not in such luck as he imagined. He finds unexpected difficulty in getting away from the cozy corner and good dinner, and his pleasant dreams turn to dross as he paws ineffectually at one of the revolving top logs of the pen, while his hindleg seeks an evanescent foothold.

It takes him a good while to see the point and that his trunk and the hide thereof are held for payment of that dinner, and to realize that he is trapped. And meanwhile he expends a good deal of energy in trying to get to the end of that endless revolving log, and his temper is generally completely ruined when the hunter arrives.

These pens are designed for both black bears and grizzlies. Joe James, who constructed most of the pens in the park, told me that he had sold the privilege of killing a grizzly in one of them to a New York sportsman, who in the East bears quite a reputation as a hunter. He said that the grizzly presented such a savage appearance as to completely unnerve the sportsman, and that after firing several times and only hitting the logs of the pen, he (James) was obliged to kill the bear, timing the shot as nearly as possible with that of the so-called sportsman so that the latter might imagine he had killed the bear.

J. B. BURNHAM.

Small Shot and Deer.

FOX LAKE, Dodge County, Wis., Dec. 23.—One of your contributors in last week's issue wonders at finding bird shot in his venison. It is a common thing among hunters who use shotguns for deer to fill in around the buckshot with fine shot. This I often do, though I do not know as it improves the pattern any.

W. E. W.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

THE MAINE GAME SUPPLY.

BOSTON, Dec. 27.—Now that the shooting season of 1895 has closed, and the experiences of many hundreds of sportsmen in the Maine woods have become a matter of history, the time would seem to be ripe to speak of the existing game laws of that State and the matter of their enforcement. As everybody knows, the slaughter of big game during the past three months has been simply without precedent. No section of the State, however remote, but has witnessed the coming of the ambitious gunner, and few have left for home without some substantial trophies of the trip. Without doubt much the largest number of sportsmen from any one place who annually visit Maine are from Boston, and naturally it is in this city that the greatest interest in the continuance of proper regulations for the protection of game is found. In talking with men who have tramped, camped and shot through the forests of Maine for years, I find that many coincide in the opinion that a decided change must soon be made, principally in the enforcement of the laws, if the present well stocked condition of the forests is to continue.

The shooting of game "for meat only" by fishing parties in the summer is a practice very generally carried on throughout the whole State, and practically means an open season from May to January. This fact is conceded by many, and it is useless for the authorities to ignore it. In the great Aroostook country, at places like Patten, Ashland and Norcross, the number of wardens should be substantially increased. At these places they can be easily reached if wanted, and again are on the direct line of entrance into the great game region.

If the law allowing one individual to kill one moose, one caribou and two deer was applied to guides as well as to men being guided, probably the amount of game killed would be reduced nearly one-half. It is a well-known fact that a large percentage of the heads brought out of the woods by triumphant sportsmen are from animals shot by their guides. Thus in guiding several parties during the season these men exceed many times over in the animals killed the number allotted to them by law. This law should apply to the guide as well as his employer, and in fact, if an outsider went into the woods and shot two moose, one for himself and one for his friend, the guides would be the first to inform him that he had broken the law, at the same time reserving to themselves the right of doing the same thing without risk of penalty. Of course the sportsmen are largely responsible for this state of affairs, but it has grown to such proportions that some effort should be made by the Commissioners to stop it.

Again, the present practice of many gunners of cutting off the heads of big game and leaving the meat should be discouraged. A friend who lately returned from the woods tells me that the man who brought out his game told him that since October he had brought out eleven or twelve moose heads for sportsmen, the bodies of all but three having been left to rot where they fell.

It would be well also to devise some means for stopping the constant raids of French-Canadians over the line. These people kill many moose for their hides, and get back over the line into Canada without any fear of detection. An extra force of wardens would seem to be the only way to stop this kind of business.

I do not wish to appear too pessimistic regarding the future of the moose in Maine, but the animal has been chased to extermination elsewhere, and such seems to be the fate in store for him there unless a decided stand is taken to correct some of the abuses now directed against him. The published list of big game killed in the Aroostook region makes interesting reading and may prove beneficial to the railroad companies, guides and others interested in bringing a large number of people into the country, but it seems to me a mistaken idea, for no hunting region can stand the ever-increasing crowd of gunners that are influenced by these reports, and when the game is quite exterminated, as at the present rate it promises to be in a few very short years, sportsmen will seek new fields, and the money which now rolls into this splendid section of Maine will almost cease.

HACKLE.

Before these lines are published one of the greatest big game seasons the State of Maine has ever known will have been closed legally, Dec. 31 being the last day for the hunters. Through October and November there was more than the average of good hunting weather, with several good tracking snows, and the record of big game taken was remarkable, as has already been told. But December has proved to be a very poor month for the hunters. Indeed, there is to-day an absence of snow in many sections of Maine, and where there is no snow it is covered with a noisy crust. Such has been the case for a number of days, and the big game taken in December is likely to make a very small showing. I have lately heard from a number of interested parties—good guides and others—and they express satisfaction that the season is closing with no more slaughter. One guide writes me that he is really glad that the season is about over, and that in his section—Andover, Me.—there are a great many deer to "winter over." He does not believe that the stock is greatly harmed. Another guide and woodsman, from the line of the Aroostook Railroad, thinks that the deer left to winter will far exceed those of a year ago. Let us hope that such a report is universal. It is certain that December, often a very hard one for the deer, moose and caribou, has passed, and the supply is in far better shape than it could have been had December been a favorable month for the hunters. A prominent Boston lover of the gun said yesterday: "December has passed, and it has gone just right. The big game is still alive. Now let everybody look out that the lumbermen and crust hunters do not destroy the excellent prospects for another season."

In talking with a company of several sportsmen the other day, the suggestion was made that moose hunting methods have changed within a year. The practice in northern Maine now is for the guides to locate the moose when there is snow for tracking. The hunter is then notified, and with provisions for several days, carried by the guide, the hunt is begun. No moose in the woods can escape. The trail is followed as long as the day lasts, and guide and hunter camp where night overtakes them. The moose soon becomes footsore and must allow the hunters to approach. It is suggested that a number of moose have been obtained in this way this fall, and that though the record of moose slain in Maine is a long one, the stock has probably suffered badly. Other opinions on this subject would be of great interest.

Mr. Charles L. Bly speaks in the most delightful terms of his trip to Maine this fall for hunting. He was accompanied by his wife and Mr. and Mrs. H. P. Williams. The ladies did the cooking, and Edgar was free to guide. That he did it well may be inferred when it is said that the hunters got three deer, two bucks and a doe. Venison was in order much of the time, when not varied by the abundance of partridges they slew.

SPECIAL.

BANGOR, Me.—*Editor Forest and Stream:* Your correspondent Hackle is correct in his statement in your issue of Dec. 21, that the newspaper reports of the laws being properly enforced in Maine are far from true. I believe that there have been fewer wardens in our woods this year than for years past. I have personally traveled over a very large portion of country in northern and eastern Maine and neither saw a warden nor could hear of one being seen or heard of for the whole summer and fall. I did not see so many signs of summer killing of deer as usual, although I in one place found where three had been killed on one stream in the space of about six miles. Several moose had been killed in summer, and any decently smart warden could have found out who did it, even at as late a date as I was there. There was not so much hunting with dogs as in years past, but I heard dogs driving deer several times and saw one large party of men from Massachusetts whose guides told me killed four deer with dogs, and told me particularly about the dogs being carried in after the party were on the ground.

MANLY HARDY.

ADIRONDACK DEER.

TROY, N. Y., Dec. 27.—*Editor Forest and Stream:* I send you herewith detailed statement received by Forest, Fisheries and Game Commission relative to number of deer killed during the season in the Adirondacks:

"The reports received by the State Fisheries, Game and Forest Commission demonstrate that the fears of those who wish further protection are well grounded. These reports have been received from all but twelve counties in the Adirondack region, and these show, from conservative figures, that 5,083 deer were killed during the last open season.

"This number is under rather than over the exact figure. Of the total animals slain 2,699 were does. Thus it will be seen that the does shot outnumbered the bucks by 315. In Hamilton county the greatest slaughter took place, the animals killed numbering 1,406, of which 724 were does. In but two counties, Essex and Franklin, did the number of bucks killed exceed the number of does. The reports give these totals:

Counties.	Whole Number.	Bucks.	Does.
Clinton.....	85	42	43
Essex.....	468	250	218
Franklin.....	934	480	454
Fulton.....	64	23	36
Hamilton.....	1,406	683	724
Herkimer.....	508	225	283
Lewis.....	423	185	238
St. Lawrence.....	813	345	468
Saratoga.....	14	6	8
Oneida.....	40	12	28
Warren.....	282	107	175
Washington.....	46	22	24
Totals.....	5,083	2,384	2,699

The members of the Commission seem to be pretty well worked up in the matter, and I believe if an effort were made by all friends of game preservation the following results might be attained, viz: Changing beginning of open season for deer from Aug. 16 to Sept. 10; cutting short by one-half hounding season; prohibit killing of does for a period of five years; wipe out section 249; and fix opening of woodcock and grouse season at Sept. 1 or later if possible. Inasmuch as grouse may be killed up to Dec. 31, I would favor extending open season for hares to that date in all counties where a longer season is not already provided for.

M. SCHENCK.

BROOKLYN, N. Y.—*Editor Forest and Stream:* In your issue of Dec. 7 two of your correspondents refer to my communication regarding deer hounding. Musset says, "In nine cases out of ten the deer is killed." Undoubtedly his experience warrants his opinion. But the experience of many others leads them to an entirely different conclusion. I have interviewed several veteran Adirondack sportsmen, and they say that, if anything, I did not place the proportion of escaping deer high enough when I expressed the opinion that at least half of all the deer run by dogs escape.

Mr. R. S. Spears asks for particulars regarding the hunt I named, when a dozen men and as many dogs failed one day to secure a single deer. As he appears to ask the question good-naturedly, I cheerfully gratify him. It was just after the opening of the season and several independent parties were organized for a hunt on Utowana Lake. There was no plan for cooperation, but "catch as catch can" was the order of the day. Guides went into the woods to start dogs wherever each man chose and at different hours, and several times when it seemed a deer was coming to the lake he appeared to be diverted by the bark of a dog between him and the water. Most of the dogs were hounds, but there was one bird dog, and both sexes were represented. The combination proved most unfortunate, and it was generally agreed there were too many dogs.

Mr. Spears's last query is answered by the fact that, as a rule, people in any pursuit do not advertise a failure. Sportsmen are no exception. They prefer to speak of success.

J. C. ALLEN.

NUMBER FOUR, N. Y.—*Editor Forest and Stream:* I regret to learn that the State has bought so much land of Dr. Webb. It will be the signal for butchering the deer next fall if hounding is allowed by law. Dr. Webb gave permits freely on this territory, but no dogs were allowed to be taken on the grounds. The result is that deer have become very plentiful; so much so that almost any greenhorn could get his two deer by fair still-hunting. It is to the credit of Dr. Webb that we have any deer about here. They were all cleaned out by hounding in the fall, but during the year some would wander in from the immense tract of Dr. Webb, on which he allowed no hounding and kept a large number of protectors, so was able to enforce this rule, and deer became very plenty. I long ago became convinced that if any deer were preserved it would have to be done by private enterprise. Last summer I rented about 6,000

acres in Townships Nos. 3 and 4, John Brown's tract. I also prevailed on the Adirondack Timber and Mineral Co. to give me control of the rest of Town 4. So now I have control of about 30,000 acres of land. I complied with all the requirements of the game law relating to private parks. By employing these game protectors to patrol the territory during the hounding season I was able to prevent hounding within the park, and thereby saved at least 400 deer that would surely have been killed if it had been open to the public. Some days as many as four or five deer would pass through the lake here, driven by dogs from lands adjoining the park. But instead of being attacked and murdered as heretofore they were allowed to pass on unharmed. I inclose rules and regulations which were carried out to the letter. It has cost me about \$400 including game keepers. But I never paid out money that I got so much satisfaction out of as in this case.

CHAS. FENTON.

The following rules and regulations have been adopted for the government of the No. 4 Park and the private park belonging to the Adirondack Timber and Mineral Company, of which they have made me manager with full powers of attorney:

Believing that the greatest increase of deer will come from their being driven into the park during the hounding season from adjoining lands, no person having the right or permit to shoot on the park will be allowed to watch on the water or shores of any pond, lake or stream, with the intention of shooting deer driven to the water, or upon any runway, or anywhere within the limits of the park, that is being driven by dogs. All persons found upon the park during the hounding season with the implements of hunting will be considered trespassers. (See game laws relating to private parks.) This does not apply to persons passing through the park to hunt on other grounds. Neither to persons in the actual employ of T. B. Bassett, as manager of the Beaver River Lumber Company, in passing to and from the camp occupied by their employees.

No camp shall be occupied for the sole purpose of hunting. No dogs shall be employed to chase or in any way aid in the hunting of deer. This rule is imperative, as it is enjoined upon me by the owners of the park, and if the foreman or managers of the lumber camps that may be within the limits of the park will kindly assist me in the enforcement of this rule, it will be greatly appreciated. Persons having occasion to pass through the park with dogs will be required to keep them securely chained. Gamekeepers are instructed to do no injury to dogs that may run on to the park from adjoining grounds, but when practical catch and bring them to me, where they will be cared for and returned to the owner on proof of property, unless the gamekeeper is fully satisfied that the dog was purposely put upon the grounds, or the owner enters upon the premises with the intention of shooting deer.

CHARLES FENTON, Lessee and Manager.

DATED, No. 4, Sept. 4, 1895.

ABOUT BIG BAGS.

Editor Forest and Stream:

I carefully scanned the pages of FOREST AND STREAM of Dec. 28 for some voice of protest against the slaughter recounted in the previous issue, that of the 21st ult. I refer to the 264 ducks killed in one day by a Long Island market hunter.

Of course this matter is taken out of the realm of sportsmanship, since confessedly it is the act of a market hunter, and as such it was a matter of business. No one will have the hardihood to maintain that business is sport, nor would any one have the hardihood to maintain that such slaughter was sport, even if it were done by one professing sportsmanship.

I maintain that, even as a sport, killing must not be done to excess. There are excesses in everything, and the excess is what distinguishes the wholesome and the right from the harmful and the bad.

But considered as the act of a market shooter, was not this killing all wrong? Assuming that a market hunter has a right to make a living—and that every one will concede—is not the world open for him to make a living, as it is for every one else, without killing off the game which belongs to the people? If he kills 264 ducks in a day, is not that number more than is necessary for his livelihood in one day? Because a man is a market hunter, is there to be no restriction on the number of birds he may kill? Has he a right to kill so many in winter that he can lie idle all summer? Has a market shooter an inherent right to kill all that he pleases because he is a market shooter?

The ducks of the people of America are being gradually exterminated by the market shooters, and must the nation bow to the behests of the men who repudiate sportsmanship and who stand boldly forth as butchers? The sportsman acknowledges moral limitations as well as legal ones in his pleasures, but his self-limitations simply work to his own disadvantage, for the market shooter steps in and stops killing only when he can kill no more.

This matter of killing 264 birds in one day should be a rallying cry for the true sportsmen of America to organize and urge the passage of a law limiting the number of ducks that any one person can kill in one day. It is better thus to protect the interests of all than to submit to the impositions of the few.

If all the market shooters of the country were to kill 264 ducks in one day, and every day during the season, the number thus killed would be incredibly large, and the only reason that they do not kill so many is because they cannot always do so.

DICK OF CONNECTICUT.

BOSTON SPORTSMEN.

DAVID N. PRATT and C. W. Gammons, of Cohasset, Mass., have been having some good sport with the rabbits in the Halifax Swamp, which is located in that town. They have found the little jumpers quite abundant, and better still, they are of the long-eared variety, often called hares. Six very large specimens were the result of a day's hunt by the two gentlemen recently. Not a few foxes have been seen in the same locality within a few weeks past. For some years reynard has been almost extinct in that part of Plymouth, and it is gratifying to know he is returning to his old haunts. Mr. Charles Curtis started a fine fellow out of the woods at the rear of Scituate Hill, and with two fine hounds gave him a long chase, but finally lost him. Mr. Curtis has been very successful in his goose and black duck shooting at Lily Pond. He has a number of well-trained live decoys and owns the stands at the ponds. The ice has interfered with the shooting for the last ten days, and in fact the season is now practically closed.

F. L. Cressy, one of Boston's lawyers, is spending the winter near Saranac Lake in the Adirondacks. He is seeking restored health and has certainly gone to a good country to find it. He is occupying a part of his time in pickerel fishing through the ice, but I have not heard with what success.

HACKLE.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

"MADE A GREAT RECORD."

DETROIT, Dec. 23.—*Editor Forest and Stream:* In your issue of last week you had an item in regard to the slaughter of ducks. I inclose a clipping from the *Detroit News* which also bears on that subject. The question is how many years will Mr. S. be able to find 4,102 ducks? It may be needless to state that Mr. Scotten is a rich man and of course only shoots for "sport," but where does the "market hunter" come in? F. F. F.

This is the story: 4,102 wild ducks in thirty-five days is the record which Oren Scotten and six friends made during October and November in hunting on the St. Clair Flats and in Lake Erie. The six besides Mr. Scotten were William H. Dean, Sr., William H. Dean, Jr., of Richmond, Va.; Thomas E. Reeder, Patrick Marcott and Herbert Pierce, of Detroit, and another gentleman from New York. The entire party did not shoot every day. Sometimes only three would go out with the decoys. But a careful count was kept, and if anybody besides pot-hunters made a better record this year they have not been heard from.

Mr. Scotten was the host of the party and they lived on his houseboat, which he towed over a good portion of the lower lakes this year with his steam yacht. The houseboat was fitted with all the conveniences of a modern land house. The start for the first trip was made Oct. 16, and a run was made to the north channel grounds in Lake St. Clair. For sixteen consecutive days they shot ducks and then returned to Detroit for two days, going back to the north channel for seven days more. Later a third trip for five days was made, and still later a trip of one week to Lake Erie. On the night before the big blow of three weeks ago Mr. Scotten got the houseboat back to her winter moorings at Detroit.

Everybody who knows Mr. Scotten knows that whenever he engages in anything he does so at a pace which would soon tire out men who do not possess his wonderful energy. That's the way he went into duck hunting. Every morning shortly after 3 o'clock he was up and dressed and getting ready for the day's shoot. Arising at that hour was the easiest part of the sport, he says. The really trying part was to lay stretched in a skiff half a mile or so from shore with the ice-cold water swashing over him until he was drenched to the skin. Mr. Scotten was drenched in that way frequently, but he did not allow the wetting to drive him in during daylight, while there was a chance to bring down another duck.

The good points for duck hunting change with the wind, and for this reason duck hunters are always out in their skiffs by daylight to set their decoys. Mr. Scotten and his friends were usually out an hour or two earlier than the other hunters, and never missed getting their decoys set at the best points first. Some mornings they shot so early that when they brought a duck down they could not see it floating on the water on account of the darkness.

Every morning they had the decoys set and were concealed in their skiffs behind the blinds before 5 o'clock. They continued shooting until 1 or 2 o'clock, and then returned to the houseboat for lunch. After lunch they were out again until 6 or 7. Then, after dinner, they would start for the grounds where the mallard ducks come in at night from the open lake to feed, and would shoot by moonlight for a few hours. It would often be 10 o'clock when they returned to the houseboat.

"What did you do with the 4,102 that you shot?" Mr. Scotten was asked.

"Sent all that we did not eat to Detroit and gave them away to our neighbors. I sent one lot of six bushel baskets to Daniel Scotten, and he gave them all to his neighbors. Not more than a dozen were eaten by my own family."

The best record that Mr. Scotten made for a day with a punter was eighty-two. He is going to build a cottage on the north channel next summer and live on the duck hunting grounds hereafter all through the season.

IN AROOSTOOK WILDS.

DURING the summer of '94 I received a letter from Mr. C., a gentleman in Ohio, saying he had read with much interest an account I had written for *FOREST AND STREAM* describing the region around Oxbow, Aroostook county, Maine, as good moose ground. He had never hunted large game, but wanted very much to shoot a moose. We had a good deal of correspondence, resulting in my getting a rifle for him similar to mine and starting him late in November for my friend Peavey's. He did not get a moose on that trip, but was satisfied that it was a good place for such game. One day they cracked two to a thick spruce swamp, getting within 100 yds. of them, but as the snow was somewhat noisy and the trees loaded with it, they started the moose without getting sight of them.

Mr. C.'s courage was good and he wrote me, saying, "I shall go again next year prepared to stay a long time if necessary." He went again early in October of the present season, and had John Keating, one of Peavey's men, as guide. They first went to Cut Lake, some ten miles from Oxbow. The weather at first was unfavorable, then they had a couple of good nights, but failed to get an answer to their calling. From there they moved their camp several miles down Ulmacolus Stream to Dead Brook. Calling the first night at the latter place they had an answer almost at once, but the bull would not come. As it began to rain the guide advised waiting until morning. Calling again in the morning (which was the eighth day in the woods) they heard the moose, and about 7 o'clock the moose walked out to the brook about 150 yds. away. Mr. C. shot at him and he jumped out of sight. Getting into the canoe they crossed the stream and took his track, finding blood and where he had twice lain down. After following about half an hour they came to a small open bog, and had hardly stepped on it when the guide caught Mr. C. by the arm, saying, "Shoot." The hunter looked and saw the horns of the moose moving close to the ground, but not seeing enough to shoot at waited a moment, when the moose rose up 50 yds. away and stood slightly quivering. Mr. C. put a bullet in him just back of the shoulder, dropping him at once. Mr. C. wrote me: "I could not describe my feelings during the time we were following him or at time I shot, and I will not attempt to. It was the first time I had ever seen a moose, and as he stood in full view on the open bog I realized what a sight it was."

I was very glad to hear of Mr. C.'s success. I had advised to try that region, and he had courage to travel

a long distance to reach it. He was prepared to spend a much longer time in the woods, and could no doubt have killed a couple of deer and perhaps a caribou; but he started for home, saying, "I came to try and shoot a moose, and would have stayed a long time trying to do so; having killed one I am satisfied."

Again, he is one of the few of the many sportsmen who go after big game who will not bring out game unless of their own shooting. Last season when hunting with Peavey it was hard traveling, and Mr. C. not being used to such work, Peavey advised him to stay in camp while he (Peavey) cruised about trying to locate some moose, as the game had been hunted a good deal and it might take several days to find one. While cruising in this way Peavey started a large yard of moose a long distance from camp and killed one; also shot a bull caribou one day on his way to camp. When the time came for Mr. C. to go home, without having killed anything, Peavey said, "The moose and caribou I killed belong to you [both had good heads], and you must take the heads home with you." But, as Peavey wrote me, "I couldn't make him touch them."

Aroostook county is, or rather has been, a good place for large game. The opening of the Bangor & Aroostook Railroad has made it too easy to reach, and according to the accounts of game brought over the road (and which is not much over one-half of what is actually killed) it will be remarkable if the supply holds out. C. M. STARK.

DUNBARTON, N. H.

IN THE OLYMPICS.

SEATTLE, Wash., Dec. 5.—In a northwesterly direction from Seattle can be seen the Olympic Mountains, running for miles in all directions and filling to a great extent the area bounded by the Pacific Ocean, the Straits of Juan de Fuca, Gray's Harbor and Hood Canal. As soon as the first snow flies in the fall each sharp peak takes on a white coat, and as they are viewed in a clear day the sight is as beautiful as the most critical mountain climber could ask for. I was born in the northern part of Vermont, where our pride was the range of Green Mountains that rose in the distance like a great wall, but I must confess that the Olympics are far more picturesque and grand. For six years I had admired these mountains from a distance, and when the opportunity came for a closer acquaintance I eagerly jumped at it, and now only regret that I did not have time to explore the heights where the elk and mountain or blue grouse are found. Yet I had the pleasure of following for some distance into the forest and along the mountain sides the trail made by the Government surveyors three or four years ago when they first pierced the wilderness, and viewing at close range craggy peaks, the immense fir forest that covers the mountains and the snake-like Skokomish River that could tell, if it had a tongue, of many deaths in its cold, swift waters. Sticking out from the side of one of the mountains was a huge rock on which deer and elk appear once in a while now. Only a few years ago it was a common thing to see a fine buck standing on the rock in bold relief, gazing up and down the valley of the Skokomish. One day we were seated on the bank of the river at what is called Camp No. 4, when Stan Hopper, the most successful hunter of the Olympics, became reminiscent and told of a remarkable experience he had while trailing a large elk that he had seen on this rock. The snow was very deep, and it was only after a laborious climb that he reached the spot where the elk had appeared. The track led in a slanting direction up the mountain side, and he was plodding along when the idea came to him that a "pull at his old corncob" pipe would help him along on what he knew might be a long journey. He sat down in the snow and was just putting the match to the tobacco when a feeling came over him that some object was looking at him from above.

"Well, boys," said Hopper, as he took a look up the mountain, "I knew that game was near, but I was in a fix. Slowly I twisted my head around and there above me, their heads just visible over a shelf, were two deer. It is a hard thing to say why I calculated that the game would remain standing until I had lighted the pipe. I will not attempt to explain it. I simply kept one eye on the heads above me and finished the job I had started. Then the rifle jumped to my shoulder, the heads bobbed, and as the report of the rifle was heard I was in doubt as to having scored a hit. I started up a slide to see what I could find of my game, and as I did so a fine buck crossed below me on the jump. It was just like rolling off a log to nail him, and as he fell in a heap and rolled down the mountain side I said to myself that I had no objections to his going to the river's bank. Then I continued my trip to the rock shelf above, but could not see the two deer. Imagine my surprise, however, when they suddenly appeared coming around a rock along the narrow path over which they had disappeared. The surprise was evidently mutual, for they made frantic efforts to turn on the narrow ledge, and when I dropped the one further from me it went rolling down the mountain side in the same direction as the buck had taken. I was not over anxious for deer meat at this time, so I paid no more attention to the other deer and let it escape. The only way that I have been able to account for their taking a back track is that they ran into a pocket, and being unable to get up higher or continue their flight along the side of the mountain, retraced their steps in the hope of passing above me and continuing their journey to my left. Fortune favored me once more, for the elk moved slowly and I sighted it after a comparatively short tramp. A long shot it was, but I took the chance and had the satisfaction of seeing the monarch of the forest stagger, rush forward and plunge over a precipice to death. The old fellow finally stopped tumbling near the Skokomish River and within 40 rods of Maurice Hanson's cabin. He came out and helped me get the body over to his place and then we went up the river to find the deer. It did not prove much of a job, for they nearly reached the foot of the mountain and were within a few hundred feet of each other."

Having finished his story, Hopper threw a pitch pine stick on the fire, and said he thought he would take a short spin up the mountain to see if there were any traces of elk. In about two hours he returned with the intelligence that there was no chance of having any sport. As we went back to Lake Cushman along the river we struck a fresh deer trail, but darkness was soon upon us and we had to give up. I asked Hopper how they kept people from chasing deer with dogs in that section, and he replied in a laconic manner, "Shoot the dogs."

PORTUS BAXTER.

CHICAGO AND THE WEST.

The Death of Felix Payne.

CHICAGO, Ill., Dec. 21.—Readers of *FOREST AND STREAM* who remember the story of the Mississippi bear hunt, published in these columns last winter, will recall that one of our party at Bobo station was Mr. Felix Payne. Mr. Payne was also of the party in the Delta bear hunt in Mississippi, from which I recently returned, and of which extended mention has not yet been made. I looked forward to the writing of that story with interest, for I contemplated again saying some of the things I felt in regard to Mr. Payne, who on this hunt, as always, was so kindly and courteous to all, and especially to the strangers who were at the camp. I thought again, as before, that I had never met anywhere in all my life a man of whom one could write more unreservedly as a perfect sportsman and a perfect gentleman in every respect which that term implies. Now it is too late to say for Felix Payne the things one would have been ashamed to say to his face, so flattering must they have been. The sad news is just received that Felix Payne is dead, and beyond the reach of that human praise which could be the only human comment on his pure and noble life.

It seems that Mr. Payne was not in good health at the camp. He went home early in the hunt, being called away, he said, by the sickness of a relative. Alas! he too was taken sick, and in a short time he died of pneumonia. The burial occurred last Saturday.

Mr. Payne was a single man, whose plantation was near Capt. Bobo's, at Bobo station, Miss. He was only of middle age, and no one thought he had any but a long and prosperous life ahead of him. He was known all through the Delta as a quite, steady citizen, well-to-do, unostentatious, kindly and upright. He was one of those gentle characters from whom never a word of complaint or ill-nature is heard, yet against whom the most critical could never urge the least trait of weakness. He was as brave as a lion and kind as a woman, and a more lovable man never walked the earth, north or south or in any land. What his life-long friend and companion, Capt. Bobo, will feel over this is something one would rather not think about. They were as brothers, and neither would think of going on a hunt without the other. Bobo has lost his right arm, and more than half his heart goes with it, we may be sure. There is not a man who was with Mr. Payne on the late hunt who will now think of the hunt without this sudden and solemn conclusion of it ever foremost in his mind.

This is the Way to Do It.

The Minnesota wardens deserve a long, long mark of credit. They have done one of those things which people are in the habit of saying can't be done. Everybody knows that illegal game comes out of Minnesota, Wisconsin and Michigan—tons of it, especially this season of the year; yet everybody says, "You can't catch them." But they did. This is what the dispatches say of the matter:

"DULUTH, Dec. 20.—Seventy-five thousand dollars in fines is what the Arion Fish Company, of Tower, this State, will have to pay if the State can make good its case against that concern. This morning the game warden seized a car containing 3,000 ruffed grouse and a quantity of moose and deer meat which had been shipped to a New York firm by the Arion Company. Two previous consignments bring the number of birds illegally shipped up to 25,000, and the company will be prosecuted on each count."

That is the way to do it. Stop the sale of game. Never mind the weak men and the weak papers. Listen to the strong papers. Listen to the dictates of plain common sense. Stop the sale of game, and if you incidentally have to stop a few commission houses and cold-storage outfits, don't waste any tears over that.

Kekoskee Over Again.

Mr. D. J. Hotchkiss, editor of the *Fox Lake (Wis.) Representative*, called at the *FOREST AND STREAM* office here to-day. He says they are having Kekoskee over again up on Beaver Dam Lake in that country. That lake, about twelve miles long and a mile wide, is frozen entirely over, and many think it will freeze to the bottom. The farmers have cut holes in the ice and are harvesting bullheads by the ton. Mr. Hotchkiss says he saw thirty-six sledloads, with the wagon boxes full and heaped up, standing in one line there one day this week. The thaw has lowered the price of bullheads, and the output is less this week; but a cold snap will send the price up again. Mr. Hotchkiss says the odor of the dead fish is very bad already, but admits it is not from the dead fish, but from the offal left by those who have been cleaning the fish for taking away. I don't believe the populace need any encouragement to take away these imprisoned fish, and it is probably well enough that it is now too late to use dynamite in killing them. Mr. Hotchkiss asks the *FOREST AND STREAM* to send up a man and promises to show a wild and exciting spectacle at the fishing holes on Beaver Dam.

The Fox River Voyages.

Mr. Geo. Sandler asks *FOREST AND STREAM* the following questions:

"CHICAGO, Dec. 14.—Is Fox River from McHenry up north passable by small boats at all seasons, and what towns are lying along the river for good stopping places for parties that would undertake such trips? At what season is Fox River at its best as to water level? Are there any good maps in the market showing said river with towns shown to advantage? At what points is good fishing, and if different kinds of fish, what are they?"

The highest water in the Fox is of course in the early spring, but one should wait till June for the pleasantest time to make the Fox River run. He can get down all right with skiffs from Waukesha, but will have to fight a good many weeds by the middle of June. The usual starting point for floating trips on the Fox is Burlington, Wis. From there on down one is not far from all the towns along the Wisconsin Central line—Trevor, Silver Lake, Antioch, etc.—though the stream winds about much and one would hardly wish to visit any of the towns, but would need to camp in order to be independent, as a trip of some miles to a sleeping place is not desirable at night. If one did not wish to camp, it would be better to stop at the farmhouses, and this could be done very well. The map firms carry county maps for Wisconsin, but I never found these maps of much use. The best way is to go out and map the country for yourself, then you get it right. The Fox is one of the best fishing streams in this region,

and has a good supply of small-mouth bass, also large-mouth bass and some wall-eyed pike. Minnows are hard to keep alive. Frogs are fairly good for bait. Crawfish, the spoon and the fly have been found killing.

Ski Wax.

Montana, of Helena, Mont., asks what is the best wax to use on *skis*. Billy Hofer knows more about this than anybody, but tastes differ as to the question. In the mountains we used white wax or paraffine a great deal, but mixed it preferably with lard oil when we could get it. A wax candle makes a very good wax, and we carried them as the handiest form of *ski* grease. A little beeswax adds polish to the *skis*, but one should not use too much, as you can get *skis* too slippery to go well in practice. A plain, unvarnished tallow candle will do if one has nothing better. Perhaps the best wax for all purposes could be made by using two or three paraffine candles or the equivalent in white wax, with one tallow candle or the equivalent in lard oil or some such animal grease, and about 1oz. or less of beeswax, or not more than one-fourth beeswax for the total mixture. This should be heated very hot. The *ski* should also be heated hot over an open fire—it will not hurt to scorch the surface, though it should not be charred—then the wax should be smeared on with a rag while hot. Lastly a hot iron—preferably a smooth flat-iron—should be run over the surface of the *ski*, to heat the grease in. The idea is to get the wood saturated, and it takes some time to get a new pair full. After several treatments the grease makes a glassy coating on the surface of the *ski*, which should be put out in the cold to get it well chilled before use. This coating gradually wears off, according to the condition of the snow, but after *skis* have been well treated in this way they get easier and easier to keep in order. The use of the hot iron lays the grain and makes the *ski* slippery. Some *ski* men use pine resin and some use tar, and these may do if the weather is cold, but the wax above mentioned is safer to stick to.

About Christmas Trees.

To-day Fay Buck, of Mercer, Wis., with whom I took the trapping trip last winter, came into the FOREST AND STREAM office here, looking as big and husky as ever, only he had on store clothes. Fay tells me that he brought down 7,500 Christmas trees for the Chicago market. This is an industry of which I had never thought before and I did not know it was such a big one. It was rather startling to learn that he only gets about 5 cents apiece for Christmas trees of a fine quality. I wish some man who has to buy Christmas trees for his own private consumption would let us know what he has to pay for them after they have passed through the hands of the middleman. I should guess over a dollar anyhow. This isn't treating Fay right. He is bringing joy into too many little hearts to get only 5 cents a Christmas tree.

Fay Buck reports a great many deer up his way this season and not so many hunters as we have heard from elsewhere. He says he heard of three men being shot accidentally, taken for deer, up near Hurley—perhaps not all new cases besides those already reported in FOREST AND STREAM. He says Frank Brandis is well and happy and is out now trapping mink and rat. They caught in all seven otter and eight beaver last season. Fay brought down to me the skull of the big lynx we caught and tried to photograph last winter. He reports a good season of muscallonge fishing and says the Buck Hotel on Turtle Lake is in good shape for visitors for next season.

Arkansas not Encouraging.

From Mr. Jos. Irwin, at Little Rock, comes word that news of the Arkansas game crop for this year is not encouraging on the whole. Mr. Irwin says the duck shooting in his part of the State was a failure, though the clubs in the eastern part of the State reported good sport. He says that along the Arkansas Valley covers he has had good quail shooting, but that the general report says quail are very scarce where the snow lay so long last winter. Still, the State has more grain than ever planted before, and the birds this fall are in good condition.

Wild Beasts for Sale.

The commissioners of Lincoln Park, Chicago, have authorized Superintendent Alexander to go East and offer for sale or exchange ten buffalo, six elk, and five lions. The park has now seventeen buffalo in its herd, and more elk and lions than will stay in the boxes. The lions are all guaranteed to eat peanuts, and I don't see why there isn't a bargain in this for some Eastern man who wants household pets. This is a good big game country mere.

From Texas.

Mr. E. S. Rice, agent for the Du Pont powders in the West, and Mr. W. L. Shepard, also of this city, and president of our State sportsmen's association, are just back from Texas. They visited Galveston, Rockport and others of the Texas Coast cities, though too hurried to get much duck shooting. At Waco they were met by Mr. O. W. Lippincott, son of Mr. Lippincott, of Fox Lake hotel fame, and at Waco they had good quail shooting. They enjoyed very much their sojourn in the Lone Star State.

In Europe.

Mr. John Carse, of the boat department of the big firm of Thos. Kane & Co., this city, is absent in Europe on business for his firm and will be gone for some weeks. Mr. Carse can well represent the sort of young business men there are in this country.

But it Was.

Mr. Roth, of the John Wilkinson Co., Chicago, who was mentioned earlier as a sufferer from an operation for appendicitis, is now well and about again, looking better than one would think. He says he didn't know it was loaded.

The Horrors of War.

I should, for certain reasons—mainly sympathy for England—regret to see the United States and England plunged into the bloody struggle which it now seems we are going to have about next week; yet if this thing has got to happen, I wish to serve notice on Mr. Noel Money, of Oakland, N. J., that immediately upon the declaration of hostilities I shall move upon his works and endeavor to secure as my personal loot the very excellent pair of leather riding breeches he wore on his late Southern trip. Of course I wish to be courteous and diplomatic, but there is no use disguising the fact that this country and

all of us patriots must stand firm, and if it comes to war I am going to have them pants.

The Possum Club.

The Possum Club has slumbered duly since last winter, but is about to wake up for its winter season. The grand annual dinner by Bill Werner will occur Wednesday, Jan. 8. There will be a very pleasant meeting of a dozen or two optimistic possumists. I wish to suggest to Mr. Werner that the *fin de siècle* possum must have a big baked apple in its mouth when it is served on the table—the head being left on the fowl. This I have recently learned in the South. A possum is not a legal tender in the South unless it is served with an apple in its mouth.

Albino Quail.

Dr. W. D. Taylor, of Brownsville, Tenn., with whom I have just had the pleasantest quail hunt I ever did have in my life, has, since my return, killed on our shooting grounds there and sent up to me for mounting one of the most peculiar and by far the handsomest albino quail I ever saw. The bird is of a very snowy white where the albinism has taken effect, but there is none of the slatiness of plumage one sometimes sees. The dark-brown feathers stand out in a few spots in perfect contrast, and there is one wing quill which is quite black. The back is dotted with a few dark feathers which show well against the pure white of the main plumage. This handsome specimen Dr. Taylor kindly presented to the FOREST AND STREAM office, where I am sure it will be prized very much.

National Association.

A meeting of the executive committee of the National Game Bird and Fish Protective Association was held at the office of the president, Mr. M. R. Bortree, Friday evening. Present: Messrs. F. S. Baird, F. E. Pond and E. Hough, of the committee. The main business was the postponement of the annual meeting, which is set now for the second Wednesday in February next, thirty days later than the adjournment date. This brings it on Feb. 12. Mr. Baird will draft a bill which the Association hopes to have presented to Congress, advocating an amendment to the interstate commerce laws now existing, so that it shall be unlawful under those laws also to ship game or fish contrary to any State law. It is likely that the National Association will incorporate at its next meeting. From now on there will be frequent meetings of all the standing committees (executive, finance and law) in the evening on Fridays, and those present will eat dinner together down town and discuss Association affairs at table and after. This will save time from business hours, when it is hard to get a committee together.

Good Shoeing.

The snowshoeing was good last week along the Des Plaines River, just west of the city. The snow was a foot and a half deep or more then, but rain has taken it all off now.

There has been received at this office advance notices of an important new work on Norwegian Immigration.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

Quail in North Dakota.

FORT RANSOM, North Dakota, Dec. 21.—*Editor Forest and Stream:* While reading E. Hough's story of "How Fur is Caught," page 509, I read: "Who would look for quail in North Dakota? Yet E. Bowers, of Fargo, in the Red River valley, killed one in a plumb thicket, a few years ago, south of Fargo, the only one ever seen in that country."

Now I would say we have quite a few quail on the Cheyenne River, at Fort Ransom, about seventy-five miles southwest of Fargo. I saw them the first year I came here, fifteen years ago, and every year since.

They do not seem to increase or decrease. Last winter I saw one boy with nine and another with sixteen birds. They are not shot at as far as I know, but I suspect that the cats and mink keep them down when they come around the farm buildings in the winter. Four years ago I saw seven birds in my garden (this was I think in the month of May); where they came from I am at a loss to know. My home is three miles from the river; they came from the south; but there is no timber or brush for hundreds of miles south of us.

Cottontail and jack rabbits are thick and we have fine sport through the winter, hunting them with the .22cal. rifle. Chickens and other grouse are fast disappearing. It will be some time before they get so thick again after such fearful hailstorms as we have had this past season.

I killed my five deer this last November, four bucks and a doe. It was the first deer hunt I have had in fifteen years, and I enjoyed it very much. One of the heads is a beauty, and I am having it mounted to hang up with a blacktail buck's head, the only one I ever shot.

J. F. H.

About a Name.

WALTON, N. Y., Dec. 2.—*Editor Forest and Stream:* I have been a reader of FOREST AND STREAM two years, and expect to read it as long as I am able to purchase it. I call it a converter of pot and all other illegal hunters if they read it a while, for no man can follow its columns, if he be a pot or market-hunter or fisher, and not be converted if he has any conscience at all. But it is not of this I mean to speak. What I would like to say is this: I have followed Mr. E. Hough all through the Yellowstone Park on his winter trip, his good work in Mr. Blow's defeat, his trips South—all his work for the past two years—and find them interesting and wish they could have lasted longer. In his Southern trip, in his visit to Mr. Bobo, I see he calls the negro a colored man; but when he gets as far as Quarantine he says his "nigger" talks French; and he has a great deal of "nigger" until the cooks, Jim and George, tickle his palate with nitro coffee and mullet and shellfish, then "the two colored servants." Now don't you think it sounds odd? "Negro" is one letter less to write, and sounds better to me; for I am a descendant of that race myself, and there are several of us who take FOREST AND STREAM and like to peruse its columns, and even to the ads. I read it all. I am a believer in it. I often sit and think, since those boys wrecked the passenger train, that if boys could be convinced that a paper of this kind would be of more benefit to them than blood and thunder novels, and followed the teachings of it, there would have been no train wreck, and they would

be free to-day to roam the woods or follow the brooks the coming spring. If you want to read adventure and good, sound reading, try FOREST AND STREAM a while. I was persuaded to do the same, and here I am in the same old rut and don't want to get out of it. GEO. BRUCE.

Mrs. Giles does for a Bear.

MR. AND MRS. F. S. GILES, of New York, who are visiting at Mr. J. H. Hunter's, Havelock, went out on a bear hunt Monday morning early, and Mrs. Giles had the rare good fortune for a lady of killing one that weighed 255lbs. She used buckshot and killed him stone dead at the first fire. They were only about 20yds. apart when she shot him. They were about three miles from Havelock station.

The bear was being run by Mr. Hunter's dogs. We imagine the hide of that bear will be kept a long time as a memento of the event.—*New Berne (N. C.) Journal, Dec. 25.*

Sea and River Fishing.

RED SALMON.

I THINK it has been remarked by some of your correspondents—Judge Greene, Mr. Cheney and others—that it wouldn't do just yet to close the salmon book with the idea that the information concerning the species and habits of this noble fish had been completely harvested. I never took very much interest in the subject until I came recently to the coast, for I had never had opportunity to play or study with the fish, but being thrown among them quite frequently of late my curiosity, interest and enthusiasm have been aroused, and from the day I speared my first salmon with a stick as it was swimming up the creek until I played him to the gaff with rod and reel for 'n hour 'n half, or such a matter, I have been trying to learn something about him or them. I am just in the primer yet, but I have learned some things, and one is that there are red salmon as well as Chinook, silver, dog, blueback, Tyce, steelhead, calico, and for aught I know, gros-grain, mohair and worsted; for a paper lately stated—I think San Francisco or Seattle—that there were, if I remember correctly, twenty-seven kinds of salmon on this coast, but we'll make it twenty-five—I'm not particular about two.

But about this red variety. He has been running in Hood's Canal since September last. Whether he comes at other seasons I know not, but I first noticed him jumping among the silver—a common sight among the residents along the canal in the fall. Later I found him running up the creeks among the dog, and it has been my impression, I admit, that he was a sport from some other variety caused by some peculiar environment, length of time from the ocean, or in fresh water, or some other cause, yet he might be a distinct variety. He is handsome enough at all events to deserve a beautiful name all to himself, and I suggest that we call him the cardinal. I say "he," for though I have opened several I have found no female; but I have made no exhaustive search, for the fish have not been very plentiful, only now and then among the hundreds of dog have I observed the red. In size they have run from 15in., maybe, to 30 or more. I do not think I have noticed any smaller than 15in., though there may have been some more than 30in. I have no doubt there were.

Let me describe one which I shot for the purpose of examination while after ducks one day. It is not all of ducking to duck, you will observe. This is a country of surprises and wide possibilities. The specimen was 27in. long and 5½in. deep, back to belly, and very symmetrical; a male; weight 5½lbs.; a very pronounced hook-nose, with regular dog salmon teeth; tail small just forward the caudal fin, not truncated; color a deep rich cardinal on sides and belly, shading into a rich brown, black spotted, within 2in. of the back; a strip of red 2in. wide extended laterally across the gills and face, narrowing to within a ¼in. of the eye; other parts of head brownish black; fins dark, tinged with red.

In some respects this fish was different from others I observed, which were not so rich or solid in color, and which were as perfect specimens of salmon as ever swam, having neither hook-nose nor prominent teeth. These red salmon running with the silver in salt water took the spoon well. I have seen them white, pink and red meated. Fishermen attribute this difference to more or less protracted stay in fresh water. The meat of the above described specimen was pale flesh color, with here and there spots of light red. A resident tells me that these red salmon have been long known on the canal, but more numerous this year than ever noticed. When they leap into the air and the sun's rays strike them right, they are a "thing of beauty" indeed. Their leap is similar to that of the silver, straight up or very nearly so, whereas the leap of the dog is not far above the surface, at an acute angle therewith, and it leaves the water on its side. I have seen the silver leap ten consecutive times, good high jumps too. This is unusual, but it is by no means unusual to see them leap from four to seven times in rapid succession. When there is a big run on and the fish are feeling pretty frisky, the sight of hundreds of silvery beauties flashing in the air amid the spray is a most inspiring one, and calculated enenmost to cause the spirit of Uncle Izaak to rise up and whoop.

If this ruby subject is of interest I will try and gather other facts relative thereto.

O. O. S.

WASHINGTON, December.

Southern Massachusetts Fish and Game League.

REPORT OF THE EXECUTIVE COMMITTEE FOR THE YEAR
ENDING NOV. 12, 1895.

DURING the past year very little has been attempted in the way of fish legislation.

Mr. Kelley again urged the passage of a bill which would permit him to use nets in Buzzards Bay for the purpose of supplying his vessels with bait. This was opposed by this Association, together with the Old Colony Club and the Boatman's Association. It could not be shown why such permission should be given to him without establishing a precedent for any and all others who should apply for it, and the committee of the Legislature reported adversely upon it, as they did also upon the petition of Mr. Hoxie for legislation against seines, nets and pounds in the waters of the Commonwealth other than Buzzards Bay.

We are of the opinion that no further legislation is necessary to protect the fisheries of Buzzards Bay, but we have

reason to fear that attempts will be made to repeal the laws which have been enacted against the use of nets, weirs and seines, and open the waters of the bay to any and every kind of fishing. Were it not for this, we should believe that all the purposes for which this league was formed had been accomplished, and its further continuance become unnecessary.

That the Dartmouth and Gosnold fishermen will not make some effort tending to the continued use of their weirs and pounds is hardly to be believed; at all events, the chances that they may make the attempt will justify us in guarding well what we have with so much difficulty secured.

We are confident that since seines, nets and pounds have been so far prohibited, the fisheries of the bay have shown a marked improvement, and we are equally confident that if the migrations of fish are not interfered with, it will not be long before the normal balance will be restored.

Officers elected for 1896: President, Dr. Arthur Ricketson; Vice-President, Robert Bennett; Secretary and Corresponding Secretary, George H. Palmer; Treasurer, Dr. Henry M. Knowles. Executive Committee: The President and Secretary *ex-officio*, Robert Bennett, James H. Tallman, Dr. Henry M. Knowles, Arthur Ricketson, President.

GEO. H. PALMER, Secretary.

Wholesale Murder Suspected.

It was dusk on Thursday evening when a woman walked along the road near Pompton Lake, at the point where stands a little house adjacent to where the Oakland road joins the road from the west. Suddenly her attention was drawn to mysterious figures gathered close to the edge of the water. There were three men with a lantern. One of them cracked the ice with a stone and then the three held a consultation. The woman could not see what was being done, but her suspicions were aroused. Looking about she saw a large truck standing in the road a short distance from where the men were. The men went to the truck and removed some articles which seemed heavy, as it took two of the men to carry each one while the third held the lantern and lighted the way. The suspicions of the woman increased. With bated breath she watched the men from a safe distance, and she thought that she saw them putting something into the water; this was followed by some splashing and then one of the men cried out in a voice loud enough to reach the ears of the woman, "Be sure to put them all under." This was enough for the woman. She felt certain that bodies of human beings were being stowed away under the ice, and with a wild shriek of "Oh, my God!" she fled up the road and to her home. The men who aroused these horrible suspicions were employees of the Fish and Game Commission. The heavy bodies they removed from the truck were large cans containing fish, and the men were anxious that every fish should be saved.—*Hartford Post.*

The Kennel.

FIXTURES.

BENCH SHOWS.

Feb. 19 to 22.—Westminster Kennel Club's twentieth annual dog show, Madison Square Garden, New York. James Mortimer, Supt.

March 3 to 6.—City of the Straits Kennel Club, Detroit, Mich. Arthur D. Welton, Sec'y, 25 Larned street, West.

March 10 to 13.—Chicago.—Mascoutah Kennel Club's bench show. John L. Lincoln, Sec'y.

March 17 to 20.—St. Louis Kennel Club's show, St. Louis. W. Hutchinson, Sec'y.

April 20 to 23.—New England Kennel Club's twelfth annual show. D. E. Loveland, Sec'y.

FIELD TRIALS.

Jan. 20.—Bakersfield, Cal.—Pacific Coast Field Trial Club. J. M. Kilgariff, Sec'y.

Feb. 3.—West Point, Miss.—U. S. F. T. C. trials. W. B. Stafford, Sec'y.

Feb. 10.—West Point, Miss.—The Field Trial Champion Association's first trial. W. B. Stafford, Sec'y.

Sept. 2.—Morris, Man.—Manitoba Field Trials Club. John Wootton, Sec'y.

ME AND DOC.

Doc was on his way home from the trials at Newton, N. C., and wanted to shoot a little bit, having tired of hearing "Point, judge!" and an occasional shot, without taking a hand in the shooting himself.

Doc talks plain, and said to me, "Some folks wrote that there were no birds on the grounds of the Eastern Club at Newton. Now, I saw the work in the trials, and plenty of birds were found, especially when a brace were hunted that had any experience on game and wanted to find and point the birds."

Doc's a funny man. He told me confidentially that the most perfect work done during the week was when Shad, in the Members' Stake, saw a black, white and tan cow pointing a covey of pea vines and promptly backed her; and another time, when Revenue tossed a rabbit in the air, caught him in his mouth, and let him go just for the fun of racing with him to a pine thicket.

Saturday morning, when me and Doc were about to start out on our hunt, he did not look well; the horse he was going to ride had one shoe off, and the saddle had no girth. Doc said he was a poor walker, and seeing a big gray horse, a sort of cross between a giraffe and a Percheron mare, belonging to me, a suggestion was made that he ride this horse and let me walk, and finally, after some parleying, Doc said "All right." The day was perfect for quail; no use telling about it, a sort of day when you "just find 'em."

The dogs Jay and Kay, like their masters, had enjoyed a good breakfast. The darky carried the camera and the lunch and led the horse down the road till we struck the fields.

The dogs were let go; both ranged well and wanted to hunt, and after going up the ditch, across the hill and down the bottom, we "sorter" watching them, Jay shot into the briars and rushes along the creek bank and pointed. Doc did not think birds were there, but they were. A big covey got up and scattered in the weeds and open woods. Several points were gotten on singles. Kay, a fine young pointer, not well broken, flushed and chased everything for a time, but we did not get many shots. In working toward a pine thicket where some singles were, Jay pointed another covey, but it was run into and flushed by Kay. Then going back again across the creek the dogs were found on a point, Jay pointing and Kay backing beautifully. The birds were followed across the hollow, into the open woods and down the ditch bank, but, strange to say, we could not find the singles, and only found one bird.

We then saw a fine piece of work by the dogs. They were hunting well and intelligently, and in going through a big open stubble both made game but nothing found. They were lost for a few minutes, and when found Kay

was pointing and Jay backing. The pointer was rigid, his muscles stood out like those of a trained athlete, and his head was raised as high in the air as he could get it, and with his tail pointing skyward he looked as if he owned the world and like the king he will some day prove himself to be. Doc felt good, and with a big laugh said to me, "This is worth coming 500 miles to see." He got a good picture and then set the pointer and the camera back by the darky.

We never saw birds keep quite so close, as after the covey was flushed, they settled in the edge of some wire grass along the side of a hill near a fence row, close to a thin piece of small trees. We walked and hunted all along this place over and over again and so did the dog. Finally we walked up several, each at different times. Coming from the same place, the dog could not smell them in the least.

Doc has a patent on getting on and off a high horse. He sits on the horse, gets hold of the stirrup, lets it out as long as possible and crawls down, and when he wants to get up his stirrup is low to the ground, so he does not have to lift his foot high to climb up again. No man except a Jerseyman can use this method, so Doc says. He tried to cross a ditch, a creek, a briar patch, and duck his head under a locust tree with thorny branches, all at the same time. After some foreign explosives of the Doctor's own making and some laughter, he was finally extricated. After crossing the creek, he planted himself on the bank and said he would rather eat the lunch than carry it, and said also that he was going to rest an hour, and he did it!

After we ate lunch the dog made game within 80 yds. of a darky's cabin, the owner standing in the door and asking us if we had found the birds that "used" about his house. Just then Jay pointed and a big covey was flushed, which scattered in the broom sedge between some thick pines and oak woods. Some good work was done on singles and a couple of clean misses made.

In working these singles the dog made game, but seemed unable to locate well. One of us flushed the covey near by and the birds were followed to the creek bank; the cover however was rough, so after killing a couple of birds Doc said, "Let's find another covey." The dog got tired of working hard for half an hour and finding nothing, and the sun was shining pretty hot.

We soon found a nice covey, however, in the open stubble and Jay pointed them well. The birds were small, with a few old ones mixed with them, and when we found this out, though they were nicely scattered in open pines, we let them off.

Doc was now shooting in good form; he had his second wind and seldom missed.

Jay now flushed a big covey that settled along the lower edge of open pines and grass. A number of pretty points were made and some good work done with the guns, when going across the big road the dog pointed a covey which scattered in thick weeds along the edge of a swamp, and as they were walked up Doc bowled them over. He chuckled to himself every time the thought came into his head that he had a horse to ride back on. Well, about this time he was in the field just above the road. There was a steep embankment down to the road, and he did not care to risk depriving his patients of their family physician; so he said, "Catch the horse as he comes down," and gave him a cut with a switch. He was not caught, and made a bee line for home, and he was not headed either! To say that the "medicine man" looked blank was putting it mildly. If by mistake he had given his best paying patient a dose of poison he could not have looked worse. He collapsed completely, and the only thing that brought him round was, "Where is Jay?" He said he saw him going up through a cornfield, and we followed him at once.

There was a deep ditch ahead of us bordered with briars, and we almost fell in, and had a hard scramble to get out of it. We found the dog pointing again on top of the hill in the edge of a stubble field. My! What a covey was flushed. We both missed clean. The birds scattered nicely in the brown sedge not far off. We then had some splendid shooting on singles, and as it was growing late and we had three miles to walk, we started for home. Across the meadow and over in a big field Jay was making game, but not locating quickly enough, and working out of our line of direction. He was called off, but soon after pointed a large covey. We killed two, but did not follow them. Going through the woods and over into a small stubble field, Jay worked by foot scent and came back behind us and pointed his last covey for the day. We gave them one shot, called the dog to heel and quickened our steps toward home. The rosy tints left the sky, the moon glistened on the leaves, the lights glimmered a welcome from the windows, a big blazing fire, a hot supper, a kind of happy, contented, half-weary feeling, a sound sleep, and the Doctor's last day's hunt of the year is over.

TAR HEEL.

Ranging.

FIELD trial clubs have succeeded in doing a great deal to encourage the breeding of wide-ranging dogs. Wide ranging is one of the most important points in a high class dog, but if his performances in that line are not under control they will not recommend themselves to the sportsman who wants to enjoy good shooting. It is because many field trial dogs, though they range wide and go at a "killing gait," fail to do good bird work, and don't hunt where they are wanted to, that many men say that they are no good for shooting over. If a dog has not been taught to range to hand (that is, hunt where he is directed) and beat out his ground with judgment, and without losing time in watching or coming in to his handler, he is a nuisance, and unfit to shoot over.

A dog ought to be taught to range just as much as to be stanch on point or anything else. On the prairies or in any open country it is very easy to teach a high class, intelligent puppy to range right; but in such ground as we usually find in the South it is difficult and takes a great deal of time. I do not think that a Derby puppy ought to be expected to range correctly; if he points, backs and is reasonably obedient, that is enough to expect from him, and too much ranging drill would be liable to spoil his natural inclination to range wide, but an all-aged dog ought to be under perfect control and range wide or close, as the nature of the ground requires. It is impossible to lay down any rule as to how far a dog should range under certain circumstances, except that he should not keep out of sight for any length of time or too far to hear the whistle.

C. E. McMurdo.

A REVIEW OF THE YEAR.

In the year which has just passed there have been many changes in canine interests from a competitive point of view, both as they relate to the bench and the field. Field trial interests in particular have undergone great changes. Nearly all the field trial clubs east of the Rocky Mountains suffered financial loss in holding their competitive events, many of them being brought face to face with serious deficits. In this connection it is proper to mention that FOREST AND STREAM many months ago called attention to the fact that nearly all field trial clubs were giving larger prizes than they could afford, and that sooner or later their erroneous financial management was sure to end in a deficit which in time was sure to dampen the enthusiasm and club interest of the members or cripple the club, or even disorganize it. Without going further back than the past year there are lessons enough to show that the financial methods of field trial clubs need remodeling.

The large prices which were demanded and paid for setters and pointers a few years since no longer exist. Undoubtedly the large prices were harmful to breeding interests in the end, since but a few relatively could enjoy such expensive luxuries, thus gradually the sport grew out of the financial reach of the men of ordinary means.

To restore the sport to a healthy, sound basis the prizes must be made smaller and the entry fee reduced accordingly, so that it will be within the means of the average sportsman, and so that the clubs also will thus have a reasonable chance of "paying out."

FOREST AND STREAM clearly pointed all these things out long ago, and while they were admittedly true, the competition of the field trial clubs for patronage prompted the risking of chances which were not in accord with sound policy. Now that such systems have worked out their legitimate results, the times are favorable for all the clubs to adopt a new and sound financial policy.

In last January, when Mr. P. T. Madison, the secretary of the U. S. F. T. C., read his report at the club's annual meeting, the first paragraph was as follows: "In making my annual report I am pained to say the past season has been a disastrous one for field trial clubs. The great falling off in entries and starters made it difficult for clubs to get through and survive," etc. This of itself should convince field trial managements that the old systems of finance, which were good in their time, are not good under the new and changed conditions of field trial matters.

In this connection the professional trainer holds that the prizes are so small now that even if they win they do no more than pay expenses. This must be taken more as a general statement, and as such bearing on but a part of the case, for at all times there can be but few winners as compared to the total number of handlers who compete. To join in the competition is quite as expensive to those who lose as to those who win. But, aside from this, the records show that handlers win much more than their expenses. This, however, is a perversion of the issue, for after all field trials are not gotten up solely with a view to paying the expenses of the winning handlers, nor is the money to be considered all the value they receive out of it. They have much advertising which adds greatly to their regular business; they often make sales at the trials; the value of the winning dogs is increased; general interest is stimulated, which in turn makes business for the handlers. If the entry fees are reduced it will make it much easier for the handlers who lose as well as for those who win, and for dog owners in general. Surely the interest of all concerned is the real interest to consider.

The Southern Club canceled its contracts and declared its February trials off recently. If the Continental Field Trial Club had run at Newton in November last it was sure to lose several hundred dollars. The United States Field Trial Club pluckily ran its trials in the face of a certain loss of several hundred dollars in November last. All these are material instances concerning the matter under consideration.

The pointer has added to his good standing in public esteem, his competition during the past season rating well up to the highest standards. Of all the breeds, the pointer in the past few years has made the greatest improvement.

The excellence of the setter competition has been gradually declining in the past few years, considering it as a whole, although there are individuals which still show the highest class of setter work.

The Irish setter has shown good capabilities in the competition afforded him, but the admirers of that handsome breed have not given the support to the Irish setter trials that is necessary to give their favorites a proper opportunity. The Irish setter trials, too, would have a greater importance and be a more accurate index of Irish setter interests if the fanciers of that breed would take a material interest in field work and field competition. It would also be a gain if they were to compete in the trials open to all setters and pointers.

The chicken trials given by the Continental Field Trial Club proved a great success, though the contestants from the United States side of the line were hampered greatly by customs regulations and exactions, all of which was pointed out by FOREST AND STREAM as being probable when Manitoba was first under consideration as a place for the club's chicken trials. So great was the success that the club has decided to hold another trial on chickens this year, on the United States side of the line, however. The permanency of the chicken trials is doubtful, as the supply of birds is very variable from year to year, and also variable in numbers in one locality as compared to another year after year. Their season is shorter as compared to the quail season; the preparatory work of the dogs must be crowded into a short period of very hot weather, August and September, and the journey is longer and more expensive in comparison with that in respect to the quail trials. They, however, come at a time when there is no other shooting, when the spirit is eager for sport after many months of enforced rest, and the sport is in itself more or less of a novelty to the shooters of the South and East. So long as it holds the interest of sportsmen the chicken trial will be a success.

In connection with the success of the chicken trial, it is proper to mention that a radical departure was made in the financial feature of it, the fee being \$20 both in the Derby and All-Age Stake respectively, and the purse in each was \$350. The same reduction or a similar one in the entry fees of the quail trials would have a similar

beneficial result. The sport as it now stands is too expensive for the general public. The club which is wise in arranging for the new conditions, regardless of what some rival club may do, is likely to live healthily and much longer than the club, which is living beyond its means.

The greatest addition to field trial interests during the past year was the organizing of the Continental Field Trial Club, the most powerful field trial club ever formed, considering it from the point of its personnel and the wide distribution of its membership. It was unfortunate, however, in declaring its first quail trials off in a most arbitrary manner, and thus it lost confidence and prestige.

The Southern Field Trial Club recently disbanded, and thus field trial interests incur a serious loss. The club gave trials in a dignified, perfunctory sort of a way, leaving it to the owners and handlers to supply their own information, enthusiasm and interest. The club accepted such support as blew in and ran its trials in an estimable manner. But the club in itself was lacking in activity and the progressiveness which comes from being alert and in touch with its supporters, and in keeping itself before the public. Instead of sending its matter to the sporting press at large it confined all its matter to one journal, with the natural result that its sphere grew narrower and at last it yielded to the inevitable.

There are lessons in the past which field trial managements should read and ponder over and heed. Field trials for their healthy existence must rest on a sound financial basis. They being public affairs their scope must be public in the widest sense. There is no lessening of interest in field sports with dog and gun, and there will be no lessening in the competitive interests if those who have them in charge only shape them up to conform to existing conditions.

The bench show interests have a better prospect than ever before. The recent changes made by the A. K. C. in respect to the requirements concerning bench shows will encourage a much wider competition, and will admit of the holding of shows in places where the old conditions were practically prohibitory. There is no doubt but what the old restrictions of the A. K. C. cramped the bench show world to a serious extent, but now that it has shown its intention to develop the kennel world to its utmost, it should receive every support and encouragement. These changes and the cropping question are still of such lively interest that lengthy consideration at this time is unnecessary.

The matter of ranging, and indeed field trial work in general, is engaging the earnest attention of sportsmen, and there is no doubt but what exacting that work in the competition shall be on lines more in accord with practical work afield would add to the general approval and support of field trials.

OWNEY, the Globe Trotter.

OWNEY, the much traveled dog, has returned to his native land, to bask under the shadows of the American flag. The great dailies of New York show much gladness over the safe return of this globe trotter and the *Herald* relates his journeyings with much detail:

Owney, who is going around the world on a dog trot, arrived here yesterday as a first kennel passenger on the steamer Port Phillip, from Yokohama. He declined to be interviewed. To the question, "Can't you talk?" he shook his tail and made a dive for the forepeak. He comes back covered with foreign decorations, in the form of tags attached to his collar on which are written the names of the places he has visited since Aug. 19, when he left Tacoma, Wash., on his grand tour around the world.

Owney will be taken to his old friends, the railway mail clerks, who will see he reaches Tacoma some way. There was a time when this sleek Skye terrier was a shivering little pup. That was eleven years ago, when he crawled into the Albany Post Office so hungry that he knew not where to sleep, and crept under the mail bags. He formed the habit of traveling since that, and every large city in the country knows him. He has traveled from Maine to California and back many times. He started to extend the scope of his adventures, and, at the suggestion of his Tacoma friends, he began his tour.

The Tacomans bought him a collar, which he still wears. A plate is attached to it which bears the inscription, "Owney. Boom Tacoma while you live, and when you die be buried in a Tacoma made coffin." The pious postmaster of Tacoma also affixed a note to the collar.

His letter of introduction reads: "To all who may meet this dog: Owney is his name. He is the pet of 100,000 postal employees of the United States of America. He starts to-day (Aug. 19) on a trip around the world. Treat him kindly and speed him on his journey across ocean and land to Yokohama, Hong Kong and New York. From New York send him overland to Tacoma, and who knows but he may compass the earth and beat the record of George Francis Train."

Owney has compassed well. His letters of introduction were a passport everywhere. He got to San Francisco and Yokohama by a Pacific Mail steamer. He was received in Yokohama with every mark of distinction. He inspected the post office methods of the empire. He found the mail bags soft to lie upon. He frisked in the streets and defied dogs of all degrees. He got a tag there with inscriptions thereon in Japanese attesting the fact that his credentials were satisfactory. He lived on rice and chicken and paid no hotel bills.

He was escorted to Port Phillip on Oct. 3 by Americans and Japanese of high degree and consigned to the care of Captain Grey. He captained the steamer and all that was in it. He had a seat at the captain's table, or rather under it, and access to the galley. He ingratiated himself with the cook by killing all the rats, which he faithfully brought on deck. He stood on the bridge with the captain, whether it was his watch or not. At Hong Kong he went ashore with the mate.

He was challenged by a native dog. He explained as best he could that he was not a follower of the code, and turned away. He held high carnival at Shanghai, Wootung and Foochow. He was charmed with the sunlit shores of Singapore and the white quays of Perim. He was on deck during the passage of the Suez Canal, and at Algiers he saluted the Bey. He stood at the bow when the Azores were reached, and he was among the first to sight land as the Port Phillip neared these shores.

The steamer was detained at Quarantine all day yesterday to be fumigated, and to-day she will reach her

pier, when Owney will again reach his native soil and go in pursuit of mail bags and men in the gray uniform of postal clerks. If Owney has good luck he will complete his tour in four months and a half.

C. S. K. C.'s Local Show.

THE local show of the City of the Straits Kennel Club held at Detroit was a success.

The weather was unfavorable, yet the show closed on Dec. 21 with receipts sufficient to pay expenses and probably a small balance over. Mr. John Davidson judged all classes.

MASTIFFS.—CHALLENGE—Dogs: 1st, L. Younghusband's Prince Cola. **Bitches:** 1st, L. Younghusband's Minnie Beaufort.—**OPEN—Dogs:** 1st, J. T. Stirling's Don; 2d, F. J. Lawrence's Dom Pedro. **Bitches:** 1st, W. Wolfsky's Fanny.—**NOVICE—1st,** F. J. Lawrence's Dom Pedro.

ST. BERNARDS.—ROUGH-COATED—Dogs: 1st, Major Guillott's Scion Lomond; 2d, D. B. Duffield's Belle Isle Napoleon I.; 3d, A. Robinson's Lord Olive. **Bitches:** 1st, Belle Isle Kennels' Artilla.—**NOVICE—1st,** Major Guillott's Scion Lomond; 2d, A. Robinson's Lord Olive; 3d, H. E. Richmond's Friend.—**PUPPIES—Dogs:** 1st, C. J. Hirt's Simpson; 2d, C. Leonard's Gladstone; 3d, G. G. Fenwick's Tom Carlisle. **Vhc.,** F. J. Peddie's Prince. **Hc.,** C. Conly's Sir Gerold. **C.,** J. F. Farrand's Prince Galaith. **Bitches:** 1st, G. G. Fenwick's Blossom; 2d, E. Horenburg's Lulu.—**SMOOTH-COATED—Dogs:** 1st, Belle Isle Kennels' Clovis; 2d, J. G. Hawley's Sir Donovan. **Bitches:** 1st and 2d, Belle Isle Kennels' Sunol and Sunbeam; 3d, H. Froehlin's Fernwood Princess.—**NOVICE—Dogs:** 1st, Sir Donovan. **Bitches:** 1st, Augusta. **Puppies:** 1st, H. Froehlin's Sultan; 2d, G. G. Fenwick's Augusta.

GREAT DANES.—Dogs: 1st, C. H. Brown's Prince; 2d, G. A. Sheley's Peter the Great. **Bitches:** 1st, Henrietta Glynn's Wolverton Haldee.—**NOVICE—1st,** Peter the Great.—**PUPPIES—Dogs:** 1st, H. K. Cowan's Neustreiner. **Bitches:** 1st, H. K. Cowan's Jack.

POINTERS.—Dogs: 1st, W. Ravelle's Judge Landsdowne; 2d, W. Predhomme's Royal Flush. **Bitches:** 1st, Fred. Moe's Louise Banner. **PUPPIES—Bitches:** 1st withheld; 2d, C. A. Converse's Bird; 3d, J. B. McKay's Cora.—**NOVICE—Bitches:** 3d, Cora.

ENGLISH SETTERS.—Dogs: 1st, R. Bangham's London; 2d, C. A. Rathbone's Chester; 3d, Frank Dolan's Blue Coat. **Res.,** J. G. Hawley's Cincinnati Max. **Bitches:** 1st, Victor Chauvin's Belle C.; 2d, Edward Glasco's Maggie G.; 3d, R. Bangham's Linda S.—**NOVICE—Dogs:** 1st, R. Bangham's Ontario; 2d, Cincinnati Max. **Bitches:** 1st, Maggie G.; 2d, Dr. D. S. Campbell's Queen Lil.—**PUPPIES—Dogs:** 1st, Stephen Lusted's Jim Purser; 2d, J. G. Armstrong's Max; 3d, S. Lusted's Sirius. **Bitches:** 1st and 2d, S. Lusted's Regal and Atair; 3d, J. M. Whitney's Fisher's Glen. **Res.,** Queen Lil.

IRISH SETTERS.—Dogs: 1st, Mrs. E. B. Welton's Fingaln. **Bitches:** 1st, A. Drouillard's Fawn; 2d, Concord Kennels' Nina Concord; 3d, E. B. Gregory's Roxie.—**NOVICE—Dogs:** 1st, A. Drouillard's Frank; 2d, J. B. McKay's Drenagh. **Bitches:** 1st, Roxie; 2d, W. A. Morton's Wenah.—**PUPPIES—Dogs:** 1st, Drenagh.

GORDON SETTERS.—Dogs: 1st, F. Drouillard's Duke of Essex. **Bitches:** 1st, C. A. Converse's Fly.—**PUPPIES—Dogs:** 1st, F. Drouillard's Lady D.

COLLIES.—Dogs: 1st, Doone Kennels' Sir Sefton Doone; 2d, Dr. B. P. Manton's Sir Rupert Doone; 3d, J. J. Dodd's Sir Maxwell Doone. **Res.,** Doone Kennels' Sir Eusor Doone. **Vhc. and hc.,** Miss E. M. Lynch's Regent Roslyn and Heather Joslyn. **C.,** R. McFadyen's Grampion Chief. **Bitches:** 1st, Doone Kennels' Lady Doone; 2d, W. B. Drew's Lassie; 3d, A. H. Stevens's Grampion Josie. **Res.,** R. McFadyen's Lissie. **Puppies:** 1st, F. Stevens's Heather Belle.—**NOVICE—Dogs:** 1st, Sir Sefton Doone; 2d, Sir Rupert Doone; 3d, Sir Maxwell Doone. **Res.,** T. Robinson's Rex. **Vhc.,** Heather Roslyn. **Bitches:** 1st, Lady Doone; 2d, Lassie; 3d, Lissie.

IRISH WATER SPANIELS.—Dogs: 1st, Foxhall Kennels' Roger O'Donaghue. **Bitches:** 1st, 2d and 3d, Foxhall Kennels' Nellie, Fan II. and Fan III.—**PUPPIES—Dogs:** 1st and 2d, Wolfgang Felders's — and —.

BLACK POODLES.—Dogs: 1st, J. Wright's Peter Jackson; 2d, Miss Margery Hendrie's Bonaparte. **Bitches:** 1st, G. Hendrie's Lazette.—**PUPPIES—Bitches:** 1st, James Moynahan's Trixy.—**OTHER THAN BLACK—A. W. Imrie's Laurette.—NOVICE—BLACK—1st,** Miss Hendrie's Josephine.

WHIPPETS.—1st and 2d, J. J. Spracklin's pair.

BULL-TERRIERS.—CHALLENGE—Bitches: 1st, J. H. McMillan's Edgewood Matchless.—**OPEN—Dogs:** 1st, F. G. Austin's Bassett. **Bitches** (light weight): 1st, J. H. Alexander's Monon.—**PUPPIES—Dogs:** 1st, J. H. McMillan's Boxer; 2d, D. Goldberg's Starplex; 3d, H. M. Field's Little Billee.—**NOVICE—Dogs:** 1st, Bassett.

BEDLINGTON TERRIERS.—Bitches: 1st, L. R. Baldwin's Zulu II.

BOSTON TERRIERS.—Dogs: 1st, S. M. Copeland's Bunker; 2d, Miss D. McLean's Nick.

OTTER HOUNDS.—Dogs: 1st, G. M. Hendrie's Cripple.

BLACK COCKERS.—CHALLENGE—Dogs: 1st, Concord Cocker Kennels' champion Pickania. **Res.,** C. F. Backus's champion Bendigo.—**OPEN—Dogs:** 1st, A. T. Knowlson's Willie Silk; 2d, N. Savage's Sandy; 3d, D. Daniel's Tucker. **Res.,** Belle Isle Kennels' King Raven, Jr. **Bitches:** 1st, J. R. H. Wagner's Miss Ginger; 2d, Concord Kennels' Miss Mae; 3d, W. Iron's Topsy. **Res.,** W. B. Gregory's Nellie.—**PUPPIES—Dogs:** 1st, Sandy; 2d, Concord Kennels' Black Justice; 3d, W. A. Pung's Bobby Silk. **Bitches:** 1st, Miss Ginger; 2d, C. F. Backus's Lady Cherry.—**NOVICE—Dogs:** 1st, Bobby Silk. **Bitches:** 1st, Miss Ginger; 2d, Lady Cherry.

RED COCKERS.—Dogs: 1st, C. F. Backus's Cherry Boy; 2d, Concord Kennels' Red Justice; 3d, H. C. Van Husan's Brantford Redstone. **Res.,** E. Wiles's Ripper. **Bitches:** 1st, Belle Isle Kennels' Gaiety Girl; 2d, C. F. Backus's Lady Laforce.—**NOVICE—Dogs:** 1st, Cherry Boy.

FOX-TERRIERS.—SMOOTH—Dogs: 1st and 2d, Foxhall Kennels' Dux and My Fellow. **Bitches:** 1st, Foxhall Kennels' Venus; 2d, My Lady Starden; 3d, Foxhall Topsy. **Res.,** W. J. Kernon's Spot.—**PUPPIES—Dogs:** 1st, J. W. Hartford's Wentworth Doe. **Bitches:** 1st, Miss Hendrie's Flora; 2d, C. E. Abram's Lady Clair.—**NOVICE—Bitches:** 1st, Venus; 2d, Flora.—**WIRE-HAIRED—Dogs:** 1st, R. Davis's Yondatega. **Bitches:** 1st, G. Hendrie's Thistle.—**PUPPIES—Dogs:** 1st and 2d, G. Hendrie's Jack and Whisk Broom.—**NOVICE—Dogs:** 1st and 2d, G. Hendrie's Jack and Whisk Broom. **Bitches:** 1st and 2d, G. M. Hendrie's Thistle and Flurry.

BEAGLES.—CHALLENGE—Dogs: 1st, G. D. Welton's Joe.—**OPEN—Dogs:** 1st, W. Goudie's Snowball.—**Bitches:** 1st, G. D. Welton's Jane; 2d, Henrietta; 3d, Daisy. **Res.,** Bessie. **Vhc.,** J. T. Younghusband's Rose of Lansing.—**Bitches** (under 13in.): G. D. Welton's Superba. **PUPPIES—Dogs:** 1st, G. D. Welton's Deacon.

BLACK AND TAN TERRIERS.—Dogs: 1st, C. W. Stewart's Dandy.—**Bitches:** 1st, C. W. Stewart's Bulagh.

PUGS.—Dogs: 1st, G. R. Andrews's Tony.

TOY TERRIERS.—Bitches: 1st, J. W. Wright's Trixy.

YORKSHIRE TERRIERS.—Dogs: 1st, James Wright's Toody; 2d, W. Sewell's Ino.—**Bitches:** 1st, James Wright's Toots.—**PUPPIES—Dogs:** Prizes withheld.

MISCELLANEOUS DOGS.—1st, William Rickerman's Nellie (Mexican).

SCOTCH TERRIERS.—CHALLENGE—Bitches: 1st, R. McDonald's Merry Cole.—**OPEN—Bitches:** 1st, R. McDonald's Ooloo.

POINTS AND FLUSHES.

MR. WILLIAM BRAILSFORD arrived safely at his home in England, and in a personal letter, under date of Dec. 14, writes on field trials in his clear and forceful manner as follows: "The work of the dogs which were to the fore at Morris I see have varied a good deal in their more recent work at Newton, the leading dogs having changed places from time to time, and bearing out the old-time saying that dogs have their own days, a well-worn truth. The holding of successive field trial meetings on the same ground would almost carry the impression that yours is a very small country, and wanting in resources. It is in many respects objectionable and it looks odd to outsiders that each club cannot provide its own grounds in a country without limit.

"I am thankful to have found all going on satisfactorily on my return home. I am just getting in a fine entry of young dogs of this year's breeding for next spring's breaking. Fox-hunting and pheasant shooting are the sporting occupations going on just now. One day last week

Mr. Heywood-Lonsdale's party of eight guns killed 1,104 pheasants, a very pretty day's shooting—this besides other game."

The attempt made by the *Sportsman* to arouse sufficient interest and union among dog owners to secure the holding of a bench show in Portland has proved abortive. The rivalry existing in this city between men interested in dogs is not of the generous character found in other localities which leads to concerted action in getting dogs together, and strong individual efforts to secure the prizes after this is done.

Such jealousy and rancor has been engendered here by past happenings in the kennel line that barrels of the oil of peace would be wasted apparently in efforts to calm the troubled waters. The only dog likely to be exhibited in Portland is the "dog in the manger." Instead of trying to become reconciled and work together, the two factions representing canine enthusiasts simply glower at each other over the fence, and are united only in a determination not to allow anything to be accomplished by either side.

This is a regrettable state of affairs, but it is the existing one, and of course a successful exhibit is out of the question until it is overthrown and better counsels prevail. Just now a change of heart seems as remote as the millenium and a Portland bench show is indefinitely postponed.—*Northwest Sportsman.*

[What! what! and this is the town where lives Old Mike, Judge Greene's philanthropical and cynophilistic old setter!]

In the case of F. T. Miller vs. the Canadian Express Company, the *Canadian Kennel Gazette* states that the jury awarded the plaintiff \$100 and costs of the suit. The suit was for \$200 for loss of bull-terriers smothered while in charge of the express company on the return trip from the Montreal show. In this connection the *Gazette* advances a point of material interest to all fanciers, as follows: "Express companies may disclaim liability for damage to stock in transit, but this does not in any way relieve them of their responsibility as common carriers."

The editor of a German contemporary, who had the audacity to speak of the incident of the Emperor of Germany's Barzoi which were accidentally shot and wounded in Potsdam as an "attempt on the life of the Emperor's bow-wow," is now undergoing three months' imprisonment for his pains. The editor in question was prosecuted on the plea that it amounted to what is termed "lese majeste," which means "insult to majesty." We are told that the *Vorwaerts*, which committed the alleged journalistic sacrilege, has already lost two of its editors for similar offenses, which makes one feel grateful that we do not live in a land where the press is thus fettered. In America the laws err in the opposite direction, being too lax, in that they give the press a license to say anything almost, however indecent or untruthful.—*Our Dogs.*

By the courtesy of Mr. E. von Otto-Keckwitz, editor of our German contemporary, *Hundesport*, we are enabled to give the views of the Germany Great Dane Club on the incident of the abolition of cropping in England, and its special bearing on this breed. The president expresses himself as follows: "If it is the determination in England to uphold the decision to exclude all cropped dogs, then this breed is prohibited. A dog with hanging ears is like a butler in a nightcap; a dog that is cropped, like a smart grenadier with helmet. Continental fanciers will, no doubt, remember what the uncropped 1-year-old brindle dog I exhibited in Vienna in 1885 was like. The fine ears were always beaten raw, although my dog was always in good health. The second year I tried to heal his ears, and he had to wear leather earcaps continually. At 2½ years old I had to crop him so as to free him from further pain, which his ears caused him, and myself from further trouble. If you gentlemen in England do not want to crop these dogs that is your affair, but you should leave foreign dogs as produced in their native land. You do not leave our dogs anything, not even their honorable name. Is that gentlemanly? I mean when you buy our dogs in Germany and call them 'German dogs,' you only uphold a duty of politeness, which you English sportsmen never forget; but it does not sound melodious to call a German dog a 'Chou Chou.'"—*Our Dogs.*

Mr. J. H. Johnson, Carlisle, Ind., in a pleasant letter writes as follows: "By the way, what made you give Tony's Gale credit for a flush on a single in his first heat when he pointed it at least 300yds. away and held it until judge and crowd came up, when I flushed and shot over him. This was his only point in his two heats. We are having fine weather here—a little rainy, but good for my business. I am finding lots of birds—three to five coveys per brace. My posters have been the means of keeping the shooters off my preserve in my absence. I will go South on the 27th or 28th of December, and don't know just where I will locate."

In our advertising columns Geo. E. Jantzer, New York, offers beagle for sale or exchange. C. F. T., New York, offers reward for lost or stolen setter bitch. C. F. Robbins, Oxford, Mass., has training and boarding kennel. J. H. Miller, Christiana, Pa., offers foxhounds and rabbit dogs. 21 W. 17th st. offers fox-terriers.

The calendar of Spratts Patent for 1896 abounds with matters of interest for all lovers of the dog. It is a work of art. It contains portraits of typical dogs, drawn by the well-known artist R. H. Moore, with descriptive text of the different breeds. There are also types of some of the favorite breeds of poultry. There also is a list of technical terms used by dog and poultry fanciers, besides other information of value. It is worth your while to send a postal requesting a copy of Spratts Patent calendar for 1896.

Under date of Dec. 22, Dr. Wesley Miles writes us as follows: "I wish to congratulate you on the independent, sensible, humane and rational stand you have taken in FOREST AND STREAM on the cropping question. May the right prevail soon, as it must in the end."

The coursing meeting which was arranged for New Year's Day at Minnehaha Driving Park, near Minneapolis, has been declared off, owing to possible complications with the Humane Society.

A Fox Hunt in Connecticut.

Editor Forest and Stream:

Last week my friend George and I planned for a fox hunt on Red Mountain, if the weather was favorable. On Thursday night we saw that the weather would probably be good for a hunt the next morning. So Friday morning saw me up bright and early. It was just the day for a hunt. The atmosphere was damp; no wind. Our dogs were fairly eager to go, barking with delight. I called for friend George and his Nero, and off we started. Fifteen minutes' walk brought us to the place where we would be likely to strike a track. And off the dogs went through brush and brier.

They had not gone long before old Leo, an old-timer, got on to a track, and barking and yelping all three rushed after him, making the finest music for a hunter's ear.

They had run the fox for about an hour, always in hearing. Both of us, full of excitement, were always ready with our Parker guns.

I stood in an old wood road and was just thinking of changing my stand, when I heard the hounds, seemingly driving the fox on the road I was on, and sure enough, there was the old fox coming down the road toward me. My Parker went to my shoulder, and bang! bang! went the old gun, and to my surprise it stopped my fox. When the dogs came up they were as proud as myself, it being my first fox.

A. SIERERS.

The Boston Terrier Club.

BOSTON, Dec. 26.—*Editor Forest and Stream:* The Boston Terrier Club have offered the following trophies, open to members only, to be competed for twice annually, viz.: at the Westminster Kennel Club and the New England Kennel Club shows. Each trophy to be won five times before becoming the absolute property of the winner. The winner at each show will receive a silver medal in commemoration of the award.

First, the Boston Terrier Club breeders' trophy, value \$100, for the best dog or bitch bred and owned by the exhibitor.

Second, the Boston Terrier Club challenge trophy, value \$100, for the best dog or bitch owned by exhibitor six months prior to close of entries.

Entries to be made with the secretary of the Boston Terrier Club on or before Feb. 4 and April 1 each year, accompanied by an entrance fee of \$3. The winner to receive 50 per cent. of stake, 30 per cent. to go to the second, and 20 per cent. to the third winner.

F. G. DAVIS, Sec'y.

Under the Wagon.

HARRISBURG, Pa.—*Editor Forest and Stream:* In a recent issue of the Harrisburg *Daily Patriot* there appeared a local, written by a Steelton correspondent, as follows:

"Dr. C. R. Miller and E. Alleman lost a valuable dog while on a hunting trip on last Tuesday. On their return home they tied the dog by a rope around his neck beneath the wagon. In some way the rope tightened and the unfortunate animal was strangled to death. The worst part of the matter is that the dog was borrowed."

I send you this so that sportsmen and lovers of the dog will know that two men reside in Steelton, Pa., who after a day's enjoyment by the work of a faithful dog will tie him under the wagon. I can in fancy see the tears in Wanda's eyes when she reads this. A DOG'S FRIEND.

U. S. F. T. C.'s Trials Postponed.

UNITED STATES trials postponed to the date of the Southern, Feb. 3, on account of champion trials.

W. B. STAFFORD, Sec'y.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address. Prepared Blanks sent free on application.

NAMES CLAIMED.

Mr. M. J. Flaherty claims the name Fred Taral for setter dog, whelped July 11, 1895, by Snapper Garrison—Nellie L.

BRED.

Mr. J. Danforth Bush's Careless, bull bitch, Oct. 16, to Leonidas. Leinster Kennel's.
Leinster Sing, fox-terrier bitch, April 6, to Driftwood Rambler.
Wilton Leah, fox-terrier bitch, May 3, to Poker Brown.
Leinster VI, fox-terrier bitch, April 5, to Poker Brown.

WHELPS.

Dr. H. T. Foote's
Champion Meersbrook Maiden, black and tan terrier bitch, whelped Oct. 19, three (one dog), by champion Broomfield Sultan.
Whittle, fox-terrier bitch, whelped Oct. 26, three (one dog), by Brittle.
Leinster Kennel's
Leinster Sing, fox-terrier bitch, whelped June 5, four (two dogs), by Driftwood Rambler.
Leinster VI, fox-terrier bitch, whelped June 16, four (one dog), by Poker Brown.
Wilton Leah, fox-terrier bitch, whelped July 5, six (one dog), by Poker Brown.

SALES.

Mr. M. J. Flaherty has sold Fred Taral, English setter dog, to Mr. James Kenyon.
Mr. R. V. Ohi has sold
Boy Gladstone, English setter dog, to Mr. W. A. Poland.
Spotena Gladstone, English setter dog, to Mr. W. A. Poland.
Mr. E. M. Little has sold
Queen Bess, pointer bitch puppy, to Mr. Arthur D. Murphy.
English setter puppy, to Mr. Paul Ranton.
English setter puppy, to Mr. Frank Aldrich.
English setter puppy, to Mr. James Johnson.
English setter puppy, to Mr. A. M. Henk.

Yachting.

LORD DUNRAVEN has not only come, but gone, after a visit of something over fifty hours to New York, having arrived by the Teutonic on Dec. 26 and sailed by the Umbria on Dec. 28. The former vessel was due on Christmas Day, but outside of Sandy Hook she was interfered with by a dense American fog, only reaching Quarantine at daylight on Thursday. Lord Dunraven and Mr. Arthur Glennie were taken off by the tug E. C. Everts and landed at the foot of West Twenty-fourth street, proceeding to Mr. Kersey's home at 40 East Twenty-fifth street. When the steamer reached her dock in the course of the morning, there landed Lord Dunraven's solicitor, G. R. Asquith; his secretary, J. A. G. Hamilton, and his valet.

The hearing began, as announced, on Friday morning, there being present the special committee, J. Pierpont Morgan, William C. Whitney, George L. Rives, E. J. Phelps and Capt. A. T. Mahan, U. S. N., Mr. Morgan being chairman and Mr. Rives secretary. The model room of the New York Y. C. house was arranged with tables for the committee and the two parties and was closely guarded; several detectives being present downstairs and accompanying Lord Dunraven to and from his rooms. While members of the club were admitted to the first floor, only those directly connected with the investigation were allowed upstairs, and all strangers, especially the newspaper men, were rigidly excluded. Fortunately the weather was clear and warm, and those whose duty took them in quest of news were able to keep reasonably comfortable in the street outside, where they gathered in full force and laid in wait for all who entered or left the club house, endeavoring, but with no success, to interview them. The committee was in session until 6 P. M. on Friday and again all day on Saturday, Mr. Iselin being present with his counsel, Mr. Choate, also Mr. Herreshoff, Mr. W. Butler Duncan and others of Defender's party, and Capt. Haff with a dozen of her crew. Billman, the rigger, was also present with the Captains of the Hattie Palmer and the tug Wallace B. Flint.

The hearing will probably be concluded on Monday, but up to the time of going to press nothing official or reliable is known; nor will it be until announced by the committee. The lengthy and detailed accounts published by some of the daily papers differ so from each other as to show that they have no particular connection with the truth. The one fact that is positively known is that Lord Dunraven has failed to make out any case, the able efforts of Mr. Asquith, in behalf of his client, failing for lack of substantial facts. Lord Dunraven was before the committee on Friday and again on Saturday morning, Mr. Glennie also being examined; but at noon on Saturday both left the club house and at 1 P. M. boarded the Cunarder Umbria, leaving Mr. Asquith to represent the Earl in the concluding proceedings. During the first session some excitement was occasioned by the discovery of a reporter listening at the big skylight on the roof of the club house, he having engaged a room in the adjoining house and made his way to the roof. He was driven off and watch set to prevent his return.

YACHT DESIGNING.—I.

BY W. P. STEPHENS.

Introduction.

IN the minds of many yachtsmen, even the better informed, yacht designing is considered to be the "scientific" process of "drawing the lines," or making such drawings as frequently appear in the pages of the FOREST AND STREAM, as opposed to the "rule of thumb" process of "whittling" a model from a block of pine, as a basis for building. If this were indeed the case, our task would be an easy one; as the mere production on paper of the lines of a vessel, especially where there are no cant frames, as in all yachts, or where the construction is of metal, involves only the simpler problems of descriptive geometry, and is a branch of mechanical drawing which may be readily mastered by the novice, even through self-instruction. A smaller number take a broader view of the subject and cherish the belief that in addition to the "lines" there are "calculations," formulas more or less abstruse, but positive, and by means of which the expert can conjure up with infallible certainty a successful yacht. If the former of these opinions falls short, the other goes too far; there is no general formula or collection of formulas to make yacht designing a certainty, even to the initiated; and, so far from being the sum and substance of designing, the drawing of the lines is merely one, and by no means the most difficult and important one, of the many processes, mental, mathematical and mechanical, by which a vessel is produced.

In its broadest sense, yacht designing may be defined as the study of vessels with a view to the determination of their governing principles; and the application of these principles to the creation of yachts. This study, which is not necessarily limited to yachts alone, but may with profit be extended to include many allied types of fishing vessels, pilot boats and other commercial craft, deals with the vessel in every stage of her existence; in the first form of the crude dimensions and elements of the design, the completed drawing and its calculations, the enlarged design on the mould loft floor, the vessel herself in frame on the stocks, on the launching ways, afloat and in service, down to the final breaking up, in which faults of design or construction previously unknown or unidentified are disclosed in the form of undue straining or premature decay.

Of the many distinct processes which make up the sum total of yacht designing, some, such as the actual drafting and many of the calculations, are governed by principles which are clearly understood and definitely formulated; but there are many other processes whose principles are still involved in mystery and uncertainty, and over which even the most expert are in doubt or opposed to each other.

The basis of yacht designing is, naturally, the science of naval architecture, in itself a codification and exposition of the laws which govern floating bodies; but, indispensable as it is, naval architecture alone falls far short of being the whole or even the greater part of yacht designing. The most complete familiarity with such standard works as Sir W. H. White's "Manual of Naval Architecture" and Sir E. J. Reed's "Stability of Ships" will still leave the student in complete ignorance of the best dimensions for a cruising 30-footer, or the proper sail plan for a racing 15-footer. The history of yacht racing shows that, from the time of the schooner Titania, designed in 1851 by the late John Scott Russell, down to the present, the efforts at yacht designing of the leading naval architects and the most expert investigators of naval science have been failures; and, on the other hand, successful yachts without number have during the same period been turned out by men of the most limited education. By some these two facts have been considered a final argument against all

systems of designing on paper, and for the wooden model and the condensed methods of the shipyards; but they by no means prove that scientific yacht designing is all wrong, or even useless, but only that the principles on which it is based are as yet not so fully understood as to be infallible guides. So far from abandoning all study and investigation in favor of what are termed "practical methods," there is every inducement to continue them earnestly and to increase our store of valuable knowledge.

It can hardly be denied that the more a man knows about a vessel, especially as concerns those features less in outward evidence, or disclosed to the eye in the model or the actual vessel, the better he is qualified to design new ones; and the risk of failure through too close an adherence to some new and possibly extreme theory is much less than that which accompanies an ignorance of the simpler principles of flotation and stability. Many successful yachts have been produced by builders who were ignorant of all knowledge of the elementary principle that the total weight of a vessel is exactly equal to that of the water displaced by her—much less of the fact that this weight can be calculated, and that before she is built. It needs no demonstration to prove that a builder who is possessed of these two facts is better qualified for his work than one who is ignorant of them; and that the former would be still better equipped if he possessed the ability to calculate the displacement from the design.

It is hardly necessary here, however, to plead the cause of systematic designing, as the very fact that a man is sufficiently interested to read these articles is proof that he is looking for something more certain and definite than the old method of cutting a model.

The task of designing a yacht is by no means an easy one, nor is it invariably attended with success, even in the hands of the most famous designers. It is, however, far easier than the task of writing acceptably on designing, as in the case of the doubts which invariably attend many important points of a design the designer may at least keep them to himself and risk the chance of failure on this one point against those of success through lighter construction, better dimensions, or superior handling; while the writer on the same subject is expected to give a positive and specific answer to every question. Such questions as those published in the FOREST AND STREAM two weeks since occur constantly in designing, and many of them cannot be answered positively and definitely. A great many will come up in the course of this series of articles to which we have little hope of giving full and satisfactory replies; the best that we can do is to teach our readers to seek out and consider carefully every possible condition affecting the question, to compare cause and effect in any similar cases, and to avoid generalizing too quickly and from too few facts. Assuming an equal amount of knowledge of naval architecture, the most successful designer will be the one who in each case takes cognizance of the greatest number of conditions and comes the nearest to giving each its true relative value; in doing which he must go far outside of all that can be taught by text-books or professors, and fall back finally on good judgment, experience and common sense.

A yacht is a vessel used exclusively for purposes of pleasure, as distinguished from war or commerce; usually but not necessarily fitted by design and furnishing for this end. She may be of any size; the smallest yacht recognized by the clubs is the half-rater or 15-footer, and the largest sailing yachts run but little over 100ft. in waterline length. She may be propelled by sail, steam, electricity or other power. The essential principles of design take no cognizance whatever of size.

The many processes through which a yacht is produced are as follows:

1. The determination of general type, class and rig.
2. The selection of dimensions, such as length, breadth, draft, freeboard, and the leading elements, such as displacement, ballast, area of midship section and area of sail.
3. The general location of the center of buoyancy, center of lateral resistance, center of effort, center of gravity of ballast, etc.
4. The drafting of the lines on paper, to conform to the dimensions, elements and positions of centers already determined, including the sail plan.
5. The final calculations of all areas, centers, etc., with possible readjustment of the centers and accompanying changes in the lines.
6. The determination of the scantling, or sizes of all parts, and of the general details of construction.
7. The making of the construction drawing, showing all parts, and methods of joining and fastening.
8. Making the interior plans, showing general arrangement and details of joiner and cabinet work.
9. Making the drawings of spars, iron work and similar details.
10. Drawing up the specifications.
11. Taking off from the lines the Table of Offsets, for the builder.
12. The superintendence of the yacht under construction.

This completes the work of the designer, but we may well follow the vessel to her final completion at the hands of the builder, the additional processes being:

13. The "laying off," on the floor of the mould loft, of the full-size design.
14. The making of moulds of thin wood, from which the frames, stem and various parts—whether of wood or metal—are shaped.
15. The preparation of the building ways and the laying of the keel blocks.
16. The moulding and casting of the metal keel.
17. The getting out in the yard of all members, such as frames, stem, sternpost, deck beams, etc.
18. The laying of the keel on the keel blocks.
19. The erection and regulation of the frames, clamps, deck beams and other members.
20. Planking and decking.
21. Caulking and paying seams of hull and deck.
22. Finishing the hull, squaring and planing.
23. Fitting attachments, rudder, such as centerboard, bulwarks, rail, etc.
24. Painting outside of hull.
25. Laying launching ways and launching.
26. Putting in interior work, floor, bulkheads, furniture, plumbing, etc.
27. Masting, shipping spars and setting up rigging.
28. Planing decks, final painting and varnishing.
29. Reeving off running rigging and bending sails.
30. Trial trip.

A Stray Shinplaster

Comes to us once in a while for a copy of "Game Laws in Brief;" but shinplasters nowadays are scarcer than Moose in New York; and 25 cents in postage stamps will do just as well.

All of these operations are gone through with to-day in a well regulated yard, but where the builder is also the designer they are considerably abbreviated; and in the old days, when there was no designer, but the yacht was simply built, without formality, they were still more condensed. The old practice was to begin operations by the selection of a block of clear dry pine, which was then to be had in plenty, though it is now unknown. Just how much thought and consideration the carver of the block had previously given to the many serious questions of type, class and dimensions depended very much on the man, but—with or without due preparation—the attack on the block was begun, and with spokeshave, gouges, rasp and sandpaper a model was finally produced and screwed to a board.

This model seldom aspired to represent the exterior form of the completed yacht, but a very different form—that of the outside of the frames, or the inside instead of the outside of the planking. This itself involved a serious discrepancy, as the actual fineness or fullness of the model differed materially from that of the completed yacht at the ends where the bevel of the frames was greatest. Further than this, the builder at the start concerned himself very little with anything but the form of the model, namely, of the inside of the planking of the yacht; and the exterior keel, the stem, deadwood, rudder, and the size and position of the centerboard were left largely to chance, or at least to a much later consideration, after the form had been decided on and the center of buoyancy consequently fixed.

From the model by various methods some measurements were taken and a rough drawing made, or the measurements were used to lay off the full size lines on the mould loft floor. No great amount of accuracy was used, nor was it absolutely necessary, for the builder commonly exercised his discretion in running his battens on the floor, and had no scruples in departing materially from the original model by "kicking" a batten in at one spot to make a line finer, and out at another to make it fuller. When it came to laying the keel, its exterior shape, with that of the stem, was often determined by the size and shape of the timber at hand, such a thing as a careful and final adjustment of the lateral plane and sail plan at an early stage of the design being uncared for. After the keel was laid, and the stem, sternpost and frames erected, ribbands were run around the frames, and the builder, adze in hand, "dubbed off" from the frame where a ribband failed to suit his eye by an undue fullness, or "shimmed out" any spot that showed "slack."

The entire work was practically in the hands of one man, much of the planning was done in his head and never committed to paper; the details, even to the interior finishing, being carried out as became necessary in the progress of the work under his immediate supervision. A sail plan of some sort was necessarily made, but working drawings were in the main dispensed with; in fact, too often there was no one about the yard who understood them. When the yacht was launched and finished, ballast of some kind was stowed inside and she was tried, returning to the yard for necessary alterations to rudder, deadwood, position of spars, centerboard, etc.

The main fault of this system—if so it can be called—was not that it failed in the hands of a competent builder to produce a satisfactory yacht, but that under it no account whatever was taken of those elements—the amount and disposition of the displacement, the areas of midship section, waterline plane, and lateral plane and the positions of the centers—on all of which the performances of a vessel depend; nor was any record preserved of such meager data as was produced in the course of the work. While accumulating a large amount of valuable knowledge and experience, each builder as a rule confined himself to one particular size and type of vessel in which he was successful; but, his practical knowledge not being supplemented by a familiarity with the fundamental principles of naval architecture, he generally failed when he attempted to apply it outside of his specialty. The system was in every way unsuited for modern methods, where the construction of large and complicated vessels in a very short time calls for the concerted labor of many mechanics all working closely to detailed and accurate plans prepared in advance. It also calls for the immediate presence of the designer in the yard, and makes it impossible for yachts to be built from his designs in distant yards.

While serving to develop that sound judgment and practical common sense which are essential to success in designing, this system fell far short in that it required years of experience and usually many failures before a man was competent to turn out satisfactory work, even in one particular type of yacht; and for this reason it is specially unsuited for the beginner and the amateur. These latter, while having time for reading and study, are seldom so situated as to be able to build yacht after yacht and thus acquire the experience of the practical builder; and for them at least some different system is necessary. While each designer to-day has his own special methods of working, differing in details from those of others, the art and profession of yacht designing is based on certain principles recognized by all its followers, and in presenting these we shall endeavor to follow those methods which are most simple, direct and easily understood by the novice.

The London Sailing Club Model Competition.

The London Sailing Club will hold another of its model competitions at its club house, Lower Mall, Hammersmith, London, from Feb. 11 to 22, Sundays excepted. The class selected this year is the 18ft. linear rating, under the new Y. R. A. rule, which replaces the old half-rating class. The competition is open to Americans. Last year two entries were received from the United States.

The London Sailing Club has decided to hold an exhibition and competition for half models and drawings of boats of 18ft. linear rating, as there is every prospect of this being the popular class for the ensuing season.

The following is the new Y. R. A. rule for ascertaining linear rating:

$$R = \frac{L + B + .75 G + .5 \sqrt{S} \cdot A}{2}$$

"In this formula L. = length on l.w.l. as now measured; B. = greatest beam wherever found; G. = under-water girth of the vessel from l.w.l. to l.w.l., taken at .6 of the load waterline from its fore end and measured along the actual outline of the vertical cross section at that station. If the draft forward exceeds the draft at that station, twice such excess to be added to G. In the case of centerboards, the extreme depth of the board (when dropped to its full extent below the keel) multiplied by 1.5 to be added to G. In taking these measurements all hullows in the fore and aft under-water profile of the vessel to be treated as filled up straight. Bulb or ballasted board to be measured in the same way as fixed or fin-keels. S. A. = sail area as now measured."

By way of explanation the formula written out would be as follows: To the length or the load waterline add the greatest beam wherever

found; to this add three-quarters of the under-water girth measure from load line to load line round the skin of the yacht and under the keel; to this add one-half, the square root of the sail area, and divide the whole sum by two. The quotient will be the linear feet rating.

A table of squares, cubes and roots will be required. The best is Barlow's, published by Messrs. Spon, Strand.

Mr. Dixon Kemp has kindly consented to act as judge and will award the prizes.

Following the precedent adopted in the former exhibitions held under the auspices of the club for the purpose of equalizing the chances of amateur designers in competing with professionals, the finish of the models will not be calculated as an element of merit in awarding the prizes. For the protection of professional designers all models and designs entered for the exhibition will remain the property of the persons exhibiting them, and no one will be allowed, under any circumstances, to take any measurements, except the judge for the purpose of judging.

A member of the committee of the club will be present throughout the time the exhibition is open to insure the strict observance of this restriction against taking measurements.

No exhibitor may in any way whatever disclose his identity, either on his models, drawings, or particulars, until after the judging has taken place and the prizes been awarded, and no exhibitor will under any circumstances be awarded a prize in respect of any models or drawings on which his name or identity, except in the sealed envelope, is in any way disclosed.

Entry for the competition must be made by application in writing to the honorary secretary of the London Sailing Club, and on payment of an entrance fee of 6s. for each model proposed to be exhibited, a card for each proposed exhibit will be furnished, containing the exhibitor's name and address. No application for entries will be received after Saturday, the 1st February, 1896.

The models packed in a box containing the drawings and measurements hereafter referred to, and also the entrance card inclosed in a sealed envelope marked "Entrance Card," must be delivered at the Club House, Lower Mall, Hammersmith, on or before Friday, Feb. 7, 1896.

The honorary secretary will, on receipt of the boxes containing the models, mark in the order in which they are received a number on each model, drawing, and sealed envelope, for the purpose of identification. The sealed envelope will not be opened until after the prizes have been awarded.

REQUIREMENTS.

1. A half model of hull of a boat of 18ft. linear rating, scale 1in.=1ft.

The following drawings and particulars may also be deposited with the model:

2. Sheer plan, scale 1in.=1ft. The point at which girth is taken should be marked on the keel and l.w.l.

3. Body plan, scale 1in.=1ft.

4. Half-breadth plan, ditto, ditto.

5. Centers of buoyancy and lateral resistance to be marked on sheer plan.

6. Displacement.

7. Weight of proposed ballast inside and on keel.

8. Material of centerboard (if any), and manner of working it.

The drawings and particulars, Nos. 2 to 8 inclusive, are required by the judge to enable him to form a correct estimate of the models. Supplying them is, however, optional on the part of the competitors, but they must understand that the merits of a design may fail to be observed if a model only is placed before the judge. A competitor may, however, inclose all or any of the drawings and particulars in a sealed envelope and mark the same for the use of the judge only, in which event the drawings and particulars will be produced to the judge at the time of his making the award, and afterward sealed and returned by post to the competitor.

The club will give a first prize of 7 guineas to the best boat according to the judge's award.

A second prize of 4 guineas.

A third prize of 1 guinea.

And also such certificates of merit as the judge may award.

The committee of the club will take every possible care of the models and drawings of the exhibitors, but they undertake no legal liability whatever for any loss or damage.

The decision of the committee, except in the award of prizes, in all matters of dispute arising out of the competition and exhibition will be binding and final on all exhibitors.

The exhibition will be opened on Tuesday, Feb. 11, 1896, and remain open until and including Saturday, Feb. 22, between the hours of 2 and 9:30 P. M., Sundays excepted.

Admission free.

Any further information desired will be furnished on application to the honorary secretary, London Sailing Club, Lower Mall, Hammersmith.

YACHTING NEWS NOTES.

Seabury & Co. have an order for a composite steam yacht for John P. Duncan, of New York, to be 140ft. over all, 114ft. l.w.l., 17ft. beam, 9ft. 6in. depth, and 7ft. draft, with schooner rig.

Brunhilde, schr., has been sold by David H. King, Jr., to Mr. Marsley, of Vermont, who will make a cruise to the West Indies this winter.

Capt. Chas. Barr and his bride arrived in New York on Dec. 25 on the State of Nebraska from Glasgow.

On Dec. 23 the Audubon Y. C. elected the following officers: Com., John Kurstenier; Vice-Com., W. H. Phillips; Fleet Capt., M. Arvidson; Treas., E. Schurier; Fin. Sec'y, G. T. Wooster; Rec. Sec'y, A. B. Van Riper; Meas., R. B. Saul; Steward, Daniel Sherman.

Ex-Com. Gerry has acquired, with Messrs. Robert and Ogden Goellet, a one third interest in the valuable wharf property at Newport leased to the New York Y. C.

Canoeing.

AMERICAN CANOE ASSOCIATION, 1895.

Commodore, Wm. R. Huntington, Rome, N. Y.

Sec'y-Treas., Thos. H. Stryker, Rome, N. Y.

Librarian, W. P. Stephens, Bayonne, N. J.

PURSUERS.

Atlantic Division, H. M. Dater, 307 Adelphi street, Brooklyn, N. Y.

Central Division, Wm. H. Martin, Rochester, N. Y.

Eastern Division, R. H. Hammond, Worcester, Mass.

Northern Division, Douglas H. McDougall, Toronto, Canada.

Annual dues, \$1; initiation fee, \$1.

Annual meet, Aug. 14-23, Grindstone Island, St. Lawrence River.

WESTERN CANOE ASSOCIATION, 1895-96.

Commodore, C. F. Fennell, Detroit, Mich.

Vice-Commodore, Nat. H. Cook, Chicago, Ill.

Rear-Commodore, E. H. Holmes, Milwaukee, Wis.

Sec'y-Treas., W. D. Stearns, Detroit, Mich.

Executive Committee: R. M. Lamp, Madison, Wis.; C. J. Steadman, Cincinnati, O.; F. W. Dickens, Milwaukee, Wis.

New York C. C.

The New York C. C. has sent out the following invitation, printed in red and black in elaborate style:

New York C. C.—Twenty-fifth year, 1896-1871.—I hereby warn you that the inauguration of the officers of the New York C. C. for 1896 will take place at the club house, with solemn and fitting ceremonies, Saturday evening, Jan. 4, 1896, between the hours of 8 and 12. If you have any objections, speak or forever hold your peace. Members only will be admitted. It is exceedingly important that you should be present if you can possibly so arrange your family and business affairs. No one carrying concealed weapons or wearing evening dress will be admitted, a searching committee will guard the door. A rare-bit will be forthcoming before adjournment, and a circle will be formed around the mystic cauldron. The regular dianer will be served at 6:30.

Toronto C. C.

The Toronto C. C. held its annual general meeting on Dec. 20, a large and enthusiastic number of members being present.

The secretary reported an increase of membership of 39 for the year, making the roll of members in good standing 206.

The treasurer's statement shows a balance of cash in hand of \$366.14.

The interior of the club house has recently undergone a thorough renovating, being painted, kalsomined and varnished throughout. Saturday club nights and whist matches are more popular than

ever. Once a month is held ladies' night, when dancing is indulged in from 8:30 to 11:30, the main club room, capable of accommodating sixty couple, being always taxed to its utmost capacity.

The club held one general cruise during the year to Tobico, a beautiful camping ground about fifteen miles west of the city. It was only for four days, but was participated in by some fifty-five members.

The Toronto C. C. can now boast of holding the American Canoe Association Paddling Trophy and the Toronto C. C. International Paddling Trophy, both by R. O. King, also four championships of Toronto, having defeated all comers in open races.

Members are already talking of the A. C. A. meet of 1897. Indications are, that the Toronto C. C. will again be well represented by probably sixty to seventy-five members.

Herbert R. Tilley, who has held the position of commodore for two years and proved himself to be an energetic and capable officer, retires, and Geo. Wilkie is elected commodore by acclamation. Other officers are:

Vice-Com., Fred Woodland; Rear-Com., A. E. Bell; Secretary, J. H. Watling; Treasurer, F. M. Purdy.

Member of Committee—C. H. Wilson.

House Committee—Ab. Young, Geo. A. Howell, and F. B. Andrews.

Regatta Committee—W. F. Gouinlock, C. D. Lennox, C. Shaw, A. G. E. Carruthers, and A. E. Bell.

The Central Division Report.

The following is the purser's report from the Central Division, A. C. A., which was not received until a short time since. The other reports have been published.

Rifle Range and Gallery.

Policemen Learn how to use the Revolver.

NEW YORK city's police force now possess a school of instruction in revolver practice. It opened on Monday, Dec. 30, at a few minutes before noon. Sergeant W. E. Petty, himself an expert pistol shot, is in charge of the school and superintends all the work connected therewith. Together with four assistants—all specially detailed from the police force—he will endeavor to teach New York's patrolmen how to use their revolvers so that they may become in their hands the weapons of offense and defense that they properly should be. FOREST AND STREAM has urged from time to time the necessity of such a course of instruction; that it was correct in its premises will be clearly shown when the first report of Sergt. Petty is handed in to the police commissioners.

The "school" is located in the basement of the 9th Regt. Armory, Park avenue and 95th street; two tunnels in the basement form the gallery; in each tunnel there are two targets, with an attendant for each target. Thus four pupils can be instructed at the same time. The construction of these tunnels, together with a description of the targets used, etc., was given in full in our issue of Dec. 7. The target used is the Creedmoor 100yds. military target.

It required but a brief glance at the men at the firing point to note that very few knew anything about revolvers, either how to load, handle or fire them. Wild bullets were very numerous, those that really hit the target being comparatively scarce. Still Sergt. Petty was by no means discouraged; on the contrary, he said:

"The practice is better than I expected, and we have some really good shots among the men on the force. Many of our men don't know much about a revolver just yet, but we will show a marked improvement in their work when their turn comes for a second trial. The targets made by each man will show plainly enough that this course of instruction was badly needed; the records will be kept carefully and we can then tell from time to time just how each man gets along, that is, whether he is improving or going backward."

The patrolmen from the First Precinct were the first body of men to receive instruction on Monday morning. Just what sort of a job Sergt. Petty has on hand may be judged from the following figures: Four men can be handled at one time, and ten minutes will be devoted to instructing each man in the use of a .38cal. Smith & Wesson revolver, either single or double action. During that ten minutes he will have to fire fifteen shots at the target and abide by the results. A highest possible is 75 points, and it will require 45 or better to qualify. The conditions are: 30ft. range, 15 shots, Creedmoor military target for 100yds. practice, 4in. bullseye.

Targeting for Turkeys.

OROVILLE, Wash.—*Editor Forest and Stream:* I had an invitation to eat Thanksgiving dinner at Oroville. I loaded my cayuse quite early and went down. Noticing quite a number of rifles behind the counter at Beal's store, I asked him if he had started into the second-hand gun business. "Oh no," said he, "the boys are going to have a turkey shoot. Why did you not bring your .22?" I replied that I had known nothing of their intentions.

Soon Ed. Lathrop came in, carrying a target, and announced that he had five nice gobblers to be shot for. All hands went out on to the bank of the Similkameen, and after stepping off 75yds. put up their target. Globe and peep sights were barred. Six of us at 25 cents each took a chance. I borrowed a .45-90 Winchester and opened the game. When I raised the rifle I could not see the sights to do any good, so I put on my glasses; then I could see the sight all right, but could not see the target. But shoot I had paid for and I was going to. I asked the man when I should hold and he said "Fire." I fired and hit the target 10in. too high. The boys all laughed after the six had shot. I was awarded the leather medal, being the worst.

Well, we put in again. This time I fired a single shot Winchester and missed the target. One of the other boys missed the target too, so he and I shot off our tie. I missed again.

Well, it was not very encouraging, but I put up again and shot the rifle I had first tried and held as near as I could about a foot low. The judge hollered out, "Lew's turkey." I was surprised, for it was merely guesswork. But such work with the boys is highly appreciated by

LEW WILSON.

Iroquois Rifle Club.

The Iroquois Rifle Club, of Pittsburg, Pa., celebrated Christmas by an all-comers' gallery shoot held at its indoor rifle range, 1717 Jane street, S. S. The conditions of the contest were as follows: Off-hand, with .23cal. rifles on the reduced S. A. target, three shots per target, the best three targets of each shooter counting for prizes; \$1 for three tickets, re-entries being unlimited. Twenty-two shooters, representing the Bridgeville, Manor, Carnegie, Pittsburg and Iroquois rifle clubs, took part in the shooting, which began at 10 A. M. and concluded at 10:30 P. M. Great enthusiasm and interest were manifested by the devotees of this branch of rifle shooting who were present on the occasion, and some excellent scores were made. The cash prizes, amounting to \$50, were distributed to the following shooters, whose scores are appended, the possible total score being 100:

Albert Hofmeister.....	30 29 29-88	J. Whiting.....	28 27 26-81
H. Sperling.....	30 28 28-86	Dr D. L. Aber.....	27 27 27-81
C. P. Mayor.....	29 28 27-84	T. H. Keniers.....	27 26 26-79
F. G. Broadway.....	29 27 27-83	R. Henry.....	30 25 23-78
August Hofmeister.....	28 28 26-82	L. G. Gaul.....	24 23 23-70

An American in Paris.

MR. SUMNER PAINE, of Boston, Mass., one of the best revolver shots in this country, is at present located in Paris, France. Following are some extracts from a personal letter from Mr. Paine, dated from that city, Dec. 15:

"I have naturally been very busy getting settled here and arranging my course of work for the year. Still I have managed to find time to get around to Gastinne Renette's once or twice, and have won four of the lower medals. As the gallery is not open in the evening the only chance I get is Sunday afternoons.

"If any one runs away with the idea that the Frenchmen can't shoot they will find themselves mightily mistaken. I do not think that their five best men could beat our five best, but I don't think we could produce a hundred shooters that would be in the game for a minute with the best hundred men here. M. Renette tells me that he is trying to arrange a match to be shot between New Yorkers and Parisians simultaneously; I inferred from what he said that he was carrying on his negotiations with Mr. Conlin.

"I should like to see Mr. C. S. Richmond, from Georgia, over here, as from what I saw of his work at Sea Girt I think he is one of the best shots with reduced charges I have ever seen. I hope in the summer to find time to shoot regularly, and I have no doubt that I can get the more difficult medals. So far I have devoted most of my time to shooting 'au commandement.' In this style you stand with your weapon at your side and the man in charge asks, 'Are you ready?' When you say 'Yes,' he says 'Fire, one, two, three.' You can't raise your arm before the word 'fire,' and you must shoot before the word 'three.' I have held my stop watch on the man counting several times, and find that he gives you just about 2 1/2 seconds. This is the favorite style of shooting with the Frenchmen. It was entirely new to me. I had never tried it before, but am picking it up slowly. The range here is 53ft., and the highest medal for this style of shooting is given for putting twelve consecutive balls wholly within a circle 3 1/2 in. in diameter. If anybody thinks it is easy they had better try it, and remember that the black they aim at is only 1 1/2 in., and has a white carton or spot in the center 3/4 of an inch across. This makes a very hard bulseye to hold on even when aiming deliberately.

"There is an all-comers' competition in February, March and April, and I hope to come in somewhere among the ten prize winners, although I shall not have time to shoot enough to get one of the top places."

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Jan. 4.—WILMINGTON, Del.—Second team race between All-Philadelphia and the Delaware State League, 25 men to a team; all day shoot on the grounds of the Wilmington Rod and Gun Club.

Jan. 4-5.—PHOENIX, Ariz.—Annual tournament of the Arizona State Sportsmen's Association.

Jan. 7-11.—SAN ANTONIO, Texas.—Grand mid-winter tournament, under the auspices of Texas State Sportsmen's Association and management of J. M. George and O. C. Guessaz (Texas Field), \$2,000 added. Jan. 23-24.—UMCA, N. Y.—Mid-winter tournament on the grounds of the Oneida County Sportsmen's Association; live birds and targets; J. W. Fuiford, Manager.

Feb. 1.——Third team race between All-Philadelphia and the Delaware State League, 25 men to a team. (Place of shoot not fixed.)

April 1-3.—NEW YORK.—Interstate Association's Fourth Annual Grand American Handicap.

April 14-17.—ATCHISON, Kansas.—Thirteenth annual open to all, and second annual manufacturer's amateur tournament; \$1000 added money and manufacturers' prizes. Lou Erhardt, Sec'y.

April 22-24.—WELLINGTON, Mass.—Tournament of the Boston Shooting Association; targets. P. R. Dickey, Manager.

April 30-May 2.—NEWBURGH, N. Y.—Annual spring tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

May 5-8.—NEW YORK.—Tournament of the American E. C. Powder Company; \$2,000 added money.

May 12-15.—MEMPHIS, Tenn.—Tournament of the Memphis Gun Club, \$2,000 added money.

May 12-14.—DAYTON, O.—Annual tournament of the Ohio Trap Shooters' League. Ed. Taylor, Sec'y.

May 19-22.—CINCINNATI, O.—Tournament of the Hazard Powder Co. R. S. Waddell, Agent.

May 20-24.—KANSAS CITY, Mo.—Nineteenth annual convention and tournament of the Missouri State Fish and Game Protective Association. J. H. Durkee, Sec'y.

May 26-28.—FRANKFORT, Kan.—Annual tournament of the Kansas State Sportsmen's Association.

May 30-June 1.—MILWAUKEE, Wis.—Eleventh annual tournament of the South Side Gun Club.

June 1-6.—CHICAGO, Ill.—Twenty-second annual tournament of the Illinois State Sportsmen's Association. H. B. Meyers, Sec'y.

June 8-13.—BUFFALO, N. Y.—Thirty eighth annual tournament of the New York State Association for the Protection of Fish and Game, under the auspices of the Audubon Gun Club. E. W. Smith, Sec'y.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlin Cartridge and Target Company.

July 30, 31.—GOSHEN, Ind.—Midsummer tournament of the Goshen Gun Club.

Oct. 7-9.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 318 Broadway, New York.

A report is going the rounds of the daily papers that Brewer killed 99 out of 100 live birds in a private exhibition before "a party of congenial spirits at the country seat of a well-known and wealthy New Yorker." Although we have the very highest regard for Brewer's ability to handle the shotgun, and do not doubt that he is capable of making a record as above on a certain class of birds, we naturally do not like the way in which this "record" and his one of 100 straight at Dexter Park were made; there is so much in the nature of the light-under-the-bushel business about it. Here's the actual story of how the report above given came to the newspapers: A representative of Brewer's came to the sporting editor of one of the New York dailies and told him that Brewer had killed 99 out of 100 in a match in which he was backed to kill 93, and that the match took place in certain private grounds. He then stated that the "well-known and wealthy New Yorker" was willing to back Brewer against any man in the world for any sum up to \$75,000. Chimmie Fadden would probably add, "D'yer see?"

Louis T. Duryea made the following offer on Dec. 24 last, just after the conclusion of the Wright-Brokaw match: To shoot a series of matches with any six amateur shots, members of the Carteret, Larchmont, New Utrecht, Westminster Kennel or Westchester County clubs; each match to be an individual one of 100 birds per man, with one of the six amateurs, and he was willing to shoot a race with one of them on Monday, another on Tuesday with a second man, a third on Wednesday, and so on, finishing the series on Saturday. Fred Hoev, George Work, J. P. Knapp, Fred G. Moore and Lou Thompson would all be capable of making Duryea shoot hard to win; but where's the sixth man to come from?

W. H. Skinner, the representative of the W-A powder, will be on hand at San Antonio's midwinter shoot. In a personal letter Mr. Skinner writes: "I will, after the San Antonio shoot, proceed via the Southern Pacific to El Paso, Tex., and on to Riverside, Cal., where I will hunt quail with friends for a week. Then I shall go to San Diego, Los Angeles, San Jose, San Francisco, etc., returning to Chicago by way of Ogden, Denver, etc. Our new factory at Pompton, N. J., is now completed, and our company is about ready to fill all orders for rifle and shotgun powders." Skinner is not a new man to the Pacific slope. If we remember right it was on his return from his last trip to California that he introduced to Eastern shooters the target miss-and-out sweepstake, which he called "California freezeouts," but which Dutchy Smith terms "Schkinner games."

Charlie Fehrenbach, captain of the Delaware State League team, writes us from Wilmington, Del., under date of Dec. 23, as follows: "On Jan. 4, 1896, the second team race between All-Philadelphia and the Delaware State League will be shot on the Wilmington Rod and Gun Club grounds, Front and Union streets, this city. The following programme has been selected: No. 1, 10 targets, known, \$1; No. 2, 10 targets, unknown, \$1; No. 3, 15 targets, known, \$1.50; No. 4, 10 targets, unknown, \$1; No. 5, 20 targets, known, \$1.50; No. 6, 10 targets, known, \$1; No. 7, 10 targets, unknown, \$1; No. 8, 15 targets, known, \$1.50; No. 9, 15 targets, unknown, \$1; No. 10, 20 targets, known, \$1.50. Other events to suit shooters."

J. P. Knapp, the winner of the President's "cup," a Purdey gun of the value of \$500, presented to the Carteret Club by George Work, president of the club, has put up for competition at the club's grounds four cups, the total value of which is \$500. The first cup, valued at \$250, was competed for on Thursday last, Dec. 26, George Work winning the first heat. This cup must be won three times before becoming the property of an individual. Future competitions for this cup will take place on the second and fourth Wednesdays of each month during the shooting season. The three other cups, aggregating in value \$250, will be shot for as follows: First cup to be shot for on Jan. 4, the second on Feb. 5, the third on March 4. The conditions are as follows: 50 live birds per man, \$50 entrance (\$25 optional entrance to 25yds. men and forward), cup and 35 per cent. of purse to winner, 25 per cent. to second, 15 per cent. to third, and 5 per cent. to fourth, 20 per cent. going to the benefit of the club. Shooting on each of these days commences on the arrival of the 10 A. M. train. No competition unless five or more entries.

Paul R. Litzke, of Little Rock, Ark., writes: "E. W. Hoffman, of Galena, Kans., the present holder of the Kansas live-bird championship trophy, is a beginner, having only begun shooting at the trap last summer. Regardless of this fact he has quite an enviable record, and one that any amateur would feel proud of. At the Joplin, Mo., tournament last September he broke 98 targets out of 100; in the team race, 100 targets per man, he missed his first and third targets and then ran 97 straight; at Weir City in October he was third in the big championship race, scoring 45 pigeons out of 50, only two birds behind the winner. W. W. McIlhenny, afterward defeating him for the trophy, a detailed account of which contest is given elsewhere in this issue of the paper."

The Climax-Keystone team race, the score of which is given elsewhere, was an unsatisfactory affair. It had been the intention of both captains to have at least fifteen men on the grounds, and the keystones totaled one above that number. The Climax, owing to five men who had promised to be present being unable to get to Yardville as agreed upon, could only muster ten men. Sooner than not shoot a race, the keystones picked ten of their men and pitted them against the Climax ten, the latter team winning by 11 birds, the score standing 130 to 119.

J. Seaver Page and George Work shot a race on Dec. 16 on the Westminster Kennel Club's grounds, Babylon, L. I. The match was at 50 pairs of live birds per man, Work betting two to one that he could beat his opponent. Mr. Page, who was clearly out of all form, and who also had none the best of the luck of the birds, retired at the end of the 42d pair, the score then standing: Work 50 out of 84, Page 26. The birds were an excellent lot, while a good wind helped to make them quick enough to puzzle anybody.

Ferd Van Dyke did not leave for San Antonio as was expected; Van and his pump will not be seen at the big midwinter shoot nor at any other shoot for some time, so that some others will have a chance of climbing to the top. He is located temporarily at the factory of the Winchester Repeating Arms Company, New Haven, Conn., learning all about rifles and their loads, and incidentally trying his hand with the small bores. In a personal letter he writes that he wishes he was in New York just now, as he'd like to make a "monkey" out of Jim Elliott, pump for pump!

The Rochester, N. Y., Rod and Gun Club and the Audubon Gun Club, of Buffalo, N. Y., will shoot a 15-men team race on Jan. 16. The match will be shot at Buffalo, each man shooting at 25 targets. The Rochester team will be captained by W. J. Mann. The Audubons can get together a strong team, but they will have to shoot hard to beat a 15-men team from Rochester; a good race is sure to be the outcome of the meeting, although we fancy Rochester's chances. A return match will be shot at Rochester some time in February.

The Rye (N. Y.) Gun Club has removed its old club house and replaced it with a new one, that has been erected under the supervision of architect W. A. Lyon. Many advantageous changes have been made at the grounds, and shooters are now well protected from both wind and weather. As usual, the secretary, E. J. Pope, has been bustling things, the club holding an all-day shoot on New Year's Day.

The articles of agreement entered into by Fred Emond and Jacob Koch, both of Buffalo, N. Y., for a series of three 100-bird races, \$100 a side each race, called for the matches to be shot on the following dates: Jan. 1, 8 and 15. All three matches were to be shot at Audubon Park, Buffalo, the loser of the rubber paying for all the birds.

Arthur Bunn, of Singac, N. J., states that he will bet any man in the country \$100 that he cannot kill 91 or better out of 100 birds, the pigeons to be trapped by Bunn on his own grounds. The conditions are to be: 30yds. rise, 5 traps, Hurlingham or Long Island rules. Anyone that wants to try Bunn's birds under the above conditions should write to him and make the match.

The diamond championship badge of the State of Minnesota, which was won by George E. Trent, of Madera, Minn., at the State tournament held at St. Paul on Sept. 9-12, 1895, is a remarkably handsome one and is worth \$250. It has to be won three times in succession before becoming individual property. Mr. Trent prizes it greatly and thinks that he can make it three straight.

Talking about \$2,000 added money brings up the E. C. Powder tournament next May. Although it is not settled as yet just where the tournament will be held, it is more than probable that if the Guttenburg race track, in Hoboken, N. J., can be secured the tournament will be held there.

Owing to our going to press one day earlier than usual this week, many secretaries of gun clubs and other correspondents of the trap department will be disappointed this week; much matter that arrived too late for the issue will have to be held over until our issue of Jan. 11.

This week saw the exodus for San Antonio's midwinter tournament. If all the big cities do as well in point of numbers as New York has done, the midwinter will be a big affair. Added money to the extent of \$2,000 will draw the boys quite a long way.

Jas. S. Taylor, one of the best shots in the West Newburgh Gun and Rifle Association, of Newburgh, N. Y., killed 44 out of 45 shot at on Dec. 26, the bird he lost falling dead out of bounds.

EDWARD BANKS.

Rochester Rod and Gun Club.

ROCHESTER, N. Y., Dec. 25.—The Rochester Rod and Gun Club held an all-day shoot to-day, open to everybody. The attendance was not up to what was expected, but this was undoubtedly due to the unpromising condition of the weather; it rained from 10 A. M. until 1 P. M., at which hour shooting was commenced, the sport continuing until darkness put an end to it. The main event of the shoot was a team race between teams captained by E. C. Meyer and Sim Glover respectively. The boys took great interest in this event, as the sides were evenly matched and it being a fight for victory from start to finish, the totals being a tie when the last shot was fired.

During the day some great work was done by Sim Glover and Byer; the former broke 97 out of his 100, Byer breaking one less—96. Scores in all the events are as follows:

Team race, 8-men teams, 20 targets per man, unknown angles:												
Meyer's Team.

Baltimore Shooting Association.

BALTIMORE, Md., Dec. 19.—Every second Thursday in each month the Baltimore Shooting Association holds a shoot at its grounds; the main event at these shoots is a handicap, 10 birds, \$5 entrance. To-day this event was shot, Green, Bert Claridge and Charles Macalester tying for first money with 9 out of 10. The best shooting of the day in the extra sweeps was done by Macalester; in two 5-bird sweeps he took first money alone, being the only one to kill his 5 birds straight. Score in the handicap:

Green (29).....	2220222222	9	Malone (28).....	2012011201	7
Claridge (30).....	2211221112	9	Macalester (32).....	2212220122	9
Sackett (28).....	0001002120	4	Heiskell (29).....	2010110010	5
Cunningham (29).....	1202201212	8	Baker (28).....	2200121012	7

Dec. 26.—There was a good attendance to-day at the association's grounds, target events being shot off in the morning and live-bird sweeps in the afternoon. The following are the scores in the target events:

No. 1, 10 targets, \$1: Hood and Wagner, 10; White, 9; Claridge, 8.			
No. 2, 15 targets, \$1.50: Wagner, 13; Hood and Claridge, 12; White and Hawkins, 11; Jack, 7.			
No. 3, same: Claridge, 14; Hood and Hawkins, 13; White and Chairs, 12; Cassard, 10.			
No. 4, same: Hood, 13; Hawkins, 13; Claridge, 11; White and Jack, 10; Heiskell, 9.			

No. 5, team race, 5-men teams, 15 targets per man, losing team to pay for the targets: Claridge's team: Hood 15, Jack 13, Claridge 12, White 9, Gust 5—54; Hawkins's team: Hawkins 14, Malone 11, Cassard 10, Chairs 8, Hsken 4—46.

The live-bird sweeps resulted as follows:

No. 1, 5 birds, \$3 entrance: Hayward, Hawkins, Wagner and White, 5; Kingsbury, Sackett and Chairs, 4; Heiskell, Green, Claridge and Hood, 3.			
No. 2, miss-and-out, \$2 entrance: Heiskell and Macalester, 3; Hawkins, Kingsbury, Claridge and Hood, 2; Wagner, 1; White, Chairs, Sackett and Green 0.			
No. 3, Maryland handicap, 10 birds each, \$5 entrance, three high guns: Heiskell, Claridge, Green and Sackett, 9; Macalester, Hawkins, Wagner, White and Hood, 8; Kingsbury, 1. Kingsbury withdrew on account of his gun breaking down.			

No. 4, miss-and-out, \$2 entrance: Hawkins, Heiskell, White and Wagner, 8; Kingsbury, 6; Sackett and Chairs, 5; Gent, 3; Macalester, 2. No. 5, same: Wagner, Hawkins, Green, Claridge, Hood and White, 3; Macalester and Kingsbury, 2; Heiskell, Gent and Sackett, 1.

No. 6, same: Hayward and Hawkins, 5; Hood and White, 4; Heiskell, 3; Kingsbury and Claridge, 1.

No.

Matches at the Westminster Kennel Club.

The past week has witnessed the shooting of two important matches at live birds on the grounds of the Westminster Kennel Club, Babylon, L. I. These grounds have a great reputation for fast birds, and are therefore a favorite resort for the prominent amateurs of New York and vicinity whenever they have a little question to settle as to superiority at the trap. The club's superintendent, George S. Mott, always has a supply on hand, or can obtain good birds on short notice; the Westminster birds are flyers from first to last. King's traps with an automatic pulling apparatus are used, and with the quality of the birds furnished there is very seldom any need of using the pieces of old gaspide that are kept handy in case a bird requires flushing.

The first of the series of three matches was the one between

L. T. DURYEA AND W. G. BROKAW.

This match was shot on Monday, Dec. 23. The conditions were: 30yds. rise, 50yds. boundary, 100 live birds per man, for a nominal consideration and the price of the birds.

Duryea shot a great race, outclassing, as might be expected, his plucky opponent and defeating him by 10 birds. Duryea's score of 91 could easily have been improved had he been pushed at all, as he was shooting in really marvelously good form, some of his kills being of the phenomenal order. The birds were fast and were helped by a breeze which blew directly from the shooter to the traps; this fact makes the score of 91 much better than it seems on paper.

The end of the first 25 found Duryea 2 birds in the lead, the score standing 22-20. At the half-way mark Brokaw was only 3 behind, notwithstanding the good work of his opponent, who scored 24 out of his 25, making his total for the 50 amount to 46 against Brokaw's 43. Then came a bad break on Brokaw's part: Duryea missed his 51st and 52d birds, reducing the lead to 1, as Brokaw had killed both of his birds; but out of the following 8 birds he shot at the latter lot no less than 6 escape him, thus virtually settling whatever doubt there might have been as to the result of the match; at the end of the third string he was 9 behind, the score sheet showing: Duryea 68 out of 75, Brokaw 59 out of 75. In the last string Duryea killed 23 to Brokaw's 22, making his lead 10 all told. The following shows the high runs made by each shooter: Duryea, 31, 26, 12 and 11; Brokaw, 15 and 13. Score:

The second match was shot on the following day, Dec. 24, and was at 200 live birds per man, same conditions as in the match between Duryea and Brokaw, with the exception possibly that there was more than a nominal consideration at stake. This match was between

H. B. WRIGHT AND W. G. BROKAW.

In this match also Mr. Brokaw came out behind, the full score showing Wright 177, Brokaw 161. The day was a lovely one from a tourist's point of view, the air being almost as balmy as that of spring; it was just such a day as was likely to be hard on the birds, the wind dying away to nothing while the last 200 birds were being trapped. The light breeze that blew during the first half of the match was from the right quarter for these grounds—N.N.E.—the Kennel Club's grounds facing slightly to the east of south; the latter fact makes them rather hard grounds to shoot on during the morning hours of a winter's day.

A start was made at 10:13 a. m., Fred G. Moore looking after Wright; Louis T. Duryea performing the same kind of offices for Brokaw; Jacob Pentz acted as referee, Edward Banks being official scorer; the superintendent, George S. Mott, was trap-puller. The 400th bird was disposed of at 2:30 p. m., the match having occupied 4 hours and 17 minutes; the whole of the birds were retrieved by Fred Hoey's liver and white setter dog Don, whose keenness was only partially appeased by the work he had done during that 4 hours and 17 minutes; he's a great dog. The time for each 100 birds was as follows: 1st 100—65 minutes; 2d 100—64 minutes; 3d 100—62 minutes; 4th 100—66 minutes. In figuring on the scores it should be remembered that these grounds have no fence of any kind on the dead line, the line being marked by chalk alone; the circular 50yds. boundary is a small wire fence about 18in. high. Thus a bird must be surely killed to be scored, particularly at this season of the year when they are strong flyers and heavily feathered; under such conditions, then, Wright's totals of 87 out of his first 100, and of 90 out of his second 100, must be considered as very good work, despite the fact that there was no wind to speak of to help the birds.

The result of the match was about the only one that could be expected from our point of view. Wright is one of the coming amateur shots of this section, and it must be said he is coming very fast;

The closeness of the figures, each bird being marked with a star when the result of the shot was scored, is really remarkable.

In the matter of traps it must not be forgotten that Wright is right-handed, while Brokaw shoots from his left shoulder; the end traps would, therefore, naturally bear different relations when they fell to the different shooters. It will be noticed in the following figures that Nos. 4 and 1 were far above their respective averages—80:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.	Total.
Wright.....	54	31	31	51	33	200
Brokaw.....	37	29	31	57	46	200
	91	60	62	108	79	400

Six times during the race did Brokaw miss in the same round that his opponent did, thus losing six separate chances to reduce the lead. At the end of the first 25 the score stood 22-20 in Wright's favor, but at the end of the 37th round the score stood even up, Gilbert having lost 4 birds to Brokaw's 2 since the commencement of the second string; from that point until the 45th round the shooters ran neck and neck; then Brokaw lost his 45th and 46th birds, giving Wright a lead that was never again taken from him, although it was reduced to a single bird when he lost his 51st pigeon. From that round it was really

H. B. WRIGHT.

a procession, the halfway mark, 100 birds per man, showing 87 to 83 in Wright's favor. As the latter is always a strong finisher, it looked and proved to be a sure thing for Wright, who had backed himself the previous evening to kill more birds out of his last 100 than out of his first 100.

It was in this last 100 that Wright did his best work, scoring 90 to Brokaw's 78, the latter falling away sadly in his first 25 on the second half, 9 birds out of the 25 getting away from him. All through the match he shot unsteadily, at times doing brilliant and quick work with both barrels; at others he was very slow, particularly on rising and driving birds from No. 5 trap; occasionally he held his second barrel so long as to be extremely wearing on the nerves of those who had his interests at heart; only once did he place a second barrel to advantage after holding it for a long time, while he lost several chances of placing it effectively if used 10yds. quicker. Wright shot consistently well the whole match, only dropping down occasionally, as any one is likely to do when one has a match well enough in hand to grow temporarily careless.

The full score, showing the fight of the birds, tells the rest of the story without the need of any more words:

Wright shot a Purdey gun and 48grs. of Schultze in a V. L. & D. Lightning shell. Brokaw also shot a Purdey gun. His shells were Eley Bros., of London, loaded with Schultze powder. The shells of both shooters were loaded by Von Lengerke & Detmold.

Trap Around Buffalo.

BUFFALO, N. Y., Dec. 18.—Twelve shooters put down their names and paid \$25 apiece for the privilege of taking part in a 25 live-bird race at Audubon Park this morning. Among the shooters from a distance were: Harvey McMurchy, of the L. C. Smith gun, who took first money alone by killing his 25 straight, using the second barrel but eight times; F. Osgood, otherwise D. A. Upson, of Cleveland, O., and R. May, better known to trap-shooters as Ralph Worthington, both sterling good shots with the scatter-gun; F. D. Kelsey, East Aurora, N. Y.; Sim Glover and E. C. Meyer, of the Rochester (N. Y.) Rod and Gun Club. The purse was divided 40, 30, 20 and 10 per cent., class shooting. The following were the scores:

Conditions, 25 live birds, \$25 entrance:
Harvey McMurchy.....1111221121111221221112-25
R May.....222222222222122112211200-23

Among the matches of the future are: O. Besser versus an unknown, \$100 a side, 100 birds per man; a forfeit has been placed in the hands of B. F. Smith, of this city. Jake Koch and Fred Emond have also been matched to shoot a series of three matches, each race to be at 100 live birds per man, \$100 a side. The first race is set for New Year's Day.

B. F. S.

Championship of Kansas.

WEIR CITY, Kan.—Despite the disagreeable weather and regardless of the fact that it rained steadily all day, the much-talked-of match between W. W. McIlhany, of this place, and E. W. Hoffman, of Galena, Kan., for the trophy emblematic of the Kansas State championship at live birds was shot here to-day. The match should have been shot on Nov. 21, but owing to the fact that Hoffman was taken seriously ill with pneumonia at that time it had to be indefinitely postponed. As soon, however, as he had sufficiently recovered he renewed his challenge, which resulted in the match of to-day, and in his wrestling the coveted trophy from McIlhany by the fine score of 46 to 44, each losing two birds dead out of bounds. The match was one of the most interesting ever shot in the State, for it was not until the 48th round, when McIlhany let an easy incomer beat him, that one could pick the winner with any degree of certainty.

Both men started off in rather poor form, appearing to be a trifle nervous. McIlhany led off by missing a left-quartering driver from No. 5 trap, Hoffman following suit by missing an easy incomer from No. 3. McIlhany's next was the same kind of a bird from No. 5, he scored this with his first barrel; Hoffman's second was precisely the same kind of a bird as his previous one and from the same trap, but it got over the deadline before falling. This gave McIlhany a lead which he maintained up to his 9th pigeon; this bird, a direct right-quarterer from No. 5 that went down wind, carried both charges of shot out of bounds by a few feet, being materially assisted by the wind. Had this bird come from either of the other traps and taken the same course, it would have dropped in bounds. This made things equal, but the next round McIlhany was beaten by a twisting driver from No. 1 trap. Here was Hoffman's chance to get away from his opponent, which he did, but only for that round, as his next bird, another easy incomer, and again from No. 3 trap, got away unhurt.

For the next three rounds matters were even, each scoring his birds. The 15th round changed the aspect of the race, as Hoffman's bird, a hard driver from No. 1, dropped dead out of bounds. This put an end to the missing for some time, as each contestant settled down to business and shot in excellent form. McIlhany maintained his lead of 1 up to the 41st round, when after having made the fine run of 30 straight, a driver from No. 2 went over the boundary and had to be scored lost. He followed this up by letting his next, a right-quartering incomer, escape. He managed to kill his next 5 and then lost his 48th, another incomer. Hoffman in the meantime wasn't doing a thing but killing them all; he ran his last 35 straight and won by 2 birds. He out-lucked his opponent as well as out-shot him; especially was this apparent toward the close of the match. Of his last 11 birds 8 were from No. 3 trap and 6 of them were incomers; he also drew 16 birds from No. 3 trap, while his adversary got but 9 from the same trap; incomers, however, seemed to be Hoffman's Jonah, as 3 of the 4 he lost were incomers from this trap.

The birds were a fair lot, but there were too many incomers among them to rate them as first class. The shooters faced east, and the wind blew strongly from the northeast; the rain also was against the birds, making them slow to start. Both men shot Parker guns, E. C. powder, Smokeless shells, and No. 7 chilled shot.

W. G. BROKAW.

A number of sportsmen came over from Galena and Columbus to witness the match, among whom were the following: H. T. Leeman, Fritz Weber, J. L. Horn, C. W. Sumner, S. Y. Timberlake and B. C. Best.

The conditions were: Match between W. W. McIlhany, of Weir City, Kan., and E. W. Hoffman, of Galena, Kan., for the individual live-bird championship of Kansas, 50 live birds per man, American Shooting Association rules; challenger to put up \$50 against trophy, winner to take money and trophy, loser to pay for the birds. C. H. Calhoun, of Weir City, referee. Below is a detailed score of the match:

Trap score type—Copyright 1895, by Forest and Stream Publishing Co.

PAUL R. LITZKE.

L. T. DURYEA.

the accuracy and the rapidity with which he plants his second barrel into an outgoing bird is very nearly equal to George Work's style; on incoming birds he is very sure—a great thing for anybody in such weather as that which prevailed on Dec. 24—weather that is calculated to breed incoming tendencies in even the best of birds. As a matter of fact Wright drew 54 birds out of his 200 that showed incoming tendencies; of that number he lost but two; Brokaw drew 65 incoming birds and lost 11 of them, a very large proportion of what should be easy birds to anybody who has had much practice. As a tribute to Wright's fine work at the traps since the opening of the season, he has been moved back to the 30yds. mark at the Carteret, and now shoots off the same score with such good shots as J. Seaver Page, C. M. Chapin, etc.

Brokaw, on the other hand, had up to the morning of this match been doing far too much trap-shooting in a short space of time, and could not fail to be a little stale. Besides shooting the 100-bird race with L. T. Duryea on the previous day, as reported above, he had shot about 1,100 other birds in less than as many days; add to this also the fact that he has been swapping loads and guns, and does not yet quite know what he wants in the gun line, and it is hard to see how Wright could fail to come out ahead in the race, without taking into consideration the question as to which of the two is the best man at the traps.

The luck of the birds was really about even. Sometimes, of course, they ran hard for one, but then they evened things up after a while. We kept tab on the best birds—that is, birds which were actually above par. We did this in order that we might see just how the shooters stood as to luck at the end of the long race. The totals show that Wright drew 59 extra good birds against 57 drawn by Brokaw.

Fine Rifles.

The 1895-1896 catalogue of the J. Stevens Arms & Tool Co., of Chicopee Falls, Mass., contains much of interest to every rifle shooter. Among the notable productions of this company in the line of small-bore rifles are those of .25cal., including the .25-25, which was designed by a correspondent of FOREST AND STREAM. This rifle is one of the most powerful and accurate of the small-bores, and has given very general satisfaction.

Three New Books of the Field.
North American Shore Birds.
A History of the Snipes, Sandpipers, Plovers and their Allies inhabiting the beaches and marshes of the Atlantic and Pacific Coasts, the prairies and the shores of the inland lakes and rivers of the North American Continent; their popular and scientific names, together with a full description of their mode of life, nesting, migration and dispersions, with descriptions of the summer and winter plumages of adults and young, so that each species may be readily identified. A Reference Book for the Naturalist, Sportsman and Lover of Birds, by Daniel Giraud Elliot. With seventy-four plates. Price \$2.50.
Mr. Elliot's purpose being to make a book which should be for the sportsman and bird lover rather than for the naturalist, he has written his descriptions so that they shall be plain and easily comprehended.

Scientific Duck Shooting in Eastern Waters.
By R. S. NYE. Cloth, 116 pages. Price \$1.25.
The author has something to say about duck shooting, and he says it without drawing on a thousand extraneous circumstances, or dwelling on others beyond their value, and having skillfully presented what he had to say, he stops—a matter not always truly appreciated by speakers and writers.

Caribou Shooting in Newfoundland, 1894.
By DR. S. T. DAVIS ("Shongo"). 52 Illustrations. Price \$1.25.
A vast fund of practical information is embodied, which will be invaluable to any one who takes a similar trip, and which was obtained by the author only after much correspondence, study and personal experience.
FOREST AND STREAM PUBLISHING COMPANY,
318 Broadway, New York.

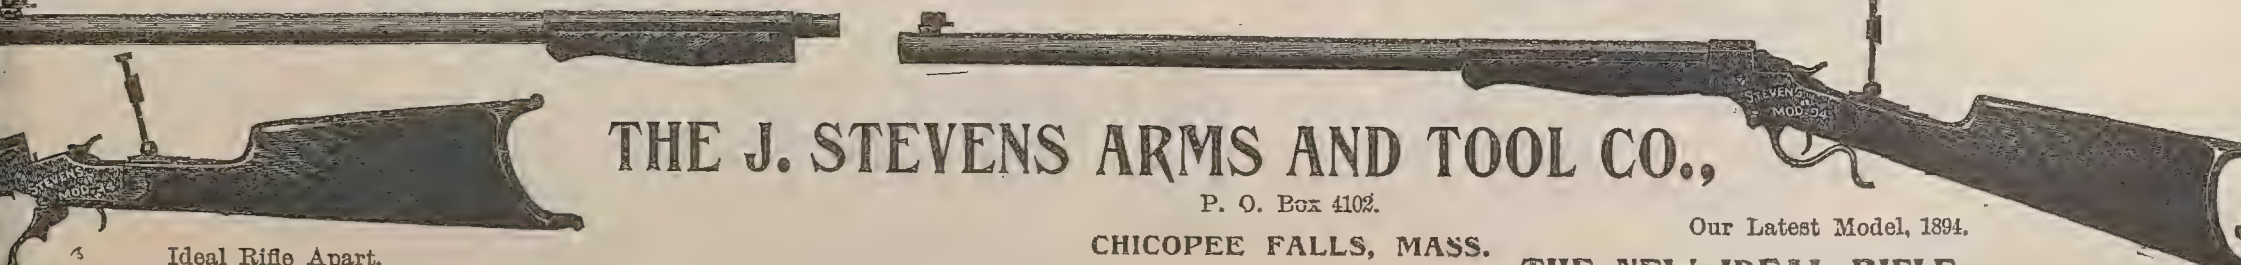

The Spaniel and Its Training.
By F. H. F. MERCEUR To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price \$1.00.
The chapters are practical and sensible. There is no theory in them. Here is a man who trained his dogs; learned by experience how to do it; and now has put down that experience for the benefit of others. We predict for "The Spaniel and Its Training" that wide popularity and favor which of right belong to practical books by practical men for practical men. In addition to the chapters on training there are descriptions of the several varieties of spaniels, with portraits of typical specimens; notes on the spaniel in America, and the standards adopted by the English and American spaniel clubs.

The Trapper's Guide.
A Manual of Instructions for Capturing all Kinds of Fur-bearing Animals, and Curing their Skins; with observations on the fur-trade hints on life in the woods, narratives of trapping and hunting excursions. By S. Newhouse and other trappers and sportsmen.
This is the best book on trapping ever written. It gives full descriptions of all the animals which an American trapper is likely to meet with, tells how they live, how to trap them and how to care for and cure their pelts. No man who is interested in trapping animals, whether it be muskrats or bears, should be without this complete manual of instruction.
Ninth edition. Cloth. Illustrated. Price \$1.00.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR, 10 CTS. A COPY. }
SIX MONTHS, \$2. }

NEW YORK, SATURDAY, JANUARY 11, 1896.

VOL. XLVI.—No. 2.
No. 318 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page v.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream one year and the set of four pictures, \$5.
Forest and Stream 6 months and any two of the pictures, \$3.

Price of the pictures alone, \$1.50 each; \$5 for the set.

Remit by express money order or postal money order.
Make orders payable to

FOREST AND STREAM PUB. CO., New York.

THE POLICE SCHOOL OF SHOOTING.

OF the reforms which have found favor and adoption with the authorities of the New York Police Department, none are of more practical utility than the school of revolver practice which has been instituted as the result of the plans submitted to the Department by the FOREST AND STREAM in July of last year.

Through the lack of the needed skill in pistol shooting the police have been subjects of ridicule for many years, holding equal place with the mother-in-law, the spring poet, etc., in the esteem of comic illustrators, caricaturists and joke constructors. The absurdities of shooting at a so-called mad dog on the street and killing an on-looker in a second story window, or of shooting at a criminal and killing or wounding two or three innocent persons, afforded endless material for the caricaturist and the satirist.

Although there are men on the force who are skillful marksmen—who know how to shoot and how not to shoot—their numbers relatively are small. The majority are unskillful, and a few do not know how to shoot at all. Their unskillfulness being constantly in evidence, with sad mishaps frequently occurring, which gives them notoriety, they thereby make the reputation of the whole force for unskillful marksmanship.

The same dangers which beset the public directly from unskillful police shooting indirectly affect the policemen themselves, for they are not properly trained for attack and defense in coping with the trained criminals. They often personally suffer severely from their unskillfulness. Thus the policeman who knows not how to handle his pistol, or who knows not its deadly powers, is not properly qualified to fill the position of police officer. When shooting begins in public places he is often more dangerous to society than is the criminal whom he sought to arrest; indeed, much more so, for every hand is raised to suppress the criminal, while the officer, be he skillful or otherwise, is allowed full liberty and discretion in using his weapons, as he represents the law.

The value of an officer is greatly enhanced if he be a good pistol shot, for the moral effect of his skill will deter even hardened criminals from the commission of crime within the territory which he patrols. The moral effect is even more beneficial than the material use of the weapon, since it is all-pervading and constant for peace and repressive of crime.

In actual battle the skillful shooter knows how and when to shoot. He knows the range and force of his weapon. Less shooting is necessary, for with precision comes quick victory. Precision also avoids the killing or wounding of peaceable citizens, or the alarming of a whole neighborhood by wild bullets. In short, it is quite as necessary that the policeman, armed with weapons to maintain the laws of society, should know how to use them as does the soldier armed for warfare against the enemies of his country. In either instance when in action the untrained man is a harm and hindrance.

The police school of shooting in New York is therefore a much needed institution, and will accomplish inestimable benefits in enlarging the efficiency of the police force. It should, moreover, add greatly to their prestige and dignity, by raising them above the ridicule which has so long attached to their marksmanship. Anything that is ridiculous seldom commands respect.

What is useful in this respect to the police force of New York is fully as useful to the force of all other cities. Any city which places pistols in the hands of its policemen should see that they know how to use them. A policeman ignorant in the use of a pistol is not a fit person to carry it, for then he is a menace to society instead of a protector.

Thus every city in the Union should have a permanent school to instruct its police in the art of pistol shooting. From an economical standpoint, the expense of it to the departments would be but trifling, as there are always a number of skillful policemen who could act as instructors to their fellow officers. The expense of gallery and ammunition is but trifling at the most, and insignificant in comparison with the benefits which are derived from it when used to promote usefulness. In case of riots or great dangerous disturbances, the fame of a police force for good marksmanship would add to its efficiency beyond computation, as a reputation for poor marksmanship depreciates it. This is well illustrated when a squad of regular troops is sent out for the suppression of disorder, their undoubtable reputation inspiring awe.

REPEAL THE LAW, RIGHT THE WRONG.

The most important step the New York Legislature can take in respect to game protection is to repeal that section of the law which permits the sale of game all the year through.

The reasons demanding such action are two. First, the sale of game the year around means an increased destruction for market in the open shooting season and a continuous destruction for market during the closed shooting season. Second, the open market in New York encourages in other States the destruction of game which finds market in New York at times when in those other States sale is forbidden.

The working of the law is destructive of the game of New York and of the game of New York's sister States. It is a wrong which should be righted, and righted at once. The remedy should be provided without the delay of a day. The Legislature should repeal Section 249 at once.

EDWARD JACK.

WE learn with sincere sorrow of the death of our contributor Edward Jack, of Fredericton, New Brunswick. Mr. Jack died at his home on Tuesday, Dec. 31, aged 70 years. In early manhood Mr. Jack was led by his tastes for woods life to abandon the practice of the law for civil engineering and forestry. Years of service first as timber cruiser and afterward in charge of the stumpage department of the Crown Lands office gained for him the reputation of being the best posted man in New Brunswick on the natural resources of the Province. More than this, he was esteemed as an honorable, high-minded and kind-hearted man. His life in the forests gave him much lore of the woods and he was an entertaining writer on these subjects; his contributions to the FOREST AND STREAM began with the first numbers and were frequent almost to the day of his death; for our Christmas number he sent an interesting note of the Maliseet traditions of the Mohawks. Mr. Jack was a person of much literary culture; he found time to master several foreign languages—Hebrew, Greek, Italian, French and German; and he made extensive translations from these tongues. We have in hand a story which he translated from the French for the FOREST AND STREAM of early hardships in a Canadian winter.

THE NATIONAL ASSOCIATION AND ITS EGGS.

WE print elsewhere Secretary Lakey's announcement of a postponed meeting of the National Game, Bird and Fish Protective Association, and his accompanying appeal for light on some seventeen subjects which range in importance from the long standing problem of what constitutes a true sportsman to a fantastic and impossible scheme of National game wardens. These questions are deserving of attention chiefly because they indicate that the officers of the Association are themselves at a loss to know where they are at, or what there is for them to do, or how they are to do it. Mr. Lakey invites you to lend the Association your influence, your voice, your presence and your money. Voice is the one great essential to the success of a National Association; voice is needed and a lot of it, but we should think that Mr. Lakey might find a sufficient supply in stock among the home talent of Kalamazoo, without appealing to the country at large.

Before the National Game, Bird and Fish Protective Association can expect any body to lend it money, it must show that it is entitled to the confidence of the people it asks to put up the funds. Money is not loaned without good security. The sportsmen of the country are not going to hand over their money to a self-constituted national association, for the sake of getting in poor return any more such preposterous fakes as the National Game, Bird and Fish Protective Association's Alaska duck egg story. Nor are thinking and prudent men going to lend the concern their voice or influence or respect until the managers shall have relieved themselves from the contempt which the public now entertains for them as foisters of foolish alarms. The most important thing the officers have before them for their Chicago meeting is to show that they had some reasonable ground for the vast amount of noise they made over this fabulous Alaska albumen industry. Failing to do this, they cannot expect the public—fooled by them once so thoroughly—to attach much importance to their Association or to give much attention to their proceedings.

TAKE CARE OF THE BIRDS.

EVERY sportsman who is so situated as to be able to observe the needs of the birds should bear in mind that a little care for them during the cold spells of winter may be productive of beneficial results to himself and to sportsmen in general, not to mention the direct benefits to the birds in lessening their sufferings or preserving their lives. Food in the stormy cold winter days is often very difficult for the birds to secure. A few handfuls of food scattered in their haunts every few days is of material benefit to them and not much trouble to the sportsman. A rude but efficient shelter can be made of dead branches and leaves in a few moments' time. With a sheltered place to live in and a little extra food given them in addition to what they can secure themselves, the birds will have many more chances of surviving the rigors of winter. A little forethought in such matters is worth a great deal more than much afterthought.

SNAP SHOTS.

The Board of Education of New York city is carrying on a notable work in the series of free lectures to the people, which are delivered each winter in certain of the public schools and such additional places as the Cooper Union Institute and the American Museum of Natural History. These lectures are a potent educational force, and at the same time are made as entertaining as is compatible with their subjects. Many are illustrated with stereopticon views, and they cover a wide and liberal range of subjects, patriotic, scientific, historical, and of travel, art and economics. During the second course, which begins Jan. 9, Mr. J. B. Burnham, of FOREST AND STREAM, will deliver a lecture upon "Camp Life and Hunting in the United States." As indicating the popularity of these lectures, it may be mentioned that the attendance last winter numbered 224,000, while the indications are that a much larger figure will be attained this season. Much of the success of the course is due to the enterprise and good judgment of Dr. Henry M. Leipsiger, superintendent in charge.

We print to-day as the best available information respecting the game qualities of the capercaillie a chapter from ex-Minister Thomas's work on Sweden, detailing his own experience with the game in its native land. Mr. Thomas is convinced that the birds might be introduced with success into America. The failures which so far have attended enterprises in this field have been due to improper management rather than to any inherent obstacles.

Mr. J. Henry Phair died at his home in Fredericton, New Brunswick, on Jan. 3. Mr. Phair was for many years fishery inspector for the Province. He was an accomplished angler and an artist who delighted to picture woodland scenes. It was Mr. Phair who some years ago fought to a successful issue the question of riparian rights in the Province against the claims of the Dominion Government.

Information Wanted—Concerning a lost man. For further particulars see our issues of Dec. 14, Jan. 4 and to-day. Who can tell us something more of him and of his fate?

The Sportsman Tourist.

A WINTER HUNT WITH JOCK DARLING.—II.

A Tame Deer.

THE common Virginia deer is really about the hardest kind of big game to hunt anywhere. It is quicker on the start than moose and caribou, for when it once plainly sees the hunter it generally does not wait long on the order of its going. Moose and caribou on the other hand are slower to accept the testimony of their eyesight, and unless they get a scent of the hunter are not quick to start. Caribou will sometimes run right up to a man who is in plain sight, influenced by the same fatal curiosity that makes the antelope decoy to the hunter's red flag, as was the case with those we saw on our photographing trip last summer.

At other times they will stand without appearing to be greatly concerned while being shot at. I know of a case where twelve shots were fired by two hunters from the same stand at three caribou, and the third caribou only ran away when the hunters had stopped shooting, having secured their legal limit of one apiece.

Some caribou apparently never learn to use their eyes. No doubt they depend largely on their keen scent, even in their every-day occupations of feeding and traveling, and their vision is to a certain degree atrophied. I traveled down on the stage from Patten with an old gentleman who had half a caribou with him in a bag, and in connection with this he told me the incident of its capture, which goes to prove what has been said above.

The day before, this old gentleman was sitting beside the fire in a house a stone's throw from the center of the village of Patten, talking with his son-in-law, Dr. Woodbury, when suddenly the latter, who had just glanced out the window, sprang to his feet and exclaimed, "There's a caribou!" Sure enough, a small caribou had that minute jumped over a fence into the back yard, apparently no more concerned at the presence of fences and houses than if they had been windfalls and rocks. If he hadn't been stopped it is possible that he would have gone right through the town and never been the wiser. As it was, however, Dr. Woodbury, who is a good hunter and sportsman, got his rifle and actually shot the caribou "from his doorstep," as they do in the woolly West.

Having stated the general principle that deer are quicker to accept the evidence of their eyes and quicker to start than other game under the same conditions, which, I believe, is pretty generally admitted by hunters, I will tell of an exception to the rule, that as such is worth noting.

Messrs. Stubbs and Staples, while cruising for moose one day, jumped a doe deer which ran a little way before old man Staples, who was leading, "blatted" and stopped her. As she turned to look back he brought his rifle to his shoulder and pulled the trigger. There was no result, however, and he recollected that he had not worked a cartridge into the barrel—it was a repeater—that morning on leaving camp. Accordingly he pulled down on the lever with this object in view, but the rifle had received a thorough wetting the day before and was so badly rusted that it would not work. Stubbs, who is something of a philosopher, meanwhile walked over to a stump and sat down and lit his pipe, and both he and the deer watched with considerable interest the old man wrestling with the rusted gun.

Staples, who is as good a hunter as ever walked the woods, got a little mad finally, and to get satisfaction out of the deer he borrowed Stubbs's gun. His first shot was high, but the deer never moved. She couldn't for the life of her understand what all the trouble and noise was about. He fired again with a like result, the gun being

"SABLE" AND BUCK.

sighted too finely, and his third shot did nothing more than take the bark off a tree just above the deer's back.

This was too much for human patience, and he handed the rifle back to Stubbs with instructions to "kill the blame thing."

The philosophical hunter took one shot and missed, and it is an actual fact that the deer stood there till the next and fifth shot, which killed her.

She was an extremely fat doe—the fattest I have ever seen—but she was altogether too slow to take a hint.

"Sable" and Deer.

The day Jock and I spent unsuccessfully hunting the moose on the ridge near Wadley Brook dam, Stubbs came up with a fine buck who was standing tail on rubbing his head against a tree when first seen. Aiming at his neck, as offering the best possibilities for a shot, he fired, and the buck went down like a log.

Stubbs walked up to the deer, but just as he reached him the buck raised himself in a sitting position, such as a dog assumes when resting upon his haunches. Upon

this Stubbs promptly shot him again, and so no doubt saved the venison, for on examination he found that the bullet had only "creased" the buck, and the shock undoubtedly was only temporary.

When Jock and Stubbs went after this deer and incidentally another hung up near by on one of the ridges west of the lake, they shot a sable—one of the pair shown in the illustration. The other was taken the same day from a bear trapset by Staples for fisher.

CAMP ON SEBOIS GRAND LAKE.

Stubbs sighted the sable on the snow near the deer carcass, and being prompted by Darling, he ran after it as fast as he could go. Jock knew by experience that it was possible to tree the animal in this way.

Stubbs lost sight of the sable almost immediately, but a careful survey of the neighboring trees soon showed the saucy little freebooter perched on one of the lower limbs. Jock brought him to the ground by a shot that only grazed the top of his skull, and did not hurt the skin a particle.

"Sable," as they are called by Eastern trappers, are the prettiest little creatures imaginable. They look very much like a fox in the face, but are longer and lower, and of course of a much darker color. They have large soft feet provided with the sharpest of claws, and they can catch a red squirrel in a tree, or a rabbit on the ground. They follow the latter in a deep snow by jumping in their tracks, profiting by the broken trail, and when the opportunity offers they will shorten the rabbit's detours by well calculated cut offs.

The deer from whose antlers the sable hang has a spread of 27 in., woods measurement, and taken in connection with the other deer's head, pictured last week, they make a remarkable pair. Another thing of interest in this picture is the arrangement of the front sight on Jock's rifle. He has covered all of the front sight but the extreme tip with a shield of leather, which is firmly bound to the barrel on either side, thereby accomplishing one of the ends which Mr. Lyman has attained with his peep sight—namely a fine bead, and an absolute certainty that at ordinary ranges he will neither overshoot nor undershoot. Jock's "patent" has proved so good that most of the woodsmen who have seen it who shoot open sights have adopted it.

Moose Hunting on a Crust.

And so the time passed till the last day of my stay. The hunting was very noisy, and though moose sign was plentiful, we had no shots at the game which American sportsmen put at the top of the list, barring only the grizzly bear. My gun had become badly rusted from hunting in the rain, and the mechanism refused to work, so Sunday was spent in walking down to the main camp, where there was a screw driver, and taking apart and cleaning the lock.

Wednesday morning found the crust as bad as ever, while, as if still further to assure the game from our covert designs, there was no wind whatever, and everything was so quiet that a man could be heard walking thirty rods. It seemed a waste of time to attempt a hunt under these conditions, and it was largely due to Darling's indomitable persistence that we went for moose that day. Darling is one of those men who only recognize obstacles to get the better of them, and this is one reason for his great success as a hunter.

There were moose on the ridge running north from the mouth of Wadley Brook, as we knew from previous scouting trips, and as this was probably the best nearby ground, we selected it as the scene of our hunt. It was arranged that Messrs. Stubbs and Staples should follow the east side of the ridge, while Darling and I took the other.

On our way to the ridge we found where three caribou had come on the ice and followed the shore of the bay from some distance, striking up at last on the bog at the mouth of Wadley Brook. The tracks were very fresh, and the temptation was strong to give up the moose hunt and follow the caribou up the brook, where the chances were greatly in favor of finding them, but we had nailed our colors to the masthead, and moose it was to be or nothing.

Jock and I saw two very old moose tracks, but that was all we had to report when we met the other hunters by chance at noon. Of course we had jumped deer, but that didn't count. Messrs. Stubbs and Staples had a somewhat better account to give. They had seen the tracks of six moose made only a few days before, and it seemed reasonable to believe that these were still on the east side of the ridge, as they had not crossed to our side and there had been no hunting in the neighborhood where we supposed them to be to frighten them away.

Stubbs and Staples had built a fire and were eating lunch when we arrived. They voted the moose hunt a

failure, and had decided to strike off to the bog on the north branch of Wadley Brook and spend the afternoon in hunting caribou. Jock and I, however, were loath to give up the moose. The news we had heard decided us to circle back toward the spot where the moose tracks had been seen, and accordingly, without waiting for anything to eat, we set off down the ridge at right angles with our former course. Had the other hunters known that almost within rifle shot of the spot where they sat were

two bull moose they might have taken a different view of the situation.

Keeping Everlastingly at It Brings Success.

The main ridge at this point was quite steep, and it did not take us long to arrive at its foot. Here the open hardwood growth terminated and the black growth took its place. Just ahead was a little knoll overgrown with balsam firs, and beyond that was the cedar swamp that extended to the open bog of Wadley Brook. To our right, between this evergreen knoll and the main ridge, was a hollow, and in this hollow we both suddenly caught sight of a large bull moose. It was only an instant's glance, for the old fellow had winded us and was off at a gait that was marvelous, considering the nature of the ground he had to pass over.

But though we only saw him for an instant, the picture was of a nature to stir a hunter's blood, and it remains vividly photographed in memory. We both stood on a fallen tree that by reason of its elevation enabled us to look over the tops of the nearest firs, and there we saw the moose, his head thrown back and the wide antlers resting on his shoulders, disappear in the forest growth.

I don't think I saw the moose for more than a second. Jock blatted a "bah-a-ah" that sounded like a bellow in a vain attempt to stop him, but he might as well have blatted at the Empire State Express. We both got our rifles to our shoulders, but there was no chance for a snap shot even, and neither fired. A moment later, seeing that there was no possibility of his again coming in sight further down the ridge, we lowered our rifles.

One's first inclination after such an experience is to consider the event from the "might have been" standpoint, but I am glad to say that whatever our thoughts no words in any such tenor passed our lips. We stood looking over the little knoll for a time, and then Jock, who never is at a loss for the right thing to do, said:

"There may be another bull in here. I'll take this one's back track, and you can work down the ridge for a shot."

As we each separately proceeded to carry out our parts of the programme, we heard above us on the ridge the voices of the other hunters. They had finished their lunch, and were coming down almost on our trail with a view of cutting across to the bog.

I watched Jock till he disappeared from sight among the firs at the far end of the knoll, and then I walked in the opposite direction, parallel to the course of the moose's flight, but keeping somewhat higher ground. In the meanwhile the other hunters passed Jock, and I could hear them talking several rifle shots beyond. What little air was stirring blew toward me, and though they were at least a quarter of a mile from the spot where I stood, I could almost distinguish the words. One of the hunters is somewhat deaf, and the other had to raise his voice to make himself understood. The fact of their talking proved how utterly hopeless they considered woods hunting under the circumstances.

Presently Jock began working my way. I heard him whistle several times, but at this juncture I became aware of a new sound. It was a crunching of the snow as some heavy animal broke through the crust, and every now and then it was punctuated by moments of absolute silence as the animal stopped to listen. Darling continued at intervals to whistle, and I could still hear the other hunters talking far off in the distance.

As the moose, for such it proved to be, came nearer I selected a good position from which to shoot on a log that offered a projecting stub for a footrest, which my left foot instinctively found. My eyes were too busy scanning the fir thicket that bounded the view at a distance of 60 or 70 yds. to notice such details.

While the moose was still well concealed by the firs I became aware that he had changed his course slightly and was moving across the front of my position. I could hear him run ahead 20 or 30 yds. and then stop and listen. No doubt he was bewildered by the unaccustomed sounds he heard on different sides, and possibly he had a fear that he was being surrounded.

Probably he had been started by Messrs. Stubbs and Staples, now well on their way to the bog, for Jock afterward told me that he had seen no fresh tracks besides those of the first moose.

Be that as it may, I soon saw that the moose was likely to pass by without offering a shot unless something unexpected happened.

It was folly to attempt to change my position, for he would certainly have heard me and been off. So I waited, almost convinced that this was another case of "might have been."

Just then the moose made one of his short runs and I caught an uncertain glimpse of him at a distance of 120yds. I saw a fir he brushed by quiver, and I decided that he had stopped just beyond. Two spruce trees stood on either side of this spot.

Feeling convinced that it was now or never, I raised my rifle, and sighting between them, fired. There was no result. Again I fired, and again there was nothing to indicate the presence of a moose within a thousand miles—no motion or sound.

I began to feel the strain on my nerves, but when I steadied my rifle for the third shot the white Lyman front sight rested on just that patch of uncertainty I wanted to test—a trifle nearer the ground than I had sighted before.

This time the shot worked wonders. There was a great commotion among the firs, and I could hear the moose plunge forward madly, smashing everything in his path.

I rushed to the spot and then on down the hill in the trail that the moose had left, till I reached a place where the growth was more open and where I could see a reasonable distance. Here I stopped for an instant and heard the moose fall with a crash like a forest tree.

The moose was still struggling when I reached his side,

cannot get along with any degree of comfort on hard smooth ice, though they travel long distances on ice that is covered with snow, or which is sufficiently roughened to give them a good foothold.

While the ice was smooth we found that they did not venture on it at all, though they were feeding on the bogs nearby in considerable numbers. In fact I found that two caribou, whose trail I followed on one occasion when the ice was in fine condition for skating, traveled up a stream for a considerable distance till they came to open water before crossing, and then back again on the other side to a point that they could have gained directly by passing over not more than 50yds. of ice. They do not object to breaking through the ice, and will frequently go on ice which is not sufficiently strong enough to bear their weight, but while the ice was smooth we could not find that they trusted to it.

Another instance: After a very slight snowfall one day we saw where two caribou had crossed Wadley Brook on the ice and slipped at almost every step. The conditions were such that a man could be certain of a fairly good foothold.

The caribou seem to come on the ice both because it affords an easy means of travel and also for the sake of the mosses and lichens that grow on the trees along the shores of the lakes and streams.

Game Law Violations.

At various times I heard of a number of game law violations which took place last summer. Judging from these reports it would seem that almost as many moose

the loss of acuteness in him of that sense that makes the hound dog valuable.

For another matter he is not so dependent on his guide, for if he chooses he can follow the game trails alone, and even if unsuccessful in his hunt there is no end of interest in this.

The charm of solitude is never more potent than in winter, when wastes of snow stretch on all sides, unmarked by human footprint, and there is a peculiar beauty by day and night that one does not find at other seasons.

The cold even in early December is severe at times. Warm footwear is a necessity that should not be overlooked. A good felt hat with a brim will be found indispensable for rainy weather. A toboggan cap is a good thing for protecting the ears on cold days, and also to use as a nightcap. Some nights a man might easily freeze his ears in camp, for the wood fire goes out soon after you have turned in, and simultaneously the thermometer drops below the freezing point.

By taking the proper precautions, however, the coldest-blooded man may be perfectly comfortable on a winter hunt such as the one I have attempted to describe, and if he has anything of the love of the woods in his make-up, he will be supremely happy as well.

P. S.—In the title under the cut in last week's issue for "A Set of Moose Antlers" read "A Set of Maine Antlers." J. B. BURNHAM.

FOREST AND STREAM OFFICE.

CRUISE OF THE YACHT DUNGENSESS.

In Two Parts.—Part II.

No words of mine can picture the beauty of the Havana harbor, with its six forts and its buildings all pink and blue and yellow, in their varied hues resembling nothing so much as a rainbow. The trees and grass-covered hills were beautiful and green, the sky like that of Naples. The water was fairly alive with strange little boats of queer type, half row and half sail, stern covered with awning over ribs like a prairie schooner and bow like a canal boat, large enough to carry twenty people and strong enough to have withstood the wear and tear of the ages since Noah. Foremost among them standing on the bow (it was a race who should reach us first among a dozen or fifteen) came a man wildly gesticulating and bowing, hat in hand, saying in English: "I am the best interpreter in the city and will save you a good deal if you take me." And he would and did. After considerable confab with our Capt. Yates he, with the rest, was dismissed. We then sent the pilot ashore, after being assigned a most advantageous spot near La Machina or Government wharf, so named from the immense crane or machine on shore used in loading and unloading cannon. When at Key West it was Mrs. C.'s pleasure to entertain on board the officers of the Infanta Isabel, and it seems that they in return, knowing our route, had wired the officials in charge at Havana not to accept even pilotage from the Dungeness, and also to allot us a favorable spot near shore, all of which orders were faithfully carried out, and on Mrs. C.'s behalf I hereby again thank them.

Impatient to land, hardly was lunch over when ashore Morris and I were rowed. At the iron gate, which gives entrance to the Government wharf, we found some fifteen or twenty little carriages, semi-victorias, with very low step, a comfortable seat for two, and a high box seat for the driver. The poor little horses were no larger than Western bronchos. If you expect the drivers to ask you to ride in their rigs no greater mistake will you ever make. Indeed they are about the laziest lot I ever saw. When you do select your conveyance and get in, the driver in a tired, slow way gathers the reins in his hands, and turning looks the question, Where to? That was the dickens of it—we could not say it in Spanish; every word I had ever learned in that Castilian tongue seemed to leave me. "American Consul," we first gently, then loudly yelled, until a slight wave of consciousness passed across our driver's bronzed face and we were off. Lickety! lickety! split! we tore along over the smooth, flat stones about 1ft. square, beneath awnings which stretched over the streets from roof to roof, by shops the very kaleidoscope of colors, around corners on

LUGGING DEER AND HAND SLEDGING.

but the light was fading from his wicked eye, and he was quite dead a moment later when Jock reached the spot.

"Well," said Jock, as he looked him over, "it pays to keep at it—if we hadn't hunted to-day we would never have got that fellow."

And Jock was right, as he generally is.

We had no axe with us to dress the moose, and we called to attract the attention of the other hunters, who were better provided; but they had gone too far to hear us. Only a few minutes later we heard a number of shots, and that night there was caribou in camp, each hunter having secured what the law allowed him. Jock estimated that the moose weighed about 900lbs., and his antlers have a spread, according to woods measurement, of something over 40in.

Films at Zero.

That night after sunset I walked twelve miles, down to the lower camp and back, to get fresh film for the camera. In zero weather film becomes rotten and almost useless. That with which the camera was originally loaded parted several times, and in some places the sensitive coating separated from the celluloid backing for 3 or 4in. at a time. At the main camp I worked nearly an hour in a temperature 2° below zero (not estimated—there is a thermometer there) easing the tension and taking out spoiled film. Everything was done by the sense of touch, for I had no ruby lantern. On another winter trip I shall use glass plates. Their additional weight will be compensated for by their reliability.

The camera too developed an annoying characteristic, due directly to the low temperature. The pneumatic action of the shutter "froze." I can think of no better term to describe the symptom. In the camp the shutter worked satisfactorily, but once out of doors it took the best part of a second for the exposure. Such an exposure was fatal for snow scenes, but by stopping the lens down to a mere pin point aperture, and giving the camera something steady to rest upon, I succeeded at last in getting some pictures.

Coming back, as I passed through the narrows of the Grand Lake, I espied in the moonlit snow that covered the ice a network of caribou tracks, looking for all the world like outlines of half grown horseshoe crabs. The tails were made by the caribou dragging their feet 5 or 8in. before resting their weight upon them. These tracks had been made since my journey down the lake a few hours before, for my trail was in places quite obliterated.

Caribou on the Ice.

In that finest of sportsmen's books, "Sport with the Gun and Rod," is shown a picture of caribou on the ice. The ice is represented to be as glossy as a mirror and the caribou are shown trotting along at a Nancy Hanks gait. They are represented as coming down to the ice solely for the pleasure of gliding over its slippery surface, and the creatures [not being shod with iron, this characteristic always seemed to me to be supernatural.

As an actual fact, this picture exaggerates to the point of absurdity a well-known habit of caribou. Caribou

ated. The air is tonic and the cold (instead of heat, as philosophers assert) is life. Two weeks at this time of year will do more to fit a man to combat the evils of civilization the next twelve months than a like period at any other time of year. The exercise and cold rid him of his surplus tissue and purify his stock of red blood, and it also toughens him against colds and such ailments.

Then, too, when the snow has come man is more on a level with the wild animals, and has no cause to regret

SUCCESS AT LAST.

two wheels, catching now and then a glimpse of an inner courtyard through the iron grating which covered windows almost flush with the street, until in Havana Calle (or street) we came to an abrupt stop in front of the offices of Mr. Williams, the American Consul. (I do not care to say anything about Mr. Williams, for I see he has resigned or been recalled. Had he not been I should myself have written to our State Department asking what American Consuls are for.) Our reception was exceed-

ingly cold, our questions hardly noticed, and abruptly turning to three Chinamen Mr. Williams seemed much more engrossed in pleasing them than us two American citizens. After standing around a few minutes, hoping for further chance of a parley, we left, still further impressed—as all Americans are who travel—with our wretched Consular service.

A block further on I had our driver stop again to leave some negatives to be printed, and then on we went to the colored banker, or money changer, Mr. Hardy. Intending to continue thence on foot we handed our driver a *pesado* or 20 cents, the right and legal fare—so we had read in the guide book. Our quiet man immediately awoke and in an instant seemed all on fire. What I took to be cursing came in long lines from his mouth like a volcano, and in that smooth tongue how easily the words did flow. Not knowing the reason we quickly fled into Hardy's shop, the driver and a crowd after us. Fortunately English was spoken there, and it appeared that instead of 20 we owed 60 cents for our ride, explained by our three stops at 20 cents a stop. If you tell the driver to stop while you light a cigar or cigarette, one stop 20 cents; but if you don't stop you can cross the city from border to border for the *pesado*. When one is familiar with the custom, I question if there is better or cheaper cab service in the world.

For our greenbacks Hardy gave us a lot of money called *pesos*, *pesados* and a lot of other "*dos*," at the rate of \$1.10 in Spanish silver for American silver, greenbacks or gold. Be it understood, however, the Spanish dollar contained as much silver as our own. For our money of whatsoever kind, marked United States of America, he gave in Spanish gold \$1.07½ for every American dollar. Put that in your pipe and smoke it, ye silver fanatics. These United States, thanks be to those to whom honor is due, are not yet in that slough of "financial despond" where we find Spain and Italy to-day. Feeling rich as *Cresus* with the mass of silver in our pockets, we walked up Obispo street, the Broadway of Havana from a shopping standpoint, but in reality, as all the streets are, so narrow that a carriage can go only one way; resembling Philadelphia in this respect. Having just dodged a whirling cabby and being nearly run down by a string of eight mules hauling a big two-wheel cart, we emerged on a little plaza, with a fountain playing in the center, surrounded by green grass, palms and flowers. What appeared to be toy soldiers stood there smoking cigarettes. They looked so cute I felt as though, should chance or war ever throw me in contact with such men, I would want to pick them up and put them in my pocket. To find our way we addressed them in their language, the words of which in guide-book Spanish we knew so well and spoke so badly. Vain effort, not a sign of "*sabe*" came to them, and all they could say was "*Yo no entiendo*" (I do not understand). Finally we said, "*Hotel Inglaterra*." Then, with a pleased and happy countenance, they pointed out our way.

Up the strange little streets we walked, noting to our great regret few signs of beauty among the women, who, though wearing no hats but the Spanish mantilla, powdered their faces so plentifully as to give them a sickly white appearance. The men were of the type seen and known everywhere as the Spanish race. At last, on the top of the slight slant on which the city is built, we entered Central Park, or the *Parque de Isabel II.*, to find it thronged with people. The cause was quickly noted, for, led by a gorgeous black and gold hearse, a funeral of some prominent politician or general was passing by. From on top of a big wagon, with a fellow kodaker, we gained a grand view of all that passed, and saw in the full evening dress of the men who rode in the carriages an explanation of many such we had seen driving rapidly about town in broad daylight.

Weary with our exciting walk and ride, and with tongue twisted all out of shape trying to talk French, English and Spanish, we seated ourselves at a table in the café of the *Inglaterra*, feeling assured that at last we could again enjoy the pleasure of hearing our own native tongue.

What's in a name? That which we call a rose
By any other name would smell as sweet.

And so with that hotel. Its name was a blind. No one spoke English, and so, not knowing "*cervezha*" meant beer, we called for *Milwaukee*, and you should have seen that boy jump. The idea of our not knowing. I think with another generation the word "*Milwaukee*" will be Spanish for beer, at least in Cuba. Having to guess the cost we thought it safe to hand him a dollar and then receive the change. This amounted to 20 cents, but my eyes chanced to wander to the cash register on the bar where he rang it up, and saw the honest (?) boy push up 15 cents and the rest went in his pocket. Great Yankee invention as a check on barkeepers, the cash register, but it takes a Cuban to run it.

Thinking a drive in the cool of the afternoon would be pleasant we hired a rig "*per hora*" for \$1.25 and soon found ourselves in the outskirts of the city on the drive *Paseo de Tacon*, a street corresponding to the *Champs Elysees* or *Bois*, close by the Botanical Gardens, full of royal palms, strange trees and flowers without number, along a well-kept smooth road with hedges of thick cactus, until at last we came to the cemetery. There many illustrious dead no doubt lie buried, with some real marble tombs or headstones erected to their memory, and many shams. The latter are of what seemed to be plaster painted white or yellow, built inside an iron fence on which hung iron painted wreaths or colored flowers in a glass case. Back we drove, near where the blue sea dashed on the shore, through the rich suburban homes of the better class. No more vivid coloring have I ever seen than the painting of those houses. Blues, pinks, yellows and whites, no two exactly alike in tint, and although only one story high differing somehow in architectural effect. Some yards were rose gardens, others all green palms and ferns, while over the whole side and porch of one house twined a vine of solid flowers the color of the richest magenta; a royal vine, no hue of northern flower have I ever seen to equal it. The rich red soil seemed to produce everything planted with a force as though native to the spot. I fancied it was all as Rome once was, only there the houses were marble; here brick or stone and plaster; but Rome could not have had prettier courtyard gardens with fountains, as all such were in Havana. It seemed a sweet dream that winter afternoon, winter still by the calendar at home, but June by the air and climate.

Once back in town, we punched cabby in the back and said, "*To the yachta, boata, aqua*" and everything pertain-

ing to water we could think of to get him to go to the dock; but he drove around the square in such an aimless way, wearing such a sickly smile, that at last in desperation we said "*Inglaterra*" again, and back there we drove in the almost vain hope of seeing an English-speaking human being. At last I found an interpreter who told our driver where to go, saying to us, "When lost again, just say '*Machina*,' and he will know where to take you." Blessed yacht! never more welcome came the good old Anglo-Saxon to my ears than when Morris called, "Oars, let fall, and give way," to the sailors in the gig.

After dinner we all sat on deck awhile in the moonlight, watching the twinkling lights floating about in the harbor or the larger anchor lights hanging from the steamships near us. All the men on board sat puffing away at cigars from 3 in. long to *panetelas* which seemed 1 ft. in length. And such cigars! For 8 and 10 cents we smoked ones which cost 25 at home, and the sailors had a brand at \$2.50 per 100 for which they claimed great things. Puff, puff, puff—each one seemed a miniature human furnace, praising to the sky their own smart purchase as being the best and cheapest in Havana. He who wrote, "It was my last cigar," luckily put the fellow on a quarterdeck "off the blue *Canarie Isles*," and not the *Greater Antilles*, for poor indeed is he who sits on a deck in Havana and smokes his last cigar.

Havana by gas and moonlight was not to be missed, so on shore we went again about the little streets up to Plaza Isabel. "What an improvement on New York parks!" we all exclaimed on noticing the benches and iron seats there arranged. They do things differently in Cuba in many ways, for scarcely were we seated before a man came along and collected 5 cents from each of us. Tiring of the passing throng, several of us bought seats for the theater. The play I could only tolerate about fifteen minutes; perhaps I was hard to please, but it was tedious, incomprehensible and decidedly vulgar, and when I again breathed the fresh air from the deck of the yacht I felt a great relief.

The following day with an interpreter we visited the churches, which we found exceedingly uninteresting, and the markets, which are of interest for the many strange fruits and vegetables, but the place was far from clean. We lunched at the *Louvre*, where fortunately French was spoken, so we fared well, and I advise all who visit Havana to go there for a good dinner.

Having secured a room at the *Pasaje Hotel*, with a pretty little balcony and tiles on the floor, for Mrs. C. and Miss S., they desiring to spend a night on shore, Morris and I taking the guide with us jumped on a street car. Seeing all the men smoking I also lit a cigar, which lasted me the three miles out to the suburb, *Jesus del Monte*. To cigar smokers this is known everywhere as the site of *Julien Alvarez's Henry Clay factory*, probably the largest cigar factory in the world. I had always promised myself this visit and was amply repaid. They make in company with *Bock & Co.*, of the *Golden Eagle* brand, some 800 varieties, from \$1,000 per 1,000 to \$20 per 1,000. These are gold list Havana prices, and multiplying the same by two and a half about gives you the New York price duty paid. If for no other reason let us annex Cuba to get good cigars cheap. They say all smokers, even though strong protectionists at home, become free traders after a visit to Cuba. Besides cigars the factory turns out millions of cigarettes, but these are little known I think in the United States, at least since my return I have noticed very few on sale. The *Algodon papel* (cotton paper) is too thick for American taste. Perhaps as famous and as interesting a factory is that close by the *Pasaje*, but the ride out in the country to *Jesus del Monte* is well worth the trip, seeing as you do inns by the roadside, with open bar or counter, to the very edge of which horsemen ride and drink without dismounting. The climate being always warm the store is wide open to the world. The iron grating over the windows, alike in town on house of rich or poor, gives also ample protection against robbers, besides allowing the air to ventilate freely through all the rooms.

But, speaking of robbery, I spent my last morning on shore taking photographs about the streets of fruit vendors, milkmen with cans of milk strapped to the mule's sides, cathedrals, castles, forts, stores and I cannot tell what all. Running short of plates, I bought some for \$1.75 per dozen (95 cents in New York), and was then charged \$1 to use the dark room to put them in the holders. Nothing except tobacco is cheap in Havana, as we found while shopping that afternoon. They have some beautiful fans, and to tell the truth, that is about all I could see to bring away as acceptable souvenirs. Had the island not been under martial law we should have attempted a run back into the country, but we were cautioned against doing so. All the signs of a revolution we saw, however, were the numerous mounted soldiers about town, together with what we read in occasional copies of the *New York Herald*.

We could not see all there was to see in that interesting city, so leaving for a future visit the many other attractions of Havana, on the morning of March 8 we steamed down and out the harbor past the forts, which we saluted with guns, and speedily headed E. $\frac{1}{2}$ N., some five miles off shore, for Matanzas, the second city of importance in Cuba. The water was smooth as glass and blue as a turquoise. We skirted along the beautiful coast past Santa Cruz and the cut at Jaruca River. Great rifts in the shore led down from the high palm tree capped mountain ridges inland to the glorious sea, making a picture to enchant even the dreariest soul. It was about noon when we turned in at the long harbor of Matanzas, and amidst the sportive play of an immense school of sharks cast anchor.

What beauty the landscape and towns of Latin countries present at a distance, away from the dirt, discerning in a glance the *route ensemble*, as our Gallic friends say. So I gazed on Matanzas and bewailed the lack of enterprise which has allowed its fine sheltered harbor gradually to fill in and compel shipping to anchor nearly a mile from the city. The great wharf built entirely of mahogany, alongside which in ante-bellum days Mr. Ulmo told us great ships were tied, is now used only by lighters. These are towed by a tug to the ships loading with sugar out in the bay, and if the wind be right, back they come with a square set sail. All the town lay in the bend of the horseshoe harbor. From the water's edge it climbed the hill behind, leaving, however, a broad green strip from the skirts of the town to the hilltop surmounted there with a cathedral, from which at eventide a curfew

"told the knell of parting day." I was at first impressed with the beauty of their having selected red tiling for the roofs, but found that of such color was the only soil from which they could be made.

Sending the captain ashore for our papers, we shortly followed, to find arrangements had been made for a drive in *volantes* to the *Cuives de la Mar* (Caves de la Mar). While waiting for the rigs we were introduced to and entertained by the *Capitain de la Porte*, Capt. Riga, late commander of the *Infanta Isabel*. A most charming Spanish gentleman we found him, and were rather surprised to learn that our salute gun created quite a stir in town, many people thinking it was a gunboat come to quell the rising rebellion. Very queer vehicles were those *volantes*. Built with a very large, soft, comfortable seat over two big wheels, extra long shafts, between which one horse was hitched; another outside, with traces once again as long as the shafts, was ridden by the driver. How they did fly around, up hill and down without slacking pace, taking ditches and gutters at full speed. Their long coupling makes a jolt hardly perceptible. We followed *en route* long strings of horses tied together going to be washed in the sea. Then we turned inland some two miles further to the caves. To those who have visited *Luray Caverns* in Virginia a comparison is hardly worth while, for besides the heat, 100° Fahrenheit, which drove the ladies out again, the long wax candles have so smoked the stalactites and stalagmites as greatly to mar their beauty. A walk of a half to three-quarters of a mile completes the circle and you have seen it all.

Hardly had an hour passed before we gained the town once more, and going through, with gaping natives and naked little boys yelling "*Americano*," we ran up rather a steep road to the cathedral seen from the bay. From that hill in two views I had sufficient reward, all else aside, for the journey to Cuba. Matanzas city with its harbor is itself a pearl set in Cuba, long known to the world as the Pearl of the Antilles. Looking the other way, in all its most impressive fullness stretched the valley of the *Yumuri*, comprising one of the richest bodies of land, if not the richest, in this whole Garden Island. It lay in a basin several hundred feet below us, and never have I been struck anywhere with an evidence of such unbounded fertility as that valley presented. Nowhere was there the least sign of barrenness; every inch seemed cultivated, while scattered in clumps and singly, royal palms, 50, 60 and 70 ft. tall, lifted their long green branches to heaven. Hardly visible, little houses were peeping out from under the foliage here and there, and but for its length and breadth, some ten by five miles, it had the appearance of a great garden. I appreciate how feebly my dull words picture in any sense to you the restful feeling that scene portrayed, but so long as I shall live nothing can erase the beautiful picture. If there be any place else in that island, 760 miles long and from 20 to 135 miles wide, like that valley I hope to see it some day. As darkness stole over the scene we turned away and went back to the yacht, listening meanwhile to the faint sound of the curfew bells.

During the evening I walked through the city, and finding an English-speaking citizen asked him to accompany us. A fair being in progress we were persuaded to try our luck by buying for 10 cents each little rolls of paper wrapped up like lamp lighters. With daily, weekly and monthly lottery drawings born in their blood, nothing as a money-making scheme can succeed in Cuba carried on in any other way than by chance. The Royal Havana Lottery, by the way, yields many millions yearly to the State. Occasionally, by unrolling the little papers, a number would be stamped on the inside to correspond with some object about the room. We won prizes from a toy boat to a set of cologne bottles, a few yards of lace and a washstand, until, followed by an ever-increasing crowd, Morris and I sought the outer plaza and a neighboring café. Our pilot, continually up to tricks, mentioned some words in Spanish which he said he once knew belonged to an extensive and close Cuban society. I don't know if what he said was true or not, but the waiter could not do enough for us and was so pressing in his attentions—attracting notice to us by so acting—that I thought the better part of valor was in flight, and so took myself off, only to get lost in the many and devious streets to the wharf. Seeing at last my predicament, and perhaps suspecting me as a filibuster—for the town was strictly guarded against such—a mounted soldier rode up and asked what I sought. I by that time had learned a little Spanish, and inquired the way to the yacht, which he quickly put me in the way of finding, so exchanging *buenas noches* and a cigarette we parted.

On Saturday morning we entertained Capt. Riga on board with several other gentlemen and ladies. Late in the afternoon an invitation to a ball the following night was brought out to us, and pleading only the custom of the country we went. About 9 in the evening, rigged in the full regalia of summer ball gowns and evening dress, four of us went ashore to be met on landing by the Captain and señoras, and in four carriages we were rapidly driven along the narrow streets to the club. At the door we were met by ushers and escorted into the ball room, where, as strangers, we were quickly the cynosure of all eyes. Mac and I were at our wits' ends to know what to say to a lot of masked señoritas who spoke to us, and had it not been for an occasional one who spoke French I should have been utterly wound up. Right here let me beg you to learn at least a little Spanish before visiting Cuba—your pleasure will be increased a hundredfold. Those unmasked—and it goes without saying, 'twas human nature, they were the prettiest—had a language of their bright black eyes and long lashes the greatest dullard could understand. Their native dance, "*The Danza*," approached nearest to a waltz of any; but for slowness and strangeness it was like unto nothing so far in my life's experience. This dance, the ofttest played by the orchestra, derives its popularity from the many stops while dancing it, giving thus to young people the only opportunity to be alone together and talk. Not solely from gallantry do I say it, but in truth I saw many pretty faces, and their black eyes are all romance has pictured them. Mrs. C.'s position, seated as she was with the señoras (to whom the knowledge of English was as foreign as the North Pole has been to Arctic explorers), was tedious; so, having invited the belle of the ball and several others out next day, we bade all good night.

Agreeable to the engagement, Mac and I went to No. 7 Rio Calle about 10:30 next day; but upon our arrival were

rather surprised shortly to find so many gathered there, as we had only invited three girls, and we rather wondered whether such an invitation included their whole connections. Two were ready, the third we saw driving down the street accompanied by a portly uncle. Fearing for the ship's safety above water did all present purpose going out, it was with great relief that one by one they began, like those in the Bible story, to offer pressing business or other affairs as excuses, until at last, as those Spanish clouds rolled away, there only remained to our affrighted vision two Spanish full moons in two mamas and three Cuban stars, the ones our telescopic eyes of the night before had picked out from the gathered nebulae of the ballroom space. These sufficed to occupy the only two carriages we had been able to secure, leaving us to walk. At a sign to Mac (and never did I realize the possibility of a sign language until that Cuban voyage) we were off. However, the distance was short and the gig large, so in safety we conveyed our jolly party out to lunch. The Captain, the handsomest man by far we saw in Cuba, came out later. Once on board, what with punch to cool the heated brow—for it was very hot—and music from our music box to gladden the spirit, helped by a phrase book, "Spanish at a Glance," ours was a merry party. The Captain, in broken English, offered a toast to the ladies, the United States, America, England, and then, fearing he had forgotten some one, said, "To the whole world." We were very loath to see his gig, with its eight men rowing, come out for them; but all good times must have an ending, and with the salute we fired as they rowed away we weighed anchor and were off for Nassau.

Laying our course N. E. $\frac{1}{2}$ E. for Elbow Cay Light, eighty-two miles distant across Nicholas Channel, the mountains of Cuba showed plainly at first and then like the shore faded away in a blue tint which made sea and sky one, and we were out on the broad expanse of mighty water. A full round moon soon showed a silvery head above the horizon like some mighty monster out of the deep, and shining almost in our course seemed a path along the sea. For many hours I gazed at the sublime majesty of it all and felt with him who said: "To those only who go down to the sea in ships are God's works fully understood." In a glassy sea we passed Elbow Cay Light on Salt Cay Bank and then steered across Santaren Channel to the Great Bahama Bank, which we reached in about latitude $24^{\circ} 33'$, equal to Key West, and, longitude $79^{\circ} 14'$ w. All the next morning, course N. E. by N., over a rippled sea with the bottom of the ocean, 12 to 15 ft. deep, we steamed along in view of white coral sands. Never was a prettier run made across the Bahama Banks to the Great Stirrup Cay Light at the entrance to the N. W. Providence Channel, and when at 12:15 that night we dropped anchor in Nassau's transparent harbor (a run of 320 miles from Matanzas) we felt indeed a pleasant voyage was over for a day and our longer journey itself drawing to a close.

Clean as a new pin was the town displayed to our eyes with morning's sun, and, warping in to the stone dock, short time elapsed before a crowd had gathered. Selecting a bright, clean, two-seated carriage, with a negro driver dressed all in white duck, we drove up town to the Royal Victoria Hotel. Of white coral formation, the whole island roads and streets present a dazzling brilliancy very trying to one's eyes, but the change from dirty Cuban cities was most agreeable. The sun was very hot, and but for the cool breeze from the water would have equaled Cuba. The strange trees arrayed in vivid green cast welcome shade. The foliage and trees themselves were of more different varieties from what I had seen anywhere, but of especial beauty were the large leaves on the almonds, green on top and red beneath. A silk-cotton tree with roots like horses' stalls was shown as a native curiosity. The smooth road caused no jolting as we sped along the shore some three miles out of town, passing many charming little villas on the slight hill which parallels the bay. Coconut trees surrounded many houses, but sisal growing has set all Nassau wild, and what appeared to be gardens of century plants abounded everywhere. The three forts protecting the settlement are deserted, leaving to Great Britain's many cruisers the care of this ward of hers. English supremacy here at least seems to speak good ruling, though I understand that many would like the Bahama Islands to belong to the United States and to be called a county of Florida or Georgia. When we annex Hawaii and Cuba perhaps we will then talk of the Bahamas; meanwhile there is still some land left out West for our growing population.

Turning home we drove by an inner road through negro settlements with huts identical to those in Africa, whence perhaps some of the old folks had come themselves. I do know they speak a language of their own, or in the market I could not understand or be understood by several I spoke with.

At the hotel where we rested awhile everything appeared clean and well kept, showing good management in the part of those in charge. A familiar face far from home was found in that of the hotel clerk last seen in charge of the Manhasset House at Shelter Island.

Though my wandering spirit was willing to roam about the pretty settlement, my whole being longed for a bath in the delightful surf I knew was beating across the bay in the coral shore. The distance to Hog Island, a narrow strip of island separating the bay from the ocean, cannot be over 400 yds. The island itself is perhaps 200 yds. wide, with what proved to be a smooth white sand on the ocean side. Quickly divesting myself of my clothing, I accepted the dashing invitation of the waves and waded into the most glorious clear and warm salt water I ever bathed in, here to my great relief I disported with comfort akin to bliss. Cooled at last and arrayed in clean duck clothes and linen, I wandered awhile in the large orange and coconut grove on that island by the sea. Glorious fruit was too, great large oranges big as your two fists, and all the fresh coconut milk you can drink (for those who like it—I don't). One especially beautiful coconut tree had over 500 nuts growing in bunches, some ripe and ready to fall, others small as hickory nuts.

The proprietor's business in town was as a sponge merchant, and in trimming the raw sponges a great deal of waste accumulated in pieces from an inch to 5 in. long. These he put to a use which struck me as very excellent. The ground all through the grove was literally covered with the fragments packed about the tree roots; in places foot deep. These absorbed the dew and against the sun's rays held moisture for a good part of the day. This could only be practiced by such a merchant, for at \$1.50 to \$2.50 per pound sponges would be rather an expensive means

of irrigation to others. I ordered a thousand oranges brought over to the boat, at the steep price of one cent each. And these, in huge sisal baskets, with bunches of bananas, pineapples, green turtles and crates of Cuban quail, rapidly began to give the space aft on the yacht the appearance of a Bahama fruiter. Attracted by the electric lights in the cabin and the search light on the bridge, like moths (only black) little native boys gathered about in small boats during the evening, giving us a serenade, rather discordant, it is true.

Having in remembrance old Samson Stamp, of Key West, the discoverer of the Sea Gardens at Nassau, we took a pilot and sailboat the following morning and sailed some four miles up the channel. There we disembarked in a row boat with a glass bottom, made by inserting therein plates of thick glass, through which the bottom of the sea spread out before us like dry land. A strange feeling crept over me, and in imagination I fancied myself with Jules Verne on the voyage of "Twenty Thousand Leagues under the Sea." We could see all the little fishes, minnows 1 in. long, and larger kinds 1 ft., 2 ft. and 3 ft. in length, some white and black and blue; besides many angelfish, all yellow like a canary, with bright blue fins and tail, swam by beneath us. Like the ripe wheat fields in summer sway to the breeze, so there in the submarine currents waved great bunches of fan leaf coral, purple, yellow and white. The water was clear as air, and pointing to some especially beautiful specimens of rock and fans, our little darky dove over, and, like the fish, we could see him swimming down until at last, clutching the growth with two hands and feet firmly braced against the coral, he gave a tug and away he came to the top, fan in hand. Indeed, God hath wrought marvelous things in this world of His, but nothing of greater bewitching fancy than the Sea Gardens of Nassau.

When night came and before the moon was up a drive of two miles back on New Providence Island brought us to a most interesting work of nature. A lake some 1,000 ft. long by 300 ft. wide lay quiet and black as any othersheet of water at night might do. But once in a row boat and shoved off from shore what a mighty change was wrought. Two small out-swimmers, the hue of the surrounding darkness, accompanied our boat of fire, for such it seemed. Like two human torches our darkies swam by our side as in a cloud of phosphorescent fire; at the slightest disturbance the whole surrounding water lit up like molten silver. Each boy's toes and fingers were as though the sun shone on them and fish darted through the quiet water like sky rockets, leaving a glittering trail behind. The light was so vivid I could see the time by my watch, and when a wave was sent upward with the oar the falling drops were like blue-tinted pearls. The movement of our boat made enough light to plainly show the bottom, for the water is from the ocean and as clear as all that which nature makes to flow about those lovely Bahamas. Enticed by the water's warmth and the hot night my friend and I went in swimming, but only for a few minutes. From this swim comes a story hard to believe, but as true as Gospel. That night, as was my custom before turning in, I went to the bath room, which I could easily darken, to change some photo plates in my holders. When about to pull the slides I noticed the phosphorescence, which I had brought from the lake, shining from my bare feet, and giving so much white light I had to cover them with a towel before I dared expose the plates to what a moment before had been intense darkness.

We took a short drive next morning to an interesting sisal hemp plantation, seeing there the leaves cut, shredded and baled for shipment. This plantation was about two miles long; but the place is on Andros Island, some 20,000 acres, so I am told, and owned by Joseph Chamberlain, the well-known English statesman. Pineapple plantations thrive, it seems, better on the other islands; but how the poor fellows, at 2 cents a dozen (the price in summer), make anything surprises me.

Nassau's best days, however, are gone. During the war, when cotton was 8 cents a pound in Charleston and \$1 to \$1.50 per pound in gold at Nassau, then it was that one successful run of the blockade paid for a ship and cargo, and two or three lucky runs made captain and owner rich men. So sure were the runners that Mr. Ulmo, who was all through it, told us they advertised the night in which they would leave Charleston or Savannah. The streets of Nassau then were alive with Southerners and Englishmen, captains of British and Federal men-of-war, and money ran like water. Everybody made money. The settlement paid its debt in one year, and one little shipyard (now the orange grove I wrote about) made for its owner \$350,000 in four years. These were days you read about which will never come again.

On the 15th of March, in the afternoon, we sailed away toward home across a sea smooth and reflecting as a mirror. It was warm as a summer's night; no one turned in until very late, and when we did we had all port-holes open, for there was no fear of incoming waves. Next day was as bright and clear, but toward night the wind began to blow out of the north, and by midnight no one was asleep, but sat about the cabin or their rooms holding on. To what, you ask, did they try to hold on to? Well, supper and anything which appeared nailed down. I went on the bridge awhile, but the yacht dipped down and threw waves all over, drenching constantly the captain and man at the wheel. Thinking to be secure back over the engine room talking to Mr. Ulmo, I was there hardly a minute when one wave landing on the bridge bounced off and soaked me. The decks ran 2 to 3 in. deep with water. Our banana and orange grove aft was a sight. The poor green turtles even were seasick. Had it not been for the iron storm shutters the whole front cabin would have been crushed in. How welcome the gleam across the sea our objective St. Augustine's light cast only those who were there can know. Only fifty-two miles more to Fernandina. But against that sea and wind quarter headway was all the captain dared to give, and how the hours dragged by until daylight. With day came a big Clyde ship bound to Jacksonville. She fairly seemed to fly past us and all her passengers and crew seemed on deck, wondering no doubt what we were doing out there, as every now and then we sank almost out of view behind some huge, curling crested wave. Eleven hours we battled against the storm, until at last, safely across the Fernandina bar, we cast anchor off Cumberland Island. There "Sinuous northward, sinuous southward, by a world of marsh that bordered a world of sea," the house at Dungeness loomed up, and we felt the danger passed and a voyage long to be remembered was ended,

Go ye, oh ye yachtsmen, and do likewise. There are no fairer seas to travel over, and if you regret doing so you are not moulded in the same flesh as he who subscribes himself
GRAHAM F. BLANDY.

THE LOST MAN.

WHO is this waif of the woodland, the "Lost Man?" Where does he hail from and where is he heading for? How does he manage to exist for weeks, perhaps months, at a time, in the depths of the wilderness, without food, fire or weapon of any kind? Is he sane or insane?

As a member of the party into whose astonished presence this modern Rip Van Winkle ushered himself without much ceremony at Pond's camp, near the Dungarvon River, on the night of July 12 last, I have been much interested in my friend Irland's description of that strange event, as well as in the account given by other correspondents of his appearance in September at Upper Millnocket Lake, in Maine. The subject has been so ably handled by these gentlemen that I shall only offer a few general comments. Perhaps the advertising which the old fellow is receiving in FOREST AND STREAM may result in his condition and whereabouts being brought to the notice of relatives or friends, if he has any, who would take care of him.

It is not a source of wonder to the undersigned that our gay and festive friends on the Upper Millnocket found him a hard nut to crack. It made me smile audibly to read about that cross-examination and to picture them bringing their mental artillery into action. It was just our own seance at Pond's Camp all over again. For the space of three hours during that never-to-be-forgotten night in July, when Chaos and the Night dealt the old chap out to us, we raked him fore and aft with every conceivable question. As the light of the camp-fire flickered away, the boys one by one gave it up, and at last I too was obliged to meander to my bunk very little wiser than before. The conclusions I drew from the interview were somewhat as follows:

The man's name is Torrens—at least he clearly stated so. He is of American birth. He said he was "raised over on the Kenawten." I spell the name, if there is such a name, as he pronounced it, never having seen it in print. His references to the war between the North and South, which was still a live issue with him, indicated that he had served in that war, or had been at the time within the area of active military operations. His statement that he had killed a quail which wasn't as big as a pheasant the day before he met our party tended, I think, to show that he had hailed from one of the Middle or Southern States. The absence of the nasal twang peculiar to the New England Yankee is some evidence in the same direction.

His mind was very much occupied with religious matters. A small Catholic Bible was the only article of any kind he had in his possession except the rusty axe he found in the brook. His conversation, however, showed that while in a general way he adhered to Catholic doctrine, he ran a side show of religious views peculiarly his own. I think our Millnocket friends sized him up very cleverly when they decided that he was suffering from an overdose of the invisible world which rendered him unable fully to digest the visible. That verdict has a tendency to persuade me that the jury was sober.

The oddest thing about the venerable phantom was his utter indifference to the hardships he had gone through, as well as to his future welfare. He had no complaints to make and no surprise to express. All that we did for him aroused no word of gratitude. He asked for nothing, not even food, though he stowed away a tremendous jag when it was given him. His central idea as to worldly matters seemed to be that he was journeying from Moosehead Lake to Grand Falls. He had not the slightest notion of the distance he had come or still had to go, and I imagine if he ever reached the falls he straightway received a call from his invisible monitors to proceed to Moosehead Lake.

A well-known lumberman of this city who saw his picture in FOREST AND STREAM states that the old fellow was seen near the head of the Tobique River early in August by a fishing party, on which occasion he was yarding away a hatful of blueberries, and paid no heed to the canoe as it passed by.

How he got into the woods where we found him (for he had not come in by the logging road from Pleasant Ridge, and there were no other roads), and how he had managed to sustain life in that region, was an absolute mystery to everyone. I think the mysterious stranger was a full private in the great army of tramps, but unlike the most of his fellows, instead of taking to the railroads and turnpikes, he took to the trails and the streams.

One important lesson it seems to me may be derived from his experience—namely, that a very limited amount of gray matter in the brain will suffice to maintain a man a long time in the woods and finally bring him out all right if he will only keep cool and keep moving.

I should say the old gentleman was insane, but entirely harmless. Some of his remarks upon abstract questions were quite rational, but when you offered him a concrete fact he looked at you in a queer, diagonal way and dodged it. He seemed to have no exact memory of anything that had happened more than forty-eight hours before.

A pet hobby of his was that he could construct a flying machine that would take him from Moosehead Lake to Grand Falls in a day. He would build a square platform, he said, and place large wooden augers at each of the four corners, and then seating himself in the center and employing a foot-power contrivance he would bore his way up into the air! I remarked that this would be a good deal like a man lifting himself over a fence by the slack of his raiment. He said that could be done too, if the man only had enough faith!

He made one observation which I now recall with some amusement in view of the present political position. He said, "The United States would like to lick England if they could." I asked him why? "Oh," said he, "they don't know George the third is dead." And then he added, looking intently at me: "Perhaps he isn't!"

As he left us in the morning and glided off through the forest in his bare feet, with his boots and rusty axe slung over his shoulder, he remarked: "A feller would just be in luck now if he could only strike a bear."

Well, he was the queerest of the queer. When I think of him and his wanderings through the trackless wilds, I feel like chucking up the name of
PROWLER.

Natural History.

CAPERCAILZIE AND BLACK GAME.

PORTLAND, Me., Dec. 28.—*Editor Forest and Stream:* I see by the ever interesting columns of FOREST AND STREAM that there is much interest in the introduction of the capercailzie and black game into this country.

For instance, Mr. Ames, of Boston, in your issue of to-day earnestly calls for information about these birds.

You will recollect, of course, that the project of introducing these valuable game birds was first proposed by myself in a dispatch to the Department of State early in 1890, which was printed in the FOREST AND STREAM of May 8, 1890, together with an editorial from your pen warmly commending the enterprise.

A fuller account of these birds, together with a description of a day's sport in shooting them on the heathery hills of old Sweden, was afterward published in my large illustrated work, "Sweden and the Swedes," issued by Messrs. Rand, McNally & Co., of Chicago, in 1892.

I would suggest to you that you publish Chapter XXX. of my book, which relates to "Capercaillie and Black Game," for the benefit of the sportsmen of America who are interested in this question.

Of course it will be necessary for you to also obtain permission from my publishers, but I have no doubt that the enterprising firm of Rand, McNally & Co. will readily grant you this.

W. W. THOMAS, JR.

From "Sweden and the Swedes." By courtesy of Messrs. Rand & McNally, Chicago, the publishers.

ONE day in August I was shooting on the grand heather-covered rock hills of the west coast of Sweden, when Nero appeared on top of a crest and came running to me in a most frisky manner. He jumped up to my face, capered about, flung himself into the air, and behaved most hilariously.

I had become intimately acquainted with Nero by this time, and could easily tell from his manner of reporting whether he had found partridges, black game or woodcock. But this was an entirely new kind of a report; the dog seemed to say, "Oh, what a great big, jolly thing I've found for you; something brand-new. You can't guess what it is; but come along, I'll show you. Such fun we'll have."

So I followed on. After some ten minutes' walk over heathery ridges Nero entered a swale where a few scrub pines grew, advanced at a cautious walk, and came to an undecided point. As soon as I reached his side he advanced again, step by step, then pointed, then again advanced. I saw, of course, that the game, whatever it might be, was running, and would probably rise wild. I therefore hurried to higher ground some 20 yds. to the right of Nero, and walked along parallel with him, and about half a gunshot ahead.

Soon Nero came to a dead point, and at the same instant there arose from under the last scrub pine an enormous dingy-black bird. From my elevated position, at one side of the pine tree, it was an easy shot. At the report the great bird fell in a confused heap into the heather, while a cloud of black feathers filled the air and drifted slowly away before the summer breeze.

Nero came in and sat down at my side, his jaws opened into a broad grin of "I told you so." I crammed a fresh cartridge into my gun, patted Nero. "Well done, old boy! So! so! Now, *apporte!*" At the word he dashed on, picked up the bird by one wing, lugged in the heavy burden through thick heather as high as himself, and sat down on his haunches before me. "*Låche!*" and Nero gave into my hand my first capercailzie, a huge old cock of good 10 lbs. weight, as big as a turkey. He was surely too heavy to carry around on a day's shooting, so, after duly admiring him I hung him up on one of the pine trees, and Nero and I went on our way rejoicing.

It was a perfect summer's day; a clear sky arched overhead, and a gentle west wind just stirred the air. Perfect silence reigned, broken only by the faint rumble of a distant train speeding along the valley far beneath, and soon vanishing, leaving only a dissolving trail of smoke behind and silence even more intense than before. From the green valley rose the tall, white tower of Lena Kyrka, resplendent in the sunlight. As far as you could see stretched smooth, cultivated fields. Here and there a red cottage peered out from its grove of bright-green birches, and showed where the highway wound along the vale.

Far above, on rocky heights that rose almost to the dignity of mountains, Nero and I, in good comradeship, followed the chase.

Pushing through a thick growth of spruce trees I heard the sound of wings behind me and knew that some bird must have hidden till I passed, then flown back in the direction whence I came. I whistle in Nero, who makes a faint stand at the spot where the bird had concealed itself, point out to him the direction in which it must have flown, and back we hunt along the ridge.

We walked on more than a mile, and I was beginning to doubt the evidence of my ears—or, rather, the conclusions I had drawn therefrom—when Nero stood at the edge of a swampy hollow. He waited for me to come up, and then we proceeded cautiously among the hillocks of the swamp, Nero pausing and coming to an uncertain point every few paces.

At last a great ruddy-brown bird bustles into air with a noise that, in the utter stillness of the August noon, sounded like the roar of thunder, and caused my heart to leap to my mouth. I shot wide of the mark, but steadied myself, pressed my heart and nerves back into place, and brought down the bird, killed clean at long range, with my left barrel.

It was a hen capercailzie. Of different color and much smaller than the cock, still a grand bird of 6 lbs. weight.

This was great good luck—two capercailzie in one morning, both over a dog in the open; for the capercailzie is preëminently a bird of the forest, and here he has the same trick that our American ruffed grouse plays so adroitly. He skulks along in advance of the dog until he reaches a thick clump of trees, when away he whirs from the further side, where it is impossible for the sportsman to catch the slightest glimpse of him. But with a cautious, steady, intelligent dog, one may get the better of both the ruffed grouse and the capercailzie.

Like our grouse, too, the capercailzie can be "treed" by a yelping cur, and is often shot while thus sitting in a tree by the country folk. This is hardly sportsmanlike, but it is chivalry itself compared with another method.

In the glorious May mornings of the Northland the

lordly capercailzie summons the dames of his harem around him. Perched on some lofty pine of the forest, at the first blush of dawn he sounds his love call. His song is short, but often repeated, and as the impassioned bird pours forth his last sighing notes, he is transported with such ecstacy that he neither sees nor hears. This is the pot-hunter's opportunity. Creeping on a few steps at the close of the capercailzie's song, and hiding the instant it ceases, he steals within easy shot, and, crouching behind some convenient tree, waits till the noble bird is again lost in the rapture of song, and then deliberately "pots" him.

The Swedish law establishing a close time for capercailzie from the middle of February to the middle of August has now made this sneak-shooting illegal, although it is still resorted to by poachers in remote districts.

I was surprised to learn that this unchivalric method of shooting the capercailzie is practiced in Austria by the landed gentry, who own great wooded estates and call themselves sportsmen. One might as well shoot a ruffed grouse while drumming in the spring and call it sport. But perhaps it is the novelty of being up and out in the freshness of early dawn that astonishes and captivates these gentlemen.

The capercailzie is also pursued in Sweden amid the snows of winter by hunters who swiftly slide through the aisles of the forest on skidor.

The male birds gather together in large packs in the winter—perhaps a hundred in a pack—and the large black fowl make conspicuous objects sitting on the trees

hunted together in the backwoods of Maine twenty years ago.

We had driven out together in the morning, separated, hunted along different routes, and met now, according to agreement, for lunch at the cottage of Ekenäs. My friends had each bagged a brace of black game, while a grand cock capercailzie, the brother of mine, dangled down Oscar's back.

But first I must have a plunge in the lake. The water was deep close in to the shore, so I dived in. I had not taken half a dozen strokes when I felt pulsations of water on my back as though swift fish were swimming close by.

I swam on more rapidly to get out of their way when I was struck two sharp blows from behind. Great Scott! are there sea monsters in this mountain lake? I turn hurriedly round; there was Nero close after me. Faithful dog, he had evidently swam out to save me from drowning. I yell at him, splash water in his face, and heap upon him the most opprobrious epithets before I can compel him to leave me and swim back to the shore, where he sat, a dripping monument of misery and despair, till I emerged from the water.

My comrades had borrowed a table from the cottage and spread the lunch upon it in the great open doorway on the shady side of the barn. Heavens! how good that lunch tasted! The mountain air, the long tramp on the heathery hills, the plunge in the lake, all contributed to give our fare the best sauce this world has known from Adam's time to ours. And then the blissful siesta after-

CAPERCAILZIE—COCK AND HEN.

From Specimens Imported by Mr. D. F. Stillman.

white with snow. They are very wary, however, and difficult of approach, and must be shot with rifle and bullet, frequently at long range. This shooting can be called sport. It requires a high degree of skill, both with rifle and skidor.

But to return to our own shooting. After picking up my second capercailzie, I saw a peasant clambering briskly up the hillside toward me. To my surprise he addressed me. Yes, he had been in America seven years. He had heard I was out on the Lena Hills, and had left his work and come up to talk English with me. It was so pleasant to talk English, and he liked America so much too. Why did he not go back? Why, he always meant to, and he only came home for a little visit; but then he met a girl here and married her, and that was the end of his traveling. And had I shot a *tjäder*? Well, that was luck. Americans were all such good shots. What, another one! Come, now, he would take this one, and go find the other in the tree, and carry them both down to his house on the road, and I could call for them when I drove by in the evening; and the obliging fellow was as good as his word.

Far away over the hills, down in the bottom of a rocky gorge, where the tall ferns grew up and waved above the heather, Nero came to a firm point. I hurried down from the ridge; up whirled a black cock, and down he tumbled. "*Apporte, Nero!*" But the dog would not budge an inch. He gave me a sly, deprecatory look, turned his head slowly half round, and pointed across the valley. I took one step beside him, when up sprang a brace of black game from under his very nose, and I shot them; right and left, before they could rise over the cliff wall. At the report a fourth bird rises and flies chattering away from my empty barrels.

On for half an hour, when, coming to a crest of the hills, I looked down upon a beautiful lake glistening far below me. At the same time I hear "Pool! pool! pool!" This is the Swedish halloo, and the poing was from my friends who had come out to meet me. I soon saw them far down the mountain side, and hurried on to join them; but when very near, Nero came to a point between us. "Move to the left there, and look sharp," I cried; "here are birds." Up got three black cock. But three sportsmen standing facing each other were too many; we made a mess of it, and although all fired only one bird dropped, proving again the old rule I always insist upon, "The more sportsmen, the less game."

Here were Mr. Fred. W. Stoddard and Mr. Oscar Lindberg. Mr. Stoddard enjoys the peculiar distinction of being a Swedish-American Scotchman, for he has good claim to all three nationalities, and Mr. Lindberg is a Swedish-American, and so old a friend that we had

ward, as we lay back on the hay and talked over the fortunes of the morning.

It was late in the afternoon when we were once more on the march. Now we would hunt up the two black game we missed. My friends went in search of the bird that flew to the right, while I toiled up hill after the one that disappeared over the mountain. Half way up the hillside I stopped to rest and, turning round, witnessed a pretty sight. Far below me, in a little inclosed field, Walli was making game; Oscar was close behind, encouraging his young pointer to advance. A gunshot ahead, at the corner of the fence, stood Stoddard, gun all ready, eager, watchful. A moment more and I see the bird rise from under Walli's nose and fly straight for Stoddard's head. He allows the cock to pass, then a puff of smoke, the bird drops, and Walli starts to retrieve before the laggard report breaks upon my ear.

Gaining the top of the hill, Nero found the bird we were in search of, and I had just time for a snap shot as it disappeared over the crest. I send Nero on at a venture into the valley beyond; but a moment afterward his head pops up over the steep cliff edge with the black bird in his red jaws.

We found no more game that day, but we were well content as it was. Three capercailzie and ten black game, over 50 lbs. weight, we packed into the dog cart, and, with our pointers nestling in the warm hay behind us, drove swiftly over the ten miles home.

Oscar and I stopped at his comfortable farm house, Lindas. Here we quickly exchanged our shooting jackets for dress coats and white ties and drove on to Bryngelsnäs, the charming and hospitable estate of Mr. Stoddard, and most pleasantly wound up the day at a grand dinner party given in our honor by our genial comrade-in-arms.

On this day, as on many another, both afield and at home, the thought has occurred to me, "Why not introduce the capercailzie and black game into the United States?" Of all the birds of the Old World I do not know of any whose acclimatization among us could be so easily accomplished or would prove so beneficial.

The capercailzie—*Tetrao urogallus*—is the largest and noblest of the grouse family, the family to which our pinnated grouse (prairie chicken) and ruffed grouse (partridge or pheasant) belong.

The full grown cock capercailzie weighs from 10 to 12 lbs., and some specimens considerably exceed this weight. These birds, in fact, approach very nearly the size of the wild turkey of America.

The home of the capercailzie extends over a wide range of latitude and temperature in two continents. From the wooded mountainous regions of northern Spain and

Greece, northward throughout Europe, this bird is found in most of the lofty forest districts suitable for his abode and where he has not been exterminated by man. This grouse fairly abounds in the great pine and spruce forests of the Scandinavian Peninsula, Finland and Russia, and the vast forest stretches of northern Asia.

The capercailzie is an extremely hardy bird. In Sweden and Norway he is found in large numbers up to and beyond the Arctic circle, as far as the 70th parallel of North latitude. He can endure the severest cold and deepest snows of the longest winters. He often avoids the bitterest weather by burrowing into the snow, thus obtaining warmth and shelter.

This bird subsists on the coarsest and most common food. He feeds upon the buds and leaves of trees, the needles or leaves of the pine and spruce, young pine cones, clover and grass, berries of all sorts, seed and grain, and insects of every kind. In the depth of winter a capercailzie has been known to live for more than a week in the same pine tree, subsisting entirely upon pine leaves and young pine cones.

The capercailzie is preëminently a bird of the pine woods, or pine mixed with birch, spruce, maple and other growths. He loves wooded hillsides better than wooded plains, and he must have fresh water near by, either a brook, or pond, or a piece of swampy ground.

He is a local, not a migratory bird, though sometimes lack of food or other causes may drive him to extensive wanderings.

In his habits he much resembles our American ruffed grouse—though he is nearly ten times as large—and I believe will thrive anywhere in the United States where our ruffed grouse (called partridge in New England, and pheasant in the Middle States) is found.

The black game—*Tetrao tetrix*—inhabits nearly the same regions as the capercailzie. He is equally hardy and can withstand the cold and snows of the most rigorous Northern winters.

His weight is about 3lbs., nearly the same as our prairie chicken. The male bird is a lustrous metallic black in color. Hence the name. He has, however, a white stripe in his wings, and is easily distinguished by his beautiful, jet-black, outward curving tail feathers. The female is somewhat smaller, and her plumage is a speckled gray. She is called in England "the gray hen."

The black game is also a grouse, and is often found in company with the capercailzie, or at least in close proximity. The black game is also a bird of the woods, but the birch is distinctively his tree, though he is met with in mixed growths of almost every variety.

He does not frequent the deep woods so much as the capercailzie. He loves better the borders of the forest, and woods, and groves, with frequent openings. He is also fond of cranberry swamps, and in swampy lands is often found miles away from any forest. He is a more social bird than the capercailzie, and comes out more into the fields and clearings, and nearer the abodes of man.

His food is much the same as the capercailzie, though not quite so coarse. It consists chiefly of the buds and leaves of trees, berries and insects. In summer the black game is very fond of blueberries, raspberries and cranberries. In winter he feeds principally upon the buds of the birch, hazel, alder, willow and beech; and, when pressed for food, will eat the young green cones of the pine. This bird seems to be equally fond of animal food, and readily eats snails, worms, the larvæ of ants, flies, beetles, etc.

The capercailzie and black game are the two most important wild birds in Sweden and Norway, and make a valuable addition to the food of the Scandinavian people. These birds are excellent upon the table, their flesh resembling that of our prairie chickens. Throughout the fall and most of the winter you may see the capercailzie and black game hanging up in large bunches or lying heaped in great piles along the market places of Stockholm, scattered about as profusely as wild ducks in the markets of Chicago or Minneapolis in the month of October.

Will the capercailzie and black game thrive in the United States? On this question I think there can be no reasonable doubt. The fact is that a great portion of the United States—at least one-third, perhaps one-half—is fitted to be the home of these valuable birds.

For there is a suitable climate, a suitable broken country of hill and dale, well watered and covered with a suitable forest growth, and this forest growth, together with its underbrush and bushes, will not only provide shelter for these birds, but will furnish them with all the food they require, until they become as plenty as European sparrows now are in our streets and public parks.

It is my firm conviction that both the capercailzie and black game will thrive throughout all the wooded districts of New England, New York and Pennsylvania, and westward through the greater portion of the States of Michigan, Wisconsin and Minnesota. They will also find a congenial home along the wooded slopes of the Rocky Mountains for their entire length, as well as in all the wooded ravines and declivities of the mountain ranges of California, Oregon and Washington.

And not only here. The fact that these birds are found among the hills and mountains of Europe, as far south as Greece, Italy and Spain, renders it almost certain that they will find a congenial climate and nature throughout the entire ranges of the Alleghanies, the Blue Ridge and the Cumberland Mountains, together with their spurs, side-hills and outlying forest districts, and may thus easily be acclimated over large sections of the States of Virginia, West Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Georgia and Alabama.

How can these birds be introduced among us? The easiest and cheapest way would be by obtaining their eggs, sending them to America, and having them hatched out there. I am sorry that I cannot recommend this course. Eggs have repeatedly been sent to Germany and Great Britain, but every such attempt has turned out a complete failure. The only other method is to procure and ship adult birds. This has also been tried, and the results are such as to give us great encouragement.

The capercailzie was originally found in Scotland. His great size and fine flesh caused him to be keenly hunted, and some generations ago he was utterly exterminated. About fifty years since, some fifty capercailzie, adult birds, were shipped from Sweden across the North Sea to Scotland. They arrived safely, were liberated in a suitable locality, and lived and increased. Their descendants are

living and increasing to this day, and the capercailzie is again added to the food-birds of Scotland.

I find there have been several shipments of both capercailzie and black game, of late years, from Sweden to various parts of Germany, Austria and Hungary—to localities where these birds had been shot out, or where they had never existed.

In all the instances where proper care has been exercised most of the birds have arrived in good condition, have taken kindly to their new homes, and are breeding well there.

A few years ago a considerable shipment of black game was made from Sweden to southern Austria, near the Italian boundary, and notwithstanding the birds were ten days upon the road and that there were many changes of trains, they all arrived sound and well, not a bird dying on the passage. There are now steamers from Gothenburg, Sweden, with transshipment at Hull, England, also direct boats from Copenhagen, just across the sound in Denmark, to New York and Boston. The passage, in the summer time, occupies some twelve or thirteen days. Surely the fatigue and hardship of this passage would be less than ten days in freight cars.

Neither will the salt air have any bad effect upon the birds. Both species love to inhabit the wooded islands along the coast, and fly readily from one to the other across great reaches of water.*

I find the birds recently shipped to Germany have cost \$12 each for capercailzie and \$7 for black game. These prices seemed to me high. I learn, however, that many of the birds are injured in snaring and many more die after a few days' confinement.

Birds suitable for export, and for which the above prices are asked, are all strong and full grown, without injury or blemish. They are kept for a considerable time in captivity, and are, in fact, nearly half domesticated before they are considered suitable to ship on a long voyage. So these prices may, perhaps, be only a fair compensation for labor, and time, and the inevitable large mortality among the birds during the earlier part of their captivity.

I believe at least one hundred birds of each species should be shipped to give the experiment a fair trial. This will make the cost:

100 capercailzie, at \$12.....	\$1,200
100 black game, at \$7.....	700
Total.....	\$1,900

The birds must be placed in roomy coops of the best construction, and not crowded. They must have a light and airy position on shipboard, and some one should be sent to take charge of them, or some sailor or steward on board must be specially instructed, so as to properly feed and care for them. The expense of building the coops, of freight and of care-taking will be considerable, to which must be added freight and expenses from the American port of landing to destination; so that, allowing for all contingencies, a sum of \$3,000 will probably be required for the undertaking.

Will not you, gentle reader, be the patriotic American to merit the thanks of your countrymen and of posterity by contributing the amount necessary to add these noble birds to the fauna of America?

*Since this chapter was written, I am informed that black game have been introduced into Newfoundland, and are doing well there.

Michigan Black Foxes.

EWEN, Mich., Dec. 30.—*Editor Forest and Stream:* After enjoying every page of the last FOREST AND STREAM I decided to send you an item which I think will interest a great many of your readers:

During the early summer it was reported by different homesteaders, living about three miles east of here, that they had seen a full grown black fox with three young. Very few credited the story, although such a fox was shot by a Mr. Bennet, at Trout Creek, last winter, which is sixteen miles east of here. Nevertheless, a friend of mine named James Caulgin, who had a homestead near where the foxes were reported to have been seen, made up his mind that as soon as snow came he would know whether there were any black foxes there or not.

During the deer season he stopped with a party in his shanty on the homestead. While supposed by the other boys to be putting in his time hunting deer, he was nearly every day following the track of two foxes which he thought were a trifle larger than any tracks he had seen in the vicinity. He did not expect to see the foxes, but thought he would find where they had dropped a hair, which would tell their color. He tramped in vain till nearly the last day of the season he found a black hair in a fox track. Not saying a word to anyone he returned home on the last day of the season, but after a few days at home he returned alone to the homestead, intent on capturing one or both of the black foxes. The fourth day after leaving town he came in bringing two black fox skins. They were both fine, large skins—a male and a female. He got them in a hollow log and killed them both with a stick. Their fur is very fine and thick, and when stroked toward the head laid as nice as when stroked toward the tail. Each hair had a gray tip and each tail had a white tip. They were admired by hundreds, most of whom had never before seen a black fox. One was slightly grayer than the other, and had a white spot on its breast. He sold the two to a fur buyer in Duluth last Saturday for \$328.

Deer were more plentiful than ever here this season, but owing to the woods being so noisy fewer were killed than any season before; only one of the many hunters getting the five allowed by law.

Wolves are thicker here than ever before this winter. They are working great havoc among the deer.

Deer and Lilypads.

TROY, N. Y., Jan. 3.—*Editor Forest and Stream:* I quite agree with Mr. Rice, who in the last issue comments upon having seen where lilypads had been eaten by the deer. Day after day, during the months in which the deer come to water to feed, I have noticed the empty lily stalks standing straight up out of the water, with the pads taken off as clean as though severed by a sharp knife.

A few years ago, while sojourning at Lewey Lake, a relative of mine, then a young girl of 14, prevailed upon one of the guides to take her out on the lake so that she might see a deer at close quarters. Just about dusk they were paddling slowly up the inlet, when the guide suddenly discovered a deer standing close to the shore, gazing straight at them and holding in his mouth a large lilypad, which hung down from his jaws in such a manner as to give him, in the uncertain light, a somewhat peculiar appearance. The young lady, upon having the deer pointed out to her by the guide, gazed at him a moment and then exclaimed in disgust, "A deer indeed! That's no deer at all. It's a goat; I can see its whiskers."

A December Quail's Nest.

GREENBRIER, Ala.—*Editor Forest and Stream:* While shooting quail Tuesday, Dec. 24, I found a newly laid quail's egg in the grass. I had two large coveys scattered upon a sedge hill, and for a few minutes the shooting was furious. While gathering up the dead I discovered the egg. It was perfectly white, not a spot or stain upon it.

Game Bag and Gun.

CALIBERS FOR BIG GAME.

Editor Forest and Stream:

From FOREST AND STREAM I am learning the present haunts of the fast disappearing game of our country and how to encompass their capture—for I am a tenderfoot to big game hunting and very desirous to sojourn where they are to be found and kill some of them—not wantonly, but only for the healthful experience and the necessities of camp life. However, hunters are like doctors, because wherever there are two they disagree as to the best caliber of rifle to be used for large game. One reasons that a .45-90 makes a large hole and bleeds the game, and the increased shock and hemorrhage from the larger openings more rapidly destroy life, and escape is correspondingly decreased. Another equally practical and experienced hunter tells you he does not want to carry an iron mine around with him when still-hunting, and has more respect for his shoulder, and that a .38-55 will stop all the game that he wants, and that if the first shot does not do it he keeps pumping away as long as the game is moving and in sight.

Now the small caliber rifles, the .30-30 or even smaller, together with the smokeless powders, are coming upon the scene with their greater velocity and penetration, and it seems as if they are going to be the fad. As to the nature of the missile this would seem to have great bearing on the resulting wound. A soft lead, large caliber and low velocity would appear to cause the most destructive wound, whereas a metal-patched bullet of small caliber and high velocity would go straighter through the obstruction, make smaller wounds, less hemorrhage, less shock, and consequently the animal would live for a longer time, and so escape oftener.

I am given to understand that the large majority of big game are killed nearer than 100yds. off, and if this be true and the above theories are correct the larger caliber and soft bullet would be the surer and the most humane destroyer. I have read of a moose being killed with a .22cal., but this cannot be considered an ideal arm for such a purpose. Now why cannot this entire subject be considered from a scientific standpoint, as in military surgery? This subject can certainly be reduced to actual facts, so that prospective purchasers of an arm and ammunition for big game hunting can have a safe and reliable guide in their selection. I may briefly state that personally I have read everything I could get hold of on this subject for years past and have failed to come to a positive conclusion, and I may echo the queries of many others by this admission. In short, I want to buy a rifle and suitable ammunition; which caliber shall I get for large game hunting as the best and most serviceable weapon of destruction?

A. H.

FREAKS OF RIFLE BALLS.

Editor Forest and Stream:

Certainly rifle balls sometimes do strange things. I remember once killing an antelope in Dakota with a single ball, which broke all four of its legs. Tough story, I know, but true, though I am sorry to say several of the men who witnessed the shot have gone over the "long hill" since it happened, and cannot be called to give testimony.

Of that party Charley Reynolds, the scout, and Bloody Knife, the Ree, were killed with Custer in 1876, and Cold Hand, the Ogallala, I think was killed in the Sioux war a year or two later. Bear's Ears, another Ree, for all I know, may still be alive.

Three or four of us, scouts and hunters, came up over a hill and upon a buck antelope feeding in the Bad Lands, about 60yds. off. Antelope were plenty in that country in those days, and very tame, and this one, when he saw us, only raised his head, looked for a second or two, and then trotted off 20 or 30yds. and stopped again. I had tumbled off my horse and as soon as he stopped fired at his shoulder. He staggered a few steps and then fell, and I went up to him. He was not dead, and I had to cut his throat.

The course taken by the ball which struck him was very remarkable. It had passed through the joint between the shoulder blade and humerus of the left fore-leg, crossed over and struck the right humerus on its posterior side, and then turned at right angles and gone back, cutting two or three ribs, and struck the right femur, which it broke low down, and then turned again at right angles, came out of the right leg, high up, under the animal's belly, and struck the gambrel joint of the left leg, which it unjointed and cut off, all except a little thread of skin. I could hardly believe my eyes when I traced the course of the ball, but there could be no doubt about it because I was the only person who fired, and there was but one hole of entrance.

OLD MAN.

MY ENCOUNTER WITH A MOOSE.

THE first part of Oct., 1894, my brother Arthur and I sat on the deck of one of the Fall River boats on our way from New York to Maine, and as I smoked my pipe after a good dinner we talked over our former trips, and wondered if we would have the luck this time to get a moose. We had been in the woods together for fourteen or fifteen years, and had shot lots of deer, and had glorious sport, but our ambition to get a moose had never been fulfilled. One year in northern New Hampshire, on 2d Conn. Lake, we chased two bull moose in our canoe for over a mile, and were within a few rods of them all the time, but as it was in July, we only followed them for the sport of it; but when we finally drove them ashore and they turned on us, with the hair on their mane standing straight up, we saw enough of moose to know you don't want to tackle them unless you can keep your nerve and know how to shoot.

The night of our second day out found us at a farm house on the edge of the woods, where we intended to stay over night and from there take canoes to our camp, about twenty miles away. That evening we met several sportsmen who were on their way home, and as we talked over a big wood fire we found that their success after moose had been poor, and we wondered if we were going to have another year without reaching our goal. Making a very early start the next morning, we took to the canoes, with two strapping big river men to pole us, the river being so rapid that paddles were useless. Going up that beautiful stream and breathing the exquisite air I commenced to feel that life was worth living. It was a magnificent fall day, and as I sat there in the canoe watching the trout scoot away, and all the life of the woods around me, it passed all too quickly, and our camping-place for the night was reached before I was ready for it.

The first day or two in the woods I am always lazy, and let my guide—if I happen to have one—do all the work, knowing that my time for camp duties would soon come; so after a good supper I took my old brierwood pipe that had been in the woods with me for nineteen years and went out and took a seat where I could hear the musical ripple of the stream as it flowed by at my feet. What quiet old times I have had with that same old pipe. A man who does not smoke cannot realize the companionship there is in an old pipe that has been off with you in the woods for years. With every wreath of smoke it seems to bring back to your memory some bright spot when you were together before.

I remember once when I was out alone in the Maine woods in the winter time, and had been following the track of a big buck nearly all day, and had got turned around. It was not far from dark, and at first I got rattled, so I cleaned away the snow from an old stump, and taking out my old friend, filled him up and started to reason out with him the best way out of my dilemma, and it was not long before his quiet soothing talk brought me to my senses, and I succeeded in reaching camp not long after dark.

The next day about noon we reached our main camp on a beautiful lake, and here we found our guide, John Eastman, who is so well known throughout Maine. We tried calling for moose at this camp for three days without getting an answer, and on the third day the genial proprietor of the camp, William Atkins, came back with a sportsman from a lake about fifteen miles away, where they had succeeded in getting a very fine bull moose, so we decided to start for that lake the following morning. Each of us carried a heavy pack the next day, and I for one was glad to reach camp, for I had not been in the woods long enough to get toughened. It was a beautiful night to call, so John and I started out and called until very late, but without an answer. I was so tired that I slept between each call, and it is a wonder I did not upset the canoe.

We went out calling every night for a week without success, and our hopes commenced to go down to a very low ebb, and likewise our provisions, so we called a council of war and decided that John would better go back to the main camp for a fresh supply, and Arthur thought he would go with him and try calling for a night on Lake Millinocket, so the next day they left me to solitude with my old pocket friend. As I sat on the steps of the camp talking with my old friend, he said: "Now, old man, don't get lazy, but go out and try to get a deer, to have when the others come back to-morrow;" so, arguing with him for awhile, he, as usual, got the best of it, and, taking my Winchester, I started for the foot of the lake where there is a deep bay with a small stream running into it at one side. The bay is about one-eighth of a mile wide and the same in length, and nowhere over 1 ft. or 18 in. deep, with a hard, sandy bottom and a line of rushes all around the shore. It seemed to me to be an ideal place for deer to come in about dusk.

As I leisurely paddled down the lake I passed one or two flocks of ducks, but there was no need for their flight if they only could have known that all I wanted of them was to go up to the head of the lake and stay away from the place where I was going to. After looking the ground well over I paddled up the stream which ran into the bay, and ramming the paddle into the mud so as to hold the canoe, I settled myself for a long wait. There are many muskrats along the stream, and it was interesting to watch the sharp little fellows. Mr. and Mrs. Rat, with some little Rats, would come swimming around a corner, and, catching sight of me, under they would all go, and pretty soon I would see Mr. Rat watching me from some cover; and, not seeing me move, out he would come and they would all go to work again, seeming not to notice me, but the slightest move on my part and away they would all go.

Along toward dusk I began to get sleepy, for my week of calling at night had begun to tell on me and I was about ready to give it up, when—what was that in the bay? A rat; no, the sound was too familiar to me. There it goes again; and now my nerves were all on a strain, as I could hear splash after splash, and knew from the sound that a deer had entered the water and was wading around. From the noise he made I thought he must be a big one. From the direction of the sound I judged he must be going out from the shore and decided to wait so as to allow plenty of time for him to get settled. I waited what seemed to me an age, but was probably only a few minutes; and then laying my Winchester across my knees, I took the paddle and very cautiously worked the canoe out of the stream. Down in the bay I could hear it (what-

ever it was) having a great old time, but could not see, as it was getting to be dusk and the rushes were quite high; so slowly working my way down along the shore in the rushes I got nearer. I was straining my eyes looking in among the rushes when, great Scott! I almost jumped out of the boat, for there I saw a great black form that looked like a house, and I knew that I had a moose to tackle instead of a deer. I would have given a good deal just then for a few minutes' conversation with John Eastman as to the best plan to pursue, but John was miles away and my moose was right there.

The air was absolutely still and there was no danger of his winding me. I could see that he was headed right out for the center of the bay, but I could not see him plainly, and could not tell if it was bull or cow, but thought if he got far enough out I would be able to push along and get in between him and the shore, and that would show him up against the water and I would be able to see if he had horns. As much as I wanted a moose I would not shoot a cow.

It is a wonder he did not hear my heart beat, for it sounded to me like a drum. The way that old fellow splashed out into the middle of that bay one would have thought he was going there by my orders. Now he is against the background of water and I could see an immense set of horns. As he worked his way out I worked through the rushes and got between him and the shore, and when those horns showed up my heart for an instant seemed to stop, but I said to myself, Now, old man, you have been trying for this chance many years, don't make a fool of yourself. Being in about the right position I turned the canoe and worked toward the edge of the rushes, and, as I cleared them and reached open water, he was only about 80 yds. from me. Almost the second I had a good view of him outside of the rushes I let my paddle slide quietly into the water and took up my gun. I tried first to sight through my Lyman rear sight, but it was too dark, so I turned it down and opened my bar sight. At that moment the old fellow saw me and threw up his head with a grunt, and the next minute I fired. From the pitch forward he gave I knew my bullet had hit him. Instantly recovering himself he came for me on the jump, with the water flying so I could hardly see him. Shoot as quickly as I could, I only got in three or four shots before he had covered the short distance between us. He came straight for the canoe and I thought my time had come. I was about to jump out and put for deep water when, within about 20 ft. of me, he swerved and went by, and then I gave him one that brought him down to stay. The splashing then was something terrific in that shallow water, and not being over 10 ft. from me, I grabbed my second paddle and shoved the canoe off, for I did not know but he would be up and at me again. Gradually his struggles ceased, and with one mighty snort his old nose went under water and soon all was quiet.

I sat, all of a tremble, hardly realizing what had taken place and the danger I had been in, and it was not until I had paddled up and taken hold of the great horn that stood way out of the water that I came to myself and realized the magnificent prize I had secured, all by my own efforts, off on that lonely lake. Then you just should have heard me! Why, I yelled and sang and whistled, and almost danced in the boat. It was hard to leave that noble fellow there in the water that night, but I might as well have tried to move a mountain as to stir him. So taking up the paddle I started home. I was so occupied in going over all of it in my mind that in the dark I missed the landing, and went up the lake over a mile past it.

The next day Arthur and John got back; they found me sitting on the steps where they had left me, and wanted to know if I had been sitting there ever since they left me. "No," I said, "I got tired last evening and went out and got a moose." They laughed at first, thinking I was joking; but when they found out it was true there were great times in camp. The rest of that day we three worked hard on that moose, and were tired out when night came. The horns measured 54 in. across, and he stood 7 ft. from the shoulder down; so you see he was no baby. His grand old head is on my dining-room wall now, and I always read my FOREST AND STREAM where I can look up at him and think over my hunt again. The next week Arthur got a bull moose almost a mate to mine, and under circumstances almost as exciting; but I will try and get him to write about that himself. Well, old friend, I see no smoke coming from you, so I will put you carefully away. I never forget that but for your talk with me that day way up in Maine I should not now have that grand head before me. HENRY E. JANES.

NEW YORK.

A PROFITABLE MOOSE.

BOSTON, Jan. 3.—The Maine moose, deer and caribou season is over, but not so the interest in that game. One would be thoroughly convinced of this to have witnessed the crowd following a dead bull moose in a wagon, being transported from the railway station to Faneuil Hall market the other day. The crowd increased and by the time it reached the market it was almost a mob. The moose was a noble one that had been purchased by Messrs. Swan & Newton from a Maine guide, Mr. Fred A. Heath, of Heath & Hawthorn, of Philbrook Camp, Schoodic. The animal is stated to have weighed over 800 lbs., though experts declare that it could not have weighed over 700 lbs. On the weight of the moose Mr. Heath, who called upon me, is silent. It cost him \$9 to get the beast from East Sabois to Boston, or rather he paid the American Express Co. \$3 from East Sabois to Bangor and \$6 from Bangor to Boston. He brought this moose out before the last day of the season, as his own, killed by himself, as he had a right to do, under the Maine game law. For the whole animal he received \$87.50, with which he is much pleased. While here he was taken in charge by a number of gentlemen whom he has entertained at his camps. These gentlemen speak highly of Philbrook Camp. Mr. W. P. Hanson was there this fall and got two buck deer. His brother J. A. Hanson also got a buck. Wayne North and Charlie North have both been there this season and have got their share of big game. Mr. A. Frazer shot his deer there. Mr. John Conkling came back from the same camps with two does. Mr. George Lanphier, the well-known newsdealer who carries the FOREST AND STREAM, got his share of moose early in the fall. The above are a few of the hunters that have visited Camp Philbrook this fall, and were pleased to meet Mr. Heath in Boston.

Concerning the moose, that was evidently an old one;

Mr. Heath has a curious idea. He believes that the beast has long inhabited the section of his camps. He says that two or three years ago a hunter caught a moose swimming over the lake and paddled up to the animal in his canoe. It was close time and he did not dare to kill the moose. A happy thought struck him; he would fix the moose so that he could be pretty sure of him as soon as the open season begun. A bell on him would be the thing, since cattle that stray in the woods are easily located by a bell. Accordingly he tied a bell to the neck of the moose and let him go. Mr. Heath believes that the name of the man was Gerrish. The bell was often heard in the woods in that part of the country. But somehow the hunter did not get his moose as easily as he had anticipated; did not get him at all, in fact. Evidently he lost the bell, as a part of the strap was found in the woods. From some sort of marks, Mr. Heath concludes that he has killed the moose that wore the bell. I did not ask him how the hunter happened to have the bell in the canoe when the moose was caught. Moose have frequently been caught swimming in the water, but this is the first instance of that animal being mentioned as wearing a cowbell. Has not this bell, or bell story, something to do with the tuft of hair found under the throat of the moose, termed by hunters "the bell," because it somewhat resembles a bell in shape? Will the man who put the bell on the moose speak up through the FOREST AND STREAM? SPECIAL.

ADIRONDACK DEER.

From Governor Morton's Message.

THE policy which has been recently inaugurated of purchasing lands within the Adirondack Forest Preserve is one that is giving satisfaction to the people, and should receive the consideration that its importance deserves. Unless these lands are acquired within a reasonable time, they can only be obtained at higher cost many years hence. The preservation of this vast wilderness in its present condition means the conservation of the greatest watershed in this State, and one of the most important in this country. The rivers that have their source in this region depend upon this forest for their supplies. The woods and mountainous character of this picturesque region also render it one of the best sanitariums in the world.

It is generally believed that the game laws of the State need amendments, to the end that better protection of deer in the Adirondack region may be secured. Unusually large numbers of deer have been killed during the past season, and if this easy slaughter is not checked these animals will soon become extinct in this State. Two remedies are proposed by persons who are familiar with this question: First, a shorter season in which deer may be killed, and second, the prohibition of hunting deer with hounds and "floating." It is claimed by competent authorities that the hounding of deer and driving them into the lakes and ponds, where they are easily killed, is an unsportsmanlike butchery of a fine game animal. In view of the importance of this matter, it will be wise to give due attention to the remedies that will be proposed for the preservation of deer in the great Adirondack forests.

The Superintendent of the State Land Survey reports that the survey of the State lands has been prosecuted during the year in a manner insuring the best practical results as well as scientific accuracy. The chief assistants employed have been representatives of the best engineering talent of the State, and men whose work has given them distinction in the general practice of their profession. The boundaries of many of the larger tracts of land within the Forest Preserve have been monumented, and nearly 150,000 acres of these lands have been inclosed during the year, or about one-fifth of the present possessions of the State, and the work is still in progress. The topographical work has been kept apace with the survey of the boundaries, and the trigonometrical survey of the State has been extended with precision, with the aid of the best instruments and engineering talent available. This important work should receive the support of the Legislature as necessary to the preservation of the forests and the boundaries of lands.

Editor Forest and Stream:

It is with great interest that I have read the many ideas lately expressed concerning the preservation of deer in the Adirondacks.

Last summer I wrote an article for the *Syracuse Standard*, in which I gave carefully itemized figures obtained from sixteen points which, on being footed up, show that in one year (which I think was 1893), in the localities mentioned, 995 deer were killed by hounding, 471 by floating, and only 233 by all other methods combined. Now, if measures are taken to preserve the deer, it would seem from these figures that the first thing necessary is to prohibit hounding entirely.

I would recommend most earnestly to the reader's attention that part of Governor Morton's message in which he speaks of the preservation of game. He states in effect that hounding is characterized by competent judges to be unsportsmanlike butchery. Let me ask, what genuine sportsman will deny it? If it is unsportsmanlike butchery the laws should not permit it, even if there was no necessity for preserving the game. I would also call your attention again to a most interesting article in one of the last issues of FOREST AND STREAM, by Mr. Charles Fenton, of Number Four, in which he says in effect that because of hounding the deer were all cleaned out in that section in the fall, but that the supply was increased later by deer wandering in from the preserve of Dr. Webb, who allows no dogs in his vast park. Mr. Fenton has now obtained control of 30,000 acres, on which he allows no dogging.

Again, floating, though not nearly as destructive as hounding, is not exactly satisfactory to the real sportsman, and I believe should be abolished.

With these two pernicious features eliminated it is most certain that within a few years deer would become so plentiful that almost any greenhorn could obtain game by still-hunting.

It has been suggested that it would be wise to prohibit all deer hunting for a period of years, the supposition being that at the end of that time the laws now in force would again be in vogue. This would be a severe blow to sportsmen who depend upon the Adirondacks for their annual outing.

Again, what would be the result of such prohibition?

The number of visitors to the great forest is enlarging each year, and though the game would be greatly increased at the end of the period of years the slaughter by the vast army of hunters would be correspondingly larger when it did begin, and in a few years we would again find ourselves in the same condition as at present. It is urged by many that it is inexpedient to increase the number of deer very much because it is difficult for those now existing to obtain feed enough through the winter to keep them from starvation. If this is so, the entire prohibition of shooting for a period of years would at first increase the game only to result in a couple of years in starvation for a great proportion. This would be an added point for my argument that shooting should not be prohibited, but that hounding and floating should be abolished. However, it seems a very pertinent question to ask why the vastly greater proportion of game in Canada and Maine is not decreased more by starvation. Is there more feed there proportionately than in the forests of New York?

Of course I can understand very readily why some of the hotel men wish to have hounding and floating continued, as they fear that the number of visitors to the woods will fall off if they cannot offer inducements to the effect that by these lazy and easy methods their guests can obtain their game. However, these very hotel men are near-sighted, inasmuch as they are looking only at next season instead of into the seasons to come after that.

I have noticed that some are in favor of making the open season begin a month or more later. This would be a discrimination against the summer visitor and in favor of the natives, and while hounding was permitted would hardly be a very efficient measure.

The unsportsmanlike use of shotguns for deer hunting, resulting in a large amount of wounded game which succeeds in escaping the hunter, is to be deplored.

I understand that the lumbermen butcher a great deal of game during the winter when it is unable to escape because of the deep snow. Can any one give any figures concerning this?

FRANCIS E. OLIVER.

SYRACUSE, N. Y., Jan. 3.

CANTON, N. Y., Jan. 1.—*Editor Forest and Stream:* It was with considerable interest that I read, under title of "Adirondack Deer" in your issue of 4th inst., that just 5,083 deer were killed during the open season just passed, and that certain amendments to the game laws would aid preservation. I do not know how many deer were killed, nor do I think anyone else does; nor do I think anyone knows what proportion of those killed were of either sex. But, Mr. Editor, whatever the number, it seems to me that the remedy proposed is worse than useless. It is not new laws, not more stringent laws, not a shorter open season that we need, but a larger force of protectors during the months of May, June, July and August, and the law enforced as it is.

It is common report that most of the summer hotels have "mountain mutton" any time after May 15. It is well understood that most parties who go into the woods on a fishing trip in May or June kill one or more deer "just for camp use." Many parties go in the woods in July because they cannot leave their business later in the season (?), and many others go in a few days before the open season begins so as to get camp established by the time the law is off. A few are honest, but for the most part these latter two classes go when they do simply to get the start of the honest man, who waits for the open season. To postpone the opening of the season until Sept. 10 is simply to play into their hands, and isn't this a pertinent question: How many men who are now law-abiding will join their ranks if they find their legal right to kill cut off for the only part of the season that is enjoyable?

Schools begin about Sept. 1. To have the open season begin so late as Sept. 10 makes in fact a close season all the year for teachers, students and parents who have to be at home during the school year. After Sept. 10 we often get cold, bad weather, and no one but the woodsman cares to be in the woods. I want to take my family with me. They enjoy the camp and the woods as much as I do, and I want to be able to kill a deer for camp use and to do it without breaking any law.

No, do not amend the law; enforce it as it is; and to do so you must have more than one protector to each 1,000 square miles.

I would suggest this: Let the chief protector be authorized to appoint 100 special deputies to serve from May 15 till Aug. 15, say at a salary of \$50 per month, the State to have all fines. Suppose the fines to equal the costs of prosecution, then this protection costs the State \$15,000. If the deer are not worth that sum better let them go. Let the appointments be made secretly and kept secret. Let the chief and regular protectors see that these specials are on duty all the time. The party who wants a deer in May, the ones who go in July, will not dare get it, as for all they may know their own guide is a "special" protector. With 100 unknown protectors ranging the Adirondacks from May 15 until the open season begins there will be a wonderful diminution in the number of deer killed for the entire season.

I have hunted deer more or less for thirty-seven years. I have a considerable acquaintance among guides and hunters, I won't say sportsmen, in this part of the State. I know many honest citizens who do not think it any crime to violate the game law by killing a deer in July or early in August. No one will complain of these men unless it be a game protector or a neighbor who has a grudge to work out. The former is never around, for the simple reason that he cannot be in every part of his 1,000 square mile district at the same time. Did you ever cross a field where the grasshoppers were plenty? How they rise up in your path, eluding your grasp, if you want them for "bait," but settle down just behind you the same as if you had not been there. Did you ever paddle along a stream in midsummer and note the frantic efforts of each and every frog just ahead of you to make the most noise, and his equal anxiety to keep still when you get opposite him? So the known protector can travel days and weeks, well knowing that hoppers and frogs are plenty and yet never catching more than the occasional one.

When the "neighbor with a grudge" makes complaint the attorney for the defense makes the most of the grudge feature and the prosecution starts out handicapped. The average jurymen argues "What harm if this man did kill a deer out of season, he did no real harm, this other man complained of him just to be mean, and I won't help him

work out his grudge unless the evidence is so clear that I cannot help myself," and he will vote "not guilty" if there is any possible excuse for so doing. With the unknown protector upon his track the would-be deer slayer will, for the most part, postpone his little game until the open season begins, and my word for it, you can cut the season's kill right in the middle as the result.

Why not try it for one year at least?

J. H. R.

Editor Forest and Stream:

The mere killing of 5,083 deer by hunters in the Adirondacks last fall is not in itself an indication that the deer are going to be exterminated next season or in forty years for that matter. The question is, Are there enough breeders to keep up the supply so that next fall there will be as many deer to begin with as there were last fall?

It is to be hoped that there are, but there is a standing doubt that there are not, and that being the case there is but one way to be taken, and that is to chain up the hounds—the safe side.

Four-fifths of those deer were killed ahead of dogs, and I haven't any doubt but a good share of them literally went to the dogs as well, save a few choice portions. Whether the dogs got the meat or not don't matter, the deer were dead and might as well be eaten by appreciative dogs as by men.

Hunting with firearms to kill game is the cruellest sport allowed by humanity, but it is growing more refined every day. The shots sportsmen are proudest of are those that killed clean or instantly. A mortally wounded deer chased by dogs runs often far away and is lost; but an unwounded deer is as pitiful an object when swimming in a lake or river, striving in vain to reach the far shore while behind come men in a boat. The deer is absolutely helpless once it is beyond its depth and the hunters in a boat are after it. It is as easy and as manly to beat a deer to death under such circumstances as it is to shoot it to death with a rifle. In fact the club is a surer and a less painful way of killing game, as anyone who was ever knocked senseless with a club and has cut himself with a blade of grass, or paper or tin, knows. A law which allows deer to be driven to water by dogs is a disgrace, for it allows and necessarily promotes the killing of deer in this brutal fashion.

A law that allows hounding of deer defeats the law itself, for it is a fact that the best dogs for trailing deer are those that have sucked the blood from a deer's throat when the snow was 5 ft. deep and the deer helpless in yards. There is a common expression said when a young hound has showed skill in running rabbits. It is, "Wait till he's been a-crustin' of deer!"

True, the letter of the law forbids such a practice, but it is done to satisfy the demands of those men who must have a "sure" or "true" dog—a dog that will put a deer into "big water." Where is there "big water" in the Adirondacks during the hounding period that has not its quota of men day by day waiting for the deer? It is the untrue dog that does not follow a deer across the brooks and lesser creeks. These are common, but when a "true dog" gets after deer 99-100ths of those deer die. The fool dogs lose trails, and so it is possible for a deer to be run by dogs several times and escape for a while.

I once saw a big old buck driven by one of the "true dogs" to the water. He was gasping when he got down there, but when he saw that the forms of men rose about him he did not stop to drink. The water was about a foot deep for several yards—ten or fifteen—out, but that deer crawled along on the bottom, trying to make the water shield him from the bullets raining down on his body. I would like to ask any one if that deer did not realize that death stared him in the face, and if that deer did not suffer as much as most men would when facing such a cruel and ignoble death—dishonorable to the killer and terrible to the killed?

The twelve men with twelve dogs, of which Mr. Allen kindly gave us the details, did have too many dogs—just an even dozen too many.

RAYMOND S. SPEARS.

BROOKLYN, N. Y.

MISSIONARY GUIDES.

NOT long ago I met a Western man who makes a business of outfitting and guiding big-game hunters from the East. I fancy he must be a good man and a successful hunter. Certainly the parties that he takes with him have good luck. In one season recently he said that he had seen twenty-seven bears, which shows that bears are abundant in the country that he hunts in, and that he understands how to find them. This man struck me as peculiar in many ways, for he has ways of thinking which are much more intelligent than those usually prevailing among hunters in the mountains. When he is out with a hunting party he never carries a gun. He takes the responsibility of finding the game and bringing the hunter within easy shooting distance. There, in his opinion, his responsibility ends. If the man he has with him cannot kill the game that is his fault. The guide does not help him to do the killing. He understands that as long as he is in the business of taking out hunting parties, it is for his advantage that the game should be abundant, and he feels a real regret over every head that is killed. Besides this, by quiet talks about the camp-fire at night he endeavors to make the men with whom he is associated see what a grave mistake it is to indulge in the indiscriminate killing which a few years ago used to be so common among Eastern men who went out West for the first time. He seems to be doing good missionary work in this way.

This man told me that in his opinion game about the borders of the Yellowstone National Park had considerably increased during the last few years. This remark applies especially to elk, which have been less hunted for the market lately than for some years. At present the Montana law forbids the killing of elk and moose for a period of ten years, but of course this law is but little regarded.

OLD MAN.

Wild Turkeys.

THERE are very few places in this country to-day where good wild turkey shooting may be had, and the noble bird already has come to be classed as rare game. At Avoca, N. C., however, turkeys are very abundant this season, and Dr. Capehart writes that there are 100 within two miles of his house. My young friends William Capehart and Ned Wood were out Dec. 23 and killed four wild

turkeys. The following morning they got another. All were gobblers. These boys are about 15 years of age, but as good sportsmen and entertaining companions as one could desire. Dr. Capehart carefully preserves 10,000 acres of land, which accounts for the abundance of game.

J. B. BURNHAM.

NATIONAL GAME, BIRD AND FISH PROTECTIVE ASSOCIATION.

OFFICE OF THE SECRETARY, Kalamazoo, Mich.—The annual meeting of the National Game, Bird and Fish Protective Association has been adjourned from Jan. 9 to Feb. 12, 1896, at 10 o'clock A. M., at Sherman House Club Rooms, Chicago, Ill. By order of Executive Committee.

M. R. BORTREE, President.

F. S. BAIRD, Chairman.

A. L. LAKEY, Secretary.

This action was taken because many business men could not attend the meeting so early in July.

There is much said and seemingly much interest taken the matter of Game and Fish Protection, yet there seems to be a feeling with many, that some one besides themselves should do all there is to be done to accomplish this great work, as shown by the small attendance at most of our State as well as the national meetings.

Who is it that makes up the powerful lobbies in our State legislative halls? Is it the lovers of field and stream sports, or is it composed of those whose only object is self, and all they desire is the money they can make out of the general destruction, and very soon the total annihilation of all the game and fish in our country?

How can we best check and in a great degree stop this hellish work is the main object of our National Association. Will you lend your influence, your voice, your presence at the Annual National meeting, and if necessary your money, to help in this most important work of protection, at the proper time, to all game and fish?

Notice is hereby given that several changes in the constitution will be presented at above meeting.

Don't fail to attend the meeting, Feb. 12, 1896, at Chicago.

A. L. LAKEY, Sec'y.

Information Blank

For National Game, Bird and Fish Protective Association.

Give your opinion on the following subjects, and also on any others that will in your opinion advance the cause of better protection to our Game and Fish:

- 1st. What should constitute the National Game and Fish Protective Association membership?
- 2d. In what way can the National Association best advance the interests of Game and Fish protection?
- 3d. What does *National* protection mean?
- 4th. Who are the true sportsmen? What is their object and chief delight?
- 5th. Who are the pot and market hunters? What is their object and chief delight?
- 6th. Would a uniform license law assist in Game and Fish protection? If so, how can it be best obtained and enforced?
- 7th. Why not prohibit all spring shooting?
- 8th. Should Nation and State preservers be established and maintained by the National and States governments?
- 9th. Should the sale of game and game fish be prohibited at all times or only in the closed seasons?
- 10th. Should we not have national Game and Fish wardens appointed and maintained by the national government?
- 11th. What is the best system for State or district Wardens?

Asking for Light.

SAN ANTONIO, Tex., Dec. 16.—*Editor Forest and Stream:* Can some one of your readers enlighten me as to whether I am to be classed as a "game hog" or not? From the letters under the head of "Sportsmanship" I am at a loss to tell.

First, let me say that in the particular portion of the State in which I was born and passed most of my life, from the point of view of most of the writers under this head we were all only half civilized; for, did we not get into our pirogues on frosty mornings, and paddling down some swampy bayou, get near enough after many disappointments to a flock of ducks, and fire one barrel into them in the water, giving them the other as they rose? Then if the cap had not slipped from its place and the gun snapped, we would get out on the bank and laboriously load with our half-frozen fingers the old muzzle-loader and try again. Often we would return home empty-handed, the first discharge having been made in a moment of excitement, for firing a gun that is as likely to have 5 as 3 drs. of powder in it in a pirogue doesn't always mean game. In fact, it oftener means wet powder. Then we went fishing usually in the same bayou, and we would "heave out over our heads" a dozen or so perch.

We killed deer with the jack lamp. We sailed up and down the coast in luggers, and caught fish in seines. But it was our fault. We were totally ignorant of the repeating shotgun, the rod and reel and its accompaniment of flies, etc. Just about this time I became a regular subscriber to FOREST AND STREAM and "got on to new-fangled ideas." Then I purchased a lot of rods, reels, flies, etc.; but my "bringing up" was too much for me and they were all discarded save the rods which were used to "heave up" perch.

Often three or four of us would take one of our skiffs (made of three planks) and, packing up our duffle, go into camp for a few weeks on some of the bayous that emptied into the bays of the coast. There we would hunt and fish in the above-mentioned style. We killed what we wanted in any style that we could, but we killed no more than we used. We shot no game out of season.

Are we to be called barbarians because we were told this was the proper way of doing things, because we learned new ideas of such things so late that we were unable to profit thereby? When I admit that the desire to go out comes to me now, not to go out with the new style outfit, but just as we used to go, am I putting myself among the list of the "game hogs"? Because when I try to cast a line with a reel I am just as likely to catch myself by the back as be successful in my cast, am I no sportsman?

CATS.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

CHICAGO AND THE WEST.

A "Forest and Stream" Dog.

CHICAGO, Ill., Jan. 4.—If the copy for "Chicago and the West" should arrive in New York a little late next week, the fact may be explained by the fact that it was 10 below zero here to-day, and that a lost dog was trying to face a genuine Chicago wind off the lake, than which no bitter blast ever blew between the poles.

The FOREST AND STREAM stenographer came into the office with a moisture about the eyes—it was very cold walking—and gave the information that a "poor dog was freezing to death on the sidewalk just outside the door of the Security Building, and that it had been there half a day, and that no one would let it into the building to get warm." This happened on "copy day," and it was among the last hours of the day. None the less it was apparent that this dog had read or heard that the FOREST AND STREAM office was located in the Security Building in this city, and evidently had come here for help in his sad condition. I do not know how it is with other folks, but to me one of the saddest of the innumerable sad sights of the city is that of a lost and homeless dog, either frantically looking for the lost master or humbly and patiently lying down to die—as this one soon must have died in such weather as that of Chicago to-day. The inhumanity, the brutality of civilization has few more painful manifestations than this. Anyhow, it was too much for the FOREST AND STREAM force here, who adjourned to the lower floor of the building and sought to provide the sufferer with better circumstances. The engineer of the building was found—a big, good-hearted man, it proved—and on being told of the situation cheerfully volunteered to break all the rules of the building and give the dog a warm corner by the big boilers. Then we went out to the poor fellow, who by this time could hardly stand on his legs, and with only the most feeble objection picked him up and carried him down-stairs into the engine rooms. When we got him thawed out we found him to be a chunky mongrel of a dog, of strong pepper and salt brindle color, evidently about half bull-terrier. He was too cold to say much, but after a while we got a faint wag out of his stumpy tail. Then we got him something to eat, and he began to look at us with a pair of good brown eyes, in which still lingered a deal of the suspicion he had learned of humanity. He wanted his master, and repeatedly tried to get away up the stairs and out into the cold again, so he could freeze to death waiting for the master who was missing, and who, according to dog intelligence, should some time, before or after death had come, pass by that very spot on the corner where the wind swept so keen, but where duty seemed to place one. The engineer explained the folly of this sort of business to him, and introduced him to the stray kitten which for some weeks has been living down in the engine rooms. We didn't know what to do with our dog, but decided to keep him till we could get him a home. I was once of a notion to send him down to Bobo to go a-soldiering with the bear pack, but when I looked at his jaws I knew how foolish he would be about getting too close to a bear, so I gave that up. Then I went to the colored porter of the Security barber shop and laid the case before him. He proved to be a better citizen than I am, a married man, and possessed of a home where he could keep a dog. A dog can't stand it the way I live, so I couldn't offer this one a home. After I had explained for a time what a nice thing it is to have a good dog, and what a very good dog Ben was—for we called him Ben at once and he answered to the name—the porter said he would take the dog home with him and give him a home and take good care of him. To-night Ben, now a thawed out and limber dog, with eyes no longer frozen shut, will go home to a warm bed and a square meal, and I hope will regain his joy in life and attach himself to a new master. Should his old master see this he can ask for him at 356 Morris street, care of George Weaver. Ben is a short dog, not beautiful, but a fighter I will warrant. His coat, as above mentioned, is a gray brindle. His muzzle is gray, but I should not take him to be over 3 years old. He is apparently a cross between a bull-terrier and pointer. He is a very quiet and sensible dog, and I should guess he might have been a wagon dog, belonging to some one who valued him. He had not been on the streets very long, and was still fairly plump. His tail was short and thick. By this time I hope it is wagging.

Caribou Webs.

Mr. Frank H. Risteen, of Fredericton, New Brunswick, writes in regard to the "sagging" of the web snowshoes mentioned in the current trapping story in FOREST AND STREAM:

"Speaking of the web snowshoe, there is only one kind that is worthy of the name—namely, those that are strung with caribou skin. I imagine the pair you had, and which sagged in soft snow, were strung with plain, everyday cowhide. Moose hide is still worse. Caribou hide if well seasoned and tightly strung will not sag in wet snow, and will last for years. A good pair costs \$5.

"The *ski* would be of no use in a thickly wooded country like New Brunswick, though it might be pleasant on some of the long river stretches."

The shoes worn by our party were all of caribou stringing, or at least sold as such by the Montreal house making them. We paid \$6.25 a pair for them. The cheaper shoes are admitted by dealers to be of horse hide lacing sometimes; but ours were as good as we could buy, and my trapper friends claimed a long acquaintance with the snowshoe market. Canada and the cold North should of course be the home of the snowshoe of utility as well as the snowshoe *de luxe*, but maybe they don't ship their good ones. I would like to see a pair that wouldn't sag in wet snow such as we had, or a pair which will last a Wisconsin trapper much more than a couple of years under hard work. We can't buy that sort here. The webs act all right when the snow is good, and most folk only go shoeing for fun when the snow is good. When you go every day and all the time it is a different proposition.

Mr. Risteen also makes the following inquiry, which I hope we can answer satisfactorily:

"Do you know any man in Chicago who can furnish me with a copy of that beautiful poem in blank verse called the 'Kekoskee Fish Story'? I read it a good while ago and then lost it. I doubt very much whether it has any equal in our literature, and if you could place me in

the way of securing a copy I should be greatly obliged."

The "Kekoskee Fish Story" seems to be reluctant to let go of the rattling grooves of time. This was always a singular thing to me, that about the truest thing I ever wrote should have such a reception as a banner fish lie. Now, if I should really write a fish lie—but I shudder to think about that.

Been South.

Messrs. W. H. Miller, of Chicago, E. D. Pyatt and J. McGill, of Jacksonville, Ill., with Dr. Cree and Mr. Shoemaker, of Griggsville, Ill., have returned from a hunt near the Rio Grande River, in Texas. The party killed six deer and ten antelope, or rather the cowboy guides did. The riding was too rough for "States" men, and most of the animals killed were chased down into box cañons in very rough country.

Going South.

Messrs. J. W. Lyke and J. C. Burket, two gentlemen long prominent in Fox Lake protective matters, start next week for eastern Arkansas on a hunt for ducks and deer.

Wants to Go South.

Mr. T. H. Carrier, of Watauga, Tenn., asks for information as below:

"I see you have made several trips to the South, and would appreciate information as to good deer country in the Southwest, say Arkansas, Louisiana or Texas. I thought probably you could give me the names of good localities and guides, etc."

I have never gone after deer in the South, but of course have heard much of them. At San Antonio, Tex., one is near good deer country, if he knows where to go then. West of Memphis, fifty miles into Arkansas or less, more especially southwest of Memphis, there are a good many deer this year.

The above are specimen letters of a sort often received these days. The sportsman traffic South is something already large and it is growing. Nearly all inquirers ask in regard to guides. I cannot give such information, for almost without exception there are no regular guides to be had in the South, and I am mighty glad that this is so. I hope it will be a long, long time before anybody can get a hired guide anywhere in the South, for when that begins the end of the Southern game will soon be in sight. The customs of the South, as I have often remarked before, constitute a very effectual protection for its game. The gentlemen whose names are mentioned above will believe my wish to be of service to them when I say I am sure they will agree with me perfectly about the matter of guides. It is better to travel in the South with invitations of friends, but this is not a necessity. If I were in Mr. Carrier's place I should not be afraid, for instance, to start at once for San Antonio. A little casting about there would almost certainly result in getting out with the right party in a very delightful country. The Southern men are the most kindly people in the world, and I hope that all Northern men who shoot in the South will meet kindness with justice and not kill all they can of the Southern game.

Dead Park Elk.

The big bull elk of the Lincoln Park herd here died this week of congestion of the lungs. This animal was very vicious and had been dehorned for killing one of the cows of the herd. There is no bull elk left in the herd now.

Election.

Lake Poygan Club elected officers at the annual meeting in Chicago this week: President, James Pease; Vice-President, S. M. Meek; Secretary, R. M. Simon; Treasurer, S. A. Goss. Directors, R. R. Clark, E. W. Murphy and James Pease. Membership Committee, F. D. Porter, E. N. Elliott and E. Z. Mason.

The club's grounds are located thirty miles west of Oshkosh and comprise 4,400 acres.

National Association.

It is requested that all members bear in mind the change in date of the annual meeting of the National Game, Bird and Fish Protective Association, which was postponed from Jan. 9 to Feb. 12, at Chicago, Sherman House club rooms.

[Riz.]

Mr. H. R. Willis, the best rifle shot in the Mississippi Valley (I say this because he always can beat me), is in the city this week carrying the usual chip on his shoulder. Mr. Willis lives at Alton, but is connected with the Hoyt Metal Co., of St. Louis. This year his card reads "Second Vice-President," from which I see he has riz. Still he appears willing to talk with plain people, especially with people who think they can shoot a rifle.

About Spanish.

A gentleman writing to another paper says he has arrived at San Antonio and found it to be a land of "many-ana." He said it the way it sounds, but his dictionary would have spelled it "mañana"—with the Spanish "n." Yet Mr. Charles Hallock, if he will allow me to mention it, lately wrote about Mexican "hackels." He said it the way it sounds, but the right way to spell it is "jacals." All of which recalls the old jest in New Mexico about the Irishman who "wouldn't live in a country where they climbed a tree for water, dug in the ground for wood and spelled 'hickory' with a 'j'."

The Daily Reporter.

My friend, the daily reporter, took a long whiff at his pipe the other morning and did the following for a morning paper here:

"An interesting incident on South Water street was yesterday the receipt by Lepman & Heggie of 500 brace of English pheasants. The fowl stood the long transit well, arriving in the market in fine order. A consignment of three live buffalo and thirty or forty live deer was also received from the West. While on the way here six deer escaped from the car and were shot."

Inquiry developed the facts to be that all the pheasants (which are regularly imported here by many firms) were dead. There were no buffalo nor deer whatever consigned to this firm or any other firm in Chicago, and no deer had escaped, so far as known. There was a carload of live deer, however, which passed through Chicago en route East, and in the same lot were three live buffalo. These came from Montana—presumably from the Charlie Allard herd of the Flathead Reservation—but the destination was unknown.

The daily reporter who works up the "good things" in the sporting department of the Chicago *Inter-Ocean* has discovered that the Panhandle of Texas (the dry Llano Estacado) is a paradise for chickens, quail, turkeys, rabbits, ducks, geese, deer, antelope, squirrels and railbirds! The Colorado jack rabbit drive of 6,000 hares is made into 12,000, and located in the Panhandle, which is described as a lovely timbered country. The reporter gravely announces:

"Such famous sportsmen as Police Commissioner Roosevelt, of New York, and the late Mayor, Carter H. Harrison, of this city, have each said that, in his opinion, the variety of game to be had with rod and gun in the extreme northwest part of the big Lone Star State is nowhere to be surpassed in this country, expansive as it is."

And now comes the daily reporter who does the sporting specials for the Baltimore (Md.) *American*, and describes canvasback shooting as she is done on the Chesapeake:

"All decoys used on the flats around Havre-de-Grace are made of wood, as experiment has proven that it furnished the most serviceable material. Cork is too yielding and is easily torn up by the heavy buckshot, while canvas and aluminum suffer the same fate."

"The market men use their decoys in a purely scientific manner," says the reporter. "Killing ducks with them is a business, and they employ every method possible to bring the ducks within the range of their guns. They work in squads, and this mutual co-operation brings about good results. A double sinkbox will be placed in some good spot on the flats and surrounded by about 400 decoys. Two expert gunners are assigned to the sinkbox, while the rest of the crew man a schooner that is anchored to the windward about a quarter of a mile from the sinkbox. The men remain lying in the sinkbox, and never raise their heads until they get a signal from the schooner. From the nature of the signal they can tell in which direction the ducks are coming and about the altitude they are flying. Thus informed, the gunner has only to rise in the box in the proper position and bang at the ducks as they fly over his head or attempt to settle among the decoys. Nearly all of the gunners are equipped with two guns, and they rarely fail to get four out of the flock. A boat is sent out from the schooner, the dead ducks gathered up and the decoys rearranged, if they have been shot away from their moorings."

We don't shoot ducks by note out here yet, but it is a pleasure to learn what is going on in the great world of sport as mirrored by our daily papers. The conviction is irresistibly borne in upon one that FOREST AND STREAM ought to secure the services of some of these young men, so that the public can learn about the how and where of sport with the rod and gun. If the paper would import talent of that sort, the rest of us wouldn't have to work so hard.

E. HOUGH.

309 SECURITY BUILDING, Chicago, Ill.

Sea and River Fishing.

Stocking Lake County Waters.

MR. W. B. MERSHON, of East Saginaw, writes to Editor Pace, of the Lake county, Mich., *Star*:

"The Pere Marquette Fishing Club last week successfully transferred from Saginaw Bay to the lakes along the western division of the F. & P. M. over 200lbs. of small-mouthed black bass and 100lbs. of pike perch, more commonly known as wall-eyed pike. These were large fish and would be ready to spawn whenever the proper season comes around, as they ran all the way from half a pound to 3lbs. each. There were very few of them lost in transit and we think this plant will be a great addition to the fishing interests in your neighborhood, as the small-mouthed bass are far gamier than the large-mouth, and as I understand it there are no small-mouthed bass in any of the lakes up there now. Pike perch, if they thrive, will be especially desirable, as they are gamy and often weigh from 5 to 15lbs., and in the markets bring pretty nearly double the price that lake trout do. Now that we can reach Star Lake by rail arrangements have been made to make a large plant of pike perch in that lake, and they will breed this year or next, so that it will not be long before it is thoroughly stocked. If our friend Carpenter or any one else there will guarantee to receive them at the station and put them in proper waters, we can get quite a good many more of these fish, and a line dropped to Geo. M. Brown, Saginaw (E. S.), Mich., will meet with a proper response.

"The brook trout fry from our club waters [will] be ready for distribution now soon, but we only took about half as many this year as we hoped to take owing to the breaking into the breeding pond by some unknown vandals who had no respect for law and decency or the rights of their fellow-men. I am glad to see that the sentiment of the people of Lake county is to enforce the game and fish laws. It will not take long to demonstrate practically that our game and fish can increase right along, and at the same time in season, and by lawful means furnish not only a good food supply, but plenty of sport for all of us."

One of the Pleasure Spots of Life.

Editor Forest and Stream:

Though a constant reader of the FOREST AND STREAM for a year and a half only I am beginning to feel as if your regular correspondents were real acquaintances and in fact old friends of mine—friends whom I can silently observe and from whom I receive untold enjoyment. Personally and for hundreds of others I want to thank them for their rare entertainment, and as a faint encouragement to continue their graceful writings. The good and inimitable Robinson, the classic Morris, the pathetic El Comanche, the entertaining Hallock, the moralizing and poetical hermit Ransacker, the irrepressible, though gentle, Hough; all writing in the current meaty number (Dec. 28). Hosts of other unmentioned but not forgotten contributors are equally self-denying and entertaining when relating their rich experiences afield. Their opportunities the majority of us can only long for and rarely enjoy, and were it not for their facile pens and the FOREST AND STREAM we would miss much enjoyment. I look forward weekly to the receipt of your paper and regard its reading as a pleasure spot in my life.

A. H.

CHICAGO.

Sacandaga-Sacondagu-Sacrundagua.*Editor Forest and Stream:*

I notice in *FOREST AND STREAM* of Jan. 4 "a newspaper item" by F. Z. M., of Erie, Pa. I live at Luzerne, at the mouth of the Sacandaga River, twenty-four miles from Northville. My father told me when a boy that the name Sacandaga was of Indian origin and means rapid running or dancing water. I have fished for trout in its waters and have shot deer on its banks for nearly forty years. I have quite a number of friends at and near Northville, and if I can give F. Z. M. any information shall be pleased to do so.

GEORGE H. ROCKWELL.

A Punta Gorda Jew-fish.

ON Dec. 28 a guest of the Hotel Punta Gorda, at Punta Gorda, Fla., Mr. C. A. Dean, of Boston, who had just returned in his yacht the *Myakka* from a cruise up the Caloosahatchee River, harpooned a 360lbs. jew-fish just off the hotel pier. Many people came down from the village to view the monster while some colored men were removing the skin.

May 6 to 9.—Pacific Kennel Club's fifth annual show. H. W. Orear, Sec'y.

FIELD TRIALS.

Jan. 20.—Bakersfield, Cal.—Pacific Coast Field Trial Club. J. M. Kilgariff, Sec'y.
Feb. 3.—West Point, Miss.—U. S. F. T. C. trials. W. B. Stafford, Sec'y.
Feb. 10.—West Point, Miss.—The Field Trial Champion Association's first trial. W. B. Stafford, Sec'y.
Sept. 2.—Morris, Man.—Manitoba Field Trials Club. John Wootton, Sec'y.

WHY FIELD TRIALS SHOULD BE SUPPORTED.

WAVERLY, Miss.—*Editor Forest and Stream:* Judging from the poor support given the field trial clubs this season, it seems as though the usefulness of field trials were not appreciated as it should be by the great body of sportsmen throughout the country.

Field trials always have been and still remain a potent factor in elevating field sports to their present high standard, and it is directly through the competition which the annual field trial meetings invite that a comparative field test is possible between dogs from all parts of the United States and Canada. The importance of this competition has even been recognized in England, and dogs have been sent from there to compete in our trials.

All sportsmen in this country who shoot and own dogs, or ever expect to own them, are directly benefited by the result of field trial competition, as it affords them positive knowledge as to the comparative standing and quality of different strains of blood, and of the individual merit of the representatives of those strains as compared to others which are met in the competition, which could be known through no other source than field trial competition.

Then it is solely through the medium of field trials that the public gets the benefit of the services of the winners at these meetings, for were there no field trials there would be no stud dogs in the present sense, and were there no stud dogs the sportsmen would be wholly at sea as to how to breed to improve their dogs. It is entirely owing to the successful carrying out of field trials that there have been such celebrated dogs as Gladstone, Count Noble, Rip Rap, Roderigo, Gath, Gath's Mark, Jingo, Vander-vor's Don, Tick Boy and many other grand dogs which space will not permit mention. As American sportsmen we are all proud of these dogs, and we ought to be proud of the field trial clubs which gave them an opportunity to become great.

How often when in conversation with men who have never attended field trial meetings, and that subject is broached, do we hear them remark, "Oh, field trials are too slow for me; I love to shoot. To ride after a brace of dogs just to see them hunt, point and back would not be any fun for me." If the man who talks that way will attend a field trial he will find that, after all, there is more fun in a live bird than a dead one, and that the desire to kill something does not constitute all there is of sportsmanship.

To the sportsmen who have labored so long and earnestly, and I may well add successfully too, in behalf of field trials, both in establishing them and supporting them as well, the sportsmen of America owe a great debt which can be no more appropriately paid than in supporting field trials of the present day.

Field trials have always exerted a good influence toward the protection of game. Many a sportsman, who before attending a field trial could see no sport in other than a crowded game bag, has learned that the work of the dog furnishes the real zest to the sport. When he returns home he gives up practice of shooting to flushes, and learns to value the dog that can find and point birds enough for him to shoot only over points, and in that manner make as large a bag as he wants.

Appreciating as I do the importance of field trials, and recognizing their influence in educating the trainer, were I having dogs trained I would send them only to trainers who attended field trials; for field trials to a trainer are as important as a course of lectures to a physician, and the trainer who stays at home is in some ways as far behind his profession as the cross-road doctor who never attends medical lectures.

Before the time of field trials how many intelligent trainers were to be found, and what were their methods of training? Liberal use of a pair of cowhide boots and long range use of the shotgun were methods commonly used, and the men themselves were in many cases not as intelligent as the dogs they attempted to train; but field trial training demanded men of intelligence, who could accomplish, by skillful training, results which the old "breaker" could never hope to attain. The first, and per-

haps the most important matter in which field trials keep the attending trainer up on, is quality. To correctly judge quality, and know it whether hidden under the mantle of timidity, or running riot in a headstrong dog, is a trainer's business. He should be able to recognize it when he sees it, and understand how to skillfully unravel it from that which is harmful without breaking the texture or marring its value.

A trainer who attempts to select from a number sent him such dogs as possess sufficient quality to enter field trial competition, or to make superior field dogs (for superior field dogs are all that field trial dogs are), should first learn what constitutes quality. The only place he can learn the lesson is at a field trial, where the competition draws the line so sharp and clean that a novice can recognize it in its finished state, if not in the rough. We often hear of the wonderful trainer of shooting dogs who never attended a field trial, written, no doubt, by parties who get a reduction in training fee for a public portrayal of the vividness of their imaginations. When sometimes this wonderful trainer makes his appearance at a field trial with a dog so superior to those he is accustomed to that he imagines he has the "thing won," often to find out, if intelligent enough, that compared with the competing dogs the dog he has brought has not sufficient quality to be considered. If not intelligent enough to comprehend his dog's inferiority, then going back home and writing a mess to the newspapers, attacking the club for not considering a dog that was not fit for a blind nigger to shoot over.

There are illustrations of this kind every season, more or less, at the various trial meetings, and many of the accusing articles attacking field trials are only the impotent wrath of fairly defeated competitors. At one of the field trials last season was started by a trainer a dog which was only entitled to be called a dog because he wore hair and resembled one in outline, for that is as near as he ever got to being a bird dog. There was a communication from some party who knew the trainer, whom he glowingly described in terms suited to the advertising page, and in speaking of this wonderful dog he made such flights of imagination that, had the article been published before the trial instead of after, I doubt whether the other competitors would have had the courage to have remained and run the trial to a finish. It transpired, however, that the writer did not know what he was talking about, and that is just the point I wish to make about many of these articles attacking field trials—the writers simply do not know what they are talking about, and that explains it all.

But I digress. Coming back to the subject of trainers again I would comment on the many advantages he derives from field trial attendance. The matter of selecting dogs with quality I have already touched upon, and will conclude by saying that all field trial handlers can come nearer giving full value in return for the patronage they receive than any other class of trainers; for, having a thorough knowledge of his business, a professional trainer will only select and keep to train such dogs as promise to be worth their training fee when trained, which is giving full value for every dollar they receive; while the class of trainers known as "scalpers" will train every dog sent them regardless of whether it is worth \$5 or even 5 cents. There are exceptions, of course, which I freely admit, but I have always regarded field trials when applied to the trainer individually as a kind of public sorting yard, where each trainer's ability is properly tested by record, stamped and countersigned. It is an easy matter for the obscure trainers to get dogs to run at the field trials, providing they have the ability to handle and run them. The competition is a free thing. Then let them come out of the woods and show the public, by the quality of the dogs they handle, what ability they possess as trainers; but, strange to say, most of them seem to shun a public criticism of their handling.

The next thing to quality which field trials make the trainer expert in is the judging of correct field form. At the trials he has an opportunity to see in actual competition the different types of field form, and can judge for himself which type has the greatest superiority.

Field trials represent the combined skill of the brightest trainers in America, and each one learns many things sooner or later that would have never occurred to him originally. This applies particularly to kennel management, for at field trials he hears discussed and explained many ailments that dogs are afflicted with which previously he never understood nor knew how to treat.

Another more important thing yet, which all field trial handlers agree upon, is that one "can't eat his pie and have it too," and that a quail once dead is never any more use to train a dog on. This teaches him to economize his bird supply, and in abundance of birds his dogs acquire the experience which is absolutely necessary to make applicable the training given them. No truer words could be written than that no skill in training will ever supply the necessity of experience.

The stay-at-home trainer rarely goes abroad without a pocketful of shells. He takes great pride in his skill as a field shot and lets no opportunity pass to give an exhibition of it, even if it be at flushes. If he loses a bird it irritates him, and the dog is apt to feel the weight of his displeasure. He uses up his bird supply without doing his dogs any great deal of good, and the owner of the dog is the loser thereby.

As a pastime few sports furnish more real pleasure than field trials. The pleasure begins with the greetings one receives from friends and acquaintances whom he has not seen in a year perhaps, and increases as he makes the rounds to view the dogs in the hands of different handlers—dogs conditioned to make a race for their lives. As he listens to the dog chat when all are together in the hotel, which conversation is interlarded with laughable incidents of former trials which may have taken place years ago, he becomes more interested. As the spectators mount their horses on the morning of the commencement of the trials he catches the eagerness manifested on all sides to see the race begin, and as heat after heat is run and the winners begin to stand out by brilliant work and superior field quality the desire to own a dog like some of those he sees is born in his heart, and he is conscious of a new pleasure far above the selfish one of mere shooting.

When sweet-faced ladies lend their gentle presence to sports it speaks well for the class of men who conduct such sports; it refutes most positively that erroneous idea that at field trials there is bad feeling and ungentlemanly proceedings.

Field trials are not to blame because disgruntled com-

petitors attack the clubs for doing what was just and right, and field trial clubs rarely appear in print to deny or affirm. Their acts are public ones, and the intent and purpose of field trials are to place the best dogs, which the clubs do through the services of competent judges.

I have often thought that the sporting press (who should know the right and wrong of such accusations, through their reporters who are present at all trials) should never publish such communications unless backed by absolute proof. The burden of proof lies with the accuser and he should be compelled to produce it before his accusations should be considered, much less published; for many sportsmen unacquainted with the men who represent the membership of field trial clubs often credit such accusations as true because their favorite paper publishes them. They reason, that only such matter as was known to be true would be published.

The gentlemen who are patrons and members of the various field trial clubs are recognized in their various business pursuits as men of honor and responsibility, and many of them hold positions of trust far above the ordinary run of men. For an intelligent man to say such men would do or allow to be done anything that was not right and just, when the only interest they had in trials is the sport they get out of witnessing the races between the dogs, is too silly and contemptible to receive a second thought.

As to running field trials on any better business basis than they are run at present, it is impossible. A man may start a business, and no matter how bright he is as a business man, if patronage fails to come to him his business will not prosper. Patronage is all that field trials need, unless it is fewer field trials and more important ones.

When things become too common they are not so interesting to some; this seems to be the case with field trials. When there were less of them there was greater patronage; but, however true this may be, field trials are the backbone of our field dogs. What have bench shows ever done for field dogs? Nothing. Field trials have done it all. The practical sportsmen who go afield, and appreciate what the term a good field dog means, should patronize field trials even if unable to attend them in person, and in that way do their part toward their support.

W. W. TITUS.

The W. K. C. Premium List.

THE premium list of the Westminster Kennel Club, which can be obtained by addressing the Superintendent, Mr. James Mortimer, Room 26, 32 Pine street, New York, is now ready for distribution. The special prize list as is also the regular prize list is notable for its length and value. Mastiffs, St. Bernards, bloodhounds, great Danes, Russian wolfhounds, deerhounds, greyhounds, pointers, setters, spaniels, collies, poodles, bull-terriers, bulldogs, Boston terriers, dachshunde, beagles, fox-terriers, Irish terriers, black and tan terriers, Bedlington, Scottish, Skye terriers, pugs, toy spaniels, have \$15 and \$10, first and second in challenge classes, while in open classes the prizes range from \$20, \$10 and \$5, first, second and third respectively, to \$15, \$10 and \$5, and \$20, \$15, \$10 and \$5, some classes having a fourth prize. Puppy and novice classes are liberally provided for, those classes having \$15, \$10 and \$5, and \$10 and \$5. Nearly all the breeds enumerated have each a special kennel prize of \$20 for the best exhibit of four. Classes are provided for uncropped dogs of the breed commonly cropped. The special prize list is so long and valuable that, as full mention cannot be given here, special attention is called to its worth. Specialty club cups and other trophies and prizes are out in full force. The club will add 50 per cent. to the amount of prize money won by any dog wholly owned by a non-resident of the United States or Canada. Entries close Feb. 4. The show will be benched and fed by Spratts Patent. Entry fee \$5. A judge for spaniels will be announced soon.

Successful Clubs.*Editor Forest and Stream:*

I beg to call your attention to the fact that field trial interests as a whole are not in the deplorable condition pictured in the *FOREST AND STREAM* of Jan. 4 under the title "A Review of the Year." That article deals only with the pointer and setter trials, and totally ignores the foxhound and beagle trials which have been remarkably successful during the past season. Foxhound trials have been held by the Brunswick Fur Club and the National Fox Hunters' Association, and beagle trials by the National Beagle Club, the New England Beagle Club and the Northwestern Beagle Club. These five clubs are all prosperous, and their trials will bear comparison in all respects with those held by any club in the country. They have not lacked entries, the attendance has been large, no trials have been called off, no club has disbanded and none are in financial difficulties. The enthusiasm of the members and the general public interest in the trials has never been as great as it is to-day, and the coming year promises to be the most successful in the history of these competitions. No review of the year is complete which fails to mention these clubs and the splendid work they are doing.

BRADFORD S. TURPIN.

The Brunswick Fur Club.

ROXBURY, Mass.—The Brunswick Fur Club's seventh annual winter meet is to be held at Brunswick, Maine, during the week of January 13. The club headquarters will be at the Tontine Hotel. The rates will be \$1.50 and \$2 per day for a single room.

The annual meeting of the club, for the election of officers and the transaction of other business, will be held on Monday Evening, January 13.

Brunswick is on the Maine Central Railroad. Sportsmen going by the way of Boston will take the cars at the Union Station.

This is to be a rousing hunting meet. Foxes are reported plentiful near the town, and the Brunswick members of the club will do all in their power to make the hunt a notable one in the annals of New England fox-hunting. Sportsmen will receive a hearty welcome, and all who attend are urged to bring their hounds.

BRADFORD S. TURPIN, Sec'y.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

THE A. K. C. AND CROPPING.

GRAND CROSSING, Ill.—*Editor Forest and Stream:* I have taken the keenest interest in the ear cutting discussion recently going on in FOREST AND STREAM, and while I have taken no part in it myself I am gratified that the final outcome of this vexing question is settled, for the time being at least.

I am pleased to note that the agitators of this matter could not muster enough votes with which to override the wishes and interest of those most concerned. In my opinion it only goes to show that common sense has prevailed. The advocates of those opposed to cropping had but one leg to stand on, to wit: the cruelty of it. I would like to ask, Mr. Editor, how many of those who have taken such a decided stand against cropping know from their own personal observations and knowledge the extent of the cruelty inflicted. From my own observations in the last six or seven years, during which time I have cropped the ears of many and had many others cropped by others, I have never been able to discover any great cruelty in the operation: that is, when it was judiciously and scientifically done. With the aid of cocaine hypodermically injected there is little or no pain, judging from the actions of the subject.

I have on numerous occasions cut the ears of great Dane puppies, when they were 5 or 6 months old, without any assistance except that of the drug mentioned. After the operation the ears should be treated in manner as advocated by Dr. Phillips in his letter recently published in FOREST AND STREAM. When so treated there will be no pain and little inconvenience to the puppy.

Of all domestic animals when in distress the dog is the first to show it. Let him get hurt or injured and he will immediately take to his kennel and refuse all food, but I have never yet seen a puppy refuse his meal after the operation of having his ears cut. This in itself will prove that the pain is of trifling moment. Hence I say let the ear cutting and tail docking go on.

The only way to abolish it is through the medium of the public. When the public refuses to purchase dogs with cropped ears and docked tails the breeders of these breeds will themselves discontinue the practice; but neither the A. K. C., nor any other body of men, can force anything upon the public that it does not want, hence all legislation of this character through the A. K. C. should be discouraged.

The only way to propagate the individuality of a breed of dogs is to leave it in the hands of the breeders. Once let the breeders give a breed up for want of popularity or favor with the public and it will soon disappear. In proof of this note at our big shows the absence of the once numerous and popular Newfoundland. From the time the first St. Bernard landed in America the Newfoundland has gradually disappeared—not, however, from any fault of his, but because the breeders could no longer keep him to advantage against the more popular St. Bernard. So with the cropped and docked dogs, if the public will not have them they too will soon disappear.

I could go on in this strain and cite a hundred other reasons why cropping should not be meddled with by the A. K. C., but the ground has been pretty well covered by other breeders. I will close this article by thanking the gentlemen who so gallantly fought the resolution at the A. K. C. meeting.

HARRY L. GOODMAN.

Youatt on Cropping.

"I have some doubt whether I ought not to omit the mention of this cruel practice. Mr. Blaine very properly says that 'it is one that does not honor the inventor, for nature gives nothing in vain. Beauty and utility appear in all when properly examined, but in unequal degrees. In some beauty is pre-eminent, while in others utility appears to have been the principal consideration. That must, therefore, be a false taste that has taught us to prefer a curtailed organ to a perfect one, without gaining any convenience by the operation.' He adds, and it is my only excuse for saying one word about the matter, that 'custom being now fixed, directions are now proper for its performance."

"The owner of the dog commences with maiming him while a puppy. He finds fault with the ears that nature has given him, and they are rounded or cut into various shapes, according to his whim or caprice. It is a cruel operation. A great deal of pain is inflicted by it, and it is often a long time before the edge of the wound will heal; a fortnight or three weeks at least will elapse ere the animal is free from pain.

"It has been pleaded, and I would be one of the last to oppose the plea, that the ears of many dogs are rounded on account of the ulcers which attack and rend the conch; because animals with short ears defend themselves most readily from the attacks of others; because, in their combats with each other, they generally endeavor to lay hold of the neck or the ears; and therefore when their ears are shortened they have considerable advantage over their adversary. There is some truth in this plea; but otherwise the operation of cropping is dependent on caprice or fashion.

"If the ears of dogs must be cropped it should not be done too early, otherwise they will grow again, and the second cropping will not produce a good appearance.

"The scissors are the proper instruments for accomplishing the removal of the ear; the tearing of the cartilage out by main force is an act of cruelty that none but a brute in human shape would practice, and if he attempt it, it is ten to one that he does not obtain a good crop. If the conch is torn out there is nothing remaining to retain the skin round the auricular opening; it may be torn with the auditory canal, and as that is otherwise very extensible in the dog it is prolonged above the opening, which may then probably be closed by a cicatrix. The animal will in this case always remain deaf, at least in one ear. In the meantime the mucous membrane which lines the *meatus auditorius* substance, the secretion of the wax, continues; it accumulates and acquires an irritating quality; the irritation which it causes produces an augmentation of the secretion, and soon the whole of the subcutaneous passage becomes filled, and seems to assume the form of a cord, and it finishes by the dog continuing to worry himself, shaking his head and becoming subject to fits.

"Mr. Blaine very naturally observes that 'It is not a little surprising that this custom is so frequently or almost invariably practiced on pug dogs, whose ears, if left alone to nature, are particularly handsome and hang very gracefully. It is hardly to be conceived how the pug's head—

which is not naturally beautiful except in the eye of perverted taste—is improved by suffering his ears to be removed."

"If the cropping is to be practiced, the mother should have been previously removed. It is quite erroneous that her licking the wounded edges would be serviceable. On the contrary, it only increases the pain and deprives the young ones of the best balsam that can be applied—the blood that flows from their wounds."

A Lady on Cropping.

The world is funny or tragic, dependent upon our dinner and our liver.

My dinner is eaten in loneliness, and presto! my liver is sluggish and I smile at the world and feel no mirth.

I smile at the inconsistencies of the world. For instance, our very humane ideas! They depend so entirely upon style. We are humane or otherwise, as style dictates, and it's mostly otherwise!

There are dogs—I thank heaven! See what they are to us. The Esquimaux says: "A man's best friend is his dog, better even than his wife," and no woman who once knew a dog's faithfulness and loyalty ever found his equal in a man. One wise man said: "The more I see of men the more I love my dogs," and in the newspapers we read daily accounts of the heroism of dogs—saving some one from drowning, saving some one from fire, catching burglars, finding lost children, always showing heroism that equals, yes, excels, man's. And yet how do we treat these speechless friends?

Style says torture them, clip their ears and bob their tails. We heed no other consideration, and we clip and bob! We impose the most horrible suffering upon them merely so we may own "stylish" dogs! And we prate about our humanity!

Last summer I saw five bull-terriers being made "stylish." They were several months old, and had pedigrees that would fill a column nonpareil. They were darling puppies, and had been sold for \$50 apiece. But before being delivered to their owners they were undergoing the martyrdom of being trimmed into style.

The week before their ears had been cut to a point and their poor tails chopped off close to their bodies. As they ran to me in obedience to my call, they tumbled over each other, puppy-fashion, and so painful were their raw wounds that they ran about madly, howling in fearful agony.

The man showing them to me picked them up one after the other, and pulled their sore ears with all his power, to give them a sharp point, as he explained. The frenzied cries of those helpless puppies made my heart sick.

"It is inhuman, barbarous," I said, turning away, faint at the sight.

"But it's got to be done fer style, m'm," he explained. "We couldn't get any price for them wid long ears."

What matters the suffering of these helpless dogs so long as they are "cut" into style? For what do we support the Humane Society in luxurious idleness? And why do we pretend to be humane and civilized? I ate my dinner in loneliness, and so I smile.

To add to our laurels the Kennel Club, that loves dogs so well that it gives us a big dog show every year, decides that it shall continue to be the style to clip and bob and torture dogs. It was so easy for them to befriend the animal that is of such profit to them. Had they voted against the practice dogs would have been saved untold suffering and the club would have borne the stamp of civilization.

I hope every man, woman and child that loves a dog will refuse to patronize the dog show until the club shows some humanity for the animals it exhibits.

I love my dogs—my friends, who are always glad to see me, who are never unkind, who can read whether joy or sorrow is in my heart though it be hidden from the eye of man, who welcome my coming and grieve at my going, who will feast with me and who will starve with me, whose loyalty is everlasting. As they love me, so I love them, and I hate the fiends who "cut" them into style.—*Nellie Bly in the World.*

Dalziel on Cropping.

"Cropping, which fashion prescribes for certain unfortunate breeds of terriers, has no justification offered for it except the taste (?) of the admirer of this cruel and useless operation. It is said cropped terriers look sharper and handsomer than those with the ears left on, but the absurdity of this appears when we remember that it is not applied to Dandie Dinmont, Bedlington or fox-terriers. It is cruel not only in the pain the operation causes, but far more so in exposing one of the most delicate organs to the effects of cold, wet, sand and dirt, by removing the part nature intended as a protection. What would be thought of a fashion that demanded that the eyelid or the paw should be removed, with the result that the dog could not clean his eye from the matter blown into it? Cropping by exposing the internal parts of the ear to the weather and the intrusion of particles of sand, etc., produces canker, inflammation and deafness, and cannot be too strongly condemned."

A. K. C. Resolution.

In the December *American Kennel Gazette* is the following notice of resolution by Dr. H. T. Foote: "Please give notice in your next issue of the *Gazette* that I will offer at the February meeting of the Kennel Club the following resolution (not amendment or addition to the bench show rules):

Whereas, The mutilation of dogs is a recognized cruelty and not necessary or justifiable excepting in cases of disease, and

Whereas, The cruelty-to-animal laws throughout the States make such mutilation a misdemeanor, punishable by imprisonment and fine,

Resolved, That all dogs born after Dec. 31, 1896, must be shown in their natural conditions, and if in any way mutilated will be considered "improperly tampered with" and subject to Article XI. of the rules governing bench shows.

ALBANY, N. Y.—*Editor Forest and Stream:* I was surprised at a statement made by Mr. Watson at the A. K. C. meeting, Dec. 19 last, re anti-cropping amendment. You quote Mr. Watson as saying in reference to cropped Irish terriers at the present day in England, viz.: "You cannot get a cropped Irish terrier in England now, and none have been obtainable for some years."

I fear Mr. Watson rarely reads his English *Stock-Keeper* or he would frequently see cropped Irish terriers for sale. Let him refer to the *Stock-Keeper* Dec. 20, just to hand. He will there see advertised for sale Marton Masher, a cropped dog, and he is a winner during the last eighteen months of over twenty first and specials, of course not under E. K. C. rules.

Then again, what about champion Breadenhill, another cropped specimen still in the flesh, and one of the most perfect of his breed that has ever been exhibited, winning first and specials, Crystal Palace, Birmingham, Manchester, Brighton, Glasgow, Edinburgh, etc., in fact a winner in highest company whenever exhibited.

Of course anybody knows that a cropped Irish terrier is handicapped at the present time for exhibition purposes. It was the non-cropping question that drove that prince of fanciers, Mr. Herbert Graves, of Liverpool, out of breed, and at the time he owned champion Extreme Carelessness, champion Playboy, champion Glory, etc.

Still occasionally a cropped dog of this breed is exhibited in England, but, as I said before, not under E. K. C. rules.

T. S. BELLIN.

Jan. 2.

Idstone on Cropping.

Speaking of bull-terriers in "The Dog" he says: "The ears should be uncut—as nature made them—not improved by the illiterate by cutting away the lobes, pointing them in an upright position until they are rigid and erect for life. 'God never made his work for man to mend.'"

Minnesota Society for the Protection of Dogs.

Editor Forest and Stream:

To appreciate the advantages of a great game estate is to live in it; to know the necessity for the conservation of the game supply is to be in touch with all field interests.

The resources of Minnesota have made her famous, and the resident sportsmen are keenly alive to the value of their heritage. The beauties of our lakes and forests, the successes with rod and gun, have been told by many pens in the columns of FOREST AND STREAM. The tales of camp life and pleasant outings are the tiny craft that float so lightly in the deeper current of game and fish protection.

While there are no gallant exploits of arrest and conviction to chronicle for the voluntary game and fish protective association of the State during the past year, yet it has worked steadily and well. Information from this point, a quiet tip from that, have all found their way to the State Commission for the action of Executive Agent Fullerton and his wardens.

It has been a great year to record for the constituted authorities, and an educational campaign of game and fish protection by the citizens' movement.

Mr. Fullerton in his annual report gives full credit to the voluntary work and recognizes the deterrent influence on illegal taking that such an association has inspired.

The sportsmen of Minnesota have now gone a step further. We are working to protect the game and fish for the people at large, but have now struck nearer home and find it necessary to institute a public movement to protect the gunner's friend, his dog. Good hunting dogs are valuable property to own here and very tempting subjects to a thief.

In the larger cities a number of valuable dogs have been lost to their owners by theft in the last several years, but from the number reported this season it is evident that there is an organized effort by dog thieves to take up and dispose of the most valuable. But few so lost have been recovered. Instancing the fact that of a party of five whose gunning trip was noted in a daily paper, within two weeks each gentleman had lost his dog.

The dog is personal property in Minnesota and taxed as such in addition to local licenses; but owing to the systematic evasion of city ordinances the police make but few efforts to recover stolen dogs.

But the line has now been drawn, and at a general meeting of dog owners held at the Windsor Hotel in St. Paul recently an association that in its field stands alone in America was organized under the title of the Minnesota Society for the Protection of Dogs, and a full complement of officers elected as follows: Uri L. Lamprey, President, St. Paul; Henry G. Smith, Vice-President, First Congressional District, Winona; H. M. Twitchell, Vice-President, Second Congressional District, Worthington; T. M. Paine, Vice-President, Third Congressional District, Glencoe; Harry Wack, Vice-President, Fourth Congressional District, St. Paul; Wm. L. Wolford, Vice-President, Fifth Congressional District, Minneapolis; Wm. C. Sargent, Vice-President, Sixth Congressional District, Duluth; A. G. Anderson, Vice-President, Seventh Congressional District, Crookston; John S. Prince, Jr., Treasurer, St. Paul; Wm. L. Tucker, Secretary, St. Paul; John E. Stryker, Attorney, St. Paul; Stan Donnelly, Attorney, St. Paul. Board of Directors—Frank F. Loomis, Richard Price, V. S.; Wm. Libbey, Geo. Scales, L. D. Barnard, all of St. Paul.

The association starts with more than 150 members in the Twin Cities alone, and reasonably certain of hundreds of members from the State at large. The constitution speaks the object of the association as follows:

"The purpose and business of the society shall be, to protect its members in the possession and ownership of valuable dogs; to secure the return of the same when astray or stolen, and to prosecute and by all legitimate means assist in the punishment of dog thieves."

It is sure to meet with a hearty response from the dog owners of Minnesota; and it may be the means of starting a national association with like objects, and ultimately make it impossible for dog thieves to dispose of their catches in any city or State. Wm. L. TUCKER, Sec'y.

Pace in Shooting Dogs.

TYRO SHOPS, N. C.—*Editor Forest and Stream:* Speed in shooting dogs is commonly overrated. There are several other qualities of much greater consequence that do not seem to attract so much attention. As a matter of fact, some of the rather too slow ones show great intelligence and do their work in grand shape.

A dog that goes at his top speed can't last long, nor can he do first-class work. The fact is, he is nervous and in too great a hurry to take time to work out his ground properly. He may make a sensational point now and again by almost accidentally catching the scent of a covey at a few yards that he might have scented at three times the distance had he been going at the pace that he could keep up for four hours.

The pace that a strong, well-made, high-couraged dog can sustain for four or five hours is, I believe, fast enough to satisfy any experienced sportsman.

The four-hour heats of the late Central Field Trial Club were good tests of pace, as well as other qualities, and demonstrated the fact that fast, nervous weeds do not amount to much as shooting dogs. Some men make a point of never hunting their dogs for more than an hour or so at a time on purpose, to get them into the habit of going at great speed, because they expect (and are often correct in thinking) that great credit will be given them for it; but one would suppose that experience ought to have taught most field trial men by this time that excessive speed is a downright fault.

I have known of dogs that after having hunted for hours at a good hand gallop could, late in the evening, put on a tremendous sprint when they had an object in view, such as cutting off a determined runner, or locating a covey that a rival was also working on.

These are the occasions where great speed ought to be appreciated.

C. E. MCMURDO.

Treatment for Warts.

Editor Forest and Stream:

I have a cure for warts in a dog's mouth. I would like to give it to FOREST AND STREAM readers. About two months ago my puppy's mouth was full of large seed warts; in fact, the inside was literally covered. I commenced to cut them off with sharp scissors and touch the roots with nitrate of silver. I cut off five in this way, and to stop the flow of blood I used a strong solution of alum water. I sponged the mouth out about five times and waited several days for the cut places to get well. To my surprise, I found them nearly gone in a few days. I applied alum water several times more and they disappeared entirely. I am convinced this remedy did it, and as it is a simple one it may benefit some one.

HAMPDEN.

POINTS AND FLUSHES.

In a letter dated Dec. 29 Mr. W. W. Titus, Waverly, Miss., writes as follows:

"Mr. W. H. Hammond and Mr. T. Sturgis are located at Palo Alto, Miss., and Mr. J. Tredwell Richards, of New York, is staying at the same farm, shooting. Mr. Hammond at first located near West Point, but owing to the land posted by the field trial clubs, the tide of shooters (local) went over his way, and it was a constant bang from morning until night. Where he is at present is too far from town for the disturbing element to reach him. He is well pleased with his location, and finds birds abundant.

"When J. B. Stoddard and Mr. Kidwell arrived I sent them to Tibbee, which was represented as a birdy place, but they failed to find the number of birds there they expected and moved west of West Point to a place called Siloam, where the prospects seemed to be good for birds, and the country is open.

"That efficient secretary-treasurer of the United States and Champion Club, W. B. Stafford, was in West Point recently, completing the details of holding the trials. He secured a guide and completed other arrangements.

"George Gray writes from Appleton, Minn., that he will start for Mississippi on Dec. 28, and that Frank Richards will come down with him.

"I was at Vinton on Sunday to see George Richards, and found him fat and smiling because everything is going his way. Lots of birds, he says, and many of the farmers have posted their land and given him exclusive hunting rights thereon."

The many friends of the late J. Shelley Hudson will be grieved on learning of his death. He died at his home in Covington, Ky., on the evening of Dec. 24, of Bright's disease. No man was better known than he to the sportsmen of America. He owned many noted dogs and at one time took an active interest in field trials.

Major W. H. Key died in South Florence, Ala., on Dec. 7. He was a celebrated sportsman of his section and an active promoter of field trials a few years ago and participant in them. He acted many times as judge in the field trials.

Under date of Jan. 2 Mr. John Brett writes us as follows: "I shipped to Col. H. Platt, Bangor, N. Wales, on Dec. 26, three English setter puppies for the English spring trials, one of them by Real English ex Flower of Sulphur and two by The Earl ex Maid Marion. Col. Platt won first and second in the grouse trials held in Wales last August. Mr. A. G. Hooley writes me he has some grand youngsters by Real English that will be hard to beat."

Mr. R. Humfreys-Roberts is now secretary of the City of the Straits Kennel Club, vice Mr. A. D. Welton, who resigned. Mr. Welton's intention is to leave Detroit soon.

Catalogue No. 8 of the Rockland Beagle Kennel, Nanuet, N. Y., for the season of 1896, is artistically gotten up, and contains portraits of Champion Frank Forest, Buckshot, Lee III. and Champion Roy K., besides giving other information appertaining to that kennel.

Mr. Fred Mansell, 7 Saint Clement st., Barnsbury, London, N., has in hand plates of Mr. Dyer-Bennett's smooth fox-terrier bitch Lyons Sting and Mr. Sam Hill's wire hair Meersbrook Bristles. Artist's proofs, 42s. each; India prints, 15s. each. Mr. Mansell is now prepared to receive subscriptions for the limited number (thirty-five) of the artist proof plates which he will publish.

Box 2578, New York, offers broken pointer. Mr. T. Henckels, Middlebury, Vt., offers St. Bernard. Mr. A. L. Bailey, Plymouth, Mass., offers pointers. Mr. H. Benton, Afton, N. Y., offers broken beagle. Box 392, Cincinnati, offers broken pointer. Mr. John Brett, Gloster, N. Y., offers to board, condition and handle dogs. Mr. H. L. Ford, Springfield, O., offers broken setter. Mr. L. A. Pearle, Hampton, Conn., offers broken setters. Mr. A. M. Hopper, East Orange, N. J., offers pointers. Mr. G. Boehme, New York, offers Chesapeake Bay dog.

A Parisian paper, *Le Petit Journal*, of the 12th inst., indulged its readers with a list of prices paid for valuable dogs that would make English mouths water. Our contemporary relates that in the beginning of this month the

steamship *Scythia* delivered at Boston a St. Bernard dog for Mr. C. H. Moore which cost that gentleman £45,000. What will a Frenchman believe? Colonel Ruppert is said to have given £1,000 for Scottish Prince, and Turk, the mastiff, we are told changed hands for £1,620. Another St. Bernard, Lord Bute, made within a few pounds of £4,000. A New York lady, they continue, owns a Japanese spaniel for which she paid £300. We have kept the most exciting item for the last, and we think this will be news to everybody in England, particularly fox-terrier men. *Le Petit Journal* chronicles that a fortnight ago D'Orsay sailed for America in exchange for a cheque of \$5,000 (£1,000). We wonder if his owner, Mr. F. Redmond, knows this? Then our contemporary proceeds to cap the lot by adding that D'Orsay, however, is but a second-rate dog, as his "kennel companion *Vesuvienne*" is priced by the same owner at £3,000. Somebody must have been "stuffing up" *Le Petit Journal* to a comical extent, and its readers must be a gullible public to swallow such preposterous statements.—*The Stock-Keeper (England)*.

Yachting.

THE past week has brought out nothing new in the Dunraven matter; the committee heard the last witnesses on Dec. 31, and Mr. Asquith sailed for England on Jan. 2. The committee has as yet made no report.

THE Yacht Racing Union, of Long Island Sound, has just completed its first year and begun a second under the same officers who have contributed so ably to its successful establishment. During the past season the large number of clubs composing the Union have worked together in complete harmony, and with a marked improvement in the management of races. It will be necessary for the Union to take some more positive action this year than last in the matter of racing rules, and this work is already under way. The permanency of the Association now seems assured, and it is likely in the future to do much for yacht racing and the yacht clubs between New York and New London.

YACHT DESIGNING.—II.

BY W. P. STEPHENS.

[Continued from page 17.]

THE position of the professional yacht designer is so fully recognized to-day by all classes of yachtsmen, and the systematic planning and drawing of the design without reference to who may build the yacht is so much a matter of course, that very few realize how recent this great change is, or how rapidly but imperceptibly it has finally come about. Less than twenty years have elapsed since the work was entirely in the hands of the builders, some few of whom were clever and competent designers, but the professional designer entirely unconnected with building firms was unknown. Interesting as it would be, no complete history of the origin and development of yacht designing has yet been written, and it may not be out of place here to outline some of the more important points.

Considering the advanced position of systematic designing as applied to war vessels within the past century or more in England, and especially in France; and the progress attained by both naval constructors and by men of science who devoted themselves to study and research in the inviting field of abstract naval architecture; it is rather surprising to find that the early yachtsmen of England, largely men of wealth, position and intelligence, gave very little thought to the designing of their yachts, and offered very small incentive to improvement. Not only was this the case before yachting and match sailing became the popular sports they now are, but until a very recent period the wealthier yacht owners, both of America and England, have as a class done remarkably little to encourage study, improvement and research among builders and designers.

It is now nearly seventy-five years since John Fincham, a master shipwright at the Portsmouth dockyard in England, and a naval architect of deservedly high reputation, called the attention of yachtsmen to the necessity of applying to yacht building the then recognized principles of naval architecture. He went so far as to take off the lines and compute the elements of the leading yachts of the time, and urged upon owners and builders the importance of systematic tests and comparisons of all yachts. On the part of the builders Mr. Fincham met with determined opposition, each resenting what he considered an attempt to steal his trade secret, the model of his yacht; and from the owners he met with no encouragement whatever.

The matter rested for a quarter of a century, until the victory of the schooner *America*, in 1851, stirred up British yachtsmen to the realization of the defects of their best yachts, when Mr. Fincham again renewed his agitation. For several years preceding the advent of *America*, John Scott Russell, the eminent English naval architect, had urged the claims of his theories of wave lines and a long, hollow bow, as applied to yachts, but with no particular success. His contention, practically that the existing British yacht of the "cod's head and mackerel's tail" model was trying to sail stern foremost, was changed by the success of *America* from a mere abstract theory to a most concrete and pertinent fact, and after freely conceding the superiority of *America* and the defects of their own craft, British yachtsmen were, for the first time, ready to give a hearing to such men as Fincham and Scott Russell. The day of the professional yacht designer was still far distant, but there was awakened among yacht owners a desire for knowledge, and a sudden impulse was given to the work of taking off the lines and calculating the elements of racing yachts.

A few years later, in 1856, the cause of scientific designing found a firm friend and most able and earnest advocate in P. H. Murett, an English yachtsman, who has left a fitting monument in the book "Yachts and Yacht Building," published in that year. Under this modest title is presented for the first time in print a detailed and comprehensive system of designing; and Mr. Murett not only pointed out the importance of the work, but he did much to make it possible to owners and other amateurs by collecting designs of such noted craft as *America*, *Mosquito*, *Thought*, *Vesper* and *Mary Taylor*, and computing, tabulating and comparing their dimensions and elements. While writing in a popular manner and within the com-

prehension of any intelligent man, he covered the subject most thoroughly and systematically, and it would have been well for yachting if the book had received on both sides of the Atlantic that attention which it deserved. Though the building of yachts from a design was by no means unknown at this time, the majority of yachts were turned out by men who rather gloried in the fact that their knowledge was purely "practical," and that they were devoid of any scientific attainments; nor was it until twenty years later that this class gave way to the trained and educated specialist, the yacht designer.

One of the first of the noted designers is John Harvey, now a resident of New York, and known here through such yachts as *Bedouin*, *Miranda* and *Wenonah*. His personal experience dates back of America and her rivals, his father and grandfather being famous in their day as builders of fast craft, yachts and merchant vessels, at the old Wivenhoe yard on the east coast of England. Mr. Harvey's experience, beginning as a boy in the building yard and in after years solely as a designer, is a connecting link between the old and new systems.

Of those who have attained prominence as designers without being in any way connected with building, the first, so far as I can learn, is St. Clare J. Byrne, of Liverpool, designer of the steam yachts *Namouna* and *Alva*. As long ago as 1859, while engaged as a draftsman with the great shipbuilding firm of Laird & Co., of Birkenhead, Mr. Byrne designed a schooner—*Albatross*—which was built of iron and is still afloat. His real work as a yacht designer dates from about 1870, and in the four or five years following he turned out a number of successful sailing yachts of 10 to 12 tons; the latter class in particular being then in great favor with racing men. Later on he devoted himself entirely to steam yachts, in which class of vessel he has been very successful.

In 1870 Dixon Kemp became interested in the work originated by Mr. Murett some fourteen years before, and took off the lines of a large number of sailing yachts, computing the elements and tabulating and classifying the results. In the following year he designed his first yacht, named *Boojum*, and in 1873 he designed the 30-tonner *Oivana*. Early in 1874 he published in *The Field* the designs of two 5-tonners, and in the same year he began the compilation of material for the first of his books, the large quarto "Yacht Designing," published in 1876. Two years later came the first edition of "Yacht and Boat Sailing," which has now reached its eighth edition; and in 1885 appeared the first edition of "Yacht Architecture," an extension and elaboration of the original "Yacht Designing." In addition to these standard works, which have done so much to disseminate knowledge of yachts and designing, Mr. Kemp has designed many yachts, of late years mostly steamers.

In 1874 George Lennox Watson, then a young man in the employ of the shipbuilding firm of John Elder & Co., of Glasgow, designed his first yacht, a very curious craft called *Peg Woffington*, following her a year later by the famous 5-tonner *Clothilde*, and then by *Vril*, and then the long string of famous tens, including *Verve I.*, *Verve II.*, *Madge*, *Ulerin* and *Queen Mab*. Mr. Watson is purely a designer, his yachts being built by others; in all he has designed over 220 yachts, from the largest steam yachts down to small racing boats, in addition to some commercial work, lifeboats, etc.

In 1875 there came out in England a noted yacht, the 10-tonner *Lily*, from whose published design the cutters *Muriel* and *Mona* were afterward built, with some modifications, in this country. She was the work of Alexander Richardson, of Liverpool, an amateur, who next year produced the famous 20-tonner *Challenge*, and in 1877 adopted designing as a profession, in later years gaining fame through *Silver Star*, *Irex* and *Iverna*. About 1875 another young amateur, C. P. Clayton, began his work at Southampton, being particularly successful in the now extinct length classes of the *Itchen*.

Will Fife, Jr., the designer of *Minerva*, *Clara* and *Ailsa*, is a builder by birth and education, his father and grandfather, both of the same name as himself, having been famous for generations on the Clyde. His work as a designer began almost as a boy, early in the 70s, and though he has always been connected with yacht building, he is in every sense a professional designer, ranking very high.

Mr. J. Beavor Webb, designer of the challengers *Genesta* and *Galatea*, and of the fine steam yachts *Corsair*, *Intrepid* and *Sultana*, was originally an architect by profession, taking up designing about 1875 as an amateur, one of his most successful boats, the 20-tonner *Freda*, being designed in 1880.

From this brief sketch of the course of designing abroad, it will be seen that it began largely in the work of a few ambitious young amateurs about 1875, who have since made their reputations as designers, replacing the old builders. At the present time the men who are best known as the heads of the leading building yards, Arthur E. Payne, C. E. Nicholson, J. M. Soper and others, are at the same time recognized as expert designers as well.

The fact that the yacht designer obtained recognition abroad some years sooner than in this country makes it natural to deal first with the British designers, but it is interesting to note that A. Cary Smith, of New York, can lay claim to a position among the first of the professional designers. In 1870 Mr. Smith was engaged in yacht building after the fashion of the day, employing no drawings or calculations, but depending on the cut model and the eye. In that year the late Robert Center, always among the leaders in matters of sport, especially in yachting, returned from a residence of several years abroad—having crossed from New York to Cowes on the schooner *Fleetwing* in the famous triangular ocean race of 1866—and brought with him a familiarity with the English cutter and also a copy of Murett's book. With the book as a guide, and following the general design of the cutter *Mosquito*, Mr. Smith made his first design on paper without a model, making all the calculations and comparing the results with those tabulated by Murett. From this design was built in 1872 the first American cutter in model and rig, and the first yacht built in this country from a design on paper; to cap it all, the hull, as in *Mosquito*, being of iron instead of wood. After an extended and comprehensive vocabulary of ridicule and abuse had been exhausted on the model and rig of the new craft, yachtsmen and builders had still plenty to say in condemnation of the unknown method of building, without a block model, and of the use of iron in place of wood; and besides those who contended that a yacht produced in such a manner could never sail, there were others who

declared that an iron hull would never float. Under Mr. Center's ownership and personal handling Vindex proved as remarkable in this country as Mosquito had been abroad, and, though nearly ten years were to pass before yachtsmen would be ready to accept the keel model, the cutter rig and the iron hull, it was the practical and irrefutable demonstration which she gave that first silenced and eventually convinced the most obstinate.

It was during this period that American yachtsmen were divided into two parties—one, the larger by far at first, taking the side of the practical builder who took part personally in the actual handiwork of his yard; the other, at first very small, contending for the employment of a trained and educated specialist, untrammelled by the business details of building, and necessarily enjoying far more extended opportunities for carefully planning a yacht than the man of more limited education, whose time was largely taken up with his machines and his workmen. While most of the yachts of this period were built from the model by the old builders, some very successful ones, among them White Cap, Madcap and Intrepid, were designed by Mr. Smith; and then, at the end of 1879, came out the "iron pot," Mischief, also designed by him. She was the best of the centerboard sloops, a carefully worked out design embodying many modern ideas in model, construction, ballasting and rig; and her well-deserved success settled forever the issue between the old methods and the new. The brief but brilliant career of the late Edward Burgess and the achievements on both sides of the Atlantic of N. G. Herreshoff are so nearly matters of to-day that they hardly form a part of the history of the origin of designing.

Apart from the professionals mentioned and others of more recent date, there have been many amateurs who have contributed largely to the advancement of yachting and designing through special studies and excellent practical work; their names being known to our readers through such published designs as those of Petrel, designed by John Hyslop, a yacht far in advance of her day; the 90ft. racing schooner Sea Fox, designed by her owner, A. Cass Canfield; and the experimental compromise cutter Thetis and the 90ft. cruising schooner designed by Henry Bryant. The late Robert Center was a skillful amateur designer and a most exact and painstaking draftsman, delighting in fine and accurate work.

The experience of some years has shown that the builder and designer are in no way antagonistic, but that their interests are in common; and that the division and specialization of the work has been an advantage to all concerned. On the part of the builder, he is in the long run paid as much for building from an outside design as he was when he furnished the model or built "out of his head" without one; he is relieved of much detail work, and, if he faithfully follows the design, of all responsibility for the performance of the yacht. On the part of the owner, it may be said that he pays more for his yacht to the amount of the designer's fee, but this is small in proportion to the total cost of the yacht; and he certainly has a far better knowledge of what he will get and a better guarantee of good performance in ordering designs and specifications of a designer of reputation than in making a contract with a builder on the basis of a roughly-cut model which probably showed neither spars, rudder, keel, centerboard or cabin trunk.

There is, it is true, no positive guarantee that the work of the most talented designer will not prove a failure; nor is there any redress for the owner if this should unfortunately prove the case, but the same is true in the case of the builder, and in a greater degree. In discussing the relations of builder and designer it must be borne in mind that the general adoption of modern methods has greatly altered the whole question; and that, while the builder of a generation ago or less was almost always wedded to certain crude ways of his own, many of the builders of to-day are well versed in the methods of the professional designer.

For the yachtsman with any taste for science, study or practical work in connection with yachts, designing is one of the most delightful of recreations. A study of it even to a limited extent cannot fail to make him more observant and to teach him much that is of value concerning his yacht. It is not to be expected that with limited time and opportunities for study he will surpass or even equal the professional who is making a life work of designing; but with intelligence and diligence he may at least win the respect and commendation of the latter, and may add materially to the sum total of naval knowledge. While his opportunities are in some respects more limited, at the same time he is often enabled to pursue certain lines of study from which the designer is barred by the demands of a business that is both arduous and exacting.

The actual work of designing is most fascinating; there is no combination of inanimate matter which comes so near to life and intelligence as a vessel, and the creation of one that will move hither or thither at the will of her owner, that will be weatherly, able and easy, possessing those qualities which are generally recognized as desirable, that will be beautiful to the eye, and above all faster than some other of her fellows, is an achievement that well repays the pains. The general planning of a yacht is a most interesting problem, given certain assumed conditions to attain certain results; the drawing is clean, light work, with a certain charm of its own as the solid form develops itself by degrees from the many straight and curved lines of the one flat surface of the drawing board just as the image does on a photographic plate; the various calculations are interesting and open a wide field for investigation to those who are fond of mathematical problems; the construction presents a different but no less interesting problem of a mechanical nature, and the artistic possibilities of a design are almost unlimited.

The house architect is called on to produce a structure that is at once strong, convenient in arrangement and beautiful, but in doing this he need not consider floatation, speed or weight of construction; the naval architect is called on to produce greater strength with a very limited amount of material, to arrange to advantage a form that is peculiarly awkward so far as division into rooms is concerned, and at the same time to give the first place to speed and weatherly qualities. The painter or sculptor finds his work finished when he succeeds in gratifying the eye; the yacht designer, on the other hand, even though he has achieved perfection in all other respects, is still open to condemnation if he turns out a craft that is lacking in beauty and grace. There is, perhaps, no occupation which makes such extensive demands at once on

the deductive powers and the mechanical and artistic ability.

Modern Design and Construction.

THE following case, as reported by the *Yachtsman*, is a most pertinent commentary on *fin de siècle* design and construction. Without attempting to decide the exact merits of the case, we are of the opinion that the man who deliberately purchases a racing machine of 10ft. beam and 16ft. l.w.l.; with bent frames nailed to keel and devoid of any adequate system of floor construction, has no one to blame but himself when the trap falls to pieces. While poor workmanship and split garboards may have been contributory causes, one does not have to look far for the main causes, the structural weakness of such an extreme form, and the very inadequate scantling and extreme light construction.

The case of Forrest & Co. vs. Colley was tried before Mr. Justice Grantham in the Queen's Bench Division on Dec. 20. Mr. Channell, Q. C., and Sir Lennox Napier, instructed by Mr. George Terrell, appeared for the plaintiffs, the well-known yacht and ship builders of Wivenhoe; Mr. Joseph Walton, Q. C., and Mr. Poyser, instructed by Sandilands & Co., were for the defendant.

Mr. Channell, Q. C., in opening the case, said that the action was for £91, the balance of the agreed price of the 1-rater Wivern, built by the plaintiffs for the defendant, Mr. P. Colley, of Woodbridge, Suffolk. In March, 1895, some correspondence took place between the plaintiffs and defendant as to altering the Doushka, so as to make her more suitable for river sailing on the Orwell, Deben and East Coast. Eventually the defendant decided to order a new boat of the beamy, unballasted centerboard type to Mr. H. W. Ridsdale's design, the plaintiffs agreeing to allow him something for the Doushka. She was to be similar to one then building for Mr. W. P. Burton, about 15ft. on the waterline, 10ft. beam, and 25ft. over all, with 400sq. ft. of sail. In April the defendant wrote: "I will let you build me whatever you think will race. Do not forget that our rivers want plenty of sail; in the sea a large hull and small sail will do, but in the Orwell, with the water quite smooth and plenty of calms, we want plenty of sail. * * * All I ask is a fast boat. I do not want to be beaten by Mr. Burton." Afterward the defendant agreed to take over the boat building for Mr. Burton instead of having a new one. The Wivern was launched on June 1, and sailed in Harwich regatta on June 3, when she led for a short time, but fell behind owing to the centerplate being bent, so that it could not be got up. The next day she was towed back to Wivenhoe to have this defect remedied, and it was found that one of the garboards was cracked as if by a blow. She was repaired by Messrs. Forrest, and on July 6 the defendant took her back to Harwich. On July 18 the defendant wrote as follows: "Dear Sir—I capsized the Wivern to-day, and owing to the capsize I had a good look at her bottom. I am sorry to say I must decline to take her, and request you to return me the Doushka, and let me know where I shall deliver the Wivern to you. The planks on each side of her keel are no good at all, they split while you were building her, and were patched up, etc. * * *". The defendant had refused to pay anything for the Wivern on the ground that she was unseaworthy and improperly constructed; the plaintiffs were therefore obliged to bring this action.

Mr. Dixon Kemp, secretary of the Y. R. A., gave evidence for the plaintiffs. He said he went down to Shingle street in October last, and saw the Wivern lying on the beach. She was an extreme example of the type of boat produced by the old Y. R. A. rule of measurement. He thought the type was extinct now, owing to the alteration of the rule. The shape of the boat was governed by the rule of measurement in force. It was very important, for racing purposes, to have the construction as light as possible, and designers ran a good many risks for that reason. He found both garboards were split, and the keelson timbers were burst away. He concluded that this was done by some violent shock. She looked as if she had been chucked on the beach by the sea, and lay broadside on, with no supports, resting on the shingle. She was sufficiently strongly constructed for racing in calm weather in sheltered waters; the construction was clever for this purpose; but a fin-bub-keel would not have stopped on her five minutes—the strain would have been quite different. The mere fact of capsizing could not have caused the injury sustained. All the heels of the timbers were wrenched quite away; that extent of damage could not possibly have been done when she was afloat.

In cross-examination by Mr. Joseph Walton, witness said he never saw such a boat before. At the time the Wivern was ordered an alteration in the rule was contemplated. The planking was unusually wide—a little light; it had bulged inward and come away from the timbers and driven the frames up from the keel. He would probably have designed a stronger frame-construction himself.

Mr. H. W. Ridsdale, the designer of the Wivern, bore out counsel's opening statement. He said that Mr. Colley wished everything to be sacrificed to speed, and said he did not care whether she was seaworthy or not. He was certain that Mr. Colley was inexperienced in sailing such a boat.

Cross-examined by Mr. Walton, witness said he should not be surprised at anything Mr. Colley did with a boat. The damage might have been caused by Mr. and Mrs. Colley sitting on the keel when the Wivern capsized, or in other ways. The boat was to be of the best construction, and there was no haggling as to price.

Mr. Johnson, one of the directors of Forrest & Co., was examined as to a conversation with Mr. Colley before the race, in which he expressed his satisfaction with the boat. Cross-examined: Mr. Colley said that the centerplate had got bent when they went aground.

Harry Wood, shipwright in the employ of Messrs. Forrest, said that the boat was only intended for smooth water sailing. The planks were 8½in. wide, and she was strongly constructed with longitudinal bulkheads, and timbers spaced 6in.

Mr. Ridsdale (re-called) spoke as to seeing the bent centerplate at Harwich regatta. It came up with difficulty. John Simons (from Messrs. Forrest's) said he repaired the damage to the starboard strake after Harwich regatta. He thought the boat had been bumped. Mr. H. G. Rouse said he had recently examined the Wivern as she lay at Shingle street, and thought she was very well constructed. The timbers originally crossed the keel on the top and were nailed down. Cross-examined by Mr. Poyser: The timbers had lifted about 4in. when he saw them.

Mr. Joseph Walton, Q. C., opened the case for the defendant. He repudiated the suggestion of Mr. Ridsdale that his client, Mr. Colley, was inexperienced in handling small yachts. He admitted that the Wivern was built for racing simply, but contended that she should be fit for something more than sailing in perfectly calm weather. The centerplate got bent first when sailing round from Brightlingsea, and again when racing at Harwich, so that it could not be housed; afterward it touched the ground. When the Wivern capsized she was taken charge of by experienced sailors, laid ashore, covered up with a sail, and it was found that nothing but weakness of construction had caused the timbers to come up as they did.

Mr. Philip Colley, the defendant, denied that the Wivern had ever touched the ground till the end of the race at Harwich; the centerplate was bent in sailing. He was quite satisfied with the boat then. He described the circumstances of the capsizing of the Wivern in the middle of the River Alde, owing to a foul puff of wind. Witness and his wife and man were thrown into the water; they climbed on to the keel and paddled her to the shore. Afterward, when she was hauled ashore in a suitable place, he saw that the garboard strakes were split. Cross-examined by Mr. Channell, he did not notice anything wrong when they were sitting on the keel. When they got ashore the defects were pointed out to him.

Reginald Colley, son of the defendant, confirmed his father's account. The boat made a good deal of water on the Sunday at Harwich. Charles Barwood, sailor in defendant's employment, gave similar evidence. After the capsize he noticed the garboards were split on each side and the timbers displaced. Cross-examined: She leaked badly. James Barwood, skipper to Mr. Colley, said no damage was done in the course of righting and hauling her up. Mr. Alfred Burgoyne, yacht builder at Kingston-on-Thames, said he examined the Wivern in August. She lay securely on the beach. All the timbers were sprung and the bottom of the boat corrugated. There was no proper fastening of the timbers to the keel; the planking—which was about 12in. wide—was sprung; the decks were also corrugated. Cross-examined: She was well designed, and otherwise in good order. Mr. W. H. Orvis, yacht and ship builder, of Ipswich, confirmed the evidence of the last witness. He attributed the damage entirely to weakness of construction. Mr. Justice Grantham, in giving judgment, said the defendant had failed to satisfy him that the timbers and garboards had started owing to faulty construction. The learned Judge dealt at some length with the correspondence, from which, he said, it was clear that the defendant's one idea was to get the fastest boat possible under the then existing rule, irrespective of seaworthiness or any other qualities. Such a boat must of necessity be lightly constructed, and would require careful handling and looking after. A man who bought a delicate machine like that, 28ft. long and 3½in. thick, must not be surprised if something went wrong. He thought it highly probable that the damage to the boat's bottom was caused by the three people sitting on the keel when she capsized. She might also have been strained in righting her again, as the side must have rested on the shingle. The plaintiffs' case was further strengthened by the defendant agreeing to take over the boat then building for Mr. Burton instead of having a new one. In the end he gave judgment for the plaintiffs for the full amount claimed, namely, £91 and costs, and held that they were entitled to retain the Doushka as well.

Sapphire, steam yacht, A. L. Barber, arrived at New York on Dec. 27 from Brunswick, Ga., after a cruise in the West Indies.

Amateur and Professional.

IN connection with the adoption of permanent racing rules by the Yacht Racing Union of Long Island Sound, two important questions have been raised which should be settled as effectually as possible, but which are likely to prove very difficult. One of these is the difference between an amateur or "Corinthian" and a professional, as applied to yacht sailing—an old question which has frequently come before us for decision. It is by no means an easy matter to decide a specific case in which the facts are admitted, and it is very much more difficult to frame a satisfactory definition of an amateur or a professional which will be generally applicable. It is probable that the Council of the Y. R. U. will be called on to do this, and any suggestions or discussion of the subject will be of interest not only to the Y. R. U., but to the clubs, and particularly to the various associations of yacht clubs. We know of nothing in yachting or allied sports which will serve as a guide.

The aim of such a definition is, as we take it, to protect the *bona fide* yachting amateur, whose time is not given exclusively to the sport, from the competition of those who, by training or occupation, are possessed of strength and skill which he does not possess.

It may be assumed, so far as Corinthian sailing is concerned, that the one most to be encouraged by the rules is not the man of means and leisure who lives constantly aboard his yacht; nor on the other hand the man who follows the water closely as an occupation; but the man of average means and limited time who devotes most of this time to yachting. There is nothing invidious in discriminating against the first two classes, as their conditions are such that to leave both unrestricted would virtually exclude the third class.

As concerns the first class, the men of leisure, by the common usage of all sports they are recognized as fully qualified amateurs, and we shall not quarrel with this decision. At the same time a serious amount of harm has been done at times, as in rowing, by a class of amateurs who devote themselves exclusively to training and racing, often for prizes of great intrinsic value if not cash, and who are in every way more talented with professionalism than mechanics who are barred as professionals under certain rules and yet follow rowing or sailing for pure love of the sport. In yachting, however, there is little harm from this class, as the majority care little for the really hard work and discomfort which lead to Corinthian honors. A man who is lucky enough to have his time entirely to himself in summer and can spend six days in the week in sailing and working on his yacht is at a very great advantage as compared with the young business man who finds time only for an occasional sail of an evening, some hard work beaching and scrubbing off early of a morning, and a race of a Saturday afternoon; and yet both may be amateurs in a true sense. This particular phase of the question cannot be covered by any rule.

With the second class, of professional sailors or watermen, the case is different. They may be good sportsmen, owning yachts of their own and racing them for pure sport without regard to valuable prizes; but it must be evident that from their constant familiarity with boats and the water, and from the nature of their work, they have attained special strength and skill, with which the average amateur cannot and should not be called upon to compete. What adds to the difficulty in yachting is that, while in most sports a hard and fast line is drawn between the man who races for cash prizes and the one who does not, the awarding of cash prizes is a universal custom in yacht racing.

The difficulty in the way of one general definition is evident when it is considered that a rule so worded as to exclude all who race for money would shut out the whole body of racing men; a rule directed against those who earn their living by work afloat or about vessels would exclude naval officers, who are always recognized as amateurs in yachting; and a rule worded so as to bar all who worked for pay on a vessel would also bar many excellent amateurs who have been to sea before the mast or in the engine room.

There are several classes, however, which may be positively set down as professionals, the first being composed of all who accept any compensation for their services aboard a yacht in a race. Of course this should not be construed to apply to helmsmen's prizes, or to the designer, for instance, who sails aboard a yacht in a race with a view to making alterations; but it would cover all who are paid a direct fee for handling stick or sheets or who are indirectly compensated in any way for such services. No doubt some hard cases would arise under a definition embodying this idea; a man might be hired by the day to saw wood and then given a half holiday provided he would sail a yacht in a race; but evasions of this class can generally be reached by a regatta committee provided that it has a rule of some sort to fall back on.

Apart from this class—which, it may be assumed, cares nothing for sport, but sails for pay just as it would saw wood—is another class of professionals, men who work about the water all the time, who perhaps are good sportsmen and sail for sport, but who in many cases are not amateurs. In covering this class in any definition it is most necessary to recognize a distinction between those who, like the officers and many of the hands on a large vessel, have no hard labor or work which gives them special skill in steering a yacht or trimming sheets, and the large body of men who are employed as seamen, fishermen, boatmen and pilots at manual labor on vessels.

Just where to draw the line is a difficult matter. The builder, as a rule, is a professional, many devoting much of their time to boat sailing, fishing and racing; at the same time it is quite possible that a builder with any considerable amount of business to which he devoted himself steadily might be to all intents and purposes an amateur sailor. The designer is always considered an amateur when not a builder, and sometimes even though he be.

One very difficult point is to draw the line between a man's past and present occupation; a boy follows the sea for some years before the mast, finally gives it up and goes ashore to study law or sell ribbons, and in time becomes a yachtsman; he certainly cannot be barred as being a professional sailor.

It has frequently happened that a young man has gone to sea before the mast for a time and immediately on leaving the fore-castle—his means permitting—has gone into yachting, being recognized as an amateur; on the other hand, men who have been unquestionably professionals all their lives have sought to pass as amateurs after a few months of some other occupation ashore. We shall be glad to hear further from all who are interested, and to lend our aid to a thorough discussion of the question.

Lawley's Yard.

LAWLEY has about finished the 35ft. cruising cutter for Charles A. Welch, and she will be launched and fitted out as early as possible in the spring. The boat is a clean-lined and powerful one, with a moderate sail plan and fine cabin accommodations. She is 53ft. over all, 12ft. beam and 7ft. 6in. draft, with a centerboard under the cabin floor. She is painted white above the waterline and bronze below.

Nina, the 32ft. launch for B. F. Dutton, for use in Florida waters, is ready for shipment and is a fine-looking craft and splendidly built. She is 8ft. beam and 18in. draft, and is driven by a 7 horse-power Daimler motor, placed in the after standing room. The forward standing room is 5ft. 6in. long, and the after standing room 7ft. Both may be closed by curtains. The cabin is 7ft. 6in. long, with 6ft. 2in. headroom, and has a toilet room aft. The finish is in mahogany. The naphtha for operating the motor is carried in an 80-gallon tank forward. The launch can be steered from either standing room, and is expected to make six or seven miles an hour.

The 14-rater for H. M. Crane, from his own designs, is practically completed and is a speedy looking racer. She is about 14ft. waterline, 5ft. 6in. beam and 6in. draft, with very short overhangs. She will have a metal board and balanced rudder. Her sail plan calls for a short bowsprit. She is double planked, the outside skin being of mahogany, and is also decked with the same wood. The cockpit is watertight and without a conning, protection from water coming aft being given by an athwartships conning further forward.

The Williams cruiser, of Chesebrough design, is beginning to show her shape. She is double planked and copper fastened, and is being built all through without regard to cost. A 24ft. naphtha launch and a handsome rowing gig for Eugene Tompkins's new steam yacht building at Bath are in hand in the boat shop. A 21ft. cabin knockabout, built to Association rules, is completed for the market. A 24ft. cabin knockabout for New York will soon be started.

Work will soon be begun on the 23ft. centerboard cruiser of Arthur Binney's design for Charles D. Owen, Jr. The boat will be cutter rigged and have a roomy cabin, with toilet, etc.

Open and Cabin Boats.

THERE is nothing new in the question as to the dividing line between open and cabin racing boats in the smaller classes of yachts, and after long discussion it is still unsettled; but there is a serious need for some definition by the Yacht Racing Union. Where any distinction has been made, as has at times been done, the main point has been the minimum height of side of cabin house above the deck, the limit being 10 or 12in. This of itself is not enough, and it may be necessary to supplement it by a requirement that the minimum length of house shall bear some ratio to the waterline length, and that the cabin yacht shall have some permanent fittings other than a seat in the cockpit and a locker on each side in the cabin. It has been possible in the past to make a very successful racing yacht in the cabin classes by converting one of the extreme type of old-fashioned open jib-and-mainsail sandbaggers, putting on a low and very light cabin house, shipping some fixed ballast and somewhat reducing the rig. So far as a legitimate and comfortable cabin yacht is concerned, the combination was a failure; but it could enter in the cabin classes against good boats and almost always outsail them.

Another detail of the same question is the classing of the "summer cabin" boats, with light wooden roofs and canvas sides; a matter that has long given considerable trouble.

In the interest of the rapidly growing classes of good cabin boats about New York, some definition should be fixed on this winter and enforced next season. It may be necessary at first to deal leniently with existing boats which have thus far raced in certain classes; but the rule should be framed for the future and not for the past, if necessary some exception being made in the case of existing boats.

The Yacht Racing Union.

The annual meeting of the Yacht Racing Union of Long Island Sound was held on Dec. 30 at the Fifth Avenue Hotel, New York, with President Oliver E. Cromwell in the chair, the following delegates being present: Seawanhaka-Corinthian Y. C., Oliver E. Cromwell, C. W. Wetmore, Charles A. Sherman, Corinthian Fleet, J. D. Sparkman; Harlem Y. C., F. Wimmer and J. D. Creegan; American Y. C., M. C. Parsons; Indian Harbor Y. C., F. B. Jones; Knickerbocker Y. C., O. H. Chellborg and F. B. Myrick; Horseshoe Harbor Y. C., F. E. Towle, Jr.; George Gardner Fry and E. P. Cronkhite; Hempstead Harbor Y. C., Ward Dixon; Sea Cliff Y. C., Le Grand L. Clark; Huntington Y. C., David A. Story; Huguenot Y. C., E. Burton Hart, Jr.; Douglaston Y. C., F. E. Barnes; New Rochelle Y. C., Charles P. Tower; Atlantic Y. C., H. J. Gielow.

The nominating committee presented the names of the present council, who were re-elected, as follows: Oliver E. Cromwell, chairman; Frederick E. Barnes, Stuyvesant Wainwright, Oscar H. Chellborg, Le Grand L. Clark, E. Burton Hart, Jr., and F. Bowne Jones, secretary.

The special committee on racing rules presented a set of proposed rules, which will be acted on at the next meeting. Several proposals were laid before the meeting—for a definition of an amateur, and also of a cabin boat, and for some general system of members which should indicate the class of each yacht.

Yacht Racing Calendar and Review.

The Yacht Racing Calendar and Review, published by the *Field* (Horace Cox) and edited by Dixon Kemp, is growing into a larger volume each year, having now reached 800 pages. The book contains the full record of British yachting and racing for the year 1895, and in convenient and readily accessible form, the matter being reprinted from the *Field*. In the preface Mr. Kemp notes the interesting fact that while only about 70 matches were sailed in British waters in 1855 and something over 400 in 1876, the number has grown to 1,700 in 1895. To those who do not see the *Field* week by week and who wish to follow the records of Niagara and other American yachts abroad, the book will prove very interesting, as the *Field* is noted for the excellence of its race reports.

YACHTING NEWS NOTES.

The Sodus Bay Y. C. was incorporated under the laws of New York in August, 1895, with a membership of 70, that has since been increased to 100. A lot was purchased on which there will be erected as soon as the weather permits a commodious club house. During the last season some very interesting races were sailed over the club course on Great Sodus Bay. Several new yachts have been constructed, and the season of 1896 promises to be even more interesting than that of '95. At the second annual meeting the following officers were elected: Com., Spencer Meade, Elmira, N. Y.; Vice-Com., T. E. Elliott, Newark, N. Y.; Fleet Capt., W. H. Cook, Sodus Point, N. Y.; Sec'y-Treas., Dr. F. L. Willson, Sodus Point, N. Y.; Fleet Surgeon, Dr. W. F. Nutton, Newark, N. Y.; Meas., F. J. B. Le Febre, Sodus Point, N. Y.; Trustees: C. H. Perkins, chairman; A. C. Barth, J. M. Pitkin, Jr., C. P. H. Vary, P. R. Sleight, all of Newark, N. Y.

On Thursday, Dec. 12, Capt. J. H. Anderson's new steam yacht *Perlonia*, built by Messrs. W. White & Sons, of West Cowes, to the designs of Messrs. Cox & King, ran a trial trip of four hours' continuous steaming. The distance by log was exactly 41 knots, which was covered in 4h. 4m. 15s., thus giving a mean speed for the four hours' run of 10.07 knots. At the start, which was made about three hours after high water, the weather was fine, with a fresh breeze from S.W., but the barometer fell very rapidly, and at noon it was blowing half a gale. By the time the yacht rounded the Warner Lightship it had increased to nearly a whole gale, so that the last 8½ knots were run at a mean speed of 8.974 knots per hour. Thus, under the weather conditions that prevailed, the contract speed of 10 knots per hour was obtained with ease. The *Perlonia*, without stopping, then proceeded to run a progressive trial, consisting of three double runs on the measured mile, with the following results:

Mean No. of Revs.	Mean I.H.P.	Mean Speed.
173.....	114.75.....	10.062
140.....	92.35.....	9.111
120.....	77.95.....	8.052

—The *Field*.

The December number of the magazine *Men and Matters*, published in New Orleans, is devoted entirely to the Southern Y. C. of that city. The history of the club, with many half-tone portraits and notices of the members and yachts, fills the entire number in a most interesting manner. The new magazine deserves much credit for the thorough and artistic manner in which it thus recognized one of the leading institutions in Southern sport.

Talisman, steam yacht, H. M. Ballantyne, was at Wilmington, N. C., on Jan. 4, from New York, with all well aboard. A report was circulated about New York on the same day to the effect that the yacht had been lost.

The Carthage Ice Y. C. has elected the following officers: Com., Benjamin Merritt; Vice-Com., Stephen Glass; Sec., Robert Dunwoody; Treas., Wm. Merritt; Meas., Charles Merritt.

The catboat *Herald*, which left New York for Florida on Oct. 21 manned by two women—Mrs. Minnie Matthews and her daughter, Mrs. Ella Haller—and a dog, has reached Norfolk in a damaged condition after encountering very heavy weather. The crew suffered considerably from cold and exposure, but they propose to refit at Norfolk and continue the voyage.

The Massachusetts Y. C. has elected the following officers: Com., Edwin P. Boggs, stmr. *Nashawena*; Vice-Com., Oliver Hazard Perry, sloop *Fanita*; Rear-Com., Louis M. Clark, knockabout *Spinster*; Sec'y, John S. Clark, Jr.; Treas., Robert C. McKuillen. Directors, Henry W. Savage, Erastus Willard, L. S. Jordan, William O. Gay, Meas., William E. Waterhouse; Ass't Meas., Charles H. Dodd; Race Committee, William S. Crosby, C. Edwin Bockus, William E. Robinson, Jacob A. Barbey, Jr., Albert E. Schaaf; Committee on Admissions, E. M. Dennie, Francis Gray, Walter A. Underwood, Harry H. Gay, E. T. Bigelow, George Burroughs, E. H. R. Revere; House Committee, Charles G. Cutler, George M. Whitcomb, A. M. Binn, Charles L. D. Parkhill, A. W. Randall.

For a close season the Montreal yachtsmen have been more than busy since early in December. The entertainment committee of the Royal St. Lawrence Y. C. has on hand a couple of smokers at their "winter moorings," besides the annual ball, which takes place on Jan. 20. This is usually the event of the season, and promises this year to rank as high as ever. The enthusiasm instilled into the local "salt," no doubt on account of the Seawanhaka cup challenge, promises to bring out a great fleet of 15-footers. Some fourteen gentlemen are expecting to build, of which five have started. Mr. James Ross, schr. *Alcaea*, has offered three substantial cash prizes, and the steam yacht owners promise the same, this being of course over and above the usual club prizes. There will be no lack of encouragement to owners of these boats.

The 15-footers are likely to figure conspicuously about Boston next season, the Massachusetts Y. E. A. will probably make formal recognition of the class. The Adams brothers boat is a certainty. Another 15-footer has been designed by James Nicol, of Quincy, who has started to build her himself. Another designed by her owner, H. M. Crane, is building at Lawley's.

The *Yachting World* of Dec. 27 is a Christmas number of extra size with a new and attractive cover. The supplemental plates show the auxiliary steam yacht *Valhalla*, the 5-rater *Norman* and the 40-raters *Isolde* and *Carina* in a race. Two designs are given for a cruiser of 18ft. measurement, Y. R. A., and a 16ft. centerboard sailing boat.

Arthur Binney has designed and the Fore River Engine Company will build for John A. Burnham, Jr., a 35ft. auxiliary cruising cutter, which will have a Daimler motor underneath the cockpit and a screw which can be hoisted to a well in the counter when sail is used. The yacht will be 52ft. over all, 12ft. 6in. beam and 6ft. 6in. draft, with moderate sail plan. The cabin will be a roomy one, with 6ft. 2in. head room, under a low house. The construction of the boat will be of the best, and the cabin finish in white enamel, with mahogany trimmings. —*Boston Globe*.

The cutter designed by Arthur E. Payne and building by Summers & Payne for Lord Dunraven, will be named *Carlad*. She will be finished in season for the Mediterranean races, where she will meet *Britannia*, *Ailsa* and *Satanita*. Her measurement will be 120ft. under the new Y. R. A. rule.

The steam yacht building at Roach's yard, Chester, for Richard Stevens, and which, according to report, was to be named *Ranococas*, has been christened *Aileen* on the occasion of her launch on Dec. 31. She is 140ft. over all, 115ft. l.w.l., 20ft. beam, 13ft. depth and 7ft. draft, with triple expansion engines of 400 H. P. She carries two masts, schooner rigged. As soon as she is completed she will sail for the West Indies.

Arthur Iselin, son of Adrian Iselin, Jr., has ordered a racing 15-footer to be designed and built by L. D. Huntington, Jr., of New Rochelle, designer of *Question*. Mr. Huntington has also in hand a 15-footer for his own use.

Red Dragon C. C.

The annual meeting and dinner of the Red Dragon C. C. took place on Friday, Jan. 3, in Bohemia, Eighth and Sansom streets, Philadelphia.

There was a very large attendance, more than three-fourths of the entire active and associate membership being present. Most of the old officers were re-elected, the result being as follows: Com., A. S. Fenimore; Vice-Com., Wm. J. Scott; Purser, Omar Shallcross; Fleet Surgeon, Dr. F. O. Gross; Correspondent, M. D. Wilt; Quartermaster, E. W. Crittenden.

The club has just been incorporated, and the charter and seal were formally presented by the committee.

The trustees for the ensuing year are Messrs. Fenimore, Shallcross and H. W. Fleischmann.

The purser's report showed the club clear of floating debt, with a good balance in the treasury, a constantly increasing membership and prospect for another very successful season.

The club will continue this year the very successful record sailing races for canoes and canoe yaws inaugurated last season, with the addition of a new racing class of boats of 15ft. sailing length. Several new boats will be built for this class and two or three of the yaws will be altered in rig to enter it.

The club sat down to dinner at 7:30 P. M., the guests of honor being Mr. J. K. Hand, of the New York and Knickerbocker Canoe Clubs, Vice-Com. of the Atlantic Division, A. C. A., and Mr. C. B. Haag, an old commodore of the Red Dragons, who has been absent from the city for several years. After the inner man had been duly attended to, and in several instances he seemed to need a great deal of attention, toasts were responded to by Vice-Com. Hand, Messrs. Fenimore, Murray and others.

A letter of regret at his inability to be present was received from Com. Huntington, of the A. C. A. Afterward the Red Dragon quartet and the banjo and mandolin clubs and several individual members entertained the club and the meeting broke up in the wee sma' hours.

M. D. WILT.

CANOEING NEWS NOTES.

On the strength of news from America, the English papers have published semi-obituaries of Wm. Willard Howard. It would appear that Mr. Howard, who went to Armenia last September as the agent of the *Christian Herald*, of New York, is alive and safe, though he has been laid up by a fall in some Russian town. A very good portrait of Mr. Howard appears in the *Yachting World* of Dec. 27.

The eighth annual meeting of the Puritan C. C. was held at Young's Hotel on Jan. 4, the following officers being elected: Com., James W. Cartwright, Jr.; Vice-Com., Frank R. Kimball; Rear-Com., Howard L. Rogers; Treas., Lothrop Hedge; Sec'y, Charles F. Dodge. Directors: the foregoing and James Bragdon and Ed. S. Gilmore; Meas., John R. Robertson. House Committee: Commodore, treasurer and L. J. Webster. Membership Committee: Raymond Apollonio, Frank R. Kimball and Sam'l Johnson 2d.

Rifle Range and Gallery.

POLICE REVOLVER SCHOOL.

THE need of the school for the training of New York's police in the art of pistol shooting is more and more in evidence as the lessons proceed. Their shooting is bad—very bad indeed—but to say that it is bad without further explanation is not justice to the men, for, first of all, skill in the use of the pistol is not a matter of inspiration, nor is skill acquired by mystic methods. It requires assiduous practice combined with a fair theoretical knowledge of ballistics. This the men heretofore could not get. Without the proper opportunities to practice it was an impossibility for the force to attain the necessary proficiency with the revolver.

The men have been often held up to ridicule for their unskillful shooting, but not having the opportunities for the needed schooling they could not be skillful. Thus there was much to say in extenuation.

The policemen are now confessedly students in the art, and as such their attempts should not be subjected to ridicule. There is a most admirable enthusiasm in the force toward improving their shooting, and the competition, or rather the spirit of emulation, will be a potent factor in keeping up permanent interest. Unfeeling ridicule might dampen their ardor.

As for the usefulness of the school, no words are necessary to prove it. Nothing is more absurd than to put pistols in the hands of men who neither know how to use them nor know the powers of their weapons.

The men, with no opportunities for practice and instruction, could not in reason be expected to be skillful. Not instructing the force was an injustice to the public and an injustice to the officers of all cities in the land, for an unskillful policeman shooting at a malefactor in a densely populated city was more likely to hit innocent persons, and thus be a danger instead of a protector; and the officers themselves were in greater danger from not being properly trained to meet skillful criminals when pistols were a last resort. It is well known that many noted criminals are trained to a skillful degree in the use of their weapons, and for efficiency on the part of the police in protecting the community and protecting themselves the highest skill in the use of the pistol is necessary.

Were it known, moreover, that the force was skillful in the use of firearms, the moral effect on the criminal

classes would go far toward maintaining good order and suppressing crime.

Thus the unskillfulness of the force in the use of their pistols more properly lies at the doors of those in authority, who have not provided the necessary schooling and who have not made practice and improvement arbitrary.

So far as New York's police force is concerned, in its skill with firearms it probably is no better and no worse than the forces of other great cities, all of which goes to show that they need a similar school of instruction to improve the usefulness of their protectors.

All men cannot become good shots with a pistol any more than all men can be equally good at any other accomplishment. But all can attain a reasonable degree of skill, and all can learn their own powers and the powers of their weapons, so that the most unskillful at the worst can learn how *not* to kill an innocent citizen if he cannot learn how to shoot the desperate malefactor.

Practice brings steadiness and reliability. However excellent may be the man's natural capabilities, his shooting will be inferior without practice. Without practice the wild shot comes in every once in a while, even though most of the shots are bullseyes, while the man who has not the eminent natural ability, but who practices regularly, never makes a rank bad shot, though he may never shoot with expert precision.

The force is fortunate in having Sergt. W. E. Petty for an instructor. Sergt. Petty is an expert. It will be remembered that he won the Winans trophy in competition against all comers in America, and he has a profound knowledge of the theory of shooting as well. After the men come to know their pistols better the scores will improve. Many of the pistols used are too light and there is much that is experimental in the way of sighting, holding in the hand, etc. Rapid improvement undoubtedly will soon be made.

In *FOREST AND STREAM* of last week are given the particulars of targets, scores, etc., the possible being 75. Following are the scores: Barrett 26, Maxwell 47, Judge 21, Murphy 17, Daly 24, Lyons 3, Tobin 13, Wucher 29, McQuade 59, Kennedy 15, Wettlaufer 42, Schwarz 33, McTaggart 5, Cunningham 5, Raphael 12, Clare 10, Sergt. P. McNally 27, Sergt. J. J. McNally 40, Dowling 7, Heffron 16, Murphy 17, Loures 3, though Mr. Loures shot out the gas lights while making his score; Zettner 29, Logan 15, Healy 13, McCabe 32, Finlay 54, Gullity 29, Driscoll 35, Wilbur 30, Cronin 20, Coombs 16, Brummiger 8, Young 38, Slattery 23, Sullivan 13, Murphy 0, Byrnes 21, Akerly 34, Westphal 39, Malarky 20, Rickman 7, Lynch 29, Benson 29, Wagner 14, Townsend 24.

Records of San Francisco Riflemen for 1895.

SAN FRANCISCO, Cal., Dec. 22.—To-day was the last shoot of the 1895 season for the members of the Columbia Pistol and Rifle Club of this city. As a natural result the members were out in good force at the Shell Mound range; the final contests for the medals were extremely interesting. Following are the scores made:

Kuhle medal, target rifles: F. O. Young 91, D. W. McLaughlin 91, A. H. Pape 78.

Glimdermann medal, military rifles: Ed. Hovey 47, F. O. Young 47, Dr. L. C. Rodgers 46, E. Poulter 46, J. B. McCutcheon 42.

Blanding medal, pistol: F. O. Young 90, Smith Carr 89, W. H. Lowry 74, J. B. McCutcheon 69.

Carr medal, revolver: Howard Carr 32, 23, 24, 22; J. E. Gorman 25, 24, 19, 17; A. H. Pape 18, 17, 17, 13; F. O. Young 15, 10, 10, 8.

In regard to the shooting for the Carr medal, the San Francisco *Call* says: "In shooting for the Carr medal, rapid firing, the practical use of the pocket revolver was demonstrated, and those who saw the performances of Carr and Gorman yesterday were astonished at what can be done in the way of rapid firing with accuracy. Carr shot with an ordinary self-cocking revolver, and his first, third and fourth scores, with five shots each, were made in eight seconds to the score, every bullet hitting the bullseye, 50yds. away. His second score was made in seven seconds. Carr's total was 106, while Gorman's was 103 in about the same space of time."

The last event of the season was a team race between teams of eleven men chosen by Dr. Rodgers and D. W. McLaughlin; the conditions of the shoot were: Ring target, 200yds. range, three shots each, highest possible 30 points. The result of the match was a victory for McLaughlin's team by the exceedingly narrow margin of 1 point—245 to 244. These totals show a general average for both teams, that is, for the twenty-two men, of 80 per cent. The scores were as follows:

McLaughlin 23, Poulter 19, Pape 26, Cran 24, Bohr 22, Barley 23, Daiss 18, Kennedy 20, Glimdermann 26, Hess 22, Lowry 23. Total 245.

Rodgers 24, Young 25, Hovey 21, Dorrell 24, Gorman 20, Shultz 23, Klein 22, Helburg 16, Unfred 23, H. Carr 23, McCutcheon 23. Total 244.

The annual dinner and distribution of prizes brought the day's proceedings to a close. Dr. Lee O. Rodgers, president of the club, presided at one of the tables, Howard Carr presiding at the other. After an address by the president, in which he reviewed the past history of the Association, the secretary, F. O. Young, outlined the probable plan of action for 1896. Other short speeches followed and then came the distribution of prizes. Below is a full list of the prize winners for 1895:

Rifle, champion class—Dr. L. O. Rodgers, 91, 90, 89, 84—354. First class—P. Bohr 87, 86, 82, 81—336. Second class—A. Fetz 72, 74, 74, 71—291.

Pistol, champion class—A. H. Pape 94, 94, 92, 90—370. First class—J. E. Gorman 93, 91, 90, 88—362. Dr. Rodgers made a tie with Gorman on the score of 362, but the latter was the winner according to the Creedmoor rules. Second class—F. Dennis 84, 83, 73, 63—323.

Kuhle medal, rifle, all comers, won by Dr. L. O. Rodgers, 94, 91, 92, 92—369. F. O. Young and D. W. McLaughlin came near reaching this score on scores of 361.

Glimdermann medal, military rifle, won by F. Poulter—48, 48, 48, 46—190. He was closely followed by Hovey with 189, Young with 186, Rodgers with 180 and Pape with 184.

Siebs medal, rifle, pistol and musket, won by F. O. Young. Scores: Rifle—90, 90, 90, 91—361; pistol—95, 95, 94, 94—378; musket—47, 46, 47—186. Total, 925.

Young was closely followed by Rodgers, who lost by only one point, as here shown: Rifle—92, 92, 94, 91—369; pistol—94, 94, 94, 93—375; musket—44, 46, 46, 44—180. Total, 924.

Ladies' medal, 22cal. rifle, at 50yds., off-hand, won by Mrs. L. J. Crane—99, 98, 97, 95—389. Mrs. J. Nicholl was not far behind with a score of 380, and Mrs. O. M. Peck scored 377.

Blanding medal, pistol, won by C. M. Daiss, closely followed by Smith Carr. Young and Rodgers have held this medal in the past.

The Young medal, rifle on muzzle rest, was won by Glimdermann—99, 98, 90, 84—371.

Foster medal, for most 10s with a rifle, won by Dr. Rodgers, 148 10s.

Kellogg medal, Springfield rifle, 500yds, won by F. O. Young on the four best scores.

In reviewing the work of the Columbia Pistol and Rifle Association, the *San Francisco Call* of Dec. 23 says:

"Three years ago a dozen of marksmen who were fairly proficient in the use of pistols and revolvers organized a pistol club which became known as the Columbia Pistol Club. Nearly every member was also a good rifle shot and belonged to one or more rifle clubs; but they decided to widen the scope of the Pistol Club by including rifle practice, and the 'and rifle' was inserted in the name.

"Now the club's roll shows over sixty members, all of whom are so expert in the use of the rifle and pistol that they stand ready to issue or accept a challenge from any club for a contest with their favorite firearms.

"The Columbias are not selfish in their favorite sport, for they included the ladies in their membership, and offered medals and valuable prizes to the fair sharpshooters, who of course use light rifles.

"During the past year 16 prizes have been contested for and several thousand scores have been shot for each medal. The riflemen have not confined themselves to the use of one or two firearms, but their records have been made with military rifles, fancy sporting rifles, pocket revolvers, large revolvers, sporting pistols and 22-cal. rifles, at all distances, from 50 to 600yds., and with hair triggers to triggers with 6 and 8lbs. pulls.

"This practice has brought out two young men whose records stand the highest in the world with the military rifle. Ed Hovey uses a Sharp's and Frank Poulter a United States Springfield. Their

On Long Island.

CRESCENT A. C. OF BROOKLYN.

Dec. 28.—G. C. White and G. Notman shot off to-day the tie for the Christmas Day prize of the Crescent Athletic Club; the shoot-off was at 25 targets, White winning easily by scoring 17 to 12.
A 25-target sweep was also shot with the following result: Geddes 18, White and Notman 16, E. Lott 15, J. V. Fisk 14, G. W. Smith 12, F. Brose 11.
In a match at 15 targets, unknown angles, G. Notman and E. H. Lott scored 11 to White's 5. Lott and Notman also shot a match at 5 pairs, Lott winning by 5 to 4.

NEW UTRECHT GUN CLUB.

Dec. 28.—The last club shoot of the year for the members of the New Utrecht Gun Club took place at Woodlawn this afternoon. So good were the birds that not a straight score of 10 was made. Capt. Cramer and E. B. Knowlton tying for first place on 9 out of 10. The following are the scores made in this shoot:
Capt. Cramer (A).....121111210—9 C Furgueson, Jr. (AA) 000222222—7
E B Knowlton (C).....121102112—9 J Lott (C).....101021020—6
C Furgueson, 3d (B).....2220222102—8 F W Duryea (B).....22001110—4

AT DEXTER PARK.

Dec. 30.—The following sweeps were shot here to-day, the weather being favorable for live-bird shooting:
Match, 25 birds per man:
Adolph Busch (25).....01101000122111111110101—17

NEW YEAR'S DAY.

Jan. 1.—The new year was ushered in at Dexter Park by an invitation shoot, targets being shot at in the morning, live birds in the afternoon. The high wind favored the birds in the sweeps at pigeons, but it made the targets very hard to locate. Scores:

WESTMINSTER KENNEL CLUB.

Jan. 1.—New Year's Day has generally been a big day at the shooting grounds of the Westminster Kennel Club, Babylon, L. I., but Jan. 1, 1896, was a record-breaker in that respect. A live-bird event with forty-one entries is no small affair anywhere, particularly when it is practically a miss-and-out, \$10 entrance; everybody had looked for a large entry list, but very few, if any, had figured on over twenty-five entries. The result, therefore, must be very gratifying to the chief promoters—Mr. J. G. K. Duer, president of the club, and Mr. G. De Forest Grant, chairman of the shooting committee.

To-day's event marks a new departure in sweepstake events at the crack amateur shooting clubs in the vicinity of New York city; the programme called for a handicap sweepstake, unlimited number of birds, \$10 entrance, the club adding \$400 in gold, and also giving a silver cup of the value of \$250. Added money at shoots of such clubs as the Carteret, Westminster Kennel Club, Westchester Country Club, Larchmont Yacht Club, Tuxedo, New Utrecht, etc., has been, so far as we know, an unknown quantity, but there can now be no question as to the drawing capabilities of \$400 in gold added to one purse.

There was another feature of the programme that had a good deal to do with the large number of entries—it was a handicap, not of yards only, but of misses as kills. Our experience of such sweeps is that a scratch man rarely comes out on top. It is either the faithful contributor in the miss-and-outs or an occasional shooter that generally steps in and walks off with the purse, or the majority of it. For that reason these events are not popular among the best shots, but of course they won't stay out; the weaker shots come in readily, knowing that it is their best chance of getting even with the experts. This was actually the cause for the large number of shooters that faced the traps at Babylon to-day. It is just as well to state again at this point the conditions of the shoot: Unlimited number of birds, handicap rise, \$10 entrance; 29yds. men and back, miss-and-out; 28yds. men and, one miss as a kill, then miss-and-out; 26yds. men and under, two misses as kills, then miss-and-out; silver cup, valued at \$250, and \$400 added by the club; cup and 60 per cent. of the purse to the winner, 30 per cent. to the second, 10 per cent. to the third. From the above it will be seen that the scratch men had a hard row to hoe.

The winner, Walter W. Watrous, of Tuxedo, is hardly a novice, as some of the daily papers have described him; he has shot several thousands of pigeons during the past ten years and is a rattling good shot on fast birds, but he needs to draw fast ones all the time; it's the slow ones that beat him, and the conditions to-day were all in his favor. The birds were a splendid lot, while a twenty-five-miles-an-hour breeze, west by north, swept over the grounds and got under the tails of the birds as they left the traps, making "drivers and twisters" enough to fill two columns of nonpareil. It was a Watrous day and a Watrous lot of birds; with a miss up his sleeve, and with 2 to 3yds. the best of Work, Murphy, MacAlester, Knapp and F. G. Moore, he was bound to have a good look in—and he did. When he went home he carried off the cup and \$486 of the purse, just about enough, in fact, to help the Government by purchasing some of the new bonds. His victory was a very popular one and was well earned, as he ran 10 straight before missing, W. S. Edey, of the Westchester Country Club, being the only other shooter to perform a similar feat; Edey, however, was one of the scratch men and reaped no benefit from his really excellent work; had he won the cup his victory would have been fully as popular as that of Watrous.

In order that the story of to-day's doings may be told in something like a consecutive manner, it is the best to commence again right at the beginning and keep the ball rolling until the paper gives out.

The seventy-miles-an-hour gale of Dec. 31 had blown itself out, leaving behind it a good healthy infant of about one-third its strength; the sky was clear and bright, while there was enough frost in the air to make the heaviest underwearer and fur-lined overcoats none too warm. A brighter, pleasanter New Year's Day could not have been made to order; from a pigeon-shooter's point of view it was a perfect day.

A special train, leaving Thirty-fourth street ferry at 10 A. M., was placed at the disposal of the members of the club and their guests, the shoot being fixed to commence on the arrival of this train at Babylon. The two cars composing the special were well filled, about eighty all told being on board. Among the number were: J. G. K. Duer, G. de F. Grant, F. O. Deluze, Fred Gebhard, August Belmont, Craig Colt, Thomas H. Terry, Jordan L. Mott, Jr., Newberry D. Thorne, Justice William Travers Jerome, George Floyd Jones, Gen. Louis Fitzgerald, David Crocker, Judge Gildersleeve, H. B. Livingston, F. Edey, H. B. Wright, F. G. Moore, J. D. Steers, R. D. Foote, Austen Clarkson, Frank I. Lawrence, A. R. Hopkins, W. S. Edey, Daniel Bacon, B. R. Kittredge, Edgar G. Murphy, Walter W. Watrous, C. M. Chapin, J. M. Garnett, R. B. Lawrence, G. Montant, P. H. Morris, Arthur Deane, A. T. Sullivan, A. C. Clarkson, H. D. Steers, Charles Coster, E. F. Thomas, J. P. Knapp, W. H. Stafford, G. Langen, Winthrop Rutherford, H. Edey, Samuel Prior, and John S. Hoyt.

The handicapping was in the hands of Mr. Hoyt, no one knowing the capabilities of the amateurs of the East better than he does; he also, of course, acted as referee during the entire shoot, being relieved at lunch time by Charles MacAlester. The latter, along with George Work, drove over from the South Side Club in the morning, a thirteen-mile drive in a brisk, cold wind; hardly a good training for a sweepstake although the roads were in capital shape. The vast majority of the entries having been made, and the handicaps assigned on the way down to Babylon, no time was lost in getting the shooters to the score when once the long string of hacks had landed their fares at the Kennel Club. Superintendent Mott, of course, pulled the traps John Mott and Abe Southard did the trapping, while Fred Hoyt's setter Dandy tried to keep himself warm by retrieving the dead birds; he had a hard time doing it too, misses being so numerous that at times he got chilled through sitting on the cold ground waiting for a bird to drop out of the gale. A report of this shoot from Dandy's pen would make good copy for any paper, and would be great reading.

The first round was fatal to the chances of five shooters—George Work (31), Chapin (30), H. B. Wright (30), Holcombe (30) and Butler (29). There were 14 other ciphers scored in this round, making

a total of 19 misses out of 41 shots; peculiar features of this round were runs of 4 and 6 consecutive misses, the 6 last men to shoot in the round all missing their birds. The second round commenced with 36 shooters; this number was reduced to 29 when the last man on the list had shot his bird. Those to drop out were: Hopkins (27), Bacon (27), Sullivan (23), Stafford (28) and Ewing (27); these five having missed their first and second birds; Thomas and Ellison, both 29yds. men, were the other two who fell in this round. Montant, Morris, Brewster and Terry also added a second cipher to their scores, but being placed at the 26yds. mark, they were able to enter upon another round; besides the 11 above named, 7 others scored lost birds in the second round, making a total of 18 lost out of 36 shot at in the second round of the sweepstake! So far anybody backing the gun would have had a bad time of it, 37 out of 77 shot at having been scored lost!

In the third round 6 more dropped out; there were: Brewster (26), who had missed three straight; Livingston (27) and Eldridge (27), who had lost their last two; Mott (27), who had lost his first and third birds, and MacAlester (31) and Langen (29), who retired after losing their birds in this round; three others, Clarkson, Coster (his second miss) and R. Lawrence, also scored ciphers in the third round. The number of shooters left in at the end of the third round was only 23, 18 having dropped out. In the fourth round 4 lost birds were recorded; Grant (28), F. Lawrence (27) and Montant (26) retired for good, while Garnett added a second cipher to his score of two kills and one miss. In this round it began to look as if the shooters had struck their gait, 19 out of the 23 birds trapped being scored.

Round No. 5 saw Coster score his third miss and retire, while F. Edey was unlucky enough to lose a bird through his hammers not being at full cock; 18 out of 20 birds shot at in this round were scored to the shooters, the percentage of kills to misses being greatly increased since the end of the first two rounds. There were 19 shooters out of the 41 starters left in at the close of this round. Of that number no less than 6 fell out in the 6th round: Terry and Garnett, both 26yds. men, scored their third misses and retired; R. Lawrence (28), Clarkson (27) and F. Edey (27) were credited with their second misses and, of course, also retired, F. Edey being again unlucky enough to make an error in regard to raising the hammers of his gun; the curious part of the affair was that he remarked to the referee as he stepped to the score that he (Edey) would take care not to make the mistake he had made in the previous round. Knapp (31), who had made a most brilliant kill—perhaps the finest work of the day—on his 5th bird, missed his 6th bird and retired. E. Wright, the only left-handed man in the 41, and Steers scored their second misses, while Hoyt spoiled the looks of his string of 5 straight with a miss of a very hard bird. Edgar Murphy had a narrow escape, a great second-barrel kill alone saving him from joining what was now "the great majority."

There were only thirteen left in the race at the commencement of the seventh round. That number proved an unlucky one to five out of the thirteen before the round was completed. Those who retired were: Edgar Murphy (31), F. G. Moore (30), and Peter Morris, H. D. Steers and E. Wright, all 26yds. men who scored their third ciphers in this round. Harry Edey, also a 26yds. man, scored his second miss, while Winthrop Rutherford (27), who was shooting very well up to this point, scored his first loss on a very difficult right-quartering twister. In this round seven out of the thirteen birds trapped were scored lost! Round No. 8 found only eight survivors out of the forty-one that started in to win the cup. Of that number (eight), Hoyt (27) and Rutherford scored their second misses and retired, leaving only six to fight it out. Both Hoyt and Rutherford drew precisely the same kind of bird, circling right-quartering incomers, easy birds that certainly ought to have been killed. At the commencement of the eighth round an admirer of Foote was so sweet on his chances of landing the cup that he offered to bet 20 to 30 that he would win out-right; he made one bet of that amount, but could have had any amount at such absurd figures.

In round No. 9, Dean (27), who had killed 6 straight in capital style since his miss of his 2d bird, drew a driver that carried his shot out of bounds, causing his retirement. In this round, also, Foote scored his first miss. Round No. 10 saw the condition of affairs unchanged, the five left in killing their birds. W. S. Edey (29) and W. W. Watrous (23) had both killed 10 straight and were both doing very good work; the other three were Foote, H. Edey and B. R. Kittredge, the latter shooting well and cantering his birds. He had lost his 2d bird, a hard one for anybody to kill. As matters stood at the commencement of the 11th round all but Watrous (23) were on even terms, the shoot, so far as they were concerned, being a miss-and-out; Watrous had a miss up his sleeve and was in a very comfortable position. This round saw W. S. Edey miss an easy bird and retire. His brother, H. Edey, was far too slow on another easy bird, the counterpart of the one drawn by W. S.; he also dropped out. As Foote had lost his 11th bird dead out of bounds, there were thus three ties for third money. Watrous in this round drew a hard driver that fairly beat him out, and Kittredge, who had been the only one of the five to kill his bird, was therefore tied for first and second money and the cup with Watrous.

The tie did not last long, as in the very next round Kittredge had hard luck with a fast outgoing bird from No. 2, the pigeon carrying a portion of both loads out of bounds. Watrous had only to kill to win; he drew an easy one from No. 1 that was clean missed with first barrel; the second was planted with sufficient accuracy to land him a winner of the cup and first money. Second money went to Kittredge. The tie for third money was shot off, H. Edey winning on the second round. W. S. Edey had very hard luck with his first bird in the ties; it was hit hard and towered; then it almost reached the ground; next it towered again and then seemed to be coming down in bounds; finally it went away up, the wind landing it, when it came down ultimately, a couple of hundred yards from the traps—dead out of bounds.

Thus was brought to a close as pleasant a contest as one could wish to see. The quality of the birds can plainly be seen from the scores made: out of the 212 trapped in the above event, seventy-nine escaped or were scored lost. This may sound like very poor shooting, and as a matter of course there was some poor shooting or the scores would have been higher; still there was also some magnificent work shown by several of the shooters, and the blame for the low average of kills must really be laid at the door of the hard birds and the strong cold wind that drove the pigeons from the traps in a manner seldom equaled and never surpassed. People may sit around a stove and talk about killing anywhere from 90 out of 100 up to 100 straight; it's easy work to do it that way, but when one gets birds as good as those trapped at the Westminster Kennel Club's grounds to-day, and trapped too under similar weather conditions, 9 to 1 on the gun all through (the equivalent to backing yourself to kill 90 or better) would find lots of takers.

In to-day's shoot Watrous used his new Purdy gun and 51grs. of E. C. loaded in a Trap shell by the U. M. C. Co.; he also used No. 8 in his right barrel, No. 7 in his left. Kittredge shot a very pretty Franco; his shells, loaded by V. L. & D., only contained 43grs. of Schultze, a very small load for such birds in such a gale of wind; he must have pointed his gun about right.

Four miss-and-outs were shot, as well as a few small sweeps, before the day's sport was brought to a close, 455 birds in all being trapped during the day. The lunch prepared by Steward Wells was fully up to the standard and formed an important feature in the day's enjoyment. The scores in full are given below:

Nos. 1, 2 and 3 were \$5 miss-and-outs, same handicaps as in main event; non-winners in main event and in No. 1 moved up 1 yd. in Nos. 2 and 3; Nos. 4-8 were 3-bird sweeps, \$5 entrance.

WORK DEFEATS WRIGHT BY THREE BIRDS.

Jan. 2.—To-day's match at the Westminster Kennel Club's grounds, Babylon, L. I., was one of the most interesting of its kind that we have seen for a long time past; it was a pity that more people were not present to witness it. There were several features about the match that made it specially attractive to us. In the first place the two shooters, George Work and H. B. Wright (the latter, by the way, is an assumed name), are somewhat similar in their style of shooting; not so much in their attitude while at the score as in the manner in

A PIPE OF YALE MIXTURE
after a long run on the wheel is most refreshing. The blend is delightful.

Three New Books of the Field.

North American Shore Birds.
A History of the Snipes, Sandpipers, Plovers and their Allies inhabiting the beaches and marshes of the Atlantic and Pacific Coasts, the prairies and the shores of the inland lakes and rivers of the North American Continent; their popular and scientific names, together with a full description of their mode of life, nesting, migration and dispersions, with descriptions of the summer and winter plumages of adults and young, so that each species may be readily identified. A Reference Book for the Naturalist, Sportsman and Lover of Birds, by Daniel Giraud Elliot. With seventy-four plates. Price \$2.50.
Mr. Elliot's purpose being to make a book which should be for the sportsman and bird lover rather than for the naturalist, he has written his descriptions so that they shall be plain and easily comprehended.

Scientific Duck Shooting in Eastern Waters.
By R. S. NYE. Cloth, 116 pages. Price \$1.25.
The author has something to say about duck shooting, and he says it without drawing on a thousand extraneous circumstances, or dwelling on others beyond their value, and having skillfully presented what he had to say, he stops—a matter not always truly appreciated by speakers and writers.

Caribou Shooting in Newfoundland, 1894.
By DR. S. T. DAVIS ("Shongo"). 52 Illustrations. Price \$1.25.
A vast fund of practical information is embodied, which will be invaluable to any one who takes a similar trip, and which was obtained by the author only after much correspondence, study and personal experience.
FOREST AND STREAM PUBLISHING COMPANY, 318 Broadway, New York.

The Spaniel and Its Training.

By F. H. F. MERCER. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price \$1.00.
The chapters are practical and sensible. There is no theory in them. Here is a man who trained his dogs; learned by experience how to do it; and now has put down that experience for the benefit of others. We predict for "The Spaniel and Its Training" that wide popularity and favor which of right belong to practical books by practical men. In addition to the chapters on training there are descriptions of the several varieties of spaniels, with portraits of typical specimens; notes on the spaniel in America, and the standards adopted by the English and American spaniel clubs.
FOREST AND STREAM PUBLISHING CO.,

Pocket Kennel Record.

New edition. New forms. Full leather, 50 cents
FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.

The Trapper's Guide.

A Manual of Instructions for Capturing all Kinds of Fur-bearing Animals, and Curing their Skins; with observations on the fur-trade hints on life in the woods, narratives of Trapping and hunting excursions. By S. NEWHOUSE and other trappers and sportsmen.

This is the best book on trapping ever written. It gives full descriptions of all the animals which an American trapper is likely to meet with, tells how they live, how to trap them and how to care for and cure their pelts. No man who is interested in trapping animals, whether it be muskrats or bears, should be without this complete manual of instruction.

Ninth edition. Cloth. Illustrated. Price \$1.00.
FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.

SHOOT

At the target as you would at game. Use the Lyman rapid-fire target system, which more closely than any other resembles actual field work on game. Two sizes, 25yds. (15 cents a dozen) and 50yds. (25 cents a dozen). Sent postpaid by

FOREST AND STREAM PUB. CO.,

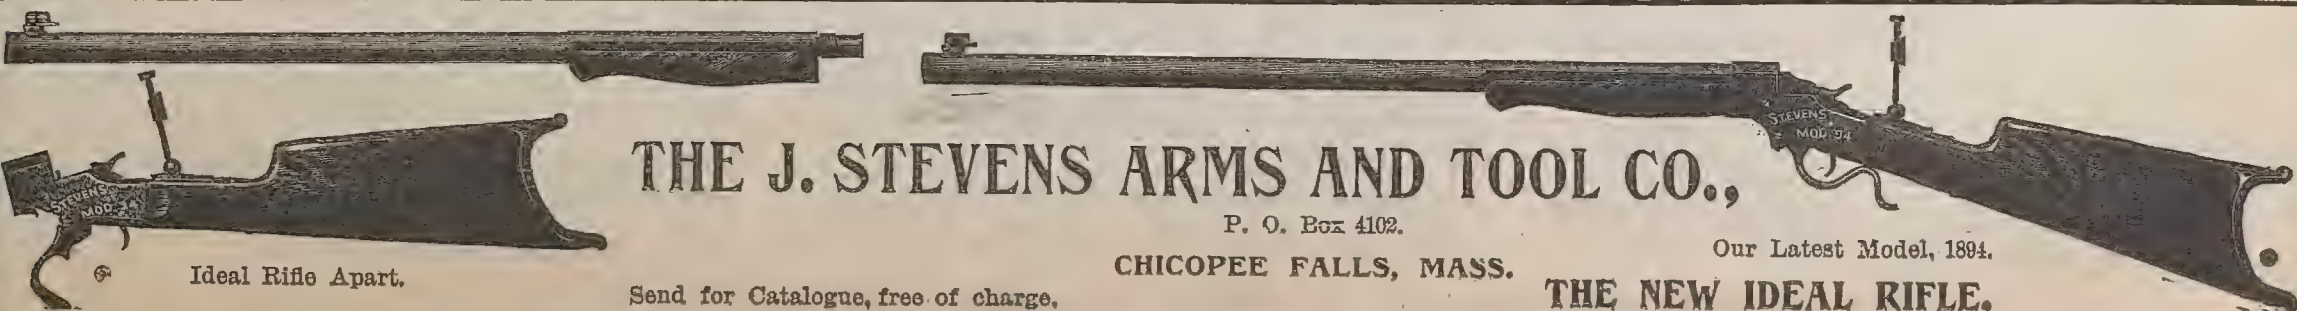

TENTS AND CAMPING

Is the subject of a new book called

Gypsy Tents and How to Use Them.

It gives a vast amount of information about how to live out of doors. Besides tents, how to make and put them up, it tells of camp fires, camps, pack saddles, cooking utensils bedding and clothing, and the joys and sorrows of camping. All outers need it. Fully illustrated. Price \$1.25.

ANGLING.

The American Angler's Book.

Combining the natural history of sporting fish, the art of taking them, with instructions in fly-fishing, fly-making and rod-making, and directions for fish breeding. Description of salmon runs, inland trout fishing, etc. By THAD. NORRIS. 80 illustrations. Cloth. Price, \$5.50.

American Fishes.

A popular treatise upon the game and food fishes of North America, with especial reference to habits and methods of capture. By G. BROWN GOODE. With numerous illustrations. Cloth, 496 pages. Price, \$3.50. This is, by far, the most popular work which has ever been published on the fishes of America, and is the book that no angler who takes pleasure in knowing the fishes which afford him sport, can afford to miss.

Book of the Black Bass.

Comprising its complete scientific and life history, together with a practical treatise on angling and fly-fishing, and a full description of tools, tackle and implements. By JAMES A. HENSEHALL, M.D. Illustrated. Cloth, 470 pages. Price, \$3.00. Dr. Henshall's monograph is the standard work.

More About the Black Bass.

Being a supplement to the "Book of the Black Bass." By JAMES A. HENSEHALL, M.D. Fully illustrated. Cloth, 204 pages. Price, \$1.50. This is a supplement or sequel of Dr. Henshall's first volume, in which the author's aim is to bring the subject matter down to date.

Fly-Fishing and Fly-Making for Trout, etc.

By J. HARRINGTON KEENE. With plates of the actual material for making flies of every variety. Illustrated. Cloth, 160 pages. Price, \$1.50. The matter of the book embraces everything which the fly-fisherman wants to know about the senses of fish, practical fly-fishing, casting and fly-making; with list of standard flies and their dressings; the feathers, silk and other material used in fly-making, there are samples of all, attached to blank sheets like pictures by way of illustration.

Fishing Tackle.

Its Materials and Manufacture. A practical guide to the best modes and methods of making every kind of appliance necessary for taking fresh-water fish and for the equipment of the angler and fly-fisher. With 454 illustrations and explanatory diagrams. By J. HARRINGTON KEENE. Price, \$1.50.

With Fly-Rod and Camera.

By EDWARD A. SAMUELS, President of the Massachusetts Fish and Game Protective Association, author of "The Ornithology and Oology of New England and Adjacent States and Provinces," "Among the Birds," Associate Editor of "The Living World," etc., etc. Cloth, 480 pages (7x9 1/2 in.), 147 illustrations. Price, \$5.00. The author is known as one of the most devoted and expert salmon fishermen of America. The volume is likewise noteworthy as an example of the rare possibilities of amateur photography.

Favorite Flies and Their Histories.

By MARY ORVIS MARBURY. 522 pages, 46 illustrations. Price \$5.00. The colored plates depict 17 hackles, 18 salmon flies, 48 lake flies, 185 trout flies and 58 bass flies.

MANUALS.

Game Laws in Brief.

Laws of the United States and Canada Relating to Game and Fish Seasons. For the guidance of sportsmen and anglers. Compiled by CHARLES B. REYNOLDS, Editor of *Forest and Stream*. Paper. Price, 25 cents. Gives all sections relative to game and fish seasons, limit of size or number, non-residents, transportation, etc. All in brief, but full enough for the practical guidance of sportsmen and anglers. Carefully compiled, and shorn of verbiage. Handsomely illustrated with numerous half-tone engravings from *Forest and Stream*.

Woodcraft.

By NESSMUK. Cloth, 160 pages. Illustrated. Price \$1.00. A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain English.

Tricks of Trapping.

Camp Life in the Woods, and the Tricks of Trapping and Trap Making. Containing hints on camp shelter, all the tricks and bait receipts of the trapper, the use of the traps with instructions for the capture of all fur-bearing animals. By W. HAMILTON GIBSON. Illustrated. Cloth, 300 pages. Price, \$1.00.

Log Cabins.

How to Build and Furnish Them. By WILLIAM S. WICKS. New and enlarged edition. Price, \$1.50. Mr. Wicks might have called his book "Every Man His Own Log Cabin Builder," for he has set out to describe fully and particularly each detail in the process of construction. Plans are given for cabins, large and small, with details of exterior and interior.

Hints and Points for Sportsmen.

Compiled by "SENeca." Cloth. Illustrated, 224 pages. Price, \$1.50. This compilation comprises six hundred and odd hints, helps, kinks, wrinkles, points and suggestions for the shooter, the fisherman, the dog owner, the yachtsman, the canoeist, the camper, the outer, in short for the field sportsman in all the varied phases of his activity.

SHOOTING.

Names and Portraits of Birds

Which Interest Gunners, with Descriptions in Language Understood of the People. By GURDON TRUMBULL. Cloth, 222 pages. Price, \$2.50. The average gunner with this work at hand would have little difficulty in identifying the contents of his bag from the text alone. Identification is further facilitated by portraits of the birds.

Antelope and Deer of America.

A comprehensive scientific treatise upon the natural history, including the characteristics, habits, affinities and capacity for domestication, of the Antilocapra and Cervidae of North America. Second edition. By JOHN DEAN CATON, LL.D. Cloth, 426 pages, 50 illustrations; steel portrait. Price, \$2.50.

The Gun and Its Development.

With Notes on Shooting. By W. W. GREENER. Breechloading Rifles, Sporting Rifles, Shotguns, Gunmaking, Choice of Guns, Chokeboring, Gun Trials, Theories and Experiments. Fully illustrated. Cloth, 770 pages. New edition. Price, \$2.50.

The Art of Shooting.

An Illustrated Treatise on the Art of Shooting. With Extracts from the Best Authorities. By CHARLES LANCASTER. Illustrated with numerous drawings from instantaneous photographs. Price, \$3.00. New edition.

Field, Cover and Trap-Shooting.

By CAPTAIN ADAM H. BOGARDUS, Champion Wing Shot of the World. Embracing Hints for Skilled Marksman; Instructions for Young Sportsmen; Haunts and Habits of Game Birds; Flight and Resorts of Waterfowl; Breeding and Breaking of Dogs. With an appendix. Cloth, 493 pages. Price, \$2.00. There is no other man in this country—or in any other, for that matter—better fitted to teach a novice the art.

The Still-Hunter.

A Practical Treatise on Deer-Stalking. By T. S. VAN DYKE. The information contained in "The Still-Hunter" is as exhaustive as it is possible to make it. 390 pages. Price, \$2.

The Breech-Loader and How to Use It.

288 pages. Price, \$1.00. A book for that numerous class of sportsmen who delight in a day's shooting, but have neither the time nor the means to make the sport a life's study.

CAMP AND HOME.

Uncle Lisha's Shop.

Life in a Corner of Yankeeeland. By ROWLAND E. ROBINSON. Cloth, 187 pages. Price, \$1.00. "Uncle Lisha's Shop" is brimful of quaint humor and sentiment, and there is an unmistakable touch of human nature in Uncle Lisha himself and his good old wife, Aunt Jerushy; in Sam Lovel, the hunter, and in fact in all the other characters introduced.

Sam Lovel's Camps.

A sequel to "Uncle Lisha's Shop," by ROWLAND E. ROBINSON. Cloth. Price, \$1. When Uncle Lisha went West, Sam Lovel took Antoine as his partner, and the fortunes and misfortunes of the two as trappers are described with all the charm of our author's quaint style, while their friends and enemies, and all with whom they are brought into contact, in the course of the story, step on to the stage real living creatures.

Pawnee Hero Stories and Folk-Tales.

With Notes on the Origin, Customs and Character of the Pawnee People. By GEORGE BIRD GRINNELL. Cloth, 417 pages. Illustrated. Price, \$1.75. New edition, revised. Like most Indian tribes, the Pawnees are story tellers. They have a vast fund of folk-tales and traditions, which have been handed down from father to son, and transmitted from generation to generation. Years ago, when the tribe lived in Nebraska, the author of the present volume camped and hunted with them, and joined in their village life. The nights were given up to story telling, and many of the tales told in the lodge and by the flickering camp-fire were carefully translated and written down. When published they excited great interest. They are tales of daring and adventure, weird accounts of magic, mystery and the supernatural; relations of the ways of life in the old, wild days; stories of war and the craft of war parties, the history of the tribe as treasured by the very old men. There is mother-wit in these stories, they are full of humor, sentiment, pathos and human nature.

Blackfoot Lodge Tales.

The Story of a Prairie People. By GEORGE BIRD GRINNELL. Cr. 8vo., \$1.75. In this volume the story of the Blackfoot tribe is told by a friend, one who has hunted with them on the prairies, slept in their lodges, lived in their camps, and shared their daily life. The stories which constitute this history have been taken down by the author from the lips of the narrators, and are given without change as told to him. There is a singular and charming freshness about the stories, which give the history of renowned warriors of ancient and modern times, show how ancient customs arose, and explain natural phenomena. The account of the daily life, customs, and history of the Blackfeet presents a series of graphic pictures of savage life in peace and in war.

Our New Alaska;

Or, The Seward Purchase Vindicated. By CHARLES HALLOCK. Cloth, 209 pages, illustrated. Price, \$1.50. Mr. Hallock's writings are always vivid and full of life.

THE KENNEL.

Dogs: Their Management and Treatment

IN DISEASE. A Study of the Theory and Practice of Canine Medicine. By ASHMONT. Cloth, 208 pages. Price, \$2.00. The *Forest and Stream* says that this is one of the most valuable treatises on canine management and therapeutics that has appeared on this side of the water.

Kennel Record and Account Book.

Boards, \$3. An indexed volume of 180 pages, consisting of a series of carefully prepared blank entry forms suited to the registration of all kennel events and transactions.

Dog Points and Standards.

First Lessons in Dog Training, with the Points and Standards of all Breeds of Dogs. Paper, new edition, 106 pages, revised to date. Price, 50 cents.

Training vs. Breaking.

Practical Dog Training; or Training vs. Breaking. By S. T. HAMMOND, Kennel Editor of *Forest and Stream*. Revised and re-written. To which is added a chapter on training pet dogs, by an amateur. Cloth, 165 pages. Price, \$1. A book for dog owners, who, by the instructions here plainly given, can successfully train their hunting dogs.

Modern Training;

Handling and Kennel Management. By B. WATERS. Illustrated. Cloth, 373 pages. Price, \$2. This treatise is after the modern professional system of training. It combines the excellence of both the suasive and force systems of education, and contains an exhaustive description of the uses and abuses of the spike collar.

House and Pet Dogs;

Their Selection, Care and Training. Paper, price 50 cents.

Lee's Modern Dogs.

History and Description of the Modern Dogs (Sporting Division) of Great Britain and Ireland. By RAWDON B. LEE, kennel editor London *Field*. Illustrated, 584 pages. Price, \$6. This is a standard work by an acknowledged authority, and is up to date. It treats all sporting breeds exhaustively. The illustrations are idealized portraits of typical specimens.

Kennel Secrets.

How to breed, exhibit and manage dogs. By ASHMONT. The dog from the time he is conceived to the time he curls himself up for his last long sleep is treated from every standpoint that could possibly occur to a man of wide experience with dogs. Every important subject that has engaged attention has been fully discussed, generalities being held practically valueless and misleading. Illustrated, 344 pages. Price, \$3.00.

The Spaniel and Its Training.

By F. H. F. MERCER. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, \$1.

Scientific Education of Dogs for the Gun.

By H. H. Cloth, Price, \$2.50. The instructions are the result of the author's amateur practical experience of 37 years. *Forest and Stream* says: "This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even old hands to study."

YACHT AND CANOE.

Small Yachts.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice. With numerous plates and illustrations. By C. P. KUNHARDT. New ed., 470 pp. of type and illustrations and 87 plates. Size of page, 14 1/2 x 12 1/2. Price, \$10. This book is intended to cover the field of small yachts, with special regard to their design, construction, equipment and keep.

Steam Yachts and Launches;

Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. New ed., 267 pp. Price, \$3.00. A complete review of the development and present status of the marine engine and boiler as applied to steam yachting.

Canoe and Boat Building.

A Complete Manual for Amateurs. Containing plain and comprehensive directions for the construction of Canoes, Rowing and Sailing Boats and Hunting Craft. By W. P. STEPHENS, Canoeing Editor of *Forest and Stream*. Cloth. Fourth and enlarged edition, 264 pages, numerous illustrations, and fifty plates in envelope. Price, \$2.00.

Canoe Handling.

The Canoe: History, Uses, Limitations and Varieties, Practical Management and Care, and Relative Facts. By C. BOWYER VAUX ("Dot"). Illustrated. Cloth, 168 pages. Price, \$1.00.

Yacht Architecture.

By DIXON KEMP, Associate of the Institute of Naval Architects and Member of Council. Second edition. Super-royal 8vo., 530 pages, numerous plans and designs. Price, \$16.80.

A Manual of Yacht and Boat Sailing.

By DIXON KEMP, Associate Institute of Naval Architects (Member of the Council). 750 pages, with numerous plans and designs. New edition. Price \$12.00.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY. }
SIX MONTHS, \$2. }

NEW YORK, SATURDAY, JANUARY 18, 1896.

{ VOL. XLVI.—No. 3.
{ No. 318 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page v.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.
SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream one year and the set of four pictures, \$5.
Forest and Stream 6 months and any two of the pictures, \$3.
Price of the pictures alone, \$1.50 each; \$5 for the set.

Remit by express money order or postal money order.
Make orders payable to

FOREST AND STREAM PUB. CO., New York.

BENCH SHOW INTERESTS.

MANY years have come and gone since the improvement of the dog excited the interest of the dog fanciers of America, and since practical effort was directed to such improvement by the importation of the best blood and the best specimens obtainable, and since the public at large bestowed its approval, encouragement and support. And yet there are those who still advocate importation to improve the older breeds.

Have the efforts of some breeders been a failure in whole or in part? We think not, although their teachings would lead to a different conclusion—the contention of those breeders who maintain that importation is the road to improvement. It is true that when a new breed is cultivated the best specimens can be obtained only from such sources as have them, but the breeds which have been carefully developed year after year by painstaking owners, and have been added to also by the blood of many importations year after year, should reach a stage of meritorious development at some time when they can be bred properly at home.

After breeding dogs for many years in succession from the best imported blood, to admit still that the improvement of the breed is contingent on the importations of good specimens for breeding purposes is to admit the superiority of the breeders abroad.

Too much value is often attached to the dog bred abroad for the sole reason that he is a foreign production. Habit no doubt is a factor in such concession. When improvement was started the value and superiority of foreign stock were conceded. From such education at the start favoring imported specimens they have held their place in popular esteem, to a partial exclusion of the fact that the home stock of many breeds has improved to a degree equal to the foreign.

Let a specimen be ordinary, so that it be foreign there is a glamour of superiority and value about it which rests solely on the fact that it came from the vague limits beyond the national horizon.

The exercise of judicious care in breeding will produce quite as good results here as abroad. Breeding largely is not necessarily judicious breeding. Breeding for market exclusively, with the purpose of quality and corresponding profit, is not the best manner of improving any breed. In breeding for market such features are likely to be considered only as will catch the attention of purchasers—long pedigrees, performances of sires, etc. In breeding for improvement the selection of the best specimens, physically and mentally, is considered, with due regard to the family tendencies to transmit the best qualities, specimens which can perpetuate their species in the highest degree.

In each breed which has attained a popular footing in this country there are many specimens which are conceded to be excellent of their kind. The plea made now and then that improvement is dependent on foreign importation is not necessarily so important as its advocates would have us believe.

There is one essential in the bench show world, however, a need which has long existed—that is, of more bench show judges. Breeds have grown larger in numbers, bench shows have multiplied throughout the land, and yet the list of judges has been added to but slowly. Even at this day of bench show development, of specialty clubs, of amateur experts, of uniform public interest, it is considered necessary to send abroad for judges. Is it not possible that the development of the judges' list has been checked by the too liberal denunciation of judges by disappointed exhibitors, by the abuse which has been so incessantly hurled at a judge under the name of criticism? Is it not possible that some of our breeding systems can be improved by breeding on a better theory, and our judges' list can be augmented by a kinder policy?

BUFFALO IN THE NATIONAL PARK.

THE campaign against buffalo killers in the National Park, which Capt. Anderson carried on last fall, was measurably successful. Two expeditions were dispatched to the southeast corner of the Park to watch for poachers, and if possible to find out what they were doing. These expeditions found the carcasses of nine or ten buffalo which had been killed within a few months, and they also came upon a party of poachers and chased them out of the Park, killing one of their horses, but failing to capture the men. Late in October Capt. Anderson made an expedition down into this same country, where he saw some fresh signs of buffalo, and he believes that there are still some on the Mirror plateau, others on the hot ground near Fern Lake, and a few about Heart Lake.

About the 1st of November the United States Marshal of Helena informed Capt. Anderson that some of the Henry's Lake poachers were negotiating with W. H. Wittich, of Butte, Mont., for the sale of buffalo scalps. Capt. Anderson had previously had detectives among the Henry's Lake poachers, and knew a good deal about them. When the United States Marshal offered to assist in the capture of the man having the buffalo for sale, Capt. Anderson swore out an information against the suspected parties and put it in the Marshal's hands for execution. In the course of time James S. Courtenay appeared in Butte with four scalps and one calf skin. He was arrested just as he was turning these remains over to Wittich, taken before a United States Commissioner, held in \$1,500 bail and sent to the Mammoth Hot Springs for trial under the Park Protection Act. He was tried late last month and was acquitted on the ground that the spoils were obtained in Idaho, outside of the Park.

This is the substance of Capt. Anderson's report to the Interior Department. He believes that the capture of Courtenay has thoroughly alarmed the poachers, and that it will probably prevent them from making further efforts to kill the Park buffalo. He believes too that, while Idaho poachers have killed a good many buffalo, the number has been greatly overestimated, and thinks that they have not got more than ten this season.

The entire failure of the Idaho Legislature to forbid the killing of buffalo within the State has often been adverted to in these columns, and the futility shown of any attempt to protect Park game so long as the butchers are at liberty to camp just outside the Park and make predatory excursions into it whenever opportunity may present.

Elk, deer and antelope are now seen in unusually large numbers in the northern part of the Park, and as usual there are some mountain sheep on Mount Everts. The Park is full of coyotes, which are killing a good many antelope. These small wolves hunt in packs and find little difficulty in running the antelope down. Capt. Anderson is having the coyotes killed off as rapidly as possible.

At last reports the buffalo had started for the Hayden Valley, but the snow-fall up to that time being light they had not yet been driven together in a single herd.

SNAP SHOTS.

We print in another column the report prepared by Mr. J. S. Van Cleef, of Poughkeepsie, counsel to the Senate Committee of the New York Legislature intrusted with the task of inquiring into the special needs of the St. Lawrence River waters for the protection of bass. The committee had numerous conferences with the Canadian authorities, who are disposed to act in concert with New York to secure uniformity of season and restrictions as to fishing methods. It is proposed to set apart a portion of the St. Lawrence River region, between

Tibbet's Point Lighthouse and the city of Ogdensburg, which shall be guarded by a special protector assigned to the district, and shall be governed by the special laws, the text of which we print in our angling columns. Only by concert of action on the part of the Canadian and New York authorities may the St. Lawrence waters be given protection. The agreement contemplated in the report of the Senate Committee will remove a long-standing source of irritation, and will promote both fish protection and the growth of friendly feeling between the fishermen of the two countries. The suggestions in the report will have the endorsement of all anglers concerned, and we trust that the provisions named in them may be put into operation.

The County Treasurer of St. Lawrence county in this State received a check for \$150 the other day, sent by a Boston sportsman as a self-imposed, conscience-impelled fine for a deer and a duck killed out of season twelve years ago. The game law violation, the Boston man wrote, had never been discovered, but the offender felt that he must square up. Now while we are talking on the sportsman and his ways, why not count this man in? Our compliments to him. More power to the conscience of every other man who is carrying around with him the secret knowledge of Adirondack deer or Maine moose killed out of season. If it would help the good cause along we would gladly supply a list of county treasurers covering all the game districts in the country. If every individual who has killed his game out of season were to follow the Boston example the game protection funds would be so generous that there would be no need of appropriations for several years to come.

Such a meeting as that at Syracuse last week affords an excellent opportunity to take note of public sentiment on questions relating to game interests. There could be no mistaking the opinion of the delegates as to deer hounding. An overwhelming majority was opposed to the practice, and the convention voted to recommend that both hounding and jacking should be prohibited. Quite as strong was the opposition to spring shooting. The date fixed upon by the convention for the close of duck shooting was March 1 instead of April 1, as now, and this date was adopted for the entire State, including Long Island. Vice-President Robert B. Lawrencé, who represented Long Island, declared that the sportsmen of the Island were almost unanimously in favor of forbidding the killing of wildfowl in the spring. It is very clear that year by year we are coming nearer to the abolition of spring shooting.

Senator Malby's bill to forbid the pollution of waters by sawdust, dyestuff and other factory waste will be pushed vigorously in the New York Legislature this year; and it is a satisfaction to know that under Mr. Malby's guidance it is likely to be made a law. The present statute forbids the deposit of deleterious substances in any waters "in quantities destructive to the life of fish inhabiting the same." Such a prohibition is ineffective and worthless, as has been demonstrated over and over again when the fish protectors have attempted to enforce it. Some of these days the public will wake up to the fact that it has some rights in its own waterways, and it will learn how to reclaim and protect these rights. Then we shall see an end of the preposterous state of affairs in which individuals and corporations are permitted to convert rivers and creeks into sewers and drains barren of food fish.

The Arion Fish Company, of Tower, Minn., thinking to profit by the opportunities afforded by New York's iniquitous law permitting the sale of game at all times, unlawfully shipped a car of 3,000 grouse and a large supply of venison, billed for New York. The Minnesota game warden intercepted the game and sued the Arion people for the penalty. The case has just been settled by the payment of a fine of \$2,000. The shipment affords a beautiful example of the way in which the New York refrigerator law works. The provision is embodied in Sec. 249, which allows at all times the sale of game brought from a source 300 miles distant from New York. The section must be repealed, and the sooner the better.

President Frank J. Amsden, of the New York State Association, deserves a generous measure of appreciation for the hard work he has done during the year in the interest of the Association. He has given to the work time and money and intelligent direction.

The Sportsman Tourist.

UNCLE LISHA'S OUTING.—IX.

A Night Flitting.

A SIDE-TRACK OF THE U. G. R. R.

THE shadows of the trees that skirted the west shore stretched far across the marsh and channel as Sam drove the canoe up the creek with quick, strong strokes, quite regardless of the throngs of incoming waterfowl that swept past him or those already arrived that arose from the marsh on either hand and the open water before him, for he had left the temptation of the gun behind him. When he entered the East Slang all lesser shadows were dissolved in the overwhelming shadow of the Adirondacks, and when he stepped on shore at the old camp landing the twilight was thickening into gloom in the woods through which he took the now dimly-defined path and hastened toward the log house of the negro.

When he came in sight of it, it was a dark blotch in the clearing against the faint light of the afterglow with one spot of light in it, where a candle shone from its single front window. As he approached he heard the voices and frequent laughter of his acquaintances of the morning, with the softer voice of a woman sometimes breaking in. He knocked at the door and the voices were suddenly hushed, and in the stillness he heard the puff that blew out the candle, followed by excited whispers and cautious steps across the floor. He knocked again and the woman's voice demanded:

"Who's there?"

"It's me! Sam Lovel! the man 'at was here this mornin'." I want to speak to the man they call James."

There was more whispering before Jim asked, jerking out the words with the characteristic nervous twitches of the head that Sam could almost see in spite of the intervening door.

"What'd' you want? Be you alone? Can't you talk through the door?"

"I don't want to holler," said Sam in a low voice, answering the last question first. "Its suthin' 'baout the man 'at you call your brother er cousin. He wants to be makin' himself sca'ce 'raoun' here. I'm all alone, an' you needn't be afeard to open the door."

After more whispering inside, the door was unfastened and cautiously opened far enough for Jim to thrust his head outside and assure himself of Sam's identity and that he was alone. Then the door was held wide open and the visitor invited to enter by a jerk of the head and motion of the hand. The door was closed so quickly behind Sam that it nearly caught the skirts of his coat. By the glimmer of light from the stove he saw the liting, dancing negro of the morning transformed into a stern, threatening giant confronting him with an axe uplifted above his shoulder. The figure of a woman shrank behind the stove with a child, wide-eyed with fright and wonder, clinging to her gown.

"You needn't be afeard to light your light an' see who I be," said Sam. "The' hain't nob'dy else."

While Jim relighted the candle with a splinter the others looked intently at Sam, as his features grew distinct in the increasing glow, when being assured that his honest face masked no evil purpose, the tall negro lowered his axe and the woman, a handsome mulatto, sat down and took the child upon her knee.

Sam told them of his suspicion that the visitors at camp were in search of Jim's guest, "and naow," he said in conclusion, "the chances is they'll be here arter you to-morrow. I've laid in with a feller to take ye to Canerdy on his boat, but he won't go afore to-morrow night or nex' day, an' you'll hafta lay low either in the woods or up to Mr. Bartlett's. I cal'late his haouse is the best place, an' I come to take ye up there an' tell him abaout gittin' on ye off, an' if that suits ye we'll be a-moggin' soon as you c'n git ready."

"I'se ready," said Bob, snatching his hat and coat from a peg on the log wall and moving toward the door.

"I don't take Bob long to pack his trunk, no sir," Jim said with a nervous laugh. "Lord, haow you did scare me when you knocked. Twice in one day is 'baout often 'nough to scare a man in one day, yes, sir! But naow you're putty nigh scarin' of me ag'in. You s'pose them fellers rally was huntin' arter Bob?"

"I'se ready," Bob repeated as he drew a small pistol from his coat pocket, and turning stooped to the candle light to examine the cap. Replacing it in his pocket he turned to Sam and said:

"I s'pec's you're gwine ter sot me 'cross de run, Marse Lovel?"

"The run? O, the Slang; yes, I was cal'latin' tu, an' tu go up to Mr. Bartlett's with ye. I want to see him. My canew's up there to the landin'."

"What! you didn't never come clean 'raound to the Slang to-night? You might ha' come right acrost the crik no time."

"I didn't know who might be a-watchin'," Sam answered. "The longest way 'raoun's the surest. Come, le's be a-moggin'."

"I'se done b'en ready," said Bob. "Goo'-bye, Nancy; goo'-bye, little Jimmy. De good Lawd bress ye an' ta' keer on ye."

He shook hands with the woman and laid his huge hand on the child's curly head, and then stretched it out to Jim.

"Goo'-bye, Jeems, er is you gwine 'long?"

"You stay along wi' me, Jim," said the woman, anxiously.

The two negroes looked at him suspiciously, and exchanged questioning glances.

"I guess I'll go a piece," Jim said, with an emphatic jerk of the head.

"All right, suit yourself. I only cal'lated it 'ould look better if anybody come. S'posin' you put the light aout ag'in, so the' can't nob'dy see us goin' aout."

Jim blew out the candle and the three went out into the night, now lighted only by the stars and the flicker of the northern lights.

They took their way across the clearing at a brisk pace, Jim taking the lead as being most familiar with the path, Sam next and the runaway in the rear. The latter cast frequent glances behind and started nervously when an alarmed bird fluttered suddenly from a bush or some night prowler scurried among the fallen leaves and dry

twigs, while Sam and Jim held steadily on, quite regardless of such harmless sounds. Feeling their way more slowly along the unseen wood path, they came to where they saw the stars again, then saw them repeated in the still water of the channel, and then were at the landing. There was a soft splash in the channel like the cautious dip of an oar.

"Fo' de Lawd," Bob gasped, starting back and thrusting his hand in his pocket, "dem fellers out dar layin' fo' me. My Gawd, Marse Lovel, you ain't de man to fool a pore niggah what's bein' hunted to de eends of de airth!" and he tried to scan Sam's face in the dim starlight, but holding aloof in a half-crouching attitude that might be a preparation for either a fight or a run.

"I guess it hain't nothin' but a mushrat or a duck," Sam whispered, looking intently in the direction of the sound, "but mabby Jim hed better shove aout there in his canew an' see."

Jim pushed his dugout to the edge of the channel and presently jerked back a loud disjointed whisper.

"Everything's all right. Jest as clear's a Christian's eye. Yes, sir, jist egzakly."

With this assurance Bob took his place in the canoe where Sam had already kneeled, with his paddle in his hand, and he now pushed out and laid his craft alongside of Jim's.

"I do' know jest where I'm a goin' tu land," he said with a questioning inflection.

"You go up 'baout fifty rods an' you'll come tu the John Clark place, where ol' John Clark allus used to fish. You can run right up to the hard bank there. Mr. Bartlett's is the furdest north in that string o' lights. You put right straight for it an' you'll strike a big holler where a brook runs, which you cross it an' follow up the north bank an' you'll kit the secont road right by his haouse. I guess I won't go no furdur an' I'll bid you good-bye, Bob, an' good luck to ye."

"Goo'-bye, Jeems, ta' keer yo'se'f, boy."

They shook hands across the gunwales and the bark canoe slid silently up the channel, breaking the smooth surface with wake and paddle strokes that set the mirrored stars a-dancing and startled the sleeping ducks to sudden noisy flight. Without greater incident the brief voyage was made, and the two men set forth across the fields, guided by the house light and the deep-cut water course to which they presently came. They approached the first road with scarcely a precaution of secrecy, for there was not a house upon it nearer than the tavern at the corner, where the bar room lights shone out with hospitable gleam.

They were beginning to climb the fence when they heard the sound of a wagon and voices in low but earnest conversation close at hand and drawing nearer. Then they saw the intermittent glow of a pipe, and as they sank back and crouched in a weed-grown fence corner they caught a whiff of its odor.

"Fo' de Lawd," Bob whispered, sniffing it eagerly, "I hain't felt de smell o' no terbacca lak dat sencē I done lef' Ol' Ferginny."

Sam laid a cautionary hand on his arm. "What be they talkin' 'bout?"

The wagon stopped almost in front of them, and as its clatter and the footfalls of the horse ceased the guarded voices of the occupants were distinctly heaad.

"I tell you the rwud cross lots is consid'able furdur on," said one. "The' hain't no gap ner barway here, fer I c'n see stakes an' caps tu ev'ry corner."

Sam held his breath while he knew that two pairs of eyes were closely scanning the fence and the very corner where he crouched beside his companion, whose hand he could hear stealthily creeping to the pocket that held the pistol.

"I reckon yo' ah right," the other occupant of the wagon said at last, and Sam recognized the smooth voice of the quiet visitor at camp, "but 'pears like we'd come fah enough."

"No, sir," the other rejoined emphatically, "the's a reg'lar rwud when we come tu it, an' it runs through a paster. This 'ere's a medder, I can see a stack a-loomin' up."

"All right," the other conceded, "go ahade and hurry up yo' cakes, foh I'll be bound Baker and his man's thah with the boat foh now."

The driver spoke sharply to his horse and the wagon went rattling down the road at a rapid pace.

"Wal," said Sam, rising and letting out his long-held breath, "I cal'late you stayed to Jim's 'baout as long as was healthy for ye."

"Sho's yo' bawn, Marse Lovel! Dat 'ar man saoun' des lak Cap'n Clahk," Bob whispered excitedly. "De shaapes' man faw huntin' niggahs dey is in all dem pahs. Lawd, if I didn't tink he was lookin' right squaar' at me."

"Wal, he hain't a-huntin' on his own groun', an' that makes lots o' odds. My sakes, won't they hev fun a-hoofin' on't 'raound the head o' the Slang in the dark! It would be tew all-killin' bad if they should break the necks a-tumblin' through the woods."

When the two came to the broad stage road, no one was astr in the quiet neighborhood, and leaving Bob hidden in an adjacent fence corner, Sam went to Friend Bartlett's kitchen door and knocked. He heard the familiar sound of a pipe rapped on the stove hearth, then stockinged feet bumping across the floor and the door was opened by a shock-headed Irishman.

"Good evenin'," said Sam. "Is Mr. Bartlett tu hum?"

"Noa thin," the man answered. "He's gahn to the vilage beyant t' a timperance matin'. It's a moral reformed droonkard they calls him, bes lacter'n."

"Wal, I sh'd like to see Mis' Bartlett then."

"Is it the misthres? Thin it's herself that wint wid him. Divil the wan o' thim in it but the daughter an' mesilf an' the gyl."

"When do you think they'll be back?"

"Divil a know, I know I'll hould yez the price of a quart, the moral reformed crather 'll be afther blatherin' till nine o'clock, vis tin, be gab, an' they'll be to hear the last wurrd."

Sam's heart sank at the poor prospect of communicating with Friend Bartlett. "You was sayin' suthin' about his darter. Is she a growed up woman or a leetle gal?" he asked.

"It's a fine lump of a wummun she is, thin; nearly as big as the mother, an' it's herself has the larnin'. She been to schule to all the Nine Partners."

* A celebrated Quaker boarding school situated in the township of Nine Partners in the State of New York.

"Wal, then," said Sam, "I can't du no better 'n to see her if you'll ask her to step to the door a minute."

The Irishman, going to the door of another room, spoke to some one therein, and presently a handsome young woman came forth. Her plain dress wore some un-Quakerly adornments, but her face was so kindly that Sam felt sure she must be in full sympathy with her parents in all benevolent work.

"Good evenin', Miss Bartlett; I fetched up a couple o' ducks to your father, an' I wanted tuspeak to him about a little business."

"Yes," she said, with a questioning affirmative, as she took the proffered ducks. "Thee may leave any message for father with me. Why, these ducks are very nice, and I'm sure he'll be very much obliged to thee. What is it thee wants me to tell him?"

"It's a kinder private business," said Sam, looking past her at the Irishman, who stood near the stove with an attentive ear turned toward them. "An' if you'd jest step aout an' shet the door a minute."

"Michael, won't thee please take these ducks down cellar and hang them up? Aren't they nice ones?" Margaret Bartlett said, and then to Sam, as Michael, taking the ducks and a candle, disappeared in the cellarway, "Won't thee come in?"

Sam declined and she stepped out, closing the door behind her.

"You tell your father," Sam hastened to say in a low voice, "at ther' 's som'b'dy arter that nigger an' they 've faound aout where he was hid, so I fetched him up here."

"The colored man at James's? Where is he?" Margaret asked anxiously. "Thee mustn't let Michael see him. Father doesn't think he can be trusted in such matters."

"No, somehaow Paddies hates niggers. I do' know why. I don't hanker arter 'em myself, but I hain't no grudge ag'in 'em. I didn't cal'late to hev nob'dy see him but your father, an' hid him in the fence aout here. But he can't stay there all night, an' what be I goin' tu du with him?"

"Thee must put him in the barn, in the bay on the west side of the barn floor. No one will go there, and I'll tell father when he comes."

"All right, an' you tell your father 'at I've laid in wi' a Canuck 'at's a buyin' apples to take the nigger to Canerdy in a day or two. Your father'll want to take daown a lwud to-morrer an' find aout when, an' we'll git the nigger there to rights."

"I wish thee wouldn't call colored people niggers," said Margaret.

"Why," said Sam, "that's what he calls himself, an' I rather guess from his looks he is one. Good night. I'll mow him away all right."

Groping his way into the unknown interior of the barn, guided only by feeling and a knowledge of the common internal arrangement of barns in general, Sam led his charge to this safe retreat, and bidding him good-bye departed on his devious, dark and solitary way back to camp.

As he silently passed the landing where Jim's dugout lay he saw the light of a lantern glimmering unsteadily along the wood path and heard the hunters returning in bad humor from their unsuccessful quest, stumbling and grumbling over the rough trail.

"Wal," said Sam to himself, as he listened to their floundering progress up the wooded bank of the Slang, "you faound the holler tree, but the coon wa'n't in it. By the gre't horn spoon! I'd ha gi'n a fo'pence to ha' be'n there an' seen 'em an' seen Jim shake that head o' his'n."

When he reached the mouth of the Slang he heard the regular sound of oars and saw another light steadily advancing up the channel of the Creek, shining far along the quiet water before it, while glittering reflections flickered out like floating sparks where the wake stirred the rushes.

Sam ran his canoe into the weeds till the other boat had passed. The lantern shining on the face of the man in the stern revealed the features of Baker, the other visitor at the camp.

"You planned it fust-rate," Sam soliloquized again, "but it's a dref'l poor night for huntin' niggers. O, you cussed slinks! I don't lay it up so much ag'in that other feller, for that's the way he was brought up; but you, Vermonsters, huntin' niggers! Damn ye! I'd liter sink ye in the mud!"

So, by turns boiling with wrath and chuckling over the discomfiture of the slave hunters, Sam pursued his way to where the candle was burning low in the socket of the tin lantern which was hung out to beacon him to the upper landing.

ROWLAND E. ROBINSON.

The Singing Mouse.

We are beguiled by simple, gentle words into listening to the song of the Singing Mouse, who has the magician's power to conjure back the past and to win us to forget the sordid present. We must all envy the author's fortune to evoke the gentle sprite who persuades us that "thoughts and remembrances, these are the things that live forever. It is only the shadows that are real."—*Philadelphia Public Ledger*.

During the long winter nights the old Indians seat themselves before the fire and carve bows, ornament club handles, and feather and point arrows. Perhaps in some of the tepees hang polished guns furnished by the Government, but they are more for ornament than use. This evening work is accompanied by the low croaking of some old Indian, who tells over and over again the legends, folk lore and nursery tales of their grandfathers and grandmothers. The Haida tribe is more rapidly advancing in civilization than any of its neighbors, yet they still carve and point bows, arrows, club handles and paddles. The Indians still cling to other rude implements and take not kindly to metal ones. Rude knives of chert are still used for skinning deer, especially by the old Indians. The axe, of course, is employed for cutting trees and excavating canoes and mortars. It has really taken the place of the stone chisel, yet many old men prefer burning the roots of the tree until it can be made to fall by giving it a few hacks with the rude stone hatchet.—*Fort Still (O. T.) Correspondence Buffalo Express*.

C. L. Bartlett, who was in Washington for two or three years, but who now has a place in southwestern Virginia, is in the city and told me of a deer he owns. "I have raised the deer," he said, "from the time he was a fawn, and Frank, as we call him, is a great favorite throughout that section of country. He will come to my call and follow me like a dog. But his principal value is as a decoy. There are a few wild deer left in that country, though not many, and occasionally I hunt them. When I do Frank goes with me. He will find them if there are any, and will call them to me. Then, if there is a buck, he will make a sound that is a wagger of battle, and the wild animal will make a rush for him. Then Frank runs right back to where I am and I shoot his antagonist. In case of a doe he leads her up very close to me without any semblance of fight. By his aid I killed ten deer last winter in a country where they are scarce."—*Washington Star*.

HOW FUR IS CAUGHT.—VII.

About Deadfalls.

In the course of my story of the Wisconsin trapping trip I have several times alluded to the fact that I saw no sort of trap except the steel trap employed by the trappers of that region. The steel trap is to-day the accepted form of instrument used by the trapper of any region where it is obtainable in quantities and at reasonable price. There are, however, some regions in which the steel trap is not so easily obtainable as in localities near the railroads, and there are times when one may find an opportunity to do a little trapping when he does not find himself prepared with steel traps, not having expected to do any trapping. In cases such as this it is natural and desirable to be fortified with a knowledge of the ancient and honorable, if more primitive, forms of traps formed of wood, such as deadfalls, pens, etc.

The principle of the deadfall is always much the same, though one sees it in all sorts of forms in different localities. Any man of resource can make deadfalls, box traps, "figure 4" traps and the like, and it is hardly worth while to go further fully into the first principles of such engines where space is so limited. The best work published on such matters I have found to be the "Trapper's Guide," published by Forest and Stream Pub. Co., which is very full and complete on this and many kindred subjects. From that work I take a few pictures of deadfalls of a high grade of ingenuity, which will serve to suggest further ideas to the trapper who finds himself out on a trip where he needs traps and cannot get steel traps.

What we may call Fig. No. 1 is a deadfall for sable, marten or any small animal which travels along on top of logs and stumps sometimes in search of food or for the several purposes which induce the moving about of game. It will be noticed that this deadfall is set on top of quite a high stump. The reason for this would be easily seen if one should see the same stump in winter time when the heavy snows have covered the ground. The top of the stump would then perhaps be about level with the snow. One will notice the little house built for the bait pen. My trapping friends do not like these artificial houses, but prefer natural objects as much as possible, yet this house will serve for the idea. The principle of the fall is readily seen. The fall log is about 10ft. long and 5in. thick. It is shown as level, but it must be remembered that the snow comes up to its level and that it must be free of the snow or it could not work; so its end is propped up out of the snow. The trigger of this trap is very simple, being made of two parts, an upright about 3 or 4in. high and a bait stick about 8in. long. The picture shows how to adjust these. This same idea can be worked out in a dozen different ways.

In Fig. No. 2 a more ingenious and less artificial-looking trap is seen, one also which takes less time to build. It is used for taking fisher, though it would be as apt to do for marten or about any animal of investigative turn of mind. It is a more thoughtful trap than at first appears, for it is intended for an animal which is very cautious and prone to spring traps when possible without getting caught.

The arrangement of the triggers in this trap is the same as in the sable trap, but the bait is put out free of any "house" or pen and clear of the log above and beneath. The fisher-cat comes along and sees the bait and lays his plans to get it. He can't reach it from below, so he climbs up the split stump and tries to get at it from there, and can't. Then he tries to go out on the top pole and reach the bait from there, but he cannot do so, because the bark covering to the bait is in his way. So he goes back to the split pole and crawls out between the two poles that make the deadfall, and sticks out his neck to reach the bait. In doing this he still leaves the greater part of his length between the poles of the trap, and the deadfall does the rest. There is one beauty of this trap which commends it, and that is that it is not so apt to blow full of snow and so become useless, as most traps often are that have houses for covering the bait. The natural effect of the falling of snow on this latter sort of deadfall would not appear to make the trap useless, and would not cover up the bait under the snow, for there would be no drifting full of snow.

Deadfalls for Bears.

There are deadfalls for otter and beaver, and deadfalls for fisher, not so good as the one above shown, but I imagine these are not important here, for nowadays otter and beaver are so scarce and so shy that when one goes after them he "goes fixed." But the case in regard to deadfalls for bears is a trifle different. The black bear is not so hard to trap in deadfalls as the otter or the beaver, and annually a great many bears are taken in deadfalls by trappers who use steel traps all the time for other fur.

The steel trap for bears is a heavy and expensive tool, and not many trappers have a great many of them. Besides the weight of such traps prevents carrying them easily, and besides that again one often runs across bear sign when he is far in the woods and has not time to get him a bear trap from the settlements. In some sections bears are not to be called numerous, so it does not pay to count on them enough to pack in great steel traps for them; yet the accident of the line may bring one right across a fine bear trail, and the working of the animal may be seen to be such that he can easily be taken; or it may be that a using ground or runway may be found where bears come through every season, and where a bear pen can be put out to good advantage.

Fig. No. 3 shows a bear deadfall which may be called about a typical one, or at least one which will do to start from. The cut shows plainly enough the way the pen is made, and one can see how the triggers work. The bait is tied to the lower end of the stick *c*. The bait used in New England is usually a piece of smoked codfish, we are told, though I believe pork and beans would be fully as good. This trap is about 5ft. high, about 3ft. wide, and about 4ft. deep. The bait is about 8in. from the back of the pen. The fall log is about 20ft. long, and is weighted with other logs placed on it crosswise. The bed log is made about of two pieces, each about 9in. in diameter. Its purpose is to assist the fall log in breaking the back of the bear when the trap is sprung.

As I look at the details of the bear trap above shown, it appears to me that it is an extremely poor kind of a trap, more especially in regard to the triggers. It is, moreover, complicated and awkward, and carries "trap" written all over it for a bear to read—and even a bear knows a thing or two about traps, especially when he isn't very hungry. It can easily be seen that such a trap would be a dangerous thing to set, especially by a man

who was alone. Instances are common enough where a trapper has had an arm broken by being caught in his own deadfall, which is no respecter of persons. If I had never seen a better deadfall than this I might think it a very good one, but I have seen a much better one, and this I will try to describe, as I saw it manufactured on the spot by Joe Blair, an old and successful trapper.

A Wisconsin Bear Trap.

Joe and I had found a piece of country toward Buckatambon Lake where it was evident a bear had crossed, although it was then only March and early for a bear to be moving. We selected a place near the top of a ravine which led up out of a dense thicket to the top of a divide making down into another system of water courses. We found a big fallen tree, whose vast upturn roots gave us our location for the trap. This made more than two-thirds of the walls of our house, and gave a natural look to the trap. We arranged the bed log and long fall log much as can be seen in the cut, Fig. 3, shown above, driving in stakes to guide the fall log in its fall. We avoided all stiff and newish-looking appearance as much as possible, and disguised the trap by covering it as well as possible with heavy boughs, though leaving plenty of light inside, so the thing would not be too suggestive of a trap.

When it came to the making of the trigger of our trap Joe cut a forked limb whose sides spread nearly at a right angle, and which was about 3ft. long on each leg. This, with one cross piece about 3ft. long, was all the trigger he had. Its principle may be understood if we should imagine the two sticks, *a* and *b*, shown in Fig. No. 3, to be reversed, end for end, in the trap, their point of union being on the bed log instead of on the fall log. In that case the stick *a* would represent the bait-stick, and all the rest of that machinery inside would be done away with—a great gain in simplicity certainly, and yet at no expense of certainty in action. When we came to set our trap Joe stood his forked bait-stick up on end on the bed log, the end which was to carry the bait projecting inside the

BEAR DEADFALL SET BY JOE BLAIR.

trap about 2 or 3ft. On the top end of his forked bait-stick he placed his cross-stick, at right angles to the forked bait-stick. Then he let down his fall log on top of the cross-stick, and the weight of the fall log held the cross-stick and the bait-stick together, so that the trap was set and ready. We then piled a lot more logs on top of the fall log crosswise, as shown in the cut above. The triggers held in place perfectly under this, yet I found that the slight touch of a pole on the point of the bait-stick easily sprung the trap. The top end of the forked bait-stick was slightly rounded at the point where the cross-stick rested on it, and the trap was so set that when the cross-stick was in position the upright leg of the bait-stick was a little to one side of the center of weight of the fall log. Here we had the fulcrum point of the trap, composed of three rounded surfaces not bearing on each other in a direct line. A touch on the bait end of the forked stick would set the fulcrum point rolling, and down would come the trap. This sort of bear trap can be set from the outside entirely, and is very simple and easily built, and looks less like a trap than that shown above. Indeed, if one should look at the photograph of the bear trap which Joe Blair and I built he would not know what it was intended to represent, nor could he see the way the triggers were set unless he looked very closely. As I have mentioned earlier in these articles, Joe wrote me that he caught two bears after I came home, but he did not say whether he took them in a deadfall or not.

How to Market Furs.

Perhaps this will do for discussion of deadfalls, and will do also as an end for these articles, which have proved far longer than I intended they should be, though there remain a great many interesting things which it is hard not to go on writing about. Indeed, that a most interesting book could be written on this subject is well proven in the visible form of the "Trapper's Guide," which I have mentioned. One useful hint I append from that work to cover the whole question of taking off and curing skins, which I have not touched upon at all. This has to do with the marketing of furs in the most acceptable form, and says:

"Fur manufacturers now (in 1894) demand:

"1. That the bow-stretcher be always used for muskrat. Skin from the nose, and make the rump square, not round or pointed.

"2. That ermine, fisher, fox, marten, mink, opossum, otter and skunk must be cased—that is, not cut open—and must be stretched on board stretchers.

"3. That badger, bear, raccoon, wolf and wolverine must be open; that is, cut open along the belly from tail to head, and stretched, somewhat oblong, to the fullest extent of the skin.

"4. The hoop stretcher should be used only for beaver."

Trade Names of Furs.

An interesting chapter could be written on the prices of furs and the trade names of the various sorts of furs. There is the most intense popular ignorance about the actual nature of furs offered for sale in manufactured form, and in no other line of business is deception more common than among uncandid fur dealers. A great many furs are never sold under their own actual names,

and there are fanciful trade names for furs which are of a very common sort if the buyer only knew it. Thus, "Electric seal" is really nothing but dyed skin of the coney, a sort of rabbit. "Black marten" is made out of the dyed skins of the opossum, the raccoon, sometimes even of the dog. "Brown marten" is dyed skunk, and it sometimes is very beautiful too. The skunk is quite a factor in the trade. The real marten, such as we caught on our Wisconsin trip, sells as "Hudson Bay sable," a very fetching name when you are selling furs to an alderman's wife, who has once upon a time heard that Hudson Bay is where the furs come from. "Black lynx" never grows black, but is dyed black. "Russian lynx" is a trifle deceptive when we learn that it is made of nothing fiercer than rabbitskins, dyed. But perhaps the nicest little trade name is that of the "Brook mink." This is nothing but our humble friend the muskrat, whose robe costs about 10 cents on the average.

Odd and Valuable Furs.

A fur store is a delightful place to wander through, and one can there see many wonderful things, and many showing the irregularity of Dame Nature's methods and her contempt for all classifications. Odd and sometimes almost unnameable skins come in, which even in their natural state puzzle the grader. Quality and not name is what makes the value of any skin. Thus I learned of one black bear skin which was bought at Boston by a Chicago house at a wholesale price of \$50. It was only a cub skin, but was so soft and silky that its value was double that of the average high-grade bear skin of twice the size. This skin was killed in Maine. Is now a rug in a Chicago residence, whose owner thought he was lucky to get it at \$100. Southern bear skins run as low as \$3 to \$10 sometimes. Wisconsin bear skins, killed when prime, net the trapper \$25 very often. Albino skins are common in the fur trade. At the store of A. Bishop, in this city, Mr. Rich showed me albino skins of the skunk, muskrat, opossum, raccoon and mink. The skin of the mink was very pale, almost white, and the leather was a faint pink instead of white. The raccoon was very white and heavily furred. There were also several skins which were called "hybrid" by the dealers. The body color was that of the marten or almost like that of the low-grade sable, but across the shoulders was a tell-tale streak of white which denoted the skunk beyond doubt, although the general look of the skin was very far from that of the skunk.

"We don't look at a skin to tell whether it is skunk or not," said Mr. Rich, "but feel of the leather. No matter how a skunk skin is marked or dyed, a good fur man can always recognize the unmistakable feel of the inside of the skin."

"Once we had a skin come in here which was odd to us at first, but we found that it was Australian opossum, plucked and then dyed. This passes in the markets as 'French beaver.'"

The Fur of Royalty.

But the handsomest furs you will see are those of the sable. If you see a bunch of these rich furs hanging on the wall you will go up to them and will not want to go away, such is their fascinating richness and brilliance of coat. I thought I had found some very fine marten skins when I came upon a lot of these furs.

"We made a little collarette for a Chicago lady the other day out of some of these sable skins," said my informant. "It was only about 8in. deep, but it cost \$350. Not more than a few weeks ago we bought one sable skin from the East which cost \$135. This skin you see here is worth \$92. We would take \$55 for this one, or \$88 for this one. It all depends on the quality, the dark skins being the most valuable. These are the furs of royalty, the genuine Russian Crown sable. Each skin regularly exported from Russia has the crown stamped on it upon the inside. A considerable number are yearly smuggled out of that country and so do not bear the stamp. The Alaska sable is not so good as the Russian, or at least is rarely so good, though we sometimes see a very fine, dark Alaska sable. With furs it is the same as with gems—with diamonds or opals, let us say. You may get an opal of some size which is not worth over \$5, or your jeweler may show you one no larger, but whose fire and brilliance may make it worth \$150."

The Trapper's Pay for his Furs.

In the question of the value of his furs the trapper is very much at the mercy of the fur buyer. The trapper has of course a general idea of what his fur is worth, but he bases this only upon what he has received for similar fur at another time. He regularly receives from his fur buyer a list of quotations on the different furs; but here is where the dishonest buyer—and there are many of these—gets in his work. It seems there is competition among these buyers, as in all other sorts of business. For instance, a new firm wants to get hold of so good a set of trappers as the Buck outfit at Mercer, Wis. The firm sends out a circular, and quotes marten up to as high as \$10, or maybe places otter "at \$12 to \$20." A young or inexperienced trapper might think that this firm was paying more than his old firm, and so would begin to ship to the new outfit. When the returns came in he would find that his darkest marten were not good enough to be worth more than \$2 to \$3, and his biggest and blackest otter would not bring more than \$6. They "would not grade." And then there would be some skins "grease burnt," and a skin or so would come up missing in the count. Such robbery of the trappers is a common and notorious occurrence, but it is usually the inexperienced who get caught. The old trapper knows about what his fur is worth, and usually knows something of the firm to whom he is shipping. In some mysterious way, too, the reputation of a good firm travels over the entire country and becomes known among all the trappers—how, I could never understand. When I was down in Mississippi this fall I saw a negro with some coon skins. He told me he trapped and bought furs in that country, and when I asked him where he shipped he mentioned the name of the same firm at Oshkosh, Wis., to which Fay Buck, Joe Blair and most of the Wisconsin trappers I met ship all their furs.

The whole subject of fur, from the wilderness to the palace, is a most interesting one. To the sportsman no phase of it will appeal like the first and rougher ones of the trapping trail. As I write the last lines of my little trapping story the snow is falling fast. It is Jan. 1, and fur will soon be prime again. When one looks out of the window and sees the white footing growing rapidly so good, it is impossible not to long again for the snowshoes and the pack of the deep woods in winter. E. HOUGH.

TWO WEEKS ON THE MOLUNCUS.

THERE are times in our lives when, with our limited capacity for enjoyment, we experience for brief seasons what we call perfect happiness. Such a season for our party of vacationists dawned on the morning of Sept. 27, 1895. Indeed, the pleasure had begun long before this time, for, as is usual with parties going to the dear old Maine woods, many happy hours had been spent together planning how to get the most out of those two short weeks.

To most of our party the delights of the camp and deer hunting were a known quantity. Some were to taste these pleasures for the first time. Let me briefly note the members of our party as we boarded the train on the afternoon of the 27th, bound for Boston.

First, genial Uncle Cole, who, remembering the opportunities to delight a boyish heart, takes with him his young son Allie. Then Mr. A., known to all as Joe, who shares the delights this season with his friend Will P.; and finally the writer, with the partner of his joys and sorrows, familiarly known as Teddie, who is as enthusiastic as the boy Allie.

In Boston we were met by another old crony, Harry J., and with him Helen E., alias Neddie, who is eager to see what camp life really is. A merry party we were as we made ready for our night ride to Kingman, Me., our railroad destination. The ladies assisting us to carry our guns and traps were the object of no small amount of pleasant interest from fellow travelers; some, no doubt, wondering what those poor girls were going to do "way off in the woods."

A night ride by Pullman sleepers over the B. & M. and Maine Central railroads is not the least enjoyable part of a hunting expedition. At least we found it as pleasant as usual, and at 7:30 in the morning, fresh and vigorous, we left the train at Kingman to meet our guides, Lon and Frank. A hearty greeting we gave and received, for three seasons with them have sealed a strong and true friendship.

A brisk ride of seven miles and a bountiful breakfast prepared by the wives of our guides, our "store clothes" exchanged for those—to me at least—more congenial, and we were off for the woods.

Our camp had been prepared for us, as is our usual custom, and for the benefit of some campers who manage to exist in a cloth tent for two weeks I will describe it:

A shed-shaped frame of poles and boards 16×22ft., with open front 6½ft. high, and highest point or ridge of the roof about 8ft. back from the front. Then the whole covered, top and sides, with tarred paper, leaving front open, to be covered in with temporary shelter pieces as may be needed. The front portion leaves a goodly space of 16×8ft., devoted to the camp stove and the ample dining table. The rear portion of 12×16ft. leaves plenty of room for those fragrant fir-bough beds of which we have all heard so much. For a few dollars we have a camp as snug and dry as the kitchen at home, and rainy days are a pleasure in such a place, where wet clothes can be dried in a few minutes over the red hot stove, and plenty of room for games and reading on the dining table.

I could enlarge on the many conveniences and comforts of what we think is almost an ideal camp, but to resume my narrative:

Saturday night saw us safely and snugly settled in our new camp, and as darkness shut down over the quiet woods and we gathered one by one around the log fire to smoke and chat and laugh, then we felt the consummation of our hopes and desires and that peaceful rest which come to the lover of the woods in no other way.

Sunday saw us sunning ourselves on some soft brush pile and gazing up at the fleecy clouds, or reading, or adding some new little convenience to our well-nigh perfect camp.

The next day broke cloudy and lowering, and we resolved to explore the little pond in the woods for pickerel, and at the same time to note the best deer resorts, preparatory to the opening day.

A short time at the pond with the little Eureka folding canoe, which I had brought from home, gave us pickerel enough, and the sudden breaking of the storm sent us hurrying back to camp, where we arrived wet to the skin. But what did we care? Wasn't it raining, and wouldn't to-morrow be the 1st of October and a great day for deer?

That rainy afternoon was well spent in stocking up the "pantry" with a goodly supply of cooked food, ready for an early start on the morrow.

Half an hour before the sun had smiled upon the yellow treetops we had eaten our hearty breakfast, and leaving the girls contentedly snoozing in bed, stole away, two by two, through the quiet woods, silent as Indians (or trying to be).

My lot fell with Frank, and we were out for meat. My story is a short one. Within half an hour after leaving camp a fat, spike-horned buck, on the way to dine at his favorite spot in the burnt land, chanced to cross our path about 60yds. ahead of us. How handsome he looked as his suspicious eye caught sight of those two unfamiliar-looking stumps down the old road! We did not give him long to satisfy his curiosity, for Frank, being directly in front of me, with a clear shot "unhitched on him," and he was ours; killed instantly by a beautiful shot through the neck.

As we reached camp, dragging our prize, we were greeted with the wildest enthusiasm by the feminine contingent, who, having just risen from the most refreshing slumber and with keen appetites for breakfast, were wildly excited by the sight of meat; but when informed that deer meat was not good to eat while warm, they cooled down somewhat, and went poking round among the cold potatoes and johnnycakes.

As midday drew near our hunters came straggling in, tired and hungry, but all with glowing accounts of big buck tracks and the sight of flying white-tails—but no deer.

A united and vigorous attack on our provision box put us all in the happiest and jolliest humor, and could you have partaken with us, no doubt you too would have been happy; for the good wives of our guides had been busy for at least two days baking pumpkin pies, apple cakes, doughnuts, cookies, tarts and delicious whipped cream cakes—food seemingly hardly suited for roughing it; but as Nessmuk says, "We don't rough it, we smooth it."

A good long rest and a quiet after-dinner smoke, and most of the boys were ready for a short afternoon hunt.

Madam J., or rather Teddie and Allie, both eager for a sight at a deer, were my companions, and crossing the

river we followed the old log road out upon the highway to see deer, and incidentally to shoot a few partridges.

A pleasant walk it was to me, as I scanned the deer tracks across the road and covertly glanced now and then at those two eager excited faces, peering sharply into the woods to see the expected deer.

A mile or so with no results and we were thinking of turning back; but Teddie wanting a little rest sat down by the roadside. Allie and I decided to go a little further and be back in fifteen minutes. Around the first turn in the road, and we came to a number of fresh deer tracks in the mud, and as I am explaining to him that some real live deer made those footprints only a few moments ago, crash! crash! and away from the roadside go two white-tails, with shrill snorts of terror. One ran fairly down the road away from us; but as we had only shotguns loaded for partridges, he got away with a whole pelt. The boy after his first jump of excitement opened his mouth to speak, but his English came somewhat twisted and his first words were, "Oh, my mouth is in my heart!" But you may be sure I understood him correctly, for I had been there before and I forgave him on the spot.

Sadly we turned back to seek another sorrowing one, sitting on a stone by the wayside, who wanted to see a deer "Oh, so much."

Camp and supper and the reports of the day's hunt fill out the day to its utmost fullness, and then the glorious old log fire again! One contented, thankful heart was heard to murmur, as he stretched out his tired legs toward the glowing fire and braced his back against a big hemlock log, that if heaven was better than this it was an awful nice place.

As our camp happened to be near an old hemlock peeling a great abundance of well-seasoned logs were scattered about, and we made good use of them during our stay, many times bringing in logs for the fire which were a good load for four strong men.

As evening advances and bedtime approaches the boys celebrate by feeding the fire with a lot of dry fir boughs—and a beautiful sight it is, as the brilliant sparks shoot up a hundred feet into the air, reminding one of Fourth of July fireworks. These celebrations were of nightly occurrence.

A little later and the fire burning lower makes us feel sleepy, and one by one we steal away to our own little place under the blankets, reminded by Lon that we must be up early if we want a deer.

Next morning as we paired off for the day's hunt Harry and I decide that we are good for at least one deer between us; and after the others have chosen their favorite grounds we sneak out on the highway to prospect a little. About two miles from camp we suddenly surprise two deer by the side of the road, just on the brow of a hill. We were not a little surprised ourselves, not looking for deer on the wagon road, but we learned in a very few days that there was no better place to find game than near these grassy roadsides.

As the deer broke away we unlimbered and opened fire. The girls down at the camp told us when we got back that it sounded like a sham battle of the Rhode Island militia. The deer disappeared in the woods, one on each side of the road, apparently untouched, and to tell the truth I thought we had said good-bye to them, for I never could hit a deer on the wing myself, anyway. But not so with Harry; his last shot had been a square side just as the deer turned into the brush, and sure enough, after a little search we found blood in plenty, and within 100yds. we came to our game, stretched out dead. The bullet hole square through the body behind the shoulder told the story. He proved to be a small buck about 100lbs. weight, and as we were lucky enough to get a lift down the road a mile or so by a passing team, we soon reached camp. Lon and Joe had just arrived with a doe, a counterpart in size to the one we had, and we shook hands joyously with Joe, for it was his first deer. Our meat hooks looked in danger of an overstocked market, for there were four more hunters to report, but luckily, as we thought, they brought nothing but partridges, although having jumped several good deer.

We thought it high time to quit for the present, as our party do not kill game we cannot use, and it was a happy feeling we had, as we realized our situation, "Plenty to eat and nothing to do," except to do just what each one had a mind to do. This was generally going partridge hunting, fishing or paddling the canoe in search of new territory.

Our camp now settled down into the delightful place that a camp is when there is not a thought of care of any kind to weigh upon one, and business is totally forgotten for the time. We think often of the dear ones at home, and hope they are all right and well, and feeling sure that such is the case, we give ourselves up totally to the bewitching influence cast upon us by the dear old woods.

The latter part of the week we were visited by Mrs. Lon and Mrs. Frank, bringing my brother, known as Billy, who could not get away from business at the time we had come to camp.

It being his initial trip to the woods we gave him a hearty welcome, and finally introduced him to the dinner table, when he smiles broadly and says he feels very much at home.

We now hastily dispatch by the departing messenger a few lines to two former members of our party, Ed. D. and Rastus B., who—poor fellows—are restlessly clanking their chains at home.

The feminine addition to our party made it very pleasant for all hands, and, happy thought! they brought with them Lon's fiddle. Now, Lon is a fiddler of dance music, known far and near in his section, and that very evening, just as the big silver moon came rolling up among the tree tops, Lon crossed his legs on a log and tuned her up. In a few minutes our smooth door yard was turned into a brilliant ball room, and we were dancing a quadrille, hopping about like grasshoppers. The etiquette of the ball room was of a new order, and smoking on the floor was freely indulged in. It was a pleasant diversion, and the music of some good old waltz, after we had tired ourselves in our hilarity and camped down in some soft spot to sit and listen, carried us back in memory to those happy hours, now gone like a dream.

The week pulled round only too soon, and Sunday, the day of rest, marked more than half our time gone. The days seemed fast slipping away from us now, and we began to look forward with regret to the day when we must leave this pleasant spot, to which we had grown so much attached.

We decided now that it was time to hunt deer again, as we wanted some game to take home. Twelve and fourteen in family have made good sized holes in the three carcasses hanging in the "ice box," and we see they can be comfortably disposed of. But we needed rain. The woods were very dry and still as death, except when we tried to hunt, and then the leaves rattled in a way to make one totally discouraged.

The rain came in due season, however, striking some of us rather unprepared. A lumber camp was in operation over to the east of us some four miles, and Monday afternoon the ladies, with Harry, Billy and I, decided to pay them a visit. After a good sturdy tramp over an old tote road—which the girls found was not concrete walk—we reached the snug little camp, where we were pleasantly and hospitably entertained by the genial proprietor, Mr. Oscar Thomas, and his cook, who set out the best in the house for us. After making ourselves familiar with the lumber business, we thought it about time to return; but the lowering clouds suddenly let loose a downpour, which quite surprised us. But night was approaching, and go we must; so away we went, prepared for a soaking. Fortunately for us, we soon met thoughtful Frank, who had foreseen our calamity, and taking all the rubber goods in camp had started out to meet us, thereby saving us a thorough drenching.

Rain was just the thing we wanted, however, and the next morning broke beautifully clear and pleasant. Everybody was up early, and I saw blood and determination in Joe and Will's eyes as they quietly lit out down the river. Billy went along with Lon to get that deer he had been dreaming about for the past six months. Alas for the beautiful chance he had at a standing deer! A streak of gray fur with a white plume behind it was all that he saw after he fired.

Frank took out Allie, who is a rattling good little shot for a thirteen-year-old boy, and they were lucky enough to get a chance also at a long range of probably 150yds. The deer was drinking at a broad space on the river, and with no chance to get closer the youngster pluckily tried it, and threw up the water directly under her.

Uncle Cole, who was the prize deer hunter of our party last season, had not yet had a shot; but he was still undisturbed, and hunted patiently and hopefully.

I cast lots with Harry again, as we seemed to be traveling under some lucky star, and we headed off on a long tramp into what was new country for us. Crossing the river we selected an old log road leading off to the northeast, and which Lon had told us led to an old logging camp. Following for several miles along the road which led mostly through a heavy, thick wood of cedar and black growth, we came finally to the clearing and the old decaying log camps.

A careful investigation of the place revealed the fact that we were in the stamping ground of a whole drove of deer. Never have I seen signs so plenty as in this place, which was like a deer yard in winter. But we had come a little late, and the wind being somewhat against us we quickly decided to continue on the road a short distance and then make a detour.

Just beyond the camp was a hemlock peeling, and here it was we saw our first deer, a buck and doe. They faded away suddenly on winding us, but not until Harry had sent a couple of copper-patched .44s cracking after them. As no blood was drawn we continued to where another road joined ours, making a sharp fork. Here we got glimpses of two more deer, and we separated for a while, each taking a road alone.

The woods in the point of land between the roads were exceedingly dense, and we had quite a circus act with a splendid buck who played hide-and-seek between us, snorting defiance, and finally completely outwitted us, getting away without giving us a shot.

Not far beyond, a small moose had come into the road and gone ahead in my direction, and as the tracks were very new I followed them. As I rounded a turn my eyes lit on a charming sight for a hunter. About 80yds. from me and just in the act of crossing the road was a slick young spike-horn. He saw me instantly, but he took just time enough for a saucy jerk of his head to get it an inch higher, and that was just long enough for me. I put the white Lyman bead right against his dark shoulder and "unhitched." His first jump told me I had got him, for he stumbled as his feet struck the ground. A few yards into the wood I found him dead. Signaling for Harry, I made ready for our lug back to camp. Just here the folly of shooting a deer four or five miles from camp dawned upon me; but as our muscles had by this time got well toughened, we tackled the job cheerfully, and at just 3 P. M., tired and hungry, as wolves, we dropped our deer before the camp door.

As on a similar occasion when Harry and I brought in a deer, Joe was just a little ahead. We saw from the satisfied way he and Will were puffing away on their cigars that "something had dropped," and no wonder, for catching a buck in the act of crossing the river, they had filled him so full of lead that he had to drop from sheer inability to carry it. He was a big fellow, the best deer our party had killed, and they were justly proud of him, especially since it was Will's first chance at big game.

About a mile from us were the camps of another party of deer hunters, Messrs. Mallett & Eifield, who also had with them their wives. Pleasant calls were exchanged by the ladies of both camps. It was while on their way back from a call to their camp that our ladies started a doe and fawn from their afternoon rest, within 15ft. of the tote road. Helen was ahead, and the excitement and delight at the sight she had witnessed had not fairly left her eyes when she reached camp. As usual, poor Teddie was a little too late and so missed the pretty picture.

One day more of hunting, in which we all put in our best efforts, but without any deer, until Uncle Cole, crowned at last with success, put in an appearance with Frank, bringing deer No. 6.

We were now well satisfied as we recounted our exploits and reflected that of six deer killed by us only one had been a doe. Deer hunting in Maine had not suffered from our visit, and it would be pleasant to remember during the year to come.

Breaking camp! Can anything sound more sorrowful to the true lover of woods and woods life than these words unless, perchance, they relate to the breaking of camp to go still deeper into those beautiful woods and among new and inviting lakes and streams? But we must go. Our vacations had almost expired and there were mouths at home watering for a taste of that venison about which we

had written them; and so with reluctance we pack up, ready for the teams to come for us.

Will echoed our sentiments as he emphatically replied to Harry's question if this wasn't the happiest day of his life, "Not by a jug full."

A little later we were homeward bound, stopping long enough at Lon's house to change our clothes and bid our kind and thoughtful friends farewell for another twelve months.

So ends our yearly hunt, unmarred by a single accident or incident which would cause us to regret one moment of the happy two weeks spent "On the Moluncus."

RHODE ISLAND.

UNDER THE SOUTHERN CROSS.

WALKING, to kill time, through the lobby of the Myrtle Baule Hotel at Kingston, Jamaica, Feb. 19, 1894, a yellow-complexioned youth appeared with three fish for sale—red grouper of from 25 to 40 lbs. weight. My fishing propensities were excited, for the grouper is a powerful fish, and gives a magnificent tussle in the attempt to capture him.

I interviewed the boy, who informed me that he was a native of Bluefields, on the Mosquito coast, and I concluded that he was a white man with a touch of Indian red, instead of the all-prevalent "tar brush" of Jamaica. His dialect was almost incomprehensible, but I gathered that he had taken the fish he had for sale just outside of Port Royal the night before, and that he would be pleased to give me a night's fishing. The compensation he named was modest, and he promised to meet me at the hotel dock that evening at 8 P. M. with the requisite bait. It was the night of the full moon of February, and as I was very much wearied with the scanty amusements of the land, I looked forward with rather pleasurable anticipations toward a night on the waters.

At the appointed time my friend appeared with the usual long and narrow canoe burnt out of the trunk of the celiba, but without bait, which I was told would be procured at the mouth of the harbor. I had my tarpon rod, reel and line, which were evidently looked upon with contempt by my Mosquito guide. I also had protruding from my pocket the butt of a revolver, for I had conceived a most unmerited apprehension of the sharks of Port Royal, gathered from "Tom Cringle's Log" and other West India yarns, and had some difficulty in persuading my boatman that the weapon was not intended to be used against him.

There never was a more magnificent night. The moon was at its full, and its clear brightness illuminated all objects with a power unknown to Northern regions, and not a breath of air rippled the level surface of the harbor. We rowed slowly down the middle of the harbor some seven miles until we reached the dismantled fort nearly opposite old Port Royal, where we found thirty or forty canoes like our own whose occupants were trying to catch bait with cast nets. I was told that the bait was a small fish called tarrapone (with the accent on the last syllable); this I erroneously inferred to be small tarpon, but they were a little silvery fish shaped like a silver mullet. The canoes carried two men each, and from them arose a babel of unintelligible jargon and jokes, punctuated with profanity easily understood. The majority of the occupants were ebony Jamaica negroes, a most courtly race; for as I approached two canoes collided, and one boatman vociferated, "By gad, sah! you run into me, sah! I smash you, sah!" Dominating all ran the deep diaphanous of curses from a heavy man in the stern of one canoe, intermixed with rough jokes, which running fire of obscenity and vulgarity, my guide told me, proceeded from an Englishman who was totally blind. After some fruitless efforts to find a school of "tarrapone," my guide suggested that we find the boat of "Fisherman Petah," whom I had been told at Kingston was the most successful man at the business in the region. We soon found "Petah" (who is a Jew), and for a dollar obtained a sufficient supply of bait. Peter informed me that he was the captor of the grouper I had seen at the hotel in the morning, and that he had given them to my guide to sell, and that he took them at some coral reefs out at sea some fifteen miles and not off Port Royal, information which did not seem to discompose my guide's serenity one whit.

Being supplied with bait we proceeded out of the harbor, dropped anchor and fished. Other boats came out and anchored near us. We shifted our position frequently, and finally dropped anchor within the harbor over the submerged City of Port Royal; but not one strike did I have, although the bait was constantly removed by nibblers.

It was by this time 4 o'clock, and in the south gleamed the splendid constellation of the Southern Cross, the stars of the first magnitude which form three of the points of the cross shining grandly and throwing a long stream of light upon the quiet sea.

Then we started back through the mangroves which line the inner line of the Palisades, by which name the narrow strip of land which separates Kingston Harbor from the Caribbean Sea is known, and crossing the harbor arrived at the hotel at 5 o'clock in the morning, almost dead for sleep, for I almost pitched overboard several times nodding, and gladly sought a bath and bed, having spent a night memorable for the celestial glories of moon and stars and for absolutely worthless fishing.

Hawk Killed by a Ferret.

The light fall of snow which fell recently made busy times for Oakland county, Mich., sports, dogs and ferrets. Charley Gowe and Billy Brown, while rabbit hunting three miles north of the sand hill in Southfield, left their ferret in a rabbit hole to look around for fresh indications of game. After half an hour's absence they were startled to see a large hawk struggling in the air with a white ferret in its talons. The hawk acted as though it wished it "hadn't." Great clots of blood splashed on the snow under the combatants. The hawk appeared worried, and after a few aimless, weak flaps, it fell heavily to the ground with the ferret firmly grasped in its talons. The hawk was dead and lacerated in a terrible manner, while the ferret came up smiling with one puncture through a loose fold in its hide. The hawk had evidently pounced on the ferret as it left the rabbit burrow, and not being posted on the cunning animal's fighting qualities made the greatest mistake of its life. The hawk was as large as a Shanghai rooster.—*Port Huron, Mich., News.*

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Natural History.

REPTILES.

THIS morning I visited a naturalist, and in less than two hours I was introduced to a new world. I had loved outdoor life for more than twenty years, and thought I loved all of it; but now I know that I looked at nature with one eye shut. Said I to myself, "Kennedy, you have missed half the fun of this thing and never knew it. Here was this fascinating book of nature—a chapter for each day afire for twenty years—and yet you never read a page!"

And having read my indictment, I cast about for a defense. I had not far to go to find one. The scientists who read in this book jealously sequester its delights by dint of a carefully studied style of writing. When one considers that one of these snake sharps—as Buck Fashaw would call them—can so fix up a miserable reptile in a glass jar, with his form, colors and markings so life-like that the reptile's own father would know him and his natural prey flee from him, it is hard to understand why or how they disguise themselves in print until, instead of appearing to be the delightful persons they are, they seem like sawdust images listlessly chanting, like chickadees, the immaterial gossip of the woodside.

And yet they do. Listen to this:

"Walked abroad. Heard to-day (April 7) red-breasted woodpecker (*Peckeraris avia*). Saw a garter snake (*Squirmis horribilis*, minor)."

I submit that is a fair sample. But go into the den of one of these sawdust men and shake his warm and hearty hand, and you see that, after all, it wasn't sawdust, but Adam-dust; and in place of the song of the chickadee you hear a continuous stream of enthusiasm of the kind that is catching.

Of course the information gained is not all pleasant. What, for instance, can be more distressing than to find that the deadly Gila monster is not deadly? I am sure that all of us fondly cherished him as the rankest poison and the most dreaded reptile in the world. And yet Mr. Hürter says he kept alive for several weeks the one now in his glass jar; that during that time it bit him repeatedly, sometimes to the bone, "and I knew it was not poisonous," he continued, "because there was no shock flying instantly up my arm, as was the case when the scorpion bit me."

"It is the same way with centipedes. I have had good ones and when I teased them they would bite me, but absolutely without a trace of poison."

The centipede is the fellow who caused the flesh to slough off where he crawled on it!

Mr. Hürter explained that bacteria often is found in the salivary glands of animals, and that when these are communicated to the person bitten they give rise to the belief that the animals themselves are poisonous.

When the scorpion bit him he had no very good snake medicine on hand, but he put his ever-ready alcohol on the wound, and as he had heard that it was good to crush the scorpion's head on the wound, he said he did that also. I did not learn whether this latter procedure was remedial for poison or sin, but rather think it was a moral agent and not a medical one.

He had a cute little alligator skeleton, and if any one can guess how he skeletonized it it will very much surprise me. He took off what flesh he could, but much still remained, and manifestly if he cooked it the bones would fall apart. So he placed it in sweetened water during the day, and at night he poured the water off and placed it in an outhouse, and during the night the hands worked at it, neatly denuding the bones of flesh, but leaving the connective ligaments intact. He said that some nights he had as high as 500 hands working on it. And, ye gods and little alligators! the hands were cockroaches!

He ought to patent the process.

"There is a suspected snake," he said, pointing to a specimen about as big as a big fishing worm. The poor little thing was so pale and harmless looking that my blood simply refused to curdle. I inquired what they were suspected of having done, but made up my mind to vote for acquittal.

"They have a grooved fang (not a hollow one) and are suspected of being poisonous." The peculiarity in this snake consists in the fact that the poison fang, instead of being in front, is back in the jaw where his molars would be if he had any. It is supposed that, having seized and started to swallow his prey, if it gets obstreperous he gives it a little pinch with his Jonah tooth and paralyzes it. Now this looks like a case where poison is used as a means of securing food and not a means of defense.

There was a jointed snake that came alive in a box. That snake's appetite was cultivated, and nothing tempted him until Mr. Hürter's son brought a blacksnake home one night and put it in the same box with the jointed snake. In the morning they were one and indivisible. The jointed snake had swallowed the blacksnake, and as he himself was but 4½ ft. in length and the blacksnake 6 ft. in length the result may be imagined. There he lay—an inert knotted crescent—and when lifted on the two hands he hung on them as stiff as a stuffed snake, which he literally was. The blacksnake's tail was doubled back at the jaws of his devourer, and the latter's neck was bulged out in consequence until it was bigger than his head, the jaws of which were still disarticulated owing to the close proximity of the doubled tail. He lay there day after day calmly digesting his dinner and when the process was complete disgorged the skin and bones.

When the hero of this exploit had shed his own skin and become a bright new snake, he was ignominiously preserved in the glass jar I saw him in. There were too many interesting reptiles and reptile stories for me to tell them all. There was the skull of a big rattlesnake, showing the fangs he was using at the time of his death, with two extra fangs neatly folded along each jaw just back of the one in use, and ready to be moved forward, by the mysterious process of nature, to take the place of the other when lost. There were beautiful lizards, strangely marked turtles, among which was the horny-backed turtle, found in Missouri, large enough to take off a man's arm or leg apparently. The harlequin, or head snake, marked in wide bands like a stocking; a small, sluggish-looking serpent, but said to be about as deadly as a cobra when it does bite.

They were boxing up some snakes to send to some other collection, and a large cotton-mouthed moccasin got mad

and tried to bite them; and when he was finally secured in his box he turned on himself, and struck himself repeatedly. "Well, box him up and ship him. If he dies, he dies. We will see," was the determination. That snake reached its destination sound and unhurt. A cotton-mouth can bite himself or one of his species without any harmful result. He can even bite a common water snake, and the water snake, of a kindred species, remains unharmed. Furthermore, one poisonous snake can bite another poisonous snake of different species without poisoning it. Therefore there is an element in the blood of poisonous serpents which renders them immune from the effects of snake poison. A snake-blood serum! They are working on it now in India, and are not far off from the solution of this long-drawn-out problem.

I cannot get my consent to stop without allusion to the midwife toad, which he lives in Germany, and when the woman toad of sadly advanced modern tendencies lays a nesting of eggs, what does the old man do, as Chimmy Fadden would say, but wrap them around his hindlegs and go off and be a father to them and hatch them. A devoted parent and a good citizen, he sits there in his travail and sings the classical arias of his country in so far as they are written in the base cliff, while his consort, unmindful of the duties of her sex, displays her charms upon the highway, or perhaps a trifle to one side in the ditch. The subject, however, is distressing to the masculine mind, and I will not press it.

But my plea stands—that these fellows, with their beautiful enthusiasm, might well acquaint themselves with the rest of the world, lending it some of their zeal and new zest in life.

GEORGE KENNEDY.

January Robin in Pennsylvania.

PHILADELPHIA, Jan. 3.—On Jan. 1 my brother flushed a robin from under a hedge in his garden. Is not this rather early? He seemed in good condition. E. R.

Game Bag and Gun.

FIXTURES.

March 16 to 21, 1896.—Second annual Sportsmen's Exposition, under the auspices of the Sportsmen's Association, at Madison Square Garden, New York city. Frank W. Sanger, Manager.

WITH THE GREENE RABBITS AGAIN.

SEVERAL weeks since S. met me and remarked, "Well, Art, it's about time we got down to Greene. What do you say?"

What did I say? What would any fellow be likely to say whose past experience tells him where there is a good old-fashioned farmhouse nestling among good hunting grounds, where the good people are always ready to welcome one in genuine no-axe-to-grind hospitality, the home of Brose, the Rhode Island Sam Lovel? I said, "Old man, we'll go whenever you say."

"Next week then," replied S.

The day came, but what a prospect! Rain and mud, and when I stopped for S. his face was as gloomy as the weather.

"No use, Art, we will have to give it up this week. It's settled in for a long siege."

Well, you all know how we felt.

But the next morning all clouds had passed away. The sky was clear, the air warm and the ground in condition to hold scent which would have enabled us to make a good bag. But we were not there, and could only kick ourselves and trust in Providence that the time set for our second attempt would be as good, and that whatever storm hovered in the vicinity would give Little Rhody the go-by.

The next week soon came, and with gun and duffle I presented myself at the store, where I found S. ready. The prospect was not good, for it rained in the morning, and even then the sky was hung with dull-looking clouds, but after a little discussion we started for the train, and were soon hustling along down toward the stamping ground.

As we neared Greene we noted that a heavy fog overhung everything, and when the station was reached one could hardly see 100 ft. ahead. Leaving our traps for the team to bring over in the evening we hoofed it over to the farm, and after a good supper, a smoker and a talk, turned in for the night with the hope that the morrow would be as fair as the day we had lost.

But fate decreed otherwise. Early in the morning as I lay backed up to S. I could hear the sharp clicking of the frozen rain against the window panes, and presently my neighbor turned over and glared at me. We didn't either of us say anything. We didn't have to. But we thought considerable, and that word "cheu" suggested by one of our sportsmen brothers, explained by many and used now by all, was the only comforting article of cussedness we indulged in. Then we heard B.'s cheerful voice calling, "Come, you chaps, get up and look at the weather." We crawled out, looked and then held a debate.

"What do you think, Brose?" asked S.

"Well, you fellows came down here to hunt and I don't think it will be so very bad after all. The woods are wet and it's turning to a light rain now. Anyhow we will try it. You take Stub up in the big woods and look out for a squirrel or two before breakfast. Anxious old Stub, dancing and talking with eyes and stumpy tail, gave us courage and away we went. As we entered the woods Stub ran ahead and shortly we heard him barking sharply. Running toward the sounds we found him engaged in a lively tussle with a big gray, which somehow he had managed to get the best of before the old fellow could get to a tree. S. soon had the big fellow safely deposited in his game pocket, and Stub was again barking off to the right. Now if Stub had been well trained he would have made a first-class squirrel dog, but his fault was that he would not stay under a tree when once a gray was driven up. It was a case of sprinting to where we heard him first bark and then using your eyes to find the squirrel, for the uneasy dog, when once the gray was driven up a tree, would leave for another section. However, Stub was barking now at the foot of a good-sized chestnut, but hard as we looked, neither of us could see any signs of a gray. Off to the left was a newly-made nest, and I suggested to S. that in all probability the fellow was watching us from there. Sure enough, as I fired at the bunch

of leaves a long gray crawled out and started for the clouds. S. stopped him with the right barrel and my left choke brought him to bag. This was a good beginning, although it was not rabbit shooting. As we could start no more and it was getting toward breakfast time we went back to the house, and while showing the two victims heard Stub again barking in the woods east of the house. "Guess I'll go down and see what he has got," said Brose, slipping five shells into his pocket and taking his Colt. Pretty soon we heard him bang! then bang! and bang! Then silence. Then bang! Another silence of possibly five minutes, followed by another bang, and Brose and Stub coming toward the house.

"How many?" we asked.

"One," he replied, holding up the mate of the big fellow we secured through the dog. "Stub had him driven up the tree, and he was hiding in a crotch. I gave him one barrel, which started the ball rolling, and then missed with the second. He went up into a nest and I fired a couple of shots into it, but he never stirred. I thought he was probably dead in the nest and started to climb up, when out he came like a streak, but the last shot caught him on the jump, and here he is. Now let's get something to eat and then start the hounds."

Our breakfast was soon over and down to the barn we went, where B. let out the hounds. Old Trim was a little stiff and looked upon the enthusiasm of the younger dogs with something of an envious expression on his wise old face, but he didn't waste any of his strength racing about. Down across the meadow we went, past the bog hole and struck toward the hundred acre lot. Spreading out with the hounds running along the line we went through for several hundred yards. Presently the Doctor's voice was heard to the right, echoed by that of Rover. They were driving straight away and then circled toward the right, where S. was anxiously waiting.

Nothing had been heard of old Trim until now, when I caught the sound of his peculiar whine toward the left. Nearer and nearer he came, then circled toward the left. Now he was going past too far for me to get a sight of him, but suddenly turned and went back, crossing the track and giving tongue to the right of the start.

B. and S. had started after the younger dogs and I was left by myself. Even Trim seemed to have joined the rest, for I could hear nothing of him, and not wishing to repeat my venture of last year when I lost track of everything—dogs and men—and having to flounder around in the brush and swamp, I too started toward where I had last heard the Doctor. Hearing a rustling of brush I looked up and saw Trim nosing along the ground. The old fellow saw me. "Go on, old boy," said I, and away he went, carefully working along. I watched him until out of sight, and then hearing nothing again started toward the rest. Nothing was to be heard of them, however, and I sat down on a log to await developments.

It was rather a gloomy outlook. Rain had commenced to fall again. The brush was soaked and the heavy sullen look of the clouds bid fair to send us home with nothing to show for our day's work. Growing anxious at the silence I again started toward where B. had last stood, and struck into a mass of bull briers, in which I was soon well mixed up. With one leg well wrapped around with the tough prickly nuisances, my gun tangled up in several more, the branches of the sprouts slapping my face as I endeavored to get myself together, the cold rain falling down the back of my neck, the thought that B. and S. were probably a mile off, I was fast becoming desperate. I must get to the dogs if I wanted to get a shot; but just as I was nearly cleared I suddenly heard Trim give tongue on my left, heard a rush, saw a streak of dirty white shoot past quartering to the right. Somehow the little 12-gauge came to shoulder in an instant, the sight caught the shooting streak well forward of the head; crack! and I had the surprise as well as pleasure of seeing the rabbit jump into the air and fall. Trim was coming at full speed, giving tongue briskly until he came to the bunch of gray. Then he stopped, sat down and looked at me with a knowing expression, as if to say, "You stay with me, young fellow, and you'll be all right. I haven't been looking after that chap for the last half hour for nothing." Drawing the game and giving Trim the head was the next move. Then we started out and ran across B., who was coming toward the sound of the shot. He had been in the neighborhood all the time watching Trim, but S. was nowhere to be seen. A few yells located him away off, and in the meantime we heard Stub barking sharply behind us.

"Stub's got one holed, sure enough," said B., and together we made our way toward the sound. Here we found Stub digging away at a hole, while Rover and Trim, catching the scent, assisted him with their baying. Driving the dogs away, B. examined the hole and then cut a long switch, which he poked into the hole, and a moment later out came the cause of the excitement. Giving the head to Stub we again started out to find S., and after considerable yelling back and forth came across him. He had been in much the same situation as myself, but failed to get a shot. This was certainly discouraging. Only two thus far, but the weather was growing worse, and after trying for another hour we struck back toward the river, and coming through the brush near the pond hole started a partridge, at which S. took a snap shot, but failed to bring to bag. This made him feel badly, but soon after a couple of quail rose directly in front of us near B. His big Colt boomed out, but nothing fell, and S. felt better, for B. is a crack shot. We were now in no condition for further work. We were wet, rattled, disgusted. My boots weighed a ton and the house was a welcome sight. The good smell of a country dinner and the warm kitchen soon made us better-natured, however, and we talked of the afternoon's plans.

"You fellows didn't see anything of that deer that's hanging around here, did you?" asked R. at the dinner table. "I would go out with you this afternoon if I thought I could get a shot at him. Guess there isn't much show for anything else, anyway."

Now a word about that deer. For a couple of weeks before S. and I went down to Greene there had been considerable excitement over the find of the tracks of a strange animal, which, as I have already told the FOREST AND STREAM, was undoubtedly a deer. Where the animal came from no one can tell. A deer was reported as being seen near Sneach Pond in the northwestern portion of the State, and again seen twice near the Riverside woods further south, and a few weeks after our return one of our friends declares he saw a buck while squirrel shooting fifty miles west of Greene. As I have already said, when

we came back to the city and reported this fact we were well laughed at, yet we are all convinced that the tracks seen were those of a deer, and although it would have been positive proof to have had the animal shot, yet I for one am glad that he escaped. I believe that if we could have a few deer started here in our big woods (and there are still some very wild places in our little State), protected by a ten-year law, we could have larger game than rabbits to tramp after. Of course the woods are filled with gunners, but when you come to look at the average one could smile and see that a cunning deer could easily evade the numbskulls that carry a gun and pose as sportsmen. It would take a good man to get a deer in the wildest parts here. The grouse have held their own since the abolishment of the snares, and the natural shrewdness of an old buck would in a measure be his safeguard. Compare the number of guns in Maine with the actual number of deer brought to bag and we still find the deer increasing. It's not all of hunting to have a gun and know how to use it. It is something to get a deer in a favorable position!

After dinner we started out again, more especially after squirrels. The dogs were thought to be safely housed in the barn, but we had been down the road but a half mile when down they all came. B. said he would take them and go down in the swamp, while S. and I watched the holes and waited for the grays to come out of the brush. Selecting our positions, we lit our pipes and waited. Now, there is a fascination in waiting and watching for the shrewd little fellows on a good day, when the woods are bright; but imagine such a day as we were having. It was nearly as dismal an outlook as one could imagine. The half-frozen rain drizzled down one's neck, making everything wet, cold and uncomfortable. My feet grew stiff, and I could hardly help but think that any squirrel that had a warm hole was a fool to be out such weather; but this was the only day we could get, and our hope was that some gray would be fool enough to be out. In the meantime we could hear the hounds at intervals down in the swamp and brush, and soon S. appeared, shivering and gloomy looking. "Well," said I, "B. and the dogs are having some sort of fun; let's go down and get into gear." We started through the swamp, became mixed up in the briers, and heard B. fire twice. "Guess that settles it," remarked S. "We can't get through here, anyway. Let's go back." And back we went. No grays appeared, though, and as it was growing dark we struck off through the woods toward the road, where we waited for B., and then struck through the brush toward the house. The dogs were running aimlessly ahead, followed by we three bedraggled fellows. B. and S. were directly ahead when I heard Stub bark, and at the same time saw S. raise his gun. Glancing in the direction the muzzle was pointing I saw a gray run up a tree, heard the sharp crack of the nitro, and fearing that the gray would get to hole, echoed the shot with my right barrel. It was Scott's game though. This gave us a little courage, but another hour in the woods brought nothing to light, and we gave up and turned toward the house.

Well, it was certainly a poor day, all things considered. Only three rabbits and four squirrels to three guns and four dogs! Well, that is the truth of the yarn. We didn't add thirty or forty more in imagination, and despite the bad weather and hard wet work we can look back and say that we did have a good time. We had no outrageous bag to boast of. We were not "goose-egged." In fact we were very well satisfied under the circumstances, and the fact that a few weeks after twenty-two rabbits and squirrels were shot in the same locality, and a few days after that a few miles from the place two others secured thirty-one squirrels, does not dishearten us from our next year's outing at the old farm. True sportsmen, B. and S. and try-to-be I are contended with a modest bag, and me-thinks were the others who boast of their big bags compelled to take their chances with all things working to their disadvantage, and above all willing to tell the truth, their share of the results would be no better.

Dick of Connecticut in the last issue hits the game hog pretty well in the neck.

A large bag is the result of hoggishness, extreme good luck, expertness, or the effects of a lying disposition.

A small bag, poor luck, poor shooting, or modesty.

But above all a fair bag, honestly made, makes the sportsman well content with himself. ART.

A DAY AND A NIGHT IN THE ROCKIES.

IN FOREST AND STREAM of Nov. 30 I read with interest an article by E. L., entitled "Will's First Wapiti," and as I happen to be the "Will" referred to, it struck me I would like to try and tell the story of the second occasion when my .38-55 "popgun" was tried upon large game. We had traveled pretty much all day, camping at about 3 o'clock, and while the men were making camp E. L. and I started off to get the lay of the land, preparatory to the morrow's hunt. After climbing the hill back of camp and scouting along the ridge a while, from whence we had a glorious view of valley and mountain, we were driven to cover by a sharp flurry of rain, but not until we had decided where our elk was to be looked for the next morning. Snugly housed, E. L. and I took turns showing the General how to play cribbage while planning the campaign.

The General and guide were going off to the left, while E. L. and I were to try our luck in the opposite direction. Located as we were in a valley, between high hills, we did not see the sun before 7:30, so I did not hear the familiar "Turn out, it's 5 o'clock," which occurs in so many hunting yarns; but instead was awakened by the rattling of dishes and the appetizing odor of broiled elk steak, cut from "Will's first wapiti." Without delaying longer than seemed needful in the bath, as the ice had first to be broken, we did full justice to the result of the combined skill of the tenderfoot and of Carlson, the cook, we put a few slabs of steak in our saddlebags, saw that our cartridge belts were full, and with one man to hold our horses in case of need, E. L. and I started some fifteen minutes after the General had "pulled his freight."

After riding about an hour we struck the fresh trail of two horses, heading in the same direction we were taking. E. L. scanned the trail closely and decided that the General and the guide had changed their plans and were headed for our hunting ground. Sure enough a few moments later we saw them ahead of us skirting the side of a mountain.

After a short consultation we decided to change our course and bore off to the left. No fresh signs rewarded us, however, and after climbing numerous ascents which

bore, to me, a striking resemblance in angle to the roof of a church, and working our way through windfalls or jungles, as our guide would call them, until I began to feel if not sore of heart at least sore of seat, we halted beside a little creek and ate every last crumb of our lunch, and while we smoked the soothing pipe discussed plans for the rest of the day. Starting out again we went down the other side of the mountain into some heavy timber, and in the little parks here and there began to find fresh elk tracks; coming into a large meadow finally, we found it all cut up with tracks, some old, but some new. Leaving the man to follow with our horses, we started across toward the timber on the other side, and almost immediately heard the shrill challenge of a bull from the woods ahead of us. We soon got into cover, and carefully making our way through the undergrowth soon saw through the bushes the yellow side of an elk; creeping slowly on we were presently able to see the elk plainly, but, to our disappointment, it proved to be a cow. Then lying hid by the bushes, with the wind in our faces, we were treated with a sight I shall never forget, as a band of some twenty cows and calves came out into the little open park ahead of us; the cows quietly feeding and the calves frolicking about, made a very pretty picture.

After watching them for some minutes and deciding there was no bull with the band, we retraced our steps, mounted our horses and rode on in the direction we still heard the whistle of the bull. Coming suddenly from the woods out upon an arm of the meadow we saw about 150 yds. off two bulls, one a spike and the other about a ten-point. Springing from my horse I got sight on the spike, now trotting fast away, and pulled. Both bulls disappeared into the ravine, and as the spike had turned at right angles I hurried forward, hoping to catch him as he passed down the ravine, but before I had covered much ground he appeared walking slowly, and shortly stopped with his head turned toward me. Sighting for his eye I fired, and was surprised that he did not fall. The next shot, through the neck, however, killed him. I then found my first shot had struck him in the flank, passing clear through him and out back of the shoulder on the opposite side; the second shot hit him within in. of the eye, and either one would have been fatal.

Profiting by our former experience, we "butchered" this animal with reasonable dispatch and only one small nick in "Will's new knife."

After hanging up the hind quarters, to be taken to camp the next day, we started for home, as the shadows were lengthening, and we had a long, rough road to travel.

We were making the best of our way when loud and clear sounded the call of a bull, followed by the peculiar grunt, showing he was not far away. I had killed two elk and was ready to quit, but E. L., having given me the chances, had not killed any and was still bloodthirsty; so while I advocated getting to camp as soon as possible he wished to get this one. "It wouldn't take long." We accordingly left our horses and plunged into the woods, hearing the shrill whistle and guttural grunt every few steps. Soon E. L. (in the lead) stopped, and I saw he had his eye on the game. Coming up to him I saw the tawny side of a big bull, his head hid by a big pine tree. E. L. fired and the elk started off through the trees. "Shoot him!" he cried. "Not much!" said I, "kill your own game!" Well, E. L. got in one more shot as the elk crashed through the timber and we soon found his trail well marked with blood, and followed it till thinking I would wait until E. L. had bagged him I sat down on a log and awaited developments. Soon a shot rang out through the forest, then another, and I started on to assist at the butchering. Before going very far I came on a spike bull just breathing his last with a hole through his heart. I leaned my rifle against a tree and was just bleeding him when bang! went another shot two or three hundred yards off, soon followed by another. I followed the sound and presently discovered E. L. in a dazed condition; asking how many he had, he told me he had run on to a "whole flock" of bulls, had fired at several, he really didn't know how many, but the spike was all he was sure he had bagged. As I was fearful of being caught out in the dark, I insisted on letting them go and we hurried back, cut up the dead bull and hung up his hind quarters, and started back to the horses. By the time we had reached them the sun had entirely disappeared and darkness was rapidly falling. Quickly mounting we started over a trail (?) which I would have been unable to find in broad day, and which to my inexperience seemed dangerous at best. The state of my mind may be imagined when as we advanced the trail (?) disappeared entirely in the darkness, and we dismounted, were scrambling up steep and sliding down into cañons with the horses on our heels, or falling over unseen logs, without the slightest idea where we were or in what direction we were headed. E. L., however, is a born woodsman and was confident he knew "where we were at" and insisted on pushing on, knowing that the whole camp would be alarmed about us, until finally, after I had fallen flat at least a dozen times and had removed portions of my cuticle on each occasion, I was inwardly devoutly thankful to hear him say we would have to give it up.

Selecting as well as we could in the darkness a sheltered spot we picketed the horses, "rustled" some dead wood, and soon had a cheerful fire going, then scouted around till we struck a little mountain brook, and after drinking our fill proceeded to roast some slices of elk liver, which we were compelled to eat without salt; then after smoking a pipe or two built another fire a little distance from the first, as the air was decidedly cool, rolled ourselves in our saddle blankets, with saddles for pillows, between the two fires, went to sleep, and much to my surprise slept all night, waking in the morning a little stiff and empty, but otherwise none the worse.

No time was lost getting under way, and we soon discovered that E. L. had his bearings all right, but when I thought of going through the country we had to reach camp in the dark I was still more thankful that we had not attempted it. We reached camp just as breakfast was ready, and we soon proved that we were ready too.

We were much disappointed to learn that the General and the guide had not seen anything again.

During the rest of our trip we never left camp without some salt, and I advise other tenderfeet to follow our example.

WILL.

Game Laws in Brief.

THE Game Laws in Brief, current edition, sold everywhere, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

CHICAGO AND THE WEST.

With Apologies.

CHICAGO, Ill., Jan. 11.—With apologies to Mr. B. Waters, who presides with dignity and precision over the kennel department of *FOREST AND STREAM*, I should like to state that this week I took the liberty of reading almost all of his department. This I know is unprofessional, but I shall not let it occur again—unless he should continue, as he has in the past, to bring it down to the ken of ordinary beings, not dogmen, who are interested in dogs and shooting. What I wanted to get at was several things, and if so, why. For instance, one gentleman has a good article under the title "Why Field Trials should be Supported." It is news to most lay-readers if field trials are not being supported, but if they are, why is there any Why? Is this question in any wise related to another little article in the same issue, by Capt. C. E. McMurdo, on "Pace in Shooting Dogs?" It is this last article which seems to me to be one of the most sensible things ever published in a kennel department. If the editor of *FOREST AND STREAM* will consent, I should like to dig this article up from the dark and bloody grounds of the kennel world and print it in "Chicago and the West," where all is sweetness and light. Capt. McMurdo says:

"Speed in shooting dogs is commonly overrated. There are several other qualities of much greater consequence that do not seem to attract so much attention. As a matter of fact, some of the rather too slow ones show great intelligence and do their work in grand shape.

"A dog that goes at his top speed can't last long, nor can he do first-class work. The fact is, he is nervous and in too great a hurry to take time to work out his ground properly. He may make a sensational point now and again by almost accidentally catching the scent of a covey at a few yards that he might have scented at three times the distance had he been going at the pace that he could keep up for four hours.

"The pace that a strong, well-made, high-couraged dog can sustain for four or five hours is, I believe, fast enough to satisfy any experienced sportsman.

"The four-hour heats of the late Central Field Trial Club were good tests of pace, as well as other qualities, and demonstrated the fact that fast, nervous weeds do not amount to much as shooting dogs. Some men make a point of never hunting their dogs for more than an hour or so at a time on purpose, to get them into the habit of going at great speed, because they expect (and are often correct in thinking) that great credit will be given them for it; but one would suppose that experience ought to have taught most field trial men by this time that excessive speed is a downright fault."

That the above are words of wisdom is something sure in the mind of any plain, unvarnished sportsman who goes shooting in the field for his own pleasure and who knows the least thing about shooting from actual experience. As such a plain and unpolished soul I wish to chronicle my approbation of them. In common with many others, I have been much troubled by men who wanted to tell me how fast their dogs were, when the sport at hand was shooting and not coursing. Then, as I have already mentioned in these columns, I have openly and ignorantly wondered why the field trials seemed to be trying to produce a sort of dog that nobody who knows anything about shooting wants to shoot over. I confess I can't see the reason why even yet, though I reckon it is because I ain't a dogman. The meat dog is still my ideal. When we begin to see large, upper-case Whys right in the kennel department, and also plain, common-sense statements like that above quoted, it surely does look as though the meat dog was going to have his innings yet one of these fine centuries. For all of which I apologize again.

The War Cloud Thickens.

The diplomatic situation in regard to Mr. Noel Money's buckskin riding breeches is, I regret to state, becoming strained, and at this writing it seems that it will be difficult to avert war between England and America. In support of this assertion I shall be forced to make public, exclusively in *FOREST AND STREAM*, certain dispatches from diplomatic circles bearing on the matter. Exhibit A is in the form of a communication from Mr. T. A. Divine, of Memphis, Tenn., which states:

"I notice what you say in the *FOREST AND STREAM* about appropriating Mr. Money's buckskin pants in the event of war. That would be a terrible hardship on Money, for to my certain knowledge he had very few clothes, and his mainstay was the buckskin pants. He wore them for three weeks on a hunt without ever pulling them off, night or day."

Exhibit B consists in unqualified admission on the part of Mr. Divine that Mr. Money left in his care a very fine Irish setter dog, which dog was nowhere to be found at the time Mr. Money started back home in the East.

Exhibit C comprises certain polite expressions from Mr. Money to Mr. Divine, such as, "Never mind about the dog. It wasn't your fault he got lost," etc., etc.

Exhibit D covers Mr. Money's question to me, "Do you think Tom stole him?"

Exhibit E is covered by the statement in Mr. Divine's letter to Mr. Money, under date of Jan. 4, "It was a great pleasure for me to have you here, I assure you, and I will be lonely till you return again. I will take your advice about the dog. It doesn't bother me any. If I find him, it's all right, and if I don't I shall not worry over it."

Exhibit F comes in form of Mr. Money's letter to me, date of Jan. 7, in which he speaks as follows:

"OAKLAND, Bergen County, N. J.—*My Dear Hough:* Knowing your righteous antipathy and your fearless, plain speaking in regard to such rogues as dog thieves, I send you inclosed a proof of the very elastic conscience of my former friend, T. A. Divine. I have little doubt in my mind that it was this holy rascal who took half a ham, a whole cheese, my boots and Bobo's blankets from the camp in Mississippi. I am really almost sorry that this matter has come to light, as Memphis is too good a place not to go there again, and when there you know how hard it is to get rid of Divine, and how as long as you are in town this man never has any work to do.

"Did he try to sell you a very handsome Irish setter after I left? I'm afraid I'll never see that dog again. Bobo warned me against leaving such a good dog in such bad hands, but truly I didn't know my man then. What a pity a man gifted by nature to such an extent both mentally and physically should fall so low.

"It is lucky it was too cold in camp ever to take off my leather breeches, or he'd have had them and your rifle 'bucket' too.

"If you consider that by publishing this letter you can warn any other fellows to look more carefully after hams, cheeses, boots, blankets and dogs when near Memphis you have my full leave to do so.

"Yours faithfully, NOEL E. MONEY."

In the light of the above special intelligences it must be admitted that the war cloud is thickening. For my own part, I can not with any dignity recede from my position in regard to Mr. Money's pants, although I admit he has international law on his side in doubting the wisdom of taking any chances while Tom Divine was around. Upon the other hand, Mr. Money can hardly depart from his position on the Schemburgh line as regards the city of Memphis, and the question is rendered more grave by the fact that Mr. Divine has swiped his dog, the latter act being generally recognized among nations as an overt act of hostility. The great issue involved, however, is really that of the Monroe doctrine; inasmuch as Mr. Money has admitted boastfully that he got his leather pants in Lunnon, and asserted that they were better than he could get here. We can not, as a nation, suffer foreign buckskin pants to find a lodgment on this continent. As Mr. Cleveland has said very ably, there can be no worse calamity than that. We must therefore leave the issue as above until further light is offered in the regular course of diplomacy.

The Annual Possum Club Dinner.

To the sportsmen of Chicago there is only one leading caterer, and his name is William Werner, alias Possum Bill. For six years Mr. Werner has prepared the annual winter banquet of the Possum Club, of Chicago, and each year he does it better. The dinner this year fell on the evening of Wednesday, Jan. 8, and at the hour of 8 there assembled at Mr. Werner's place, at 72 Bryant avenue, nearly a dozen hungry gentlemen: Messrs. R. B. Organ, C. B. Dicks, Charles Wilcox, E. Bingham, J. E. Isgrigg, D. Rad, Coover, F. A. Place, George Andrews, W. H. Haskell and John La Vally. The first thing called for was a look at Mr. Werner's dogs, and he produced them—one fine cocker spaniel, one dachshund, one Yorkshire terrier and two fine pointers. After a good romp with these the members sat down at dinner. The parent of the Possum Club never asked his children to sit at a handsomer table, nor could one be found anywhere. A huge silver epergne filled with holly made the central table decoration, and this was flanked by two horns of the big horn or Rocky Mountain sheep, out of which fell abundant holly into a long stream continued midway along the table. The effect was very rich and strong and eminently appropriate to the occasion. A new thing on the table this year was the procession of dishes full of fine ripe persimmons, which notoriously are the correct thing with possum. A good laugh was raised at the expense of the *FOREST AND STREAM* representative, who lately ventured to suggest that in the South a possum is always cooked with an apple in its mouth. Everybody else had carved possum except the *FOREST AND STREAM* man, who got none, until at last the waiters brought in a whole possum, baked brown as a nut and with a big apple in its mouth. But he laughed best who laughed last, and everybody envied the owner of a whole possum. The evening was enjoyable in every way.

Hennepin Election.

Hennepin Club elected officers this week as follows: President, W. W. McFarlane; Secretary and Treasurer, G. W. Sibley; Directors, W. W. McFarlane, G. M. Sibley, N. A. Partridge, G. M. Davis and F. E. Willard. The reports showed 2,000 ducks had been shot on the marshes of the club during the last season. There had been no shooting before sunrise or after sunset, or on Sunday.

Game Scarce in the Markets.

Merchants on South Water street here say that game was never so scarce and hard to get. They complain that Oklahoma is shut up tight and that they can get no quail out of there. Kansas is much the same, and is letting very little game out to market. Minnesota is called "air tight," and no venison is coming from there. This state of affairs is by Mr. Bortree, of the National Association, thought largely traceable to protective work in the West the past season.

There was a meeting of the executive committee of the N. G. B. & F. P. A. on Friday evening of this week. Mr. Baird, of the law committee, is drafting an amendment which the Association proposes to bring before Congress if possible, modifying the Interstate Commerce laws in such way that it shall be an offense against such laws to ship game out of any State against the laws of that State. This if done would be placing protective work in national hands.

La Crosse Bass.

Mr. Sam. D. McMillan, of West Salem, Wis., paid *FOREST AND STREAM* a visit this week. He speaks very enthusiastically of the fly-fishing for bass in the Mississippi River near La Crosse, and exacts a promise to sample it next August, at which season it is at its best.

E. HOUGH.

909 SECURITY BUILDING, Chicago, Ill.

Cannot Sell "Pet" Venison.

CHAS. A. BURCKHARDT, proprietor of the Franklin Market in Portland, Oregon, was arrested for having elk unlawfully in possession during the close season, and was tried for the offense before Judge Geisler and a jury. The statute is explicit in setting forth that it shall be unlawful to have elk, deer and other animals in possession during the close season, except for household pets, or to offer the meat for sale.

It was on the household pet contention that the defense relied for acquittal. The elk in dispute was born in captivity at Seattle and afterward figured as a wild denizen of the forest in the Gleason horse taming show last winter. Later Burckhardt purchased the animal and after keeping it for ten months slaughtered it at an unfortunate time and offered its stall-fed carcass for sale at the modest price of 15 cents per pound; to be classic—it "was butchered to make a Portland—not a Roman—holiday."

The household pet claim was a trifle gauzy under the circumstances, although Burckhardt cheerfully testified that the elk was just as much a household pet when it hung in the market in the cold embrace of death as when it leaped and gamboled beautifully in life. The jury evidently took this view of the matter and brought in a verdict of guilty, sustaining the contention of the vigilant Game Protector McGuire.

Burckhardt is deserving of sympathy, as he undoubtedly had the elk slaughtered in good faith, believing he was within his rights in so doing, but the verdict was a just one and will be heartily indorsed by every sportsman in Portland and throughout the State. A principle was in-

volved and triumphed. The principle is that the game laws must be observed to the letter and no excuses for their violation, however plausible, given a standing in court.—*Northwestern Sportsman*.

A RIFLE FOR MOOSE.

It always pains me to see an account of the losing of an animal which has been wounded. The thing which makes me enjoy duck shooting less than almost any other sport is the fact that so many birds are hit and not killed. It is in the shooting of large game, however, that the matter assumes much more serious importance. Especially does it seem a terrible thing to hit a moose without killing him. When a man wounds several animals before getting one, he is almost certain to destroy more than the limit allowed by law; and to any right-minded man the presence of a few moose in a wilderness makes it a paradise, where otherwise it would be a desert. I have always found that the hunters and guides in the moose country, at least the more intelligent ones, regard the needless wounding of an animal as a matter of extreme regret. They are anxious that the sportsman shall get his moose, but they want him to do it without allowing a wounded animal to escape.

FOREST AND STREAM this season has recorded an unusual number of moose stories. Anything concerning the noblest game animal on the continent is always of interest, and it has saddened my heart to read the numerous accounts of moose wounded and lost. Last week's *FOREST AND STREAM* alone contained no less than five instances of this. I believe in almost every case it is directly chargeable to the use of too light weapons. I have seen several cases mentioned where the .40-82 has been chosen for moose shooting. No doubt a moose can be killed with this bullet and powder charge. If I had no other rifle, and saw a bull moose in the woods, I should probably try to stop him with it; but knowing what little I do, from my own experience and the statements of others, I consider any one almost insane who deliberately selects this rifle to take into the woods for this purpose.

Every lumberman and crust-hunter has stories to tell about the ease with which the moose can be killed in the spring, when he is enfeebled by the scarcity of proper food and the severity of the weather. But I am sure that in October, when he is in his best condition, there is no other creature in North America which possesses so much vitality, so great tenacity of life. The man who expects to kill a large moose during the legitimate hunting season with anything less than an ounce of lead and 100 grains of powder is pretty certain to be disappointed, unless he strikes the animal in the heart. If one gets a fair shot at a moose which is facing him and can remember to shoot low enough, he may do this; but if he gets only a broadside shot he is not likely to strike either heart or lungs. I have seen a moose run a considerable distance with more than a quarter of a pound of lead in the region of his shoulders, and every guide in Eastern Canada can tell any number of true stories which go to show that the moose dies as hard as the grizzly bear. Anyone who has ever seen one of these magnificent animals at close quarters, his eyes blazing, the hair on his back bristling and every motion showing tremendous muscular energy, has certainly wished he had a small cannon in his hands. The great bulk of the animal serves as well as a coat of armor, as far as immediate disablement is concerned. And there are plenty of places where, if a moose runs half a mile before falling, it is very difficult to track or find him. I know at least a score of cases in which moose wounded with bullets as heavy as the .45-90—most admirable for deer—have been lost to the hunter.

There is another phase of the matter which makes the ordinary repeating rifle fall short of being the ideal weapon for moose. The company who lead the world in the manufacture of repeating rifles state frankly that they do not aim to make long-range weapons; that every concern which has meddled with long-range rifles has gone to the wall, and that their own rifles are made to do their work at 200 yds. or less. This is undoubtedly good business, on the theory of the best average for the greatest number; and the number of those who will ever look at a moose through the sights of a rifle must be comparatively limited. But the patient few who watch the lonely lakes and barrens of the vast Canadian wilderness often have opportunities for clean standing shots in good light at 300 or 400 yds. The broadside of a large moose presents fully a 3 ft. target, and the man who with a proper weapon on a still day, in a good light, shooting over water at 300 yds., sitting or lying down, cannot strike a 3 ft. ring, is not a good enough shot to go into the woods after big game. But if he shoots at a moose at this distance he should do it with a rifle that will kill.

In the old buffalo days, of which, I am sorry to say, I saw only the last hours, there was a rifle in considerable use for which I have always had the utmost admiration and respect. It was not a weapon to play with in one's back yard, but it was a rifle that was business from the start. This was the single-shot Sharps .45, 500 grs. patched bullet, 3½ in. shell, taking 120 grs. of powder. This rifle cannot now be bought, but the cartridges are made, and last summer, after some correspondence, the Winchester people kindly made for me a rifle, single-shot, of course, with an extra heavy barrel, taking this cartridge. A more satisfactory weapon I have never seen. Contrary to what the Winchester people expected, it shoots with very little recoil, its trajectory is quite low, and it is extremely accurate. Just as might be expected, its windage is almost nothing, and of course its killing power is terrific. The cartridges cost 6 cents apiece, but when one is hunting big game, and does not fire a dozen shots during the hunting trip, the cost of the ammunition is of no consequence whatever.

In the mania for small calibers, steel bullets, and all that sort of thing, I have been expecting to read of some idiot who had tried to kill moose or caribou with a .30-cal. Undoubtedly one of these crochet needles, with its penetration of countless yards of solid timber, would go clean through a poor moose, and he would probably die of peritonitis or tuberculosis, just as he would from the wound made by a .40-82; but if any reader of *FOREST AND STREAM* wants to kill a moose or caribou without having to follow his victim half way to the North Pole, he can rely on the weapon I have described. There are a number of English rifles which are equally deadly, but I know of no other weapon to be obtained in this country which has an equal amount of combined penetration and paralysis concealed about its person. FREDERIC IRLAND,

THE SPORTSMEN'S EXPOSITION.

JUDGING from the manner in which applications for space have been coming in since diagrams were sent out last month space at the Second Annual Sportsmen's Exposition, to be held under the auspices of the Sportsmen's Association, at Madison Square Garden, March 16 to 21 next, will be at a premium long before the doors of the Garden open.

The Exposition of last May was largely in the nature of an experiment. No exhibitor had a very clear idea of just what lines his own exhibit would assume when completed, and it is doubtful if any one of the thousands who visited the display during the week had formed the vaguest conception of what they beheld on passing through the Madison avenue entrance of the Garden. Notwithstanding the fact that it was a first exposition, however, and that few of its exhibitors, if any, had ever before engaged in a like enterprise, the exhibit offered exceedingly few points for criticism either from an artistic or meritorious standpoint. The display of sportsmen's goods and appliances was a revelation to the uninitiated and a source of great pleasure and satisfaction to the experienced sportsman; the spectacle was a grand one in its many and alluring representations of sport with the gun and rod; and the forty odd thousand people who looked upon the Exposition as the most altogether new and original, as well as one of the most attractive and interesting industrial and recreative exhibits they had ever inspected, gave the stamp of public approval to the First Sportsmen's Exposition in a most gratifying manner, both as to the standpoints of quality and numbers.

Under such circumstances it is not surprising that exhibitors, many of whom had gone into the Exposition with no little degree of apprehension as to the outcome, should have been gratified to an extent that resulted in their making inquiries as to space for the second Exposition almost before the first was well under way. The date for the opening of the second Exposition is still more than two months distant, and not a manufacturer outside of New York city has been seen as yet by the Exposition committee. A majority of the spaces have already been taken, however, applications and requests for reservations in every instance having come in by mail and without solicitation other than the receipt of a diagram and the price list of spaces. Many of the more prominent exhibitors of last year, such as the Winchester Arms Co., Parker Brothers, Overman Wheel Co., A. G. Spalding & Brothers, Herman Boker & Co., Hazard Powder Co., Francis Bannerman and Iver Johnson Arms & Cycle Works, have taken increased or more prominently located spaces; while such houses as the Laflin & Rand Powder Co., United States Net & Twine Co., H. H. Kiffe Co., Electric Boat Co., and others of equal importance in their respective lines, who were not in last year's exhibit, have taken liberal space for the exhibit of next March.

The creation of an Exposition committee composed of Messrs. Dressel, Von Lengerke and Chasseaud, and which, together with Manager Sanger, will have entire charge of all details of arrangement and preparation for this year's exhibit, has been a step in the right direction. The members of the committee, working in perfect harmony with Manager Sanger, have quickly eliminated the faulty features of last year's show, and have provided substitutes which can scarcely fail to give additional attractiveness to the Exposition of '96.

Last year the efforts of the Sportsmen's Association and of the Exposition management were centered in but one direction, that of filling the spaces in the Garden with a desirable and representative list of exhibitors, and of demonstrating beyond all question that an exhibition devoted to the interest of sportsmen was wanted, and would be appreciated and supported. Having accomplished this, and feeling sure that the Exposition of '96 would take care of itself so far as its spaces and attendance by the public are concerned, the Exposition committee and the Sportsmen's Association are now making tremendously strong, but very quietly prosecuted effort, to give the second exhibit a value, from a trade standpoint, which the exhibit of last spring did not know to any considerable extent. In other words, it is intended, if possible, to bring to the Second Annual Exposition, not only of the sportsmen of the country, but sporting goods dealers from all sections, to the end that closer relations may spring up as the result of personal contact between buyer and seller, and that points of mutual interest to manufacturer, jobber and dealer may, under the auspices of the Second Annual Exposition, be discussed with profit to all concerned.

The presence at the show of a thousand leading dealers in sporting goods, brought there as delegates to a sportsmen's convention, would unquestionably give the Exposition a value to the exhibitor far greater than it had last year, and that too without detracting an iota from its value as an educator, and its interest to the general public. In this direction the Sportsmen's Association is working, and within a fortnight will be able to announce its perfected plans, and the measure of success that has attended its efforts.

DESPERATE DAYS IN WISCONSIN.

Editor Forest and Stream:

In FOREST AND STREAM of Dec. 21 I have just read Mr. E. Hough's article headed "Desperate Days in Wisconsin," in which he says that never in the history of Wisconsin have there been so many hunters from Ohio and Indiana—pot-hunters, oh yes! from Ohio and Indiana—pot-hunters because they came from outside the State. And they hunted illegally, certainly, because they came a good way to hunt.

Well now, I know of several cases of illegal hunting in Wisconsin; and it was not done by outsiders either. At Phillips this fall I was told by prominent men that they did not like the law against hunting with dogs, and that they did not care a copper for the law; they would hunt with dogs, and they would kill deer whenever they wanted meat, season or no season. It was no secret that deer were hounded within two miles of Phillips by residents only, and in October at that.

At Wolfers, a noted hunting camp twelve miles from Phillips, some hunters from Chicago were placed on stands and deer driven to them by residents. Keep out non-residents.

A camp of three hunters, residents again, camped three miles from our camp, killed five deer and sold them to a logging camp of Mr. Cramer, of Chippewa Falls, Wis. Residents! some more. The hunters told me that they

would hunt until January, as they got a good price for their deer, viz., 6 cents per lb. These hunters were not pot-hunters. Certainly not, for they were residents of Wisconsin and had the right to the deer of the State.

My partner and myself killed one deer apiece and were satisfied, if we did come from Ohio. Pot-hunters again.

In regard to Michigan's law, I do not think it right to tax non-residents. It certainly is not in the spirit of the Constitution of the United States. I have hunted in Michigan for the last twenty-three years, off and on, and every deer killed by me has cost me \$1 or more a pound; so you see that somebody gets the benefit of my money. I have given away plenty of venison, but never sold a single pound—in fact, never sold 1 cent's worth of any game in my life. Still, I must be a pot-hunter from Ohio.

In Mr. Hough's summing up of results of accidents in Wisconsin, I fail to see where there were any accidents caused by Ohio or Indiana men. So you see there are some flighty hunters from some other States besides Ohio and Indiana.

Twenty-five or thirty years ago there were a good many deer in the western part of Ohio, and hunters came from outside of the State to hunt; and they were welcome, too, as long as they hunted in season; and if they killed a deer they took it outside of the State, too, for it certainly was their property if legally obtained. But alas! the deer are nearly all killed, and Ohio hunters will have to go to wilder places to hunt.

As to northern Michigan and Wisconsin, it will be a good many years before the deer will be killed off if left alone in close season by residents. If the game wardens of those two States will enforce the law against real pot-hunters there will be enough game in those States to last a good long time yet. If a man is a citizen of the United States and wants to hunt in any State of the United States in season, and kills game, it is unquestionably his, and he should certainly be allowed to take it anywhere in the United States according to the Constitution. This State rights business cost this Government millions of dollars about thirty years ago. So I think if a man hunts in season he should not be legally restrained from hunting in any State of the Union.

POT-HUNTER.

MEGANTIC CLUB DINNER.

A STRANGER who entered the Copley Square Hotel, in Boston, on Saturday evening, Jan. 11, could have fancied with no vivid stretch of imagination that he had strayed into some colossal Maine camp, luxurious perhaps in its appointments, but still possessing many of the best features of camp life. The occasion which called forth this large assemblage of sportsmen and wonderful display of the fruits of rod and gun was the ninth annual dinner of the Megantic Fish and Game Club. The decorations of the spacious dining rooms in the way of game, fish and sportsmen's accoutrements surpassed anything of the kind ever seen in this city, and reflected great credit on Mr. Abbott Frazer, to whom belongs a large part of the credit for the arrangement. Back of the table at which sat the presiding officer and the invited guests American flags were arranged in tasteful folds, at the top of which was placed a large eagle. Further decoration at this end of the hall consisted of tiger and white bear skins, while in each corner was a magnificent painting of a salmon by Brackett. Around the rooms were deer, moose, elk, caribou and mountain sheep heads. In the arch at the center hung suspended a birch bark canoe and at another place on the walls snowshoes, fishing rods, moccasins, net stiffs and various other paraphernalia of the sportsmen's life were displayed. The tables actually groaned beneath the weight of choice viands, and during the progress of the dinner Henry's orchestra played many of the popular songs of the day, and a colored minstrel band sang plantation melodies with great effect.

After cigars were lighted the 250 or more gentlemen present settled back in their chairs prepared to listen to the flow of oratory which was assured by the presence of many well-known speakers. At the guests' table sat President A. W. Robinson, Lieut.-Gov. Roger Walcott, B. C. Clark, president of the Massachusetts Fish and Game Association; the Governor's private secretary, Col. H. A. Thomas; Hon. A. A. Strout, Henry O. Stanley, Rev. E. C. Butler, Capt. T. J. Olys, of the Ancient and Honorable Artillery Company; Walter M. Brackett, the artist; Andrew S. March, president of the Eaglewood Fish and Game Club; D. J. Flanders, general manager of the Boston & Maine R. R., and Hon. Jas. E. Martine and Wm. H. Brower, of Plainfield, N. J. Letters of regret were received from Ex-Gov. Wm. E. Russell, Hon. John D. Long, Mayor Josiah Quincy and others.

An interesting feature, just before the speaking began, was the bringing in of an immense pie (accompanied by torch bearers, etc.), which when uncovered exposed to view a beautiful little girl dressed as a pink fairy, who presented to the lieutenant-governor a handsome basket of flowers. Mr. Walcott made a neat speech of acceptance and was cheered to the echo as the next governor of the commonwealth.

The first regular speaker was the club president, A. W. Robinson, and it did not take him long to convince his hearers that the Megantic Club was a prosperous organization. His statement that the membership rolls were full gave joy to the members and brought sorrow to the outsiders. Many were also surprised to find that the club had under control 250 square miles of territory. Other facts which he brought out were that there are on the preserve twenty-three ponds and lakes, eight streams, eight bogs and about thirty public and many private camps. The fish hatchery at Big Island Pond has been very successful; 40,000 trout and 14,000 landlocked salmon have been hatched therefrom, and next year it is the intention to place a large number of trout in Long Island Pond. His statement of the club expenses was pretty good evidence of prosperity. In 1887 the expenditures were \$1,694 72, in 1895 over \$15,000.

Lieut.-Gov. Walcott followed Mr. Robinson, and was at his best. He considered it a privilege to attend this giant camp meeting, where he recognized an old friend in that loin of caribou on the menu card. At a former dinner of the club he had heard of the death of an old horse on the preserve, and knowing the possibilities of cold storage, etc., could only conclude that he had found a former acquaintance. The next speakers in regular order were A. A. Strout, of Maine, who has just returned from a year's trip in Europe, and says there is no sporting country in the world like Maine; Messrs. B. C. Clark, Col. H. A. Thomas, Capt. T. J. Olys and Rev. E. C. Butler.

The last speech brought the hour up to midnight and the president with a few remarks closed the festivities. The officers of the club are: President, Arthur W. Robinson; Vice-Presidents, Walter C. Prescott and Nathan F. Tufts; Corresponding Secretary and Treasurer, L. Dana Chapman; Clerk, Dr. George W. Way; Superintendent, Robert Phillips; Canadian Warden, William Boyle, Jr.; Steward, Fred M. Viles.

HACKLE.

IN CENTRAL NEW YORK.

ITHACA, N. Y., Jan. 4.—The ruffed grouse season, which closed Dec. 31, proved in all respects unusually successful. Birds were to be found in plenty throughout the counties of central New York. In Tompkins county especially more birds were found and bagged than during any single season for several years past. The mild fall weather prolonged almost to the very last day of the open season, has constantly tempted sportsmen afield who ordinarily stop shooting about Dec. 1, if not sooner. Consequently more birds have been killed by this class of shooters, while the market-shooter has plied his trade with irrefragable energy from early morn till dewy eve. Nevertheless, as a result of our personal investigation, made during the closing days of December, I can vouch for a good supply of birds left over for next season.

There is urgent need, however, of a readjustment of the grouse season in central New York at any rate. The season should not open until Sept. 15 or Oct. 1. Sept. 1 finds the birds too small and floppy. With full-grown birds awaiting the sportsman on opening day we shouldn't hear so much of the remarkable scores made on that day by "record shooters." A great many shooting men in this section are also in favor of closing the season Dec. 1.

Woodcock shooting was a failure, but comparatively few birds being shot. The splendid covers hereabouts, which usually afford fine shooting on these beautiful birds, were pretty regularly found tenantless.

The long continued dry weather knocked the anticipations of the lovers of rabbit hunting into a forlorn hope. The owners of beagles failed to find rabbits afoot in sufficient numbers to give their dogs needed exercise. I don't happen to remember a more unsatisfactory season for sport with the agile bunny.

The rabbit season, it is unanimously agreed by all those with whom I have conversed, should be extended to Feb. 1, and the use of ferrets should be rigidly discounted by the statutes.

It is the hungry chap with the pink-eyed rodent in his inside pocket that is fast exterminating the rabbit supply.

The duck shooting on the inland waters and marshes of New York during the season of '95, so far as I have been able to discover, has not been up to the average.

A few noteworthy scores, already reported in FOREST AND STREAM, were made in the early part of November, but aside from these the shooting has been of a poor quality.

Taking the season as a whole upon the game familiar to this section of the State it can scarcely be estimated as a fairly good one. Indeed, if one were to exclude grouse shooting from the category, the season might be summed up as "flat, stale and unprofitable." "Stop the sale of game!"

M. CHILL.

NEW HAMPSHIRE GAME LAWS.

Editor Forest and Stream:

At the last session of the New Hampshire Legislature some changes were made in the game laws. Previously the season opened on ruffed grouse, woodcock, squirrels and rabbits Sept. 1. One of the changes was to make the opening on grouse and woodcock Sept. 15, leaving the opening on rabbits and squirrels the same as before. Such a change does not benefit the grouse and woodcock to the extent intended. It gives the impatient gunners an excuse for being out Sept. 1. Some of them might regard the law enough to shut their eyes when running across a brood of grouse. A good many of them would not. The opening on all such game as I have named should be uniform.

Again, another change in the law relating to deer. For a number of years efforts had been made to stop hounding, resulting in a compromise allowing dogs to be used a part of the season, and as usual in such cases, the result was neither one thing or the other. As the law now stands, dogging is prohibited altogether, and it should have been years ago. Not contented with making a law which is really of great benefit to the deer, the open season on them had to be changed, making it from Sept. 15 to Nov. 15. Now, with hounding prohibited and the season closing Nov. 15, which is usually before we can expect the first snow, it practically means no deer hunting in many parts of the State. I know of some good deer grounds in New Hampshire, but I do not know of a place where deer are numerous enough to offer much chance of success when still hunting on bare ground. With a good tracking snow it is by no means as easy as is often represented. What a howl would arise from the numerous camps in the State of Maine should the season be closed there Nov. 15!

With the ever increasing army of sportsmen game in all parts of the country needs about all the protection it is likely to get; yet in making game laws it is well to remember that it is much easier to make a law than to enforce it.

A good deal is said about killing game simply for a record and leaving it to rot where killed; nearly all game wasted in this way is killed early in the season. The sportsman of to-day as a rule cares more for the head of a moose or caribou he kills than for the meat, and should he get a good specimen early in the season in some place far back in the wilderness, and if, as is often the case, he does not know how to skin and save the head, his only object will be to get it out before it becomes tainted, leaving the meat to take care of itself. Should the open season on large game be considered too long, as was evidently the case in New Hampshire, the opening should be made later instead of closing earlier, just as the weather is becoming cold. Cold weather is the time to kill large game, and the time when it can be saved.

A clause in the game laws of Nova Scotia struck me as very sensible; it reads about as follows: "The meat of such game as moose or caribou must be brought out of the woods within ten days of its being killed." Of course ten days from the time of killing in the early part of the season would give it time to spoil, but I noticed in my hunting trips to the Province that great pains were taken to get it out in good condition. One of the first questions

asked whenever I came out with the head of a moose was, "Did you get the meat out all right?"

Such a question would prove rather a facer for some of the hunting parties to answer who go to the Maine woods.
C. M. STARK.

CURRITUCK DUCKS.

NEW YORK, Jan. 1.—Perhaps the few notes following about Currituck may interest your readers, especially those to whom the whistling of the wings of wildfowl forms the sweetest music.

We have been to the Old Currituck Inlet Gunning Club, kept by Leon White, for the purpose of winding up the old year in a blaze of—shotguns, and we certainly have had the finest kind of shooting. Currituck Inlet is on the east side of Currituck Sound, and I think it is the finest shooting ground in the South. The sound is about forty-five miles long by twelve miles wide, the water shallow, averaging 3ft., with plenty of wild celery and "widgeon grass," so called by the natives. It runs into Albemarle Sound, but the birds trade mostly in Currituck.

Canvasbacks have just come in and are in good numbers. The geese have been very plenty and swans in fair quantity, and as for ducks, you could not look anywhere without seeing ducks, and the variety is large. We shot mallards, canvasbacks, redheads, widgeon, black ducks, sprigs, ruddy ducks and teal, besides brant, Canada geese and swans. Also English snipe are found on their marshes now.

The law allows four days in a week for shooting, which gives the fowl some chance to rest and feed. The season commences on Oct. 20 and ends March 20.

My first morning out it blew great guns and it was bitterly cold. We started at sunrise and were soon located on a point, the boat being drawn out of sight in the reeds. Our shots were mostly long ones, and I tell you it takes a good gun and some pointing ahead to induce a duck to stay over to be introduced to Mrs. White. I laughed more than once over Mr. Robinson's account of Uncle Lisha and the teal; and I wished I had some of my snap shot brush shooting friends with me so they could at least see how "sudden" a bunch of teal or canvasbacks with the wind back of them can be.

Leon White has a number of live decoys of all kinds—swan, geese, brant and duck. In particular, I want to mention an old gander who must be possessed of at least seven devils; I have often wondered why he is so revengeful against his own tribe. May be he was jilted in his younger days and is now getting even; but the fact remains that he will call a bunch of geese to him, and when the guns go off and a number are killed or wounded the old fellow will sit right down and laugh, and get gay and kittenish; but if the shots are not successful he will turn right round and sulk. May he live long and prosper. He is the best linguist in the goose family I have ever heard.

Besides the "old reliable" 10-gauge, I took down with me a 12, as past experiences have taught me to have two guns in the blind, and oftentimes when shooting the small gun I was able to get three or four shots into a bunch of ducks, while for cripples it was the right thing.

The best way to get to Currituck is to go from Norfolk to Virginia Beach and then drive to White's. It will take about five hours, but while a little more expensive it is quicker and surer than by boat through the canal, especially in the fall. I am now looking forward to my trip there in August after the bay birds.
IDAHO.

AN OTTER FUR HAT.

Editor *Forest and Stream*:

I have read with interest Mr. Hough's articles on "How Fur is Caught," but none was more entertaining than No. 6, in which he described the manner of setting an otter trap. It carried me back to my boyhood days, nearly half a century ago. Now, don't for a moment think that I ever caught an otter, nor that I ever set a trap for one, as described by Mr. Hough. But what it reminded me of was an incident in connection with that beautiful animal.

My father was a country doctor, and to eke out a living he dabbled a little in politics, and for many years was justice of the peace, supervisor and postmaster. In 1846 (or to impress the time more vividly on the minds of some of your older readers, I might say it was the first year of the Mexican war) he was elected Member of Assembly for Jefferson county. He always wore a high, light-colored fur hat, and of course to go to Albany as Assemblyman he must have a new one. After the returns were all in he began to think of a new hat, which he always had made to order in Utica. One Saturday morning at breakfast he said, "Lester, this afternoon get on to your skates and go down the river to Mr. Cheesman's and get the two otter skins that he has; he said that I could have them for \$5 each." As I had intended going skating I was pleased to be commissioned to combine business with pleasure. It was only three miles to where the otter skins were, but that distance did not satisfy me, as the skating was good, and I kept on down to Red Lake, six miles from the village. As the wind was in my favor it was easy getting there, but returning was a different matter, and when I got back to where I was to get the otter skins I was quite willing to stop and warm myself while the man was getting the skins and tying them together at the nose; but as soon as I was on my skates again I cut them apart, and putting my hands and arms in each there were no cold fingers going home. The otter skins were forwarded to the hatter in Utica and in due season came back in the shape of a light brown high hat, which father wore for at least ten years, and I would give all the old hats I have to have it now.

Twelve years after the above incident I saw two otter that were killed at one shot, but that is another story.

J. L. DAVISON.

LOCKPORT, Jan. 2.

A Christmas in Texas.

OUR old friend Charles Hallock writes entertainingly in *FOREST AND STREAM* of "A Christmas in the Rio Grande." It recalls a Christmas the writer passed not many miles from that river, in Texas, in antebellum days. There was not a mile of railroad in the State and no bridges west of San Antonio. We were returning from a paying rip to Fort Davis and intermediate garrisons with an

FIG. 1.—DEADFALL FOR SABLE.

FIG. 2.—DEADFALL FOR FISHER.

FIG. 3.—DEADFALL FOR BEARS.
Drawn by Tappan Adney. (See page 47.)

ambulance and two baggage wagons drawn by mules, and had expected to join in the Christmas festivities at San Antonio. Arriving at Castroville Dec. 24 in a pouring rain we found the river bank full and of course unfordable. There was nothing to do but to go into camp until the water subsided, with San Antonio less than thirty miles away. It was not a merry Christmas.—*Charles A. Pilsbury in Belfast Journal.*

Ducks by the Square Mile.

ROCKLEDGE, Fla., Dec. 31.—*Editor Forest and Stream*: As you invite contributions to your valuable paper, I venture to send the following facts with which I am fully conversant. The place of which I speak might well be called the sportsman's paradise—it is the east coast of Florida to which I refer—because of its attractive features, lying as it does adjacent to the conjunction of the Banana and the Indian rivers. The rock bound point of Merritt's Island and that of the peninsula opposite mark the mingling of the waters of both rivers, where oysters thrive and fish of great variety abound.

To say that ducks are plentiful would be but a mild assertion. As I arose a little after daybreak, I heard what I thought to be the wind roaring in the tree tops surrounding my cottage, but on looking out I saw no motion in the foliage. Upon walking to the bank of the river I

saw myraids of ducks alighting and as they struck the water they produced the noise which I had thought to be wind; while the water was black the space of a square mile with the ducks, the air directly above them and as far as the eye could reach was filled with them. They were not permitted to remain, however, for when the approaching daylight enabled the marksman to draw a bead a fusillade of shot laid a few of them low and the immense flock again took wing, alighting at a safe distance from either shore. Should this account be discredited, I will prove its truth by the man who took the shot.

AGUR WHEELER.

Florida Quail.

ESCAMBIA, Fla., Jan. 4.—I shoot a few quail now and then; big bags are an impossibility here because birds drive into the densest thickets imaginable, but I go after them; and nailing three or four as they tower over a wall of trees or dodge around one is the nicest kind of sport—makes you feel like patting yourself on the back—and is far greater satisfaction than twenty-five birds killed by easy shots in the open. These quail are certainly wild and wary; they do not lie well to the dog while in the covey, but when once scattered in good cover they work all right. While I was up in the big woods last week we tried for deer and turkeys. Both are there, as we found tracks of them, but the hunt had no further results, I

shall try again. Last winter the Florida woods were full of robins and bluebirds. I have seen only a few of the former, and none of the latter. I suppose that points to a milder winter in the north than we had last year. They say that there are a good many ducks around here, but I have not yet investigated. E. H. O.

A SPORTSMAN'S RECEPTION.

AN invitation, couched in gentle, cordial terms, and ornamented with a noble portrait of an elk's head bearing majestic antlers, from the deft hand of Mr. Carl Rungius, was extended by Dr. C. Fulda, 107 Kent street, Brooklyn, to a number of sportsmen friends. Among the favored ones was the editor of FOREST AND STREAM, but he being "chained to business" denied himself a pleasure and permitted a member of the staff to appear in his stead.

The event was in honor of Dr. Fulda's son, Mr. Carl Fulda, and his nephew, Mr. Carl Rungius, both of whom had recently returned from the far West. Mr. Rungius is known to many of the sportsmen of America through his painting, "The Moosehead," which in itself has wide fame and much admiration. They had returned safely from a successful trip in the home of the big game, in the wilderness which tries the intrepidity, patience, endurance and woodcraft of the best of hunters, and in which successful pursuit requires more than common skill.

A rare gathering of mighty hunters responded. As they arrived they were ushered into the large double parlor by an Indian in the full gorgeousness of war paint, feathers and brave trappings, an Indian who could not understand English till later, when a sudden transformation to a prepossessing young man cast the Indian into oblivion.

The two young men in whose honor Dr. Fulda had extended his hospitality were in full Western hunters' panoply, and graciously assisted Dr. Fulda in receiving the guests. Of these there was a group rarely equaled, mighty men with the gun, and some of the gentle art of the revered master, Izaak, whose memory grows apace with the years and the art of angling.

Some of the veterans could count their summers from the first quarter of the present century, while others were in the flush of early manhood, and others again were on the middle ground of vantage from which to look boldly into the future or the past. Whatever difference in years there was, however, no difference was in the hunter's enthusiasm; age then counted not.

The skill of meadow and mountain, of stream and wood, was there. Of the big game of Montana and the West, Dr. Bennett had brought down many head. Last summer, in his tour of the Yellowstone country, he had gone over a large part of the route taken in by Mr. Hough in his *ski* trip through the mountains, and met many of his friends.

Then there was Mr. Theo. Tapken, skillful with the shotgun on birds a wing; and Mr. Robert Weider and his son, Mr. Charles Weider, whose pleasure afield was in pursuit of small game.

The Messrs. William and Fred Schleger, quick of eyes and hands, solved the flight of the erratic snipe.

Mr. Oberg, of camera fame, calmly bore the honors of an all-round hunter of game, great and small; and Mr. Weiss also had fame as an all-round hunter.

Mr. Townsend Braagaw was famous for his doings in bringing the prince of the grouse family to bag, the partridge, whose swift flight dense thickets and high hills do not lessen.

Then there was Mr. John Averill, taxidermist, and his brother, Mr. Frank Averill, both of whom were trout fishermen.

Mr. George C. Call knew the ways of deer and the approved ways of bringing them to possession.

Mr. Al Duryea, who was listened to with attention on all matters pertaining to snipe and other game birds, and Mr. Louis Chevalier, sage in the habits and habitat of the woodcock, were conceded to be graduates in the lore of the craft and dextrous in the use of the gun.

Mr. Sauter, taxidermist, is well known to fame.

Mr. Hair was a sure snap shot with a camera.

Mr. F. M. Defoe, Jr., of the *Long Island Star*, had dexterity with a lead pencil, and the representative of FOREST AND STREAM was in sympathy with all who hunted and shot and fished—that is, with every one; and appreciative of the fact that there was not one who was not an ardent friend of FOREST AND STREAM.

The violin, flute and piano, making sweet music, were supported by a diapason of voices discoursing the themes of sport.

On one side of the long parlor, on a rack extending from floor to ceiling, and about 12 or 14 ft. wide, were the trophies of the hunt—some were of the game killed by the young men, others they found in the wilderness, mementos of long ago.

There were eleven pair of elk horns, two of mountain sheep, four of mule deer, twenty of antelope and a number of abnormal horns which they found; four buffalo skulls, and smaller skulls of beaver, porcupine, rabbits, mink, badgers and weasels. These were artistically placed on a background of skins, which also were trophies. There were five skins of elk, six of porcupine, eight of antelope. There were two eagles, one of 7 ft. spread of wings, and specimens of the mountain grouse, sage hen, mountain jays, magpies, moose birds and owls, all neatly prepared for mounting for scientific purposes. The collection was a large one.

A number of realistic sketches of the mountain and plain, of the moose, elk and antelope, all from nature, were placed on the wall beside the collection, adding color and beauty to it. The industry which produced such results must have been unceasing.

Before the gathering had realized that any time had passed, the band struck up an inspiring march and supper was announced. To enumerate the *menu* would convey but a faint idea of the delicacies and substantialities, all graced by good will and good fellowship. Dr. Fulda arose and said a few words—words impressive in their simple elegance. In substance he said they were all gathered together for a pleasant meeting, that the pleasant meetings of life were not too many, and that he wished everyone to feel a brotherly welcome and participate and enjoy; and to talk of the fields and the streams, the woods and the flowers, the moose and the deer, the snipe, the quail, the woodcock, the fishes, the sports which they loved best, the sport that they liked to talk about, and to listen to the talk which they were happy in hearing.

And were they happy? And did they not talk of the sport of this year, next year, last year, of years ago, when New York was a village comparatively; of famous grounds for snipe, and quail, and woodcock, and partridge; of rare shots on cunning birds; of hard days afield, barren in result till the last moment, then happily redeemed; of the habits of game birds and deer and moose? The enthusiasm of each! Young men were boys, and elderly men were young; cheeks glowed and eyes glistened as events of stirring interest with rod and gun were lived over again. Midnight came and half had not been said. The bright places in the stretches of the years were all present at once and could not be told in a moment.

But everyone was at his best; everyone admired the two young men who uttered not a boast of their prowess, who only told the history of a trophy when asked, and who told it then in mild words and becoming pride.

And of Dr. Fulda, the gentle, the whole-souled—his happiness grew as his guests waxed enthusiastic in reminiscence and recountal of days and deeds.

And of the guests—the raveled threads of friendship which time and separation multiply were gathered together into a homogeneous whole.

May all their shadows never grow less.

New Jersey Rabbit Trapper Fined.

WM. DILL, a farmer living near Old Bridge, N. J., was charged with setting a rabbit trap on Dec. 1, 1895, by Game Warden Tooker. On Thursday morning Dill appeared before Justice Stricker in this city and paid the fine, which amounted to \$50.—*Perth Amboy Republican*.

Camp-Fire Flickerings.

"That reminds me."

In the midst of all the criticism of Lord Dunraven, it would be a mistake for anyone to suppose that he is not at heart a thorough sportsman. A few years ago he made a trip through the wilderness of New Brunswick, just to fish a little and to see the country, accompanied only by an Indian guide. A New Brunswick hunter told me that one day, when he was up near the head of the Sou'west Mirimachi River, he met two people, a white man and an Indian, coming down the stream. The water was shallow in places, and the white man, who turned out to be Lord Dunraven, was plodding along in the water towing the canoe, while the Indian, whose feet had become sore from the stones on the river bed, was sitting in barbaric state in the stern of the boat. When the pair got down to the railroad, at Boiestown, the Earl looked a little more disreputable, if anything, than the Indian. In some way Mr. Duffy, the keeper of the little hotel at that place, had heard he was likely to have a distinguished guest; and it just happened that two young persons of the plaid suit and monocle variety came along on the accommodation train, and loudly called for food. Mr. Duffy had done his best, and these two occupied the place of distinction in the dining-room. Just at that time the real Lord Dunraven, with a moccasin on one foot and several woolen stockings on the other, his trousers out at the knee, limped up from the river in company with the sad-eyed red man. They were promptly shown to the kitchen, where the unpretentious Earl and his forest brother, without comment, ate a large meal from the end of the bare pine table. Mr. Duffy shows signs of annoyance yet when he remembers the glad laughter of the boys which greeted the announcement of the telegraph operator that evening, that the vagabond of the stocking feet had been sending and receiving messages which revealed him to be Lord Dunraven, while the dukes were unconscious frauds from Boston. FREDERIC IRLAND.

"THAT reminds me" of my great rifle shot made eight or ten years ago. Doc and I were out at the range practicing for the annual inspection. Doc's shooting was all right and is now, but I was off; couldn't hit a whole covey of targets, and gave up in disgust with the remark that I was "no good on bullseyes, but if I had something alive in front of the gun I could show results."

Doc laughed and pointing across the pond, near where we were shooting, to a dead tree, on the top limb of which sat a small bird, said, "There's your game." The distance was certainly 100 yds., perhaps 25 more, and the bird looked about the size of a cent, but I dropped on my knee, said "Dead bird," and bang! went the old .52 cal. Remington.

The bird was gone. Doc wouldn't believe I had hit, but as I did not see it fly I put up a good bluff, and a small bet started us around the pond, where we found the head, a strip of the back and a couple of tail feathers of a poor little cedar bird. It was a great shot; it happened at least eight years ago, but Doc and I speak of it to this day whenever a good shot is mentioned. H. R. B.

He Paid It.

A SCOTCHMAN named Sandy McLean was the head game-keeper of a certain nobleman, and great praise was due to him for the well-keeping of the duke's preserves. Sandy did not like dogs—that is to say, other people's dogs—and one day, when seeing somebody else's dog chasing a hare just inside the boundary of his domain, he had a pop at it and killed it. As it happened, its owner was close by, and demanded £10 compensation. As Sandy refused to pay it, he was served next day with a summons. The duke's solicitor went to the court to speak for Sandy, who sat and listened very intently to the speech which was made in his behalf; but when for the defense the lawyer said that Sandy aimed at the hare and shot the dog by mistake, Sandy jumped up. "Hoot, mon!" he shouted. "Sandy is no bad shot, ye ken; I'll pay the ten pouns!" —*British Fancier*.

"The Singing Mouse Stories," by E. Hough, published by Forest and Stream Company, New York, is a unique and beautiful booklet which will thoroughly entertain the thoughtful reader if taken at the right time and place. It abounds in the genuine philosophy of life and is told so pleasingly and illustrated so quaintly as to command more than usual attention. It is, however, as we observe, like a tonic in medicine, to be taken only *quantum sufficit*. More than that would be "dissipation."

Sea and River Fishing.

THE NEW YORK ASSOCIATION.

THE annual meeting of the New York State Association for the Protection of Fish and Game was held at Syracuse on Thursday of last week, Jan. 9. The convention met in the assembly room of the Yates House, which was kindly put at the service of the Association by Proprietors Averill & Gregory. Delegates were present from twenty-two clubs, representing a membership of 4,800, distributed through the State from New York city to Buffalo and Alexandria Bay.

ANGLERS' ASSOCIATION OF ONONDAGA.—Delegates: Amos Padgham, M. J. Trench, Geo. B. Wood, C. H. Mowry. Alternates: R. A. Molyneaux, D. H. Bruce, Walter S. MacGregor, J. E. Bierhardt, Thos. Woods, Henry Loftus (400 members).

ANGLERS' ASSOCIATION OF THE ST. LAWRENCE.—G. H. Strough, G. M. Skinner, A. C. Cornwall, R. B. Grant, E. N. Brown (300 members).

AUBURN GUN CLUB.—Henry C. Carr, Chas. G. Curtis (80 members).

BLACK RIVER ASSOCIATION FOR THE PROTECTION OF FISH AND GAME, Utica.—W. E. Wolcott (250 members).

CANANDAIGUA ROD AND GUN CLUB.—Dr. C. T. Mitchell, A. B. Sackett, H. B. Whitney, C. B. Lapham (350 members).

CENTRAL NEW YORK FISH AND GAME PROTECTIVE ASSOCIATION, Lyons.—W. S. Gavitt; J. D. Alden, Henry Carr, E. G. Gould (400 members).

CONESUS LAKE FISH AND GAME ASSOCIATION.—H. S. Woodworth (30 members).

ERIE COUNTY FISH AND GAME PROTECTIVE ASSOCIATION, Buffalo.—R. H. Hoyt, T. C. Welch (300 members).

FAIRPORT FISH AND GAME PROTECTIVE ASSOCIATION.

FRANKLIN COUNTY FISH AND GAME PROTECTIVE ASSOCIATION.—W. E. McClary, A. R. Fuller (150 members).

GENESEE VALLEY PROTECTIVE AND PROPAGATING FISH AND GAME ASSOCIATION.—James Annin, H. S. Woodworth, Frank J. Amsden, H. H. Weidner (250 members).

HONEYOUE FALLS ANGLERS' ASSOCIATION.—Aaron Mather, Dr. D. G. Brown (300 members).

NAPLES FISH AND GAME PROTECTIVE ASSOCIATION.

NEW YORK (city) ASSOCIATION FOR THE PROTECTION OF FISH AND GAME.—Robert B. Lawrence, Charles L. Whitehead (500 members).

NIAGARA COUNTY ANGLERS' CLUB, Lockport.—W. E. Huston, H. K. Wickes, Will R. Smith, Dan'l Pomeroy, protector for Niagara and Erie counties (225 members).

ONONDAGA COUNTY SPORTSMEN'S CLUB.—N. Ayer, Wm. Prettie, A. R. King, M. Weidman, A. S. White, John Stedman (200 members).

OSWEGO AND JEFFERSON COUNTIES FISH AND GAME PROTECTIVE ASSOCIATION, Savona (150 members).

OUNDIAGA GUN CLUB OF ONONDAGA.—Solomon George, Martin Hill (50 members).

SPENCER SPORTSMEN'S CLUB.—Henry Killick, W. S. Gavitt (20 members).

STEBEN COUNTY FISH AND GAME PROTECTIVE ASSOCIATION, Bath.—J. G. Parker (50 members).

SUNDOWN FISHING CLUB, Poughkeepsie.

SYRACUSE GUN CLUB.—W. E. Hookway, G. H. Mann, Horace White, D. M. Lefever, H. McMurchy (75 members).

There were also present Fish and Game Commissioners Henry H. Lyman, of Oswego, and Charles H. Babcock, of Rochester; Chief Game Protector J. Warren Pond; Elon R. Brown, of Watertown; C. H. Bannister, of Lyons, and others, to whom the privilege of the floor was extended. President Frank J. Amsden, of Rochester, was in the chair, and Secretary John B. Sage for the twenty-ninth year recorded the minutes. In his opening address President Amsden said:

As usual, the time of the meeting was chiefly taken up with discussion of proposed recommendations to the Legislature respecting amendments of the game and fish laws. The recommendations had been submitted to the law committee in December and Chairman Cornelius W. Smith, of Syracuse, had prepared his report upon the various measures so systematically that the consideration of them progressed rapidly and intelligently. The amendments approved for recommendation were as follows:

Amendments Approved for Recommendation.

Special Protectors.—Sec. 3, which now provides that the Fish Commissioners may appoint special protectors on recommendation of boards of supervisors, to be amended that the appointment shall be made upon the recommendation of incorporated clubs instead of that of supervisors.

Destruction of Nets.—Sec. 32, to be amended as to require that all nets or other illegal devices seized by a protector shall be taken by him before a justice of the peace, sheriff or deputy sheriff, supervisor or two taxpayers, and destroyed in the presence of such person or persons, and that they shall make a certificate thereof. Sec. 33 to be amended so that upon the certificate provided for in Sec. 32 the expenses of the taking of such nets shall be paid as a county charge.

Deer Season.—Sec. 40, which now provides a deer season from Aug. 16 to Oct. 31, to be amended so as to make the season from Sept. 1 to Oct. 31. This cuts off fifteen days from the first part of the season.

Venison.—Sec. 41, which now permits the sale of venison from Aug. 16 to Nov. 10, to be amended so as to limit the possession of venison to ten days after the close of the season.

Floating, Jacking, Hounding.—Sec. 44 to be amended so as to prohibit all floating or jacking, or hunting with dogs; and so that no dogs for hunting deer shall be allowed in the Adirondack preserve.

Squirrels, Hares, Rabbits.—Sec. 49, which now permits the killing of black and gray squirrels and hares and rabbits from Sept. 1 to Dec. 1, with many counties excepted, to be amended so as to make the open season for squirrels, hares and rabbits everywhere from Sept. 1 to Dec. 31, except on Long Island.

Spring Shooting.—Sec. 70, which now permits the killing of web-footed wildfowl except geese and brant from Sept. 1 to April 1 following, to be amended so as to abolish all spring shooting of wildfowl after March 1.

Long Island Wildfowl.—Sec. 161, which makes the close season for wildfowl on Long Island from Sept. 30 to

May 1, so to be amended as to stop all shooting of wild-fowl on Long Island after March 1.

Meadow Hens.—Sec. 175, which now provides that the close season on meadow hens from Aug. 16 to Dec. 31, to be amended so as to make the open season for meadow hens from Aug. 16 to Dec. 31.

Quail.—Sec. 72, which makes the open season for quail Nov. 1 to Jan. 1, to be amended so as to make the open season from Sept. 1 to Jan. 1. Sec. 73, which provides for a close season on quail in many of the counties of central New York extending to Nov. 1, 1898, to be amended so as to repeal all existing limitations forbidding the killing of quail before 1898.

Woodcock, Ruffed Grouse.—Sec. 74, which now provides an open season for woodcock and ruffed grouse from Aug. 16 to Dec. 31, to be amended so as to make the open season from Sept. 1 to Jan. 1.

Sale of Woodcock and Grouse.—Sec. 75, which permits the possession and sale of woodcock and grouse from Aug. 16 to Jan. 31, to be amended so as to limit possession to ten days after the close of the season.

Transportation of Woodcock and Grouse.—Sec. 76 to be amended so as to prohibit the transportation of woodcock and grouse, unless accompanied by the actual owner.

Snipe.—Sec. 77, which makes the open season for snipe and shore birds from Aug. 1 to May 1, to be amended so as to make the season from Aug. 31 to March 1.

Sec. 100, relative to the pollution of streams, which reads:

No dyestuff, coal tar, refuse from gas houses, sawdust, shavings, tanbark, lime or other deleterious or poisonous substances shall be thrown or allowed to run into any of the waters of this State, either private or public, in quantities destructive to the life of fish inhabiting the same,

to be amended so as to remove the present limitation by erasing the words "in quantities destructive to the life of fish inhabiting the same."

Black Bass in St. Lawrence River.—Sec. 110 to be amended by striking out the words "in St. Lawrence River" from the title of the section, as the waters of the St. Lawrence are not referred to in the body of the section.

Black Bass Size.—Sec. 111, which prescribes 8in. as the legal length of bass, to be so amended as to make the length 10in.

Muskallonge.—Sec. 112, which provides a penalty of \$25 for each violation and \$10 for each fish illegally caught, so to be amended as to make the penalty for each fish \$25 instead of \$10.

Sec. 132, which in its present form reads as follows:

No fish shall be fished for, caught or killed in any manner or by any device except angling, in the waters of Lake Erie, within one-half of a mile of the shores thereof, or of any of the islands therein, nor in the Cattaraugus Creek, or within five miles of the mouth thereof, or of any island therein; nor in Lake Ontario, within one mile of the shore, or of any island therein, nor within three miles of the mouth of the Niagara River, the waters of Lake Ontario in the county of Jefferson, included between Blue Rock Point, in the town of Brownville, and the town line between the towns of Lyme and Cape Vincent, including Chaumont Bay, Griffin Bay and Three Mile Bay, in the county of Oswego, between the northerly line of the town of Mexico and Jefferson county line, are hereby exempt from the provisions of this act, * * *

to be amended so as to prohibit all netting, except one mile from shore, in Lake Ontario and all of its bays, in the Niagara River or within three miles from its mouth, or in Lake Erie within one mile from shore, or within three miles of the Horseshoe Reef Lighthouse.

Meshes of Nets.—Sec. 134, which provides that the meshes of nets used in Lake Erie and Lake Ontario and the Cattaraugus Creek shall not be less than 1½in. bar, to be amended to make the legal mesh not less than 2½in. a bar.

Hudson River.—In Sec. 136, to erase the clause forbidding all netting in the Hudson River, because it is permitted by the balance of the section.

Ice Fishing.—Sec. 142, to be amended so as to erase the clause permitting spearing in Oneida Lake and Oneida River; to permit the catching of maskallonge in December, January and February, and the exception in favor of Cortland county.

Eel Weirs.—Sec. 143, which now provides that weirs of which the laths are not less than ½in. apart may be maintained at any time in inland waters, to be amended so as to increase the space between the laths of eel weirs to 1in.

Minnows for Bait.—Sec. 145 to be amended so as to require all bass, pike, wall-eyed pike or maskallonge, caught in minnow nets, to be put back.

Nets.—Secs. 149 and 151 be repealed. They provide for the taking of frost and white fish from the waters of Otsego Lake and from inland lakes not inhabited by brook trout, during such times and in such manner as the Commissioners may stipulate, and for the licensing of nets used for this purpose. This will stop all limited licensed netting, and prohibit the granting of licenses for netting in inland waters.

Sec. 235 to be amended so as to provide that in all cases in which costs are not collected the witness fees and actual disbursements shall be a county charge and paid as other such charges are paid.

Sale of Game.—It was unanimously resolved to urge the absolute repeal of Sec. 249, which permits the sale of game the year around.

In addition to the foregoing, these recommendations were adopted:

a. To provide for the payment of bounties for foxes, owls, hawks and cranes.

b. To prohibit the exhibition or sale of brook trout during the first five days of the open season.

c. To give protectors power to examine any boat or vehicle of any angler or hunter, or any box, locker, crate, basket or other package therein or in his possession, for the purpose of ascertaining whether any provision of law has been violated.

d. To establish a system of bounties to be paid to private individuals who may take nets in illegal use, graded according to the kind of net; each person to take such net before a justice, sheriff, deputy sheriff, supervisor or two taxpayers, destroy it in his presence, obtain from him a certificate of such destruction, and receive the bounty upon production of the certificate to the county treasurer.

The resolution introduced by Mr. Wolcott, of Utica, was adopted:

Whereas, The Legislature of 1894 authorized the purchase of 75,000 acres of land within the boundaries of the Adirondack State Park, and Fish, Game and Forest Commissioners and State Commissioners of the Land Office had since brought about the purchase, and

Whereas, We believe this action to be in accord with the policy which the Association has for years earnestly advocated, viz.: The State ownership of the entire Adirondack region, therefore

Resolved, That we hereby signify our hearty approval of said purchase and urgently request the present Legislature and Commissioners above mentioned to take such steps as may be necessary to acquire additional lands in the Adirondacks as rapidly as possible, with a view that the whole wilderness may eventually be owned and preserved as a public park for the benefit of the people of this great commonwealth.

On motion of Mr. C. E. Gould this resolution was adopted:

Resolved, That whereas it is the sense of this Association that all licensing of nets by the Commissioners of Game and Forests in the lakes and streams entirely within the boundaries of the State be prohibited; also that we request the said Commissioners not to issue any license to nets in said waters; also that the secretary notify said Commissioners at once.

The committee on nominations, which was composed of R. P. Grant, of Alexandria Bay; C. B. Reynolds, of Forest and Stream, and H. S. Woodworth, recommended a re-election of the president and vice-president of the past year, and they were unanimously re-elected as follows: President, Frank J. Amsden, of Rochester; Vice-President, Robert B. Lawrence, of the New York Association for the Protection of Game and Fish; Secretary and Treasurer, A. C. Cornwall, of the St. Lawrence Association, to succeed John B. Sage.

Game Protector Pond and Commissioners Lyman and Babcock were made honorary members of the Association. Mr. Lyman made a brief address telling of the work of the State Commissioners and the difficulty which they encountered by reason of conflicting personal interests. He thought that there should be some common ground upon which the sporting and commercial interests ought to meet without friction.

President Amsden appointed the following Legislative and Law committee: Chairman, Cornelius W. Smith, of Syracuse; Elton R. Brown, of Watertown, in place of J. S. Van Cleef; Chas. B. Lapham, of Canandaigua; Howard H. Widener, of Rochester, and Z. L. Parker, of Bath. The auditing committee are W. S. Gavitt, of Lyons; H. S. Woodworth, of Rochester, and W. H. Chase, of Lockport.

New York Legislative Committees.

THE New York Senate Committee on Forest, Fish and Game Laws is made up of Messrs. Hobart Krum, of Schoharie, chairman; Richard Higbie, of Babylon, L. I.; George Chahoon, of Ausable Forks; James Ballantine, of Andes; Charles Davis, of Saugerties; Frank Gallagher, of Brooklyn, and Timothy J. Sullivan, of New York.

Assembly Committee on Fisheries and Game: Uriah S. Messiter, of Sullivan county; E. F. Post, of Suffolk; F. E. Laimbeer, of New York; M. N. Cole, of Wyoming; C. J. Clark, of Jefferson; John A. Hanna, of Dutchess; O. H. Springer, of Herkimer; H. W. McClellan, of Columbia; A. J. Galligan, of New York.

ST. LAWRENCE RIVER WATERS.

REPORT of the New York Senate Committee on Fish and Game:

To the Honorable the Senate of the State of New York:

The Committee on Fish and Game, to whom authority was given to sit during the summer recess and visit such places as they might in their judgment deem best with a view to arranging, if possible, with the Dominion of Canada for a uniform system of laws for the common waters of the St. Lawrence, respectfully report as follows:

That in the month of August your committee attended a meeting of the Anglers' Association of the St. Lawrence River at Alexandria Bay, at which the Hon. Joseph Mullen was present, where the questions of needed legislation for the waters of the St. Lawrence were fully discussed. A few days afterward your committee had a conference with Sir Adolph Coron, Acting Premier of the Dominion of Canada and Ottawa, at which were present several persons representing the fishery interests of Canada.

At this conference Sir Adolph Coron assured your committee that we could rely upon the cordial co-operation of Canada in joining with the State of New York in the adoption of a uniform system of laws for the protection of the waters lying substantially between Cape Vincent and Kingston, at the head of the St. Lawrence, and Ogdensburg and Prescott down the river.

Sir Adolph Coron was very earnest in the expressions of his desire that these common waters should be open to and enjoyed by the citizens of both countries and under the same privileges and restrictions as to the open and close seasons, the prohibition of fishing with nets and penalties for violations of the law, but was also clear and forcible in the expression of his opinion that it would be difficult to attain this object unless Canadian boatmen could be entitled to the same rights, privileges and courtesies in American waters that have been extended to American boatmen in Canadian waters.

The attention of your committee was called again and again to the fact that the Alien Labor Contract Law has been interpreted and is being interpreted as applying to Canadian boatmen employed by American citizens, and that it was largely on account of this interpretation that a year ago a license fee of \$5 was imposed upon Americans fishing on the Canadian side of the river, which license fee, however, has not been exacted during the past year in the belief that a more liberal course would be pursued by us in the future.

As the Alien Labor Contract Law is a National Act, your committee was unable to give the Dominion authorities any assurance as to its definition or modification with reference to these waters, but gave the assurance that they would use their best efforts to obtain such amendment, modification or definition of this law by the United States authorities for the purpose of exempting these common waters wholly from the operation of this law as applied to persons visiting them for the purpose of recreation or pleasure.

As the law now stands, American citizens who employ Canadian boatmen in American waters are liable to the penalties of this law, and when they frequent the waters on the Canadian side with American boatmen they are

liable to visitation by the Canadian authorities, and under a strict construction of Canadian law their boats may be seized and confiscated.

Unless this evil can be remedied, your committee is impressed with the belief that much friction and trouble are liable to result in the near future, and as most of the persons who visit these waters and who have invested their money in summer residences on the islands therein are Americans, our own citizens will be the greatest sufferers, and your committee therefore suggests that prompt measures should be taken by the Legislature of this State to procure the exemption of these waters from the operation of this law.

If this object can be accomplished the committee is of the opinion that no obstacle will remain in the way of a uniform law which will be acceptable to and adopted by both the Dominion of Canada and the State of New York.

After the conference at Ottawa your committee returned to Montreal, accompanied by Dr. Wakeham, representing the Dominion of Canada, for the purpose of preparing a uniform law to be submitted during the coming winter to the respective governments for adoption.

For the purpose of this law it is proposed that the waters of the St. Lawrence on the American side from Tibbets Point Light, four miles above Cape Vincent, to Ogdensburg, and from Snake Island Light, four miles above Kingston, to Prescott, on the Kingston side, shall constitute a special district, to be under the charge of special protectors on each side; that the open and close seasons on both sides shall be the same; that the penalties now provided by the law of this State shall apply to all of these waters, and that net-fishing, except for the purpose of taking minnows for bait, shall be wholly abolished.

Your committee is also impressed with the necessity of limiting and conforming practically to the present Canadian law as to the limit in the size and catch of the black bass, which is the principal fish in these waters.

The waters in question constitute one vast spawning ground for the black bass of the eastern or lower portion of Lake Ontario.

The bass descend the river in the early spring, and remain upon their spawning beds for the purpose of spawning and breeding their young until about the middle of June, and in many instances later, and then gradually work back toward Lake Ontario.

The failure to place a restriction upon taking these fish as to size and numbers in the past has resulted in their very large depletion within the last few years, and these waters can only be restored to their former wealth by incorporating in the law a proper limit both as to size and numbers.

The Canadian authorities are willing to extend somewhat the open season for taking black bass, allowing it to commence on June 10 instead of 15, as now provided by their law; but they insist, and in the judgment of your committee very justly, that their present limit of twelve fish to a rod and two rods to a boat, or twenty-four fish to a boat in a day, should be adopted by us, and also that no bass less than 12in. in length should be killed, which is about the size of a fish weighing 1lb.

In the interview with Sir Adolph Coron he stated to your committee that it was the earnest desire of the Dominion of Canada that certain islands or portions of islands in the St. Lawrence River should be set apart by the respective countries for and dedicated as a perpetual public park without restriction to all persons, whatever might be their nationality, who might frequent the waters of the St. Lawrence in the future for the purpose of pleasure or recreation or as summer residents, and he assured your committee that the Canadian authorities would gladly co-operate with us in carrying this measure into effect by appropriating certain islands now within its waters if the boatmen of both countries could be relieved from the embarrassments which now so frequently arise under the present interpretation of the Alien Labor Contract Law.

Your committee is advised that an effort in this direction is now being made by the Anglers' Association of the St. Lawrence, and although this matter is not within the line of the duties imposed upon them, they recommend that such proposition, if any, as may be made in this direction should be most cordially and favorably considered by the Legislature of this State.

Your committee also desires to call attention to the present lack of facilities for discovering and punishing violations of the present laws for the regulation of fishing in the St. Lawrence, for the reason that the protectors have not at present the means provided for detecting or catching persons while actually engaged in violation of the law, especially in regard to fishing with nets, and unless such violators can be caught in the act it is very difficult to obtain sufficient evidence to insure their conviction.

If the protector in charge of this section could be provided with a swift steam yacht it would be possible for him at all times to overhaul and examine the contents of any boat engaged in fishing, for the purpose of ascertaining whether the law was being violated not only as to fishing with nets, but as to the number and size of the fish taken by angling.

Your committee feel assured that if such a yacht will be provided by this State for use in the waters on our side of the line, the Dominion of Canada will make like provision for the enforcement of the law and the detection of violators of it in its own waters, and your committee therefore earnestly recommends that the Board of Fisheries, Game and Forest of this State may be authorized to procure a steam yacht to be used for such purpose, and that a reasonable appropriation be made for that purpose.

For the purpose of carrying into effect the results arrived at by your committee in its conference with Dr. Wakeham, at Montreal, for the purpose of establishing a uniform law to apply to the waters in question, an additional article to be added to the present fish and game law is herewith submitted.

This article defines the waters in question and applies exclusively to them, and your committee feels assured that the provisions of this article will be acceptable to and adopted by the Dominion of Canada if adopted in this State.

Such proposed amendments to the present law as will be necessary to make it conform to the proposed new article are also herewith respectfully submitted.

DATED Dec 31, 1895.

The amendments proposed by the Senate Committee provide for the exemption of the St. Lawrence River, between Tibbet's Point Lighthouse and the city of Ogdensburg, from all restrictions as to bass, pickerel, pike, wall-eyed pike and muskallonge contained in Sections 110, 111, 112 and 131, and supply a new Article XV., with provisions, in brief, as follows:

Article XV., Special Provisions as to the Waters of the Thousand Islands.

Sec. 320. This article applies exclusively to the waters of the St. Lawrence River lying between an imaginary line drawn from Tibbet's Point Lighthouse about four miles southwest from Cape Vincent to the Snake Island Lighthouse, about four miles southwest from the city of Kingston in Ontario, and an imaginary line drawn from the northern part of the city of Ogdensburg to the northern part of Prescott in Ontario, situated on the opposite side of the St. Lawrence River, and to be known for the purposes of this article as "the waters of the Thousand Islands."

Sec. 321. The Board of Fisheries, Game and Forests is authorized to appoint a protector, to be known as the protector of the waters of the Thousand Islands, whose duty it shall be to patrol under the direction of said board the waters of the Thousand Islands and to enforce the provisions of this article.

Sec. 322. Black bass under this article includes small-mouthed black bass and large-mouthed black bass, otherwise known as Oswego bass.

Sec. 323. Black bass, pickerel, pike and maskinongé, commonly called muskallonge, shall not be caught in the waters of the Thousand Islands between the first day of January and the ninth day of June, both inclusive.

Sec. 324. No fish shall be caught through the ice in the waters of the Thousand Islands between the first day of January and the ninth day of June inclusive.

Sec. 325. No black bass less than 12 in. in length shall be intentionally taken alive from the waters of the Thousand Islands, nor shall the same be killed or possessed, and in case any such fish is caught or taken the person taking it shall immediately place such fish back in the waters from which it was taken without unnecessary injury.

Sec. 326. No person shall take, catch, kill or possess more than twelve black bass of the size permitted by this article in any one day. Where more than two persons are fishing or angling from the same boat the aggregate number of bass taken, caught, killed or possessed by the occupants of said boat in any one day shall not exceed twenty-four.

Sec. 327. No fish shall be fished for, caught or killed in any manner or by any device except angling in the waters of the Thousand Islands, except that it shall be lawful to take minnows for bait in the manner provided for by Sec. 145 of this act; provided, however, that if any black bass, pickerel, pike, wall-eyed pike or maskinongé are taken in such nets they shall be immediately returned to the waters alive.

Sec. 328. The use of dynamite or other explosives in any of the waters of the Thousand Islands is prohibited, except for mining and mechanical purposes. The possession by any person on the shores or islands of the waters of the Thousand Islands of dynamite or other explosives, where the use of the same is prohibited by this section, shall be deemed a violation thereof.

Sec. 329. Every person fishing in the waters of the Thousand Islands shall, whenever requested by any fish and game protector, permit such protector to inspect and examine the fish taken by him or in his possession, or in the boat occupied by him, and the implements by which the same were taken, and in case of his refusal to permit such examination or inspection, he shall be deemed guilty of misdemeanor and also be liable to a penalty of twenty-five dollars for each such refusal.

Sec. 330.—In case any angler or person fishing in the waters of the Thousand Islands shall, upon the request of any fish and game protector, refuse permission to such protector to inspect and examine the fish taken by him or in his possession or in the boat occupied by him, or the implements by which the same were taken, such inspector shall have power and is hereby authorized with or without a search warrant to examine the contents of such boat or of any box, locker, basket, crate or other package therein, or in the possession of such angler or person so fishing, for the purpose of ascertaining whether the provisions of this article have been violated, and to use such force as may be necessary for the purpose of such examination.

MASSACHUSETTS ASSOCIATION.

BOSTON, Jan. 10.—*Editor Forest and Stream:* The Massachusetts Fish and Game Protective Association held its annual meeting at the Thorndike Hotel in this city Wednesday evening last. For nearly twenty-five years this body of men—business and professional men—men who love the sports to be had by the proper and intelligent use of the rod and gun, has done much to foster and encourage a healthy sentiment for the enforcement of the laws relating to the protection of fish and game not only in our State, but in the other New England States as well. When funds have been wanted for these and other purposes connected with the objects of the Association, its members have always nobly responded to the calls made upon them and in all those years; large sums in the aggregate have been spent, not only in stocking our covers with birds and our streams and ponds with fish, but in aiding wardens and others in the proper enforcement of the laws relating to their care and protection. Much has been done, but much more needs to be accomplished, and judging by the past there will be no relaxation in the efforts of the Association in that direction. President Clark is an ideal sportsman, a man who enjoys the sport for the relaxation from the cares of business, and who is never better satisfied than when helping others to a day with the rod or gun at his charming place at Cohasset. Secretary Kimball is a hard worker and his knowledge and experience are always at the service of all who are in any way interested in the good work.

But to the meeting. The board of government at its session disposed of various matters of routine work, an important report from a committee making several excellent suggestions as to enlarging the scope and work of the Association being referred to the new board of government for its consideration. At 6 o'clock sixty members sat down to dinner, at the close of which the regular business was proceeded with. The report of the treasurer showed a balance on the right side of the ledger, and that the sum of \$209 had been added to the permanent fund, making that fund \$2,403, safely invested. Messrs. Arthur P. Selfridge, Benj. F. Wild, James L. Power, C. Edward Sweet and Charles C. Williams were elected to membership. The following were elected officers for the ensuing year: President, Benjamin Cutler Clark; Vice-Presidents, George W. Wiggin, C. J. H. Woodbury, J. Russell Reed, Edward Brooks, Robert S. Gray, Edward E. Allen, Dr. Heber Bishop; Secretary and Treasurer, Henry H. Kimball; Librarian, John Fottler, Jr.; Executive Committee, Charles G. Gibson, William B. Smart, Dr. J. T. Stetson, Dr. W. G. Kendall, Rollin Jones, Edward E. Small, Loring Crocker, Charles A. Allen, William F. Almy, Walter C. Prescott, Sidney Chase, Charles Stewart; Membership Committee, Edward T. Barker, Arthur W. Robinson, John N. Roberts; Fund Committee, Warren Hapgood, Edward J. Brown, George O. Sears.

President Clark thanked the members for their renewed confidence, briefly reviewed the work of the year and pledged his best efforts in behalf of the work in which they were all interested. The committee on the annual dinner—always the event of the year—reported the arrangements well nigh complete. It will take place at Young's Hotel, Thursday, Jan. 23, at 6 o'clock sharp. That among the guests sure to be present were Gov. Greenhalge, Lieut.-Gov. Wolcott, Judge Shurtleff, Fish

Commissioner of New Hampshire; Capt. John C. Wyman, Rev. E. A. Horton, Collector Winslow Warren, President Titcomb, of the Vermont Fish and Game League; Fish Commissioner Wentworth, of Maine; A. N. Cheney, Esq., Fishcultivist of New York, and others, from which it will be seen that the occasion promises to be of more than ordinary interest.

WILLIAM B. SMART.

PITTSFIELD ROD AND GUN CLUB.

THE annual meeting of the Pittsfield (Mass.) Rod and Gun Club was held on Friday evening of last week. The officers were re-elected: President, J. M. Stevenson; Vice-President, J. F. Noxon; Secretary-Treasurer, W. W. Tracy; Captain, H. S. Russell. Executive Committee—J. H. Wood, C. A. Byram, George W. Clark. Field Officers—W. W. Tracy, Ben Smith. After the banquet President Stevenson read this report, showing that the club had been active and useful during the year.

Mr. Stevenson's Report.

"It seems to be within reason to say that the Pittsfield Rod and Gun Club has accomplished something during the past year and still gives evidence that it should have an existence. The aim of this club is to aid all lovers of the rod and gun in their efforts to enjoy their favorite recreation near their own homes. It is not an exclusive society for the benefit of a few members, but believes rather in 'The greatest good to the greatest number.'

"Through the efforts of the executive committee the State Board of Commissioners of Fisheries and Game have this year paid for the services of Deputy Commissioner Smith, and consequently relieved the club of quite an item of expense. He has continued to do efficient service in following up the law breakers, but the result of his work I consider to have been rather in the line of prevention than in cure. There is good evidence that the number of partridges has been larger than for a number of years; the supply of trout keeps up, notwithstanding the drought of last year and the increased number of fishermen.

"The fact that a competent officer is on the track of the pot-hunter or fisherman keeps him in check and gives the honest sportsman a chance. By special request of the Commissioners, Mr. Smith has devoted considerable time to the violators of the law against shooting on the Sabbath, with the result that there is not so much of it done in the localities which have received his attention. It is quite a broad field to cover and he has done the best he could with it. The arrests made were as follows: Three for liming trout brook; three for snaring partridges; one for netting fish. Of these four were convicted, paying \$10 each and costs, and one had the papers filed away on payment of costs. Warrants are also held for further evidence against four other parties for snaring partridges. Set lines have been destroyed, two each in Pontoosuc and Onota lakes and one net destroyed in Trout Brook.

"In May last the club received from the State hatchery at Winchester 50,000 brook trout, which were placed in School House Brook, Pittsfield; Town Brook, Lanesboro; Potash Brook, Hinsdale; Windsor Brook, Dalton; Flintstone Brook, Cheshire; Whipple Brook, Lanesboro; Shaker Brook, Hancock.

"We also received 10,000 Lake Superior trout, which were placed in Pontoosuc Lake. These are the same variety as were placed in Onota a year ago, and we shall have the opportunity of seeing whether they will survive in either lake.

"As you have seen in the public press, an effort is to be made to have the State establish a hatchery at some suitable location in Berkshire. This, if done at all, will be under the direction of the State Board of Commissioners of Fisheries and Game. I have been in correspondence with Commissioner Buffington, of Worcester, and find that the Commissioners are very anxious to establish such a hatchery. I have assured him the members of this club will do what they can to bring it about, and in answer to an urgent invitation we expected to have him with us to-night, but a letter received this morning states that he is not able to leave home at this time. He promises to soon visit Berkshire and to do what he can to help along the enterprise.

"It has been my privilege during the year to make several visits to Winchester and see the progress made by Chairman Brackett in breeding Mongolian pheasants. He has met with a good many obstacles, had some things to learn about the traits and peculiarities of these birds, but succeeded in raising about 150 young birds, quite a majority of which he regrets to inform me are males. There were enough, however, to send a few to different parts of the State to be used for breeding. This club were allotted three, one cockerel and two hens, which arrived the middle of November and were placed under the charge of Albert Walker at Colonel Cutting's Meadow farm. Mr. Walker has taken great care to have a suitable place fitted up, and as he has had a long experience in the care of fowls, we look hopefully for a large brood of young pheasants the coming year. He certainly shows a great interest in making the experiment a success. Mr. Brackett tells me the coming report of the Commission will contain considerable new matter in regard to the pheasants, which, with the other subjects treated, will make it interesting reading for the members of the club. I advise each one of you to obtain a copy.

"An interesting event of the year has been the conclusion of the Follett case. You will remember that Follett, then a fish and game commissioner of Connecticut, was convicted at the Great Barrington District Court for taking trout illegally from a brook in Sheffield. He was convicted and fined \$150, from which he appealed to the Superior Court, where he was also convicted and the fine raised to \$300. A further appeal to the Supreme Court was decided against him and the fine of \$300 must be paid. A full report of this case will be printed in the report of the State Commission referred to. This club cannot give too much credit to District Attorney Gardner and Deputy Commissioner Smith for the interest and zeal shown in the prosecution of this case.

"The treasurer's report will show you the financial transactions for the year. The debt of \$93.71 came from the expense of fitting up the new range, and we have practically in sight the ways and means of meeting it. The greater part of the expense of this new range has been met by subscriptions from those who use it most. We have now one of the most complete ranges in the country, and it should have a larger attendance at our weekly meetings. The range is open every Wednesday and Saturday

afternoons, and let me urge you to take advantage of its privileges. In addition to the rifle you can now use your fowling pieces and enjoy trap shooting. A sufficient sum was raised by subscription to purchase and equip three traps and we now have a complete outfit for any who wish to enjoy this sport. It has, however, been the same with the shotgun as with the rifle; the patronage has not equaled expectations. The opportunity is given you to make yourselves good wing shots and if you do not use it the club is not to blame.

"With the prospect of having a hatchery located in the county to supply our trout streams, and the probability of our hills being well stocked with pheasants, added to what we now have, I would ask if there is not enough to encourage all sportsmen to enjoy the privileges offered by this club. We need their moral and financial help, and have every reason to believe it will be given, so that the work of the club can show even better results than it has in the past."

The report of W. W. Tracy, treasurer of Pittsfield Rod and Gun Club, for year ending Dec. 24, showed receipts of \$320.27 and expenditures of \$286.44.

NEAR MASON AND DIXON'S LINE.

GETTYSBURG, Pa., Jan. 6.—*Editor Forest and Stream:* It is comparatively recently that I have become a devotee of rod and gun, and still more recently that I began to read FOREST AND STREAM, but it will be a long time before I cease to read it.

Hunting, in this section of the country, entails a great deal of hunting and the finding is often problematical. As for the fishing, well, 3 and 4 lb. fish do not strike two at a time. Consequently I can boast of no large bags or thrilling escapes. Fortunately, for me a full game bag or large string of fish is not a *sine qua non* of a day spent in the field or along the water. The day of which I wish to speak was one of small things, and would have been forgotten ere this except for an incident which may amuse some as it has amused me.

Just north of Mason and Dixon's line Marsh Creek flows along the rocky foot of a line of pine-clad bluffs. In the succession of pools connected by shallower water thus formed the black bass find their lurking places.

Thither, one summer's day, I made my way in hopes that I might be successful in persuading some of them to sample my wares. Vain hope! My most tempting flies were of no avail. As a last resort I tried the despised still-fishing. Mulligrubs followed minnows, and after a wearisome chase I captured a grasshopper. My hopes rose, only to sink again. I turned over stone after stone, but alas! dry weather had made the beetles scarce. I sat me down by my rod, and as the shadows lengthened the ripple of the water and the murmur of the pines above me caused me to forget my disappointments, and I fain would console myself with the memory of some former day and see again the lithe rod, now bending as the taut line flies from the reel, now springing back as the bass makes a vicious dash forward to gain slack line, and I can almost feel the thrill of exultation—a fat black cricket scurries by me. I capture him, draw out my line, remove the sodden remains of the poor grasshopper and impale the cricket. I make the cast and as the bait touches the water away it goes. In one brief instant upward my imagination soars. I begin to reel in. Alas! it is not the pull of the gamy bass; but the music of the reel calls to mind one of the finest fights that I ever ended successfully which began just so, but this time I land—a sunfish!

MEDICUS.

Sagamore Fish and Game Club Dinner.

THE sixth annual dinner of the Sagamore Fish and Game Club, of Lebanon, N. H., was held in Social Hall on Monday evening, Dec. 30. The committee selected to make the necessary arrangements for the dinner concluded to diverge from the usual methods employed on such occasions, and instead of securing the services of a caterer, as in former years, to let each member of the club (all members being men) take hold and get up a dinner such as one would expect at the club house on Birch Island, Holeb, Maine.

The hall was very tastefully transformed into a veritable hunters' camp in the wilderness. The dense forest; the hunters' tent, with the realistic log fire in front (an arrangement of logs and red lights); the bough bed, the hunter's pack basket, gun, snowshoes, etc.—in fact, a pleasant reminder of many happy times "way down in Maine."

There were displayed about the room guns and fish rods of many kinds, dip nets, paddles, pack baskets, snowshoes, cooking utensils and a variety of things found about a trapper's cabin in the woods. There was also a fine display of trophies of the hunt in the shape of a mounted black bear, deer heads, caribou heads, partridges, loons, trout, and skins of many kinds were spread about or hung around the room.

The dinner was entirely under the charge of the men and was fit to set before a king. It was cooked and served by the men and was a success in every detail—quantity, great; quality, fine. The tables were very tastefully laid, and at 8 o'clock the members and their ladies to the number of twenty sat down to a Maine woods dinner, of which venison formed the most important part. The dinner over a social time followed, and last, but not least, the party was photographed by flashlight, the woods and hunters' camp making a very pretty background. All present pronounced it the best annual the club has had, and certainly it was a novel affair, and when December, '96, rolls round we hope to again meet on as enjoyable occasion as the annual of '95.

K.

The Cuvier Club.

CINCINNATI, Jan. 9.—The Cuvier Club held its annual meeting last night, Vice-President J. M. Doherty in the chair and a large number of members present.

The report of the recording secretary, J. F. Blackburn, showing a cash balance for the year 1895 of \$870.26 and investments in stocks and bonds of \$11,100, was read and accepted.

It is the duty of the corresponding secretary to make an annual report of all prosecutions for violations of the game law throughout the State. Corresponding Secretary Charles Dury reported that game of all kinds becomes scarcer each year and the protection for what remains is certainly of a great deal of importance. Mr. F. B. Sturr, the game warden for Hamilton county, together

with the State Fish and Game Commissioner, has been very active and efficient in prosecuting offenders in this county. The arrests made have been 124, convictions 106, cases pending are 10, fines collected \$630—a much larger showing than has ever been made in this county.

In his report he showed that the museum and library were in an excellent state of preservation. Numerous visits have been made by citizens and schoolchildren, and he took occasion to remind members, their families and the public that the museum is always open free to visitors, and strangers in the city are especially welcome. The large and fine collection of birds is well worthy of a close inspection. The additions to the museum are: One red-throated loon, from Mr. J. H. Miers, of East Columbia City, which is the only specimen ever taken here; one gannet, presented by the club's president, Mr. Clay Culbertson; one young owl, from Mr. Ralph Kellogg, of Avondale; one case of ring pheasants and partridges, from Wm. Longmead, city; one albino quail, from the Sabina Rod and Gun Club, of Sabina, O.; one prickly ray, a curious fish, from J. E. Frey & Co., city; one barn door skate, a Florida fish, from Mr. Culbertson; one mounted cat in case, an odd variety, from J. D. Fahnestock, city; a series of crustaceans and marine invertebrates collected in Florida, Mr. Culbertson; one egg of crocodile from Florida, presented by Mr. Culbertson; one egg of alligator, also from Florida, from Charles Dury, of this city, and on deposit a series of nine rare birds not before in the collection.

The officers elected for the year 1896 were: Alexander Starbuck, President; J. M. Doherty, First Vice-President; Henry Hanna, Second Vice-President; P. Roach, Third Vice-President; Trustees: Capt. C. M. Holloway, E. G. Webster.

The Kennel.

FIXTURES. BENCH SHOWS.

Feb. 13 to 22.—Westminster Kennel Club's twentieth annual dog show, Madison Square Garden, New York. James Mortimer, Supt.
March 3 to 6.—City of the Straits Kennel Club. R. Humfrey Roberts, Sec'y, 6 Merrill Block, Detroit.
March 10 to 13.—Chicago.—Mascoutah Kennel Club's bench show John L. Lincoln, Sec'y.
March 17 to 20.—St. Louis Kennel Club's show, St. Louis. W. Hutchinson, Sec'y.
April 20 to 23.—New England Kennel Club's twelfth annual show. D. E. Loveland, Sec'y.
May 6 to 9.—Pacific Kennel Club's fifth annual show. H. W. Orear, Sec'y.

FIELD TRIALS.

Jan. 20.—Bakersfield, Cal.—Pacific Coast Field Trial Club. J. M. Kilgarif, Sec'y.
Feb. 3.—West Point, Miss.—U. S. F. T. C. trials. W. B. Stafford, Sec'y.
Feb. 10.—West Point, Miss.—The Field Trial Champion Association's first trial. W. B. Stafford, Sec'y.
Sept. 2.—Morris, Man.—Manitoba Field Trials Club. John Wootton, Sec'y.
Oct. 28.—Greene county, Pa.—The Monongahela Valley Game and Fish Protective Association's second annual trials. S. B. Cummings, Sec'y, Pittsburg.

CROPPING.

IN FOREST AND STREAM of last week was a letter from a gentleman of long experience in all matters of the kennel world—Mr. Harry L. Goodman.

Discussing the matter of cropping, he says: "The only way to abolish it is through the medium of the public. When the public refuses to purchase dogs with cropped ears and docked tails, the breeders of these breeds will themselves discontinue the practice, but neither the A. K. C. nor any body of men can force anything upon the public that it does not want," etc.

True. Cropping, for instance.

Here Mr. Goodman palpably takes a wrong view of the matter. He bases his argument entirely on a commercial consideration that is not the true consideration.

There are many matters which society will not tolerate, aside from all consideration of traffic. If society considers that cropping is cruel it may not disapprove of it in the passive manner suggested by Mr. Goodman. Instead of saying, "We will not buy your dog because we think it is cruel to crop his ears," it may say, "Cropping a dog's ears is a cruelty and we will not permit it."

Mr. Goodman seems to overlook the fact, as have many others, that it is the public which is now opposing cropping actively. Different clubs from different sections through their delegates have by their vote recorded their opposition against it; a large part of the press opposes it; the Society for the Prevention of Cruelty to Animals is against it; the statutes of most of the States are against it, etc. There might be those who would continue to sell and those who would buy cropped dogs, and the public might disapprove of both if they favored mutilation.

Mr. Goodman further advances the argument that "the only way to propagate the individuality of a breed of dogs is to leave it in the hands of the breeders. Once let the breeders give a breed up for want of popularity or favor with the public and it will soon disappear. In proof of this note at our big shows the absence of the once numerous and popular Newfoundland. From the time the first St. Bernard landed in America the Newfoundland has gradually disappeared—not, however, from any fault of his, but because the breeders could no longer keep him to advantage against the more popular St. Bernard. So with the cropped and docked dogs, if the public will not have them they too will soon disappear."

This same argument was used by Mr. Wood at the A. K. C. meeting in December. It has no relation whatever to the subject under consideration. The change cited was brought about by the breeds competing legitimately for public favor. The question of inhumanity, of mutilation, of specialty clubs, of the powers of the A. K. C., had no more relation to the victory of one breed over another than it had to the victory of one individual dog over another. There thus is no analogy.

It surely is illogical to lay down as a proposition, that because the St. Bernard by competition won favor over the Newfoundland in the esteem of the public, that therefore it is correct to cut off a great Dane's ears. That is precisely the proposition when stripped of its fallacy. A legitimate competition on one hand, so sound that it never was brought into question, is set against a matter of mutilation on the other, a matter which is in question. Could anything be more irrelevant, incompetent and immaterial?

What is the Value of Ears?

Let us examine the relative value of ears as compared

to the other parts of the dog valued in the scale of points.

From the outcry against the action which contemplates the abolishing of cropping, and the predictions of disaster which is to follow if it is abolished, one would infer that the cropped dog's ears held an overwhelmingly large value in the scale of points. Indeed, it is easy to imagine that with uncropped ears the great Dane or bull-terrier were out of competition and undesirable as companions; that with their ears on their value ended.

In "The American Book of the Dog" Mr. J. H. H. Maenner gives the great Dane standard as follows, explaining that it is that of the Great Dane Club, of England, which is the same as that laid down by the breeders of Germany, with some differences which are not essential. Values in points: General appearance 3, condition 3, activity 5, height 13; head 15, and this includes the ears, of which it is stated that "Ears very small and greyhound-like in carriage when uncropped; they are, however, usually cropped." Neck 5, chest 8, back 8, tail 4, belly 4, forequarters 10, hindquarters 10, feet 8, hair 4.

It will be seen that ears are not considered of sufficient importance to give them a special value in the scale of points, but are lumped in with the head. Thus it is evident that in the values and literature of the great Dane, cropped ears are but lightly considered and have not a remote relation to the exaggerated importance set forth within a recent period.

In the "German Mastiff or Great Dane Dog," published by the German Mastiff or Great Dane Club of America, ears are valued at 3 points in a total of 100 in the American scale, which is said to have had the approval of Herr Gustav Lang, of Stuttgart, Germany.

Under the "German Standard of Points" it treats ears as follows: "Ears medium in size, placed high, and when cropped running to a point and standing erect."

The American club deals with the ears in this wise: "The ears should not be too wide apart, small, set well up and carried high, something like those of the greyhound. The ears may or may not be cropped; when cropped, they should run to a point and stand erect, somewhat like those of the bull-terrier."

In short, in the great Dane standards and literature there is not the insistence for cropped ears which the advocates of cropping so strenuously maintain, nor is it insisted upon at all.

The plea that the Great Dane Club should be permitted without interference to abolish cropping from its standard when it is not in its standard at all, and is not treated at all as a matter of type, would go to show that a matter of more or less common usage has been confounded with a matter of type and club prerogative.

In "The American Book of the Dog," Mr. Frank F. Dole, in writing of the bull-terrier, says: "The bull-terrier is essentially a fighting dog," etc. Of the bull-terrier's ears he says: "The ears are always cropped for the show bench, and should be done scientifically and according to fashion."

Of course Mr. Dole meant the fighting dog far from literally, as at the present time the bull-terrier is not supposed to be used for fighting purposes. His ears are valued low in the scale of points, and as Mr. Dole states, cropping them is merely a matter of fashion, therefore not a matter of type.

Type and Cropping.

Confounding cropping as a type or a part of type makes false reasoning and unnecessary complications. It really seems to be one of the evasive afterthoughts. Mutilation is no part of breeding. The mere cutting off of the ear, or the tail, or the leg, is a mutilation, not a type.

The kennel world has unqualifiedly condemned all forms of faking. Painting, staining, plucking, using the knife and other artificial aids to conceal defects or to make a dog seem better than he naturally is, in plain words practicing deception, is odious to dogmen, and is an offense which is ruled against and punishable by disqualification. Mutilations are closely related to faking.

Most of all, and in this relation it bears strongly on cropping, the fact is that the condemnation of faking is a direct recognition that artificial changes do not make a type and are obnoxious to the fancy.

But, as shown above, many advocates of cropping, in referring to cropping and type, claim more than their standards cover, more than they have a title to, and more than is claimed by the specialty clubs.

The extravagant claims seem much more like making the best of a bad case than in presenting a good one. As cropping is not valued in their standards, the specialty clubs have not any claim to jurisdiction over it.

Canker and Cropping.

The absurd plea is advanced in favor of cropping that it prevents canker. So absurd is this that it scarcely deserves serious reply.

Of course, it is conceded that a dog cannot have canker in the parts of his ears which are cut off. A man would not have corns on his feet if the latter were cut off. It has thus a ridiculous feature. But cropping is not practiced for the purpose of curing canker. The curative claim is a crafty evasion. Cropping is to gratify the fashion set by the few. It is entirely a matter of fancy. When the question of cruelty arose it was necessary to trump up some plea to justify cropping on the ground of necessity or utility; and thus is the plea that it prevents canker.

It is not a common nor necessarily a serious disease. When it does seriously exist, or exist at all, it is mostly the result of neglect and mismanagement on the part of the owner. There is no inherent tendency to canker in the ear itself. No veterinarian gives long ears as a cause of canker. No one of them would make himself so ridiculous as to call cropping a remedy for canker. Many veterinarians denounce it. If any man will claim that canker is common in his kennel, he makes a confession of neglect of his dogs. He can find the causes of canker as set forth in the works of veterinarians. They are not complimentary to owners.

Canker in the ear is a rare disease with dogs which have a reasonable degree of care, or rather with dogs which have reasonable opportunities to care properly for themselves. The utter feebleness of the argument is shown in the rarity of the disease in other long-eared dogs—setters, pointers, hounds, etc.

Canker is an inflammation of the lining membrane of the ear and the passage of the ear, and can therefore exist in the ear passage even if a part of the ear is cut off. The ear is a sensitive organ, as all know, and cutting it

off deprives it of the protection provided by nature. The delicate inner passage is left exposed. Nature does nothing in vain.

But supposing that one dog or two dogs in 1,000 have canker, is that sufficient reason to justify cutting off the ears of the remaining 999 or 998? It is a simple disease, easily treated, easily cured, and still more easily prevented. Such a plea of conceded good would justify pulling out the dog's teeth because he might have tooth-ache, removing his eyes for fear of cataract, his legs because he might have rheumatism.

But canker has nothing to do with cropping. It as an argument is merely an evasion, a false issue, a far-fetched plea to satisfy the humanities. Cropping has in its purpose no reference to preventing canker, nor is it a proper method of treating canker if it were specifically practiced for that purpose. Bear in mind cropping's true purpose; that is, to gratify a whim. Crying on a false trail should not deceive anyone.

Sentiment and Cropping.

There are trivial sentiments and serious sentiments. A sentiment which expresses a determination of the mind is simply the expression of the conviction of the individual. So with the serious sentiment of society. It is not in the realm of notion, or whim, or caprice, or freakishness. The statutory law is the sentiment of society as to the proper rule of action for all. This is supplemented by an infinity of unwritten law which all recognize and obey. To disobey carries with it certain punishments, moral or physical.

The sentiment against cropping and other mutilations is not the freakish notion of a few individuals. It is the expression of a world-wide principle, the principle of humanity. It differs in degree from that which prohibits slavery and maltreatments and cruelties in general, but is the same in kind. It is a sentiment resting on a sound basis whose boundaries are greater than those of civilization. Its beginning was not with that of cropping. It exists from time immemorial. It is a sentiment whose material forms hide not in dark corners. It fears not the light of day on it or the principles on which it rests. It has a solid foundation in statute law, in common law and in the better instincts and observances of humanity. Nor is it a dead letter. It is forceful, active, gaining. A sneer does not check it; a flout does not answer it. To refer to it slightly is to confess an ignorance of its force and its importance. Also to refuse to obey the law is not a popular act. It is a good thing to heed it when it is but another name for society's behests, which have been long matured, accepted and established.

Mr. Burritt on Cropping.

Mr. Burritt claimed that, the laws of the States being different, the A. K. C. should do nothing till there was a federal law against cropping. This seemed to have a catchy jingle about it which pleased many. Seldom has more fallacy been crowded into so few words. In the first place, the federal Government can not make such a law; its concern is with the affairs of States as States. It does not meddle with the strictly domestic affairs of States.

Second, each State in the Union has a law amply comprehensive in preventing mutilations and cruelty, some more severe than those of New York. Several of the States recently admitted have adopted the laws of New York concerning mutilations and cruelties, even to their phraseology. This in effect is the same as a federal law would be. In the main the humane laws of States are alike.

Third, the laws of the A. K. C. are not founded on federal laws. It makes its own laws to conform to its own interests and requirements, which are in some few particulars different from the laws of the United States, as Mr. Burritt will see should he investigate slightly. But several delegates adopted Mr. Burritt's views, making them their own, of whom were Mr. Brooks, Mr. Thomson, Mr. Little and Mr. Morris.

But there is one feature of Mr. Burritt's argument that seems to have escaped the notice of himself and those who approved of it, and also those who opposed him; that is to say, the reluctance to disapprove of cropping till a supreme law, much greater even than the laws of the States as individuals, abolished it. Must the law teach the kennel world humanity? While Mr. Burritt's argument was weak and fallacious as argument, it was strong in seeking pretexts to evade a record on the real issue. It would seem to be the proper action for the clubs to conform of their own motion to healthy public sentiment and statute law, instead of waiting till outside forces made observance compulsory. They should be teachers instead of students.

Cropping and Sales.

It has been pointed out that if cropping were abolished breeders would abandon the breed and it would be lost through neglect. In fact, some breeders or breeder had sold their dogs in anticipation of the A. K. C. action against cropping. Here is a contradiction of terms. The breed was being abandoned. A breeder sold his dogs. Who bought them? So long as there are those ready to buy there is no lack of interest. Twelve men owning twelve dogs are more desirable than one man owning twelve dogs. There are still people who love dogs for their own sake and who may love them none the less if they are not mutilated.

But supposing some breeders do retire, what then? If they cannot prevail upon themselves to observe the sentiments of the dog world and the requirements of the law is it not better for themselves and for others that they should retire? Surely the whims of a few breeders or owners cannot be set up against the wishes of the kennel world and the law of the land.

Of course the commercial interests are worthy of consideration, and have consideration so far as their value entitles them, but the business interest of a few and the personal fancy of a few are not all of the canine world.

Dr. Phillips's Letter.

Much was made of Dr. Phillips's letter to Mr. Higginson, and the fact that Dr. Phillips was a special agent for the Society for the Prevention of Cruelty was paraded with much unction. That letter was not written by Dr. Phillips in his capacity as an agent of the Society. It was an expression of his individual opinion, and in no wise was it the opinion of the Society. Moreover, the letter was a personal letter and never intended to be used in the manner in which it was used.

But Dr. Phillips and all the other advocates of cropping who have based their arguments on an attempt to show that cutting off the dogs' ears is not a cruelty in itself fail to consider that it is the beginning of a cruelty, as the dog must suffer much pain for many days after the effects of the anæsthetic have passed away.

Mutilation.

But there is more to the matter than the question of cruelty. It is the question of mutilation. Granting, for the sake of the argument, that cropping is not cruel, it does not remove it from the law's action.

There is still the matter of unjustifiable mutilation. The law specifically mentions "a person who unjustifiably mutilates."

As had been said hereinbefore, a plea of fashion is no defense.

The humane laws of the United States are practically unanimous.

Why does not some one come forward and explain these matters away?

Judging St. Bernards.

Editor Forest and Stream:

The New York show is the hub of the dog show universe, and a win there is looked upon with pride by the exhibitor. Upon the exhibitor the Westminster Kennel Club depends for its show, and it would seem to me to be more business-like to cater to their customers.

In but a few cases do the prizes pay or begin to pay for the care, time and expense spent in preparing dogs for the show. A large majority show for the pleasure, and of course are very jealous of their pets.

Now, to trifle with them is very detrimental to the furtherance of the kennel and kennel interests. Of what benefit is it for the novice or expert to get a prize from an even casual judge if that judge is not the cream of experts? The novice is misled. He breeds on misleading lines, and not only hurts his reputation and the breed, but has his trouble for his pains.

It is obvious to even very modest intelligence that a judge with no reputation as a breeder, exhibitor, owner or judge of a breed cannot as judge command the respect and confidence of those in the fancy.

A great deal of time and great care should be spent in awarding the ribbons in any show, and in the Westminster Kennel Club's, the premier show, special efforts should be made in that direction.

A judge can not do himself justice with eighteen breeds to look after, and he must be a wonder if he acquires himself creditably. It is well known in the ordinary walks of life that the specialists in every branch of trade or occupation can command better attention financially and intellectually than his brother tradesman or workman who has a sprinkling of everything.

In this progressive age it is impossible to be an expert in everything pertaining to one's occupation. I think a novice who tries to breed to the best is going to take a whole year's step backward in this very important breed.

There are many exhibitors and breeders (among them myself) who seriously object to the treatment of the St. Bernard Club. As that club has a list of competent judges, if the W. K. C. wanted a change (which I deem a mistake), they should, in justice, select some good, able judge from the list of the club that fosters the interests of St. Bernards; that offers handsome prizes; whose members have spent thousands of dollars and much time in trying to perfect the type in this country; whose members, as exhibitors, have been the means of bringing more money in the treasury of kennel club shows than any other club; and in doing all this for its future benefit is giving the kennel clubs the first benefit by offering prizes at its shows.

Mr. Raper may do perfectly well, but the fact remains that St. Bernards are not his breed; and however varied his ability and knowledge, he has too much to do and must of necessity slight something.

I wish the Westminster Kennel Club and the public at large, as well as the members of the St. Bernard Club and exhibitors, to know of the probable injury done by the Westminster Kennel Club's latest action to the St. Bernard Club of America.

It would have been far better to let things have been as they were than to make such a change as this. There is yet time, by vigorous and concerted action on the part of breeders and exhibitors, to have an acceptable and capable judge appointed by the governors of the Westminster Kennel Club.

NOVICE.

Dogs and Turkeys.

GIBSON WELLS, Tenn.—A few days ago my son Dan, 14 years old, with an old turkey hunter, went in the bottoms near our kennels, about a mile and a half.

Dan had never seen turkeys in woods before, but he thought he would like to get one shot at them. Unluckily for him they took no dog. The hunter said he had better not.

They started a bunch of fifteen or twenty, which scattered. Fixing themselves in a favorable position, the hunter commenced calling them, and he soon had two young gobblers headed their way. Dan thinking them near enough shot and killed one dead, and he thought he crippled the other. At all events, when it rose to fly he knocked him down with the second barrel; and then commenced a chase between Dan and the turkey, which ended in the turkey getting the best of it.

The one he secured weighed 15lbs. and furnished us a Christmas dinner.

Since my coming here I bought a liver-colored setter dog, 3 years old, that has the reputation of being a great turkey dog as well as a good dog on quail. So a day or two afterward I had Platt, my kennel man, see what Mr. Heck (the dog) would do for turkeys. He started for the bottoms. The dog struck a trail and followed it for at least a quarter of a mile and pointed in a tree top. On Platt's going to him out flew a turkey, which he killed. It was a nice young gobbler also, so I think I am well fixed for a turkey dog.

I know of thirty different gangs of turkeys within six miles of the kennels. I will have a try for them in the near future.

R. B. MORGAN.

New York Show Judges.

Mr. J. F. KIRK, Toronto, has kindly consented to judge all sporting spaniels for us in place of Mr. Andrew Laidlaw, resigned.

JAS. MORTIMER, Supt.

POINTS AND FLUSHES.

In respect to the disbanding of the Southern Field Trial Club we have been informed that the action was not taken through any effects of mismanagement or financial difficulties. On the contrary, the finances and management were sound. There was money enough at all times to meet the club's obligations and that is all the club desired, as it was not nor intended to be a money-making concern. The action was the result of natural causes. Mr. Brumly had long objected to filling the office of secretary. Major Renfro is in Tacoma. Mr. P. H. Bryson has removed from Memphis to St. Louis. These changes, with some loss of interest on the part of a few other members, may be accepted as the real cause of the club's dissolution.

Under date of Jan. 4, Maj. J. R. Purcell, of Gainesville, Va., writes us: "Prof. Osthaus presented me with a painting of Lady Margaret on point, taken from an actual study in the field near Newton, N. C., when the bird was killed and most beautifully retrieved by her. To me, as a work of art, it is the most accurate and beautiful picture that I ever saw."

Maj. J. R. Purcell, well known to the sportsmen of the United States through his many years' field trial competition and devotion to the improvement of the pointer, is now engaged in lecturing on "Religious Rambles by Hickory," the lectures covering matter of war and religion. As to the purpose of the lecture, Maj. Purcell says: "Every cent of the proceeds, together with my own bought ticket, goes to aid a church struggling in its infancy."

Mr. G. S. Meyers, of St. Louis, is considering the matter of purchasing in the South 5,000 acres of land or more if necessary for use as a shooting preserve, if he can find a suitable place. It is possible that he may decide on a place near Grand Junction, Tenn.

Mr. A. P. Gilliam, formerly the trainer for the Manchester Kennel Co., is now engaged on a salary to train Mr. G. S. Meyers's shooting dogs. Mr. Meyers is of the firm of Liggett, Meyers Tobacco Co., St. Louis. It is rumored that the Manchester Kennel Co. contemplate retiring from business.

Mr. John White, of Fredericksburg, Va., may move to Mississippi, taking a string of dogs with him and there remaining all winter. He may run Sandford Druid at West Point.

Mr. Frank Richards has changed his plans, and may not take a trip South this winter, which is to be regretted, as he is a genial companion and always makes the competition interesting for all comers, observing fair play at the same time.

Owing to the fact that the Milwaukee Kennel and Pet Stock Association could not secure a building for their contemplated show they will not hold a show this spring.

There is room for several more journalistic claimants to the honor of inaugurating and successfully promoting the recent A. K. C. legislation in behalf of the bench show interests of the Pacific coast. Claims should now be filed promptly, as already there are three or four filed and proven.

We hope for smooth and happy times in the kennel world during the year that has just been whelped. We cannot refrain from commenting upon the inconsiderate action of President Cleveland, whose recent bellicose dispatch may have a worse effect upon the approaching New York Dog Show than the absence of mustard in the New York cruet-stands. The trouble in the Transvaal is also regrettable at a period when the Uitlanders were getting along so nicely with kennel matters.—*Stock-Keeper*.

[Let us hope that, if President Cleveland has a warm spot in his heart for the dogs, he will see that war does not begin till after the New York show is ended. Let good friendship and abundance of mustard grace the event.]

Runaway Dogs.

My dog is getting to be a runaway. He is a finely bred, finely trained pointer, 4 years old. About a month ago he began to disappear when let out morning or evening, and would not return for an hour or so. Next he vanished when I took him out for a run on the streets. I thought at first I had lost him, or rather that he had lost me, so kept him to heel, but he has now run away twice before my eyes and in spite of my whistling. With tail between his legs and crouching body he scuds straight away like a rocket.

How can I break him of his bad habit? MARSTRAND.

[There is no recognized treatment for curing a dog of the runaway habit. When he is at liberty and inclined to run away, he does so. The pleasures of a hunt in the fields or a vagrant romp are pleasures which he cannot resist. Perhaps some hobble could be devised similar to those used in converting pacers to trotters and *vice versa*, which would permit the dog to trot about at moderate speed, but not to run fast enough to escape. Restraint by mechanical means is the only solution of the annoyance.]

English Bloodhound Club.

THE executive committee of the English Bloodhound Club have voted to offer the following specials at the Westminster Kennel Club show to be held in February next: English Bloodhound Club trophy for best dog or bitch in the show; one gold medal for best dog and bitch respectively; one silver medal for best dog puppy and bitch puppy respectively.

Open for competition to members of the club only.

CHARLES H. INNES, Sec'y.

The Monongahela Valley Game and Fish Protective Association.

PITTSBURGH, Jan. 10.—The second annual field trials of the Monongahela Valley Game and Fish Protective Association will be held on the Preserve Grounds, Green county, Pa., Oct. 28 to 31, 1896.

S. B. CUMMING.

American Spaniel Club.

IN addition to the Spaniel Club sweepstakes for all sporting spaniels whelped in 1895 (the second forfeit for which \$3 will be due and payable on or before Jan. 1, 1896) the Spaniel Club has decided to offer at the Westminster Kennel Club show "The Novice Sweepstakes" for all American bred spaniels never having won a first prize in the open classes at any show prior to date of entry. All entries to be sent to the secretary on or before Jan. 15, and to be \$2.

The Spaniel Club to add to each of the stakes which are to be as follows: First, all breeds of spaniels over 28lbs. Second, cocker spaniels. Seventy per cent. of the stakes to the winners of first prizes, 30 per cent. to the winners of the second prizes.

The annual meeting of the Spaniel Club will be held at the Madison Square Garden on Thursday, Feb. 20, at 4 P. M. It is hoped that all members of the club attending the New York show will be present, and that they will also attend the dinner which will be given the same evening. Tickets for the dinner will be obtained during the show from any members of the Spaniel Club executive committee.

The committee wish to make this dinner a reunion of all the members of the Spaniel Club, and therefore would especially request them to make a point of attending.

The club has offered seven of their best cups and trophies at the Westminster Kennel Club show, and rely upon the members to respond as heretofore to their appeal for specials.

All specials must be sent to the secretary on or before Feb. 1, and be accompanied by the equivalent (whether money or otherwise) to insure publication in the catalogue.

ROWLAND P. KEASEBY, Sec'y.

Champion Field Trial Association's Entries.

POINTERS.

E. O. Damon's dog Strideaway (King of Kent—Pearl's Dot).

J. L. Adams's dog Lad of Rush (Rush of Lad—Topsey L.).

Edward Dexter's dog Rip Rap (King of Kent—Hops).

Edward Dexter's dog Delhi (Rip Rap—Queen III.).

W. D. Henry's dog George Croxteth (Don Croxteth—Mollie Scott).

N. B. Nesbitt's dog Jingo (Mainspring—Queen III.).

SETTERS.

Fox & Seiler's dog Terry's Gale (Antonio—Nellie G.).

W. W. Titus's bitch Minnie T. (Dick Benhu—Betty B.).

W. H. Beazell's dog Harold Skimpole (Whyte B.—Nettie Bevin).

Avent & Thayer's dog Topsy's Rod (Roderigo—Topsy Avent).

Avent & Hitchcock's dog Count Gladstone IV. (Count Noble—Miss Ruby).

N. T. Harris's dog Tony Boy (Antonio—Laundress).

W. B. STAFFORD, Sec'y.

Dachting.

THE report of the America's Cup committee of 1895 has just been made public in a pamphlet of 60 odd pages, issued by the New York Y. C. As a summary and record of the "challenge, conditions and result of the match, Defender against Valkyrie," it is interesting and of permanent historical value; but there is nothing material in it which has not been published. The full correspondence preceding and accompanying the races is given; but nearly all has appeared in the FOREST AND STREAM from time to time. The report ends as follows:

"In conclusion, the committee feels that, in view of the unfortunate termination of the match, it is only proper to place on record a statement of Mr. Iselin's attitude and actions in connection with the matter.

"Prior to the first race Mr. Iselin wrote inquiring of the committee what he should do in case of a serious accident to Valkyrie after the preparatory signal. The answer given was that the 'accident clause' was held to fully provide for any case of accidents, and the committee had no right to tell him to turn back, but must reply to his question by telling him to go on.

"As already stated, the committee sanctioned Mr. Iselin's offer to resail the protested race of Tuesday, and this offer Lord Dunraven declined.

"On Thursday, immediately after crossing the starting line, Mr. Iselin hailed the committee boat and inquired, 'Shall I go on?' and again at the finish inquired, 'Shall I cross the finish line?' The reply to both questions was in the affirmative.

"On Friday following the last day, Mr. Iselin laid two propositions which he desired to make to Lord Dunraven before the Cup committee, the regatta committee and the flag officers, assembled at the club house:

"1. To propose to resail the last two races; and when it was decided by those committees and officers that the match was ended and could not be reopened, then,

"2. To propose to sail a new match for the America's Cup wherever and whenever Lord Dunraven might desire.

"The decision was adverse to the second proposition as well.

"In view of these decisions neither proposition could be submitted to Lord Dunraven."

ONE matter of minor importance disclosed for the first time in the report is the first official measurement of Defender as follows:

	Defender.	Vigilant.
Length on load waterline.....	88.85	86.14
Square root of sail area.....	111.85	106.14
Racing length.....	100.10	96.12
Persons on board when measured: Defender 48, Vigilant 50.		

As these measurements were not taken until Aug. 12, after the New York cruise, and some changes in Defender, they fail to give the exact corrected time of Defender and Vigilant in the first races in July. As Vigilant in no event could have saved her time, this is a small matter; but had the result been closer some injustice would be done to one boat or the other. The final measurement of Defender as given in the report is as follows:

	Defender.	Valkyrie.
Length on load waterline.....	88.45	86.85
Square root of sail area.....	112.26	114.14
Racing length.....	100.36	101.49
Persons on board when measured: Defender 50, Valkyrie 60. Valkyrie allows 29s. over a 30-knot course.		

THERE is as yet no news from the special committee, though it is known that the report is in the press. Presumably it will not be made public until presented at the club at a special meeting, but no such meeting has yet been called.

THE Royal Canadian Y. C. will have the sympathy of all American clubs in the loss it has sustained through the burning of its town club house.

O! bold Sir George, be warned by me,
And stay your eager hand!
Don't waste your Tid-Bits on the sea,
But cleave unto the Strand!

—Punch.

YACHT DESIGNING.—III.

BY W. P. STEPHENS.
[Continued from page 56.]

In every estimate and comparison of yachts, as in purchasing or deciding on a design, there are three important subjects for consideration—cost, speed and size. The relation of these three variables is complex in the extreme, and it is a most difficult matter to establish a fixed standard of comparison for either one; they demand, however, the closest attention of designers and intending owners, and in fact of all who own or race yachts. While certain standards of “size” and even of speed are recognized from time to time, they are at best indefinite and devoid of all scientific basis.

There are a few fortunate yachtsmen with whom cost does not figure. Having decided that they want a yacht of a certain size or class, they are in a position to place a *carte blanche* order with some famous designer. With the great body of yachtsmen, however, even the wealthier ones, cost must always be considered to a certain extent. A man wants a fair return for his money, and if he decides to build to a certain class, he does not expect to pay as much as in the next higher class.

Throughout the following discussion we shall assume that the cost is a fixed quantity to this extent: that a yachtsman desirous of building to some certain class is prepared to set aside a sum sufficient to cover every possible item of construction and equipment, allowing for good sound material and a workmanlike job throughout; or, to put the same thing in another way, having a certain sum to devote to a yacht, the estimates will be made to cover the largest possible yacht that can be built of good materials and workmanship and with complete outfit, for the assigned sum. Such a reasonable and business-like method is not followed as a rule; but having decided that he can afford a certain outlay, the prospective owner proceeds to plan a larger yacht than can be fairly and honestly built for the money. He neglects entirely the smaller items of equipment which, though absolutely necessary before the yacht can be used, do not present themselves as actually part of the construction. He plans a large hull of necessarily inferior construction, he underestimates on ballast, sails and interior fittings, and, to crown all, he ignores that large margin which is necessary in every vessel to cover various contingent expenses. Having started out in this way, he is generally able to find a builder who, being either a fool or a knave, will sign a contract to build the yacht.

The general result is always a disastrous failure, it being merely a matter of detail whether the builder being a fool suffers a heavy loss, or being a knave saves his pocket by giving the owner a worthless vessel. In either case the owner is apt to find by the time the yacht is really in commission that she has cost double his original estimate. If he can afford to pay the money and if the work has withal been well done, it is merely a case of “all’s well that ends well,” but in the majority of cases of this kind the owner finds that the unlooked for expense of building has so embarrassed him that he is unable for the time to race or even to run the yacht properly; and, what is very much worse, that he has a craft which requires expensive alterations and strengthening before she can be used at all. A yacht is, small or large, essentially an article of luxury and a most expensive one at that; so much so that very few men can afford to build one that is unsound, unseaworthy or unmanageable and consequently worthless.

We would impress upon all yachtsmen the folly of that false economy which refuses to recognize at the outset all necessary and legitimate expenses. The question is much the same whether the yacht has a double skin of mahogany or a single skin of cedar, whether she is ballasted with lead or iron, whether her fin or board is of an expensive bronze or plain steel, whether her sails are of some special brand of canvas with a costly name or whether they are of plain honest cotton duck. This method of procedure is not confined to the small and cheaply built craft, but is found in the large steam yachts as well. The wise owner will start in with an estimate which will include every detail down to mops, brooms and squillees; and though the circumstances may impel him to accept cherry in place of mahogany, iron fastenings in place of copper, and iron ballast in place of lead, he will allow for sound seasoned wood, for an adequate amount of fastenings properly and carefully placed, and for shipshape and workmanlike construction, however plain the finish may be.

It should be borne in mind that it is always possible to get a very low estimate on any specifications; yacht building is by no means the only trade in which there are men who, through lack of experience or lack of principle, are willing to sign a contract for a sum far below that at which the work can be done, the latter sort trusting to the chances of “getting even” through some evasion of the contract or a long bill of extras before the yacht is completed. It is very seldom the case that several reputable builders cannot be found to give estimates on a complete set of specifications, from which the fair and reasonable cost of the proposed yacht may be ascertained. In the event of the figure being too high, there are three courses open to the owner: first, to cheapen the construction by substituting less costly materials, such as cherry for mahogany, iron for lead, etc., as already mentioned, of course, providing that the original specifications are not made out on the cheaper basis; secondly, to reduce the size of the proposed yacht, thus retaining the quality of finish with a lesser outlay; and third, to hunt up some builder who will agree to underbid the others. This third course is not only of questionable honesty and unfair to the men who have estimated in good faith, but it is foolish in the extreme, and in the end most costly and unsatisfactory.

In that general consideration of the question of cost which is the first step toward a new yacht, the owner will save time, money and annoyance, and will obtain in the end a better vessel, by facing boldly every possible item of construction and equipment, and by allowing for a fair compensation to both designer and builder for their very best efforts in his behalf.

As long as one of the chief functions of a yacht is to move from place to place, the question of speed can never be ignored entirely. Between the racing machine on the one hand, and the houseboat snugly moored in some sheltered spot on the other, there is the fast cruiser or ex-racer, the cruiser and the tub; but, even though a man’s ideas may lead him to deliberately plan and build a comfortable tub, there is still the question of speed. He is

presumably prepared to be left miles astern by even the ordinary cruiser, but his soul will still revolt at being out-sailed by another tub that in his estimation is of less “size” than his own. Though it may be relegated to the lowest position on the list and subordinated to cost, convenience and comfort, speed to a certain extent must be considered by the designer, if not by the owner.

When we come to the question of what constitutes speed in a yacht we are met by the perplexing but incontrovertible proposition that there is no such thing as absolute speed in yachting, but that it is in every sense a relative quality. Those to whom the proposition is new will probably be inclined to deny it on sight, but it cannot be disposed of in this summary way; and not until a man realizes the truth of it will he be at all qualified to discuss the endless question of measurement—to which no final answer will in all probability be found.

By way of practical illustration let us assume that two yachts of utterly different types, as, for instance, the narrow and deep cutter Madge and her shoal and wide opponent Schemer, have the same waterline length, and sail a certain distance in company in exactly the same time. To the landsman, and to that certain portion of the yachting fraternity which believes in a measurement of waterline alone, they have the same absolute speed; but what say the respective owners and their friends? The owner of the sloop claims that his yacht has less displacement, smaller “cubic contents,” or shorter over-all length and a shorter “mean length,” and consequently she is a smaller yacht than the cutter and must hence be considered as the faster of the two.

The owner of the cutter has equally good arguments on the other side; by his standard of “size,” the old tonnage rule, his yacht measures but 10 tons, while the wide shoal craft of his opponent measures at least 15 tons; hence his is the smaller and consequently faster vessel. Both are right, for the fact is that yachts are fast or slow only under certain rules which attempt to establish an equality of “size,” and until some standard of “size” is adopted no comparisons of speed are possible. The truth of this proposition must be fully recognized by the designer before he sets to work to design a “fast” yacht; he cannot ignore all rules, nor can he take cognizance of two or three at once and attempt to fit them all; but he must take the one particular rule of measurement,

indifferent at best, and probably very bad, as a measure of the quantity or qualities of a yacht; and study to produce a fast yacht for a certain mean length, waterline length, racing length, tonnage or rating, according to the unit of measurement established by the rule. It sometimes happens that a yacht may be successful under two or more rules; but this cannot be looked for in most cases.

Even when limited to one rule, most erroneous comparisons of speed are often made by experienced yachtsmen, as in the oft-repeated statement that the cutters of 80 to 90ft. waterline are the “fastest” yachts in the world. It is true that these great racing machines can attain a speed upward of 14 knots, while the little 15-footers are forced to be content with about 6 knots; but it is equally true that the winners of the 15ft. class are, by all yachting usage, considered as “fast,” while there have been many yachts in the 90ft. class within the past ten years which, though capable of upward of 12 knots, are recognized by yachtsmen the world over as failures, because they were “slow.”

Speed, then—the great desideratum to many yachtsmen, and of more or less importance to everyone—is a mere relative quality, dependent on measurement and class; and only to be considered by the designer in connection with certain rules and conditions.

The Herreshoffs.

AUCKLAND, New Zealand, Nov. 29, 1895.—*Editor Forest and Stream:* A good deal of discussion has been occasioned in local yachting circles lately regarding the Herreshoff Brothers. The New Zealand *Herald* lately published a note referring to the America Cup, in which one of the brothers is described as being blind, but that he is the designer of the famous yachts for which the firm is celebrated the world over. In a letter to the same journal Mr. A. Buchanan, one of the most active local yachtsmen, says that this is wrong, and that it is not the blind Herreshoff who does all the work credited to him, but his brother Nat. To definitely settle the matter will you kindly oblige by stating who is right and who is wrong?

[From the clippings inclosed with the above we should say that both sides are in part right. N. G. Herreshoff is not blind and is the designer for the firm, while J. B. Herreshoff, who has been totally blind since boyhood, is the president and business head of the company. While the actual designing of *Vigilant*, *Defender*, *Dacotah* and other famous yachts is the work of N. G. Herreshoff, there is no question that the elder member of the firm, who at one time, in spite of his blindness, carried on yacht building on a small scale, attending to all details, and even working at the bench, has worked with him in the planning and discussion of dimensions and details. J. B. Herreshoff

is in many respects a wonderful man, thoroughly conversant with yachts and yacht building, and with a delicacy of touch in handling a model that goes far to compensate for his great misfortune.]

Illawarra.

THIS handsome steam yacht is now building at the Bath Iron Works, Bath, Me., for Eugene Tompkins, of Boston, Mass. The keel was laid during the latter part of December, and the vessel will be completed next May, in time for the yachting season of 1896. The designer of the vessel is Charles Ridgley Hanscom, of Bath, Me., designer of the beautiful steam yachts *Peregrine* and *Eleanor*. The principal dimensions of the *Illawarra* are:

Length over all.....	129ft. 10in.
l.w.l.....	106ft. 3in.
Beam.....	18ft. 6in.
Depth of hold.....	10ft. 6in.
Mean draft.....	7ft. 6in.

The vessel is remarkably roomy and seaworthy for a boat of her class, and all her fittings and furnishings are designed to be elegant and tasteful. The accommodation will comprise all the requisites necessary for comfort and convenience, the owner’s quarters (consisting of four staterooms) and main saloon being on the lower deck aft. The officers and crew are berthed forward on the lower deck and a deck house on the main deck forward is devoted to a galley, dining and observation rooms.

The motive power consists of a vertical triple expansion engine of 350 h. p., with cylinders 11, 19 and 30in. The condenser is separate from the engine frame and the high pressure cylinder is placed in the center, with the low aft. The propeller is four-bladed, of manganese bronze, 6ft. 6in. diameter. There will be two Almy water tube boilers with a working pressure of 200lbs. The coal bunkers have a capacity of about twenty tons of coal, and fresh-water tanks are provided with a capacity of 2,500 gallons. The vessel is provided with a Williamson steam steerer and a Hyde steam brake windlass. She will have a very complete electric plant, including a 12in. search light and a storage battery of ten hours’ endurance.

The *Illawarra* will carry three boats—a 20ft. naphtha launch, a 20ft. gig and a 14ft. dinghy. She will have two pole masts, each about 52ft. high above deck, and will be rigged as a two-masted schooner with French sliding gaffs. The total sail area will be 2,500 sq. ft.

A New Cape Cod Cat.

THE new boat which Nelson Huckins, Jr., of Onset, is building from his own designs specially to defeat Rooster, the crack 20ft. cat owned by the “Adams boys” of Boston, is attracting considerable attention, not only from the promise of speed which she gives, but also because of the reputation her builder has already made with *Gilt Edge*, *Melro* and *Rex*, which captured so many first prizes in and around Boston last season.

■The boat is an enlargement of one of Huckins’s most successful boats of last season, the 20-footer *Sylph*, which was easily the best boat of her class in the bay. Even *Grise*, the importation from Lake Minnetonka, had to lower her colors on several occasions. As *Sylph* was a wide departure from prevailing models of her size, and an eye-opener in the matter of speed, so is the new boat a wide departure

STEEL STEAM YACHT ILLAWARRA—DESIGNED BY C. R. HANSCOM FOR EUGENE TOMPKINS.

from anything yet seen in a 20-footer. If she shows a speed proportionate to that shown by her smaller sister, the other boats of her class will need to be very fast to keep in the procession.

The new boat is about 29ft. over all, 10ft. beam and 1ft. draft. Her six feet of overhang is about equally divided forward and aft. She will have no ballast outside or inside, unless a little should be needed for fore and aft trim, but in place thereof will have a lead weighted centerboard weighing 600lbs., which will be hung in the usual way and be raised by a winch at the after end. The board will be made of 1½in. oak and the lead will be so run into the after end and lower side as to be at the lowest possible point when the board is down and yet not come above the waterline when the board is raised. The board will be rising 8ft. in length and have a depth of 5ft.

The boat will also have a metal board forward 3ft. long and 2ft. deep, a feature which her designer has found to be of great value in last season’s experiments, especially in his shallow or light draft boats. She will have about 1ft. at least freeboard and very little sheer. In model she shows long and easy lines, while every inch of her overhang will be utilized aft when she heels and forward when she goes into a sea. The midship section shows a little keel below the garboard, a quick turn at the garboard into a straight floor with considerable dead rise, which in turn runs into a very easy bilge and a topside with no tumble home. The fore and aft lines show no hollow in the main body either above or below the waterline. The forward overhang carries out the lines of the upper forebody in splendid shape, while the after overhang extends the lines of what is an unusually clean looking run.

The line of the keel is an easy upward sweep forward and aft until close to the waterline; then a sharper upward turn and then a reverse curve, taking the overhang along close to the water. The features of the model, outside the peculiar overhang, appear to be straight floor and easy bilge, and the exceedingly long fore and aft lines on both floor and side. The deck line is not a segment of a circle, but is noticeably flattened amidships, giving that long side to sail on when heeled which many good judges of modeling deem an essential feature. The diagonals are of course long, easy and sweeping, and although the boat has an extreme beam, she has not much body to drag through the water, and will be all on the surface.

In construction she is extremely light, yet the details show that strength is provided for. The keel is of white oak and the frames of the same wood ¾×½in. They are, however, spaced only 6in. centers, so they make up in numbers for smallness in size. Extra strength is gained by bent knees of the same size as the frames on every other deck carlin, while the frames forward at the shrouds are extra heavy. The boat has extra bilge strakes running the whole length 1½×2in.

The planking will be of the best ½in. pine, running full length, and copper riveted. The deck, which is flush, is of ½in. matched pine covered with canvas.

The mast is 6in. spruce, 30ft. long, and hollow. The boom is 33ft. and gaff 20ft., both hollow. The mainsail has 15ft. hoist. The boat will be steered with a balanced metal rudder.

Mr. Huckins expects great things of the boat, and she gives many indications of not disappointing him. He will also build a large second-class cat for David Whittemore, of Newton, which he expects will be a winner. She will be 33ft. over all, on similar lines to the *Rex*. Huckins’s business has increased so that it has become necessary for him to build a large addition to his shop, something which he intends doing early in the spring.—*Boston Globe*.

Arcturus, Steam Yacht.

The large new American auxiliary steam yacht Arcturus, 500 tons Y. M., has sailed from Leith for Cowes, to stay for a few days preparatory to sailing for the Mediterranean, where her owner, Rutherford Stuyvesant, will go on board for an extended cruise.

This yacht, which has been designed by Mr. St. Clare Byrne, Liverpool, and built by Messrs. Ramage & Ferguson, Limited, Leith, presents many novel features, the most striking of which is a water tube boiler of American construction, supplied by the Almy Water Tube Boiler Company, of Providence, Rhode Island, U. S. A. On the official trip on 10th ult. sufficient steam was easily generated at 150lbs. pressure to keep the triple expansion engines going 140 revolutions per minute, giving the highly satisfactory mean speed of nearly 11¼ knots on the measured mile, being fully a knot more than was expected.

In firing the boilers and feeding with fresh water no difficulty whatever was experienced. A comparison could thus easily be made, as duplicate engines in other vessels lately have been supplied with steam from other types of boilers, but with much less efficiency and notably inferior speed.

The dimensions of the Arcturus are 138ft. length B. P., 27ft. breadth, and 17ft. 6in. depth moulded. The engines are triple expansion, with cylinders 18, 21 and 34 in., working at 165lbs. pressure, and having a Bevis gun-metal feathering propeller.

Three taunt Oregon pine masts spread a large area of fore and aft canvas, which should make the yacht give a good account of herself under sail alone.

From statistics furnished by the Almy Water Tube Boiler Co., it appears that boilers of their patent type have been largely supplied to American steam yachts, as well as other small craft; so, with the Arcturus in these waters, it may be possible to make some instructive comparisons as to the relative merits of English, French and American types.

The cabins below, as well as deck houses above, are fitted up in an unusually tasteful manner, with a few transatlantic innovations which might well be adopted on this side.

Altogether the Arcturus is one of the most notable auxiliary steam yachts turned out at Leith for a long time, and her advent in English and Mediterranean waters is watched with much interest by yachtsmen generally.—*The Field*.

"One Design" 15-Footers.

The members of the Winthrop Y. C. who are building 15-footers to the number of a dozen at Acker's shop, South Boston, have agreed to sail the entire fleet to Winthrop on May 15. The boats are described as follows by the Boston *Globe*:

They will be built from a design by Parker Kemble, will be identical in model and construction and will be selected by lot when finished. The design shows a square-sided boat, 22ft. on deck, 14ft. 6in. water-line, 4ft. 6in. beam and less than 6in. draft. The least freeboard is 11in., and there is quite a sheer. The floor has considerable dead rise, and the lines have an easy sweep, which promises a good form to drive. It is a neat-looking design all around, and the boats built under it should be just as speedy, if not quite so handsome, as some of the more expensive ones.

The rig will be jib and mainsail without bowsprit. The sail area will be 235sq. ft., of which 189 will be in the gaff mainsail. The racing length will be 14.89ft. The dagger centerboard, a ¼in. galvanized iron plate, is 5ft. long and 17in. wide, and will drop to its full length. It will weigh about 70lbs., and no other ballast will be carried. The cockpit is 4ft. by 18in., with washboard set well out on the deck, and is self-draining into the centerboard box. Some novelties for lightness of rig aloft are promised. The mainsail will have a 17ft. boom, a 10ft. gaff and a hoist of 11ft. The jib will be 7ft. on the foot.

In construction the boats will show oak keels, spruce frames and ½in. planking of clear white pine. The decks will be lighter pine and will be canvased. The bottom planking will run lengthwise and be galvanized screw fastened. Cousens & Pratt will make the sails, which will be of light cotton duck.

The price of the boats is so low that the owners cannot fail to have more than their money's worth of sport. Several more of the club members are considering the matter of joining those who have already ordered, and there is certainly sport in view.

YACHTING NEWS NOTES.

The Royal Canadian Y. C. house was burned to the water's edge on Monday morning, Jan. 6, the loss being \$10,000 on building only. The wind being favorable was the only thing that saved the Toronto C. C. from a like fate. As it was, the house ignited twice, but the prompt action of the firemen prevented the flames from spreading, and only slight damage was done. The commodore of the R. C. Y. C. has received a communication from the canoe club offering any assistance required until future arrangements are made.

At the annual meeting of the Newport Y. C. on Jan. 3 the following officers were elected: Pres., Bradford Gay; Com., Charles S. Plummer; Vice-Com., John H. Scannevin; Rear-Com., George S. Slocum; Sec'y, Wm. M. Arnold; Treas., W. H. Holmes; Meas., W. M. Arnold; Fleet Surgeon, Charles D. Mueller; Regatta Committee, Henry P. Williams; Bradford Gay, Charles W. Crandall; House Committee, J. H. Scannevin, C. A. Palmer, George Ritchie, W. H. Holmes; Library Committee, W. M. Arnold, W. H. Holmes, C. W. Crandall; Committee on Admission, Wm. H. Westcott, James W. Langley, F. Goldthwaite Kimball. Two members were elected, making the total number 119. The club is in excellent financial condition and the new club house will soon be ready for occupancy.

Valiant, steam yacht, W. K. Vanderbilt, sailed from New York on Jan. 8 for Port Royal, N. C., where her owner and a party of friends will join her, proceeding at once to Nice for the Mediterranean regattas.

On Jan. 8 the annual meeting of the Brooklyn Y. C. was held at the club rooms, the following officers being elected: Com., C. H. Humphreys, ssp. Kangaroo; Vice-Com., Henry R. M. Cook, cutter Lapping; Rear-Com., William D. Groatage, ssp. Royal; Meas., Frank W. Kearney; Pres., P. H. Jeannot; Treas., Willard Graham; Sec'y, William Cagger. Trustees—Charles H. Oliver, S. S. Golding, E. H. Chandler, George B. Lyons, Albert Clunan, Edward Salt, Louis Wunder, Joseph N. Gans and R. C. Hopkins. Membership Committee—George Chaffier, Charles H. Frost and A. S. Richoffer. Regatta Committee—Henry Stanwood, James R. Finlay and George L. Robinson. Notice was given that the following amendment to the by-laws would be offered for adoption at the next meeting: Article 11, rule 5—Yachts of 30ft. and over may be steered by other than members of the club. Article 11, rule 7—Cabin yachts may carry any sail they please, except square sails, club topsails extending above topmast or beyond head of gaff. The club voted to give a subscription dinner on Friday, Feb. 21.

The annual meeting of the Indian Harbor Y. C. was held at the Arena on Jan. 8, the following officers being elected: Com., Charles T. Willis, ssp. Daphne; Vice-Com., Wm. B. Higgins, str. Clarietta; Rear-Com., George G. Tyson, cutter Vorant II.; Sec'y, Charles F. Stewart; Treas., Richard Outwater; Meas., Frank B. Jones. Trustees—to serve three years, Charles A. Moore and C. Stuart Somerville. Regatta Committee—George E. Garland, chairman; D. Willis Merritt and Charles E. McManus. A letter was read from the Seawanhaka-Corinthian Y. C. thanking the club for its aid in defending the Seawanhaka cup in the 15ft. class. The announcement was made that the club would be located in the future on Rocky Point, Greenwich.

Hermione, steam yacht, H. L. Pierce, sailed from Norfolk on Jan. 8 for the West Indies.

Immediately on his arrival at Liverpool, Lord Dunraven proceeded to Penrith, Wales, where, with the Prince of Wales, he was the guest of Lord Lonsdale. Mr. Asquith remained in New York until Jan. 7, sailing on the St. Paul for Liverpool. He has made a very favorable impression on all who have come in contact with him here.

The annual meeting of the Commonwealth Y. C. of Boston, was held on Jan. 2, the following officers being elected: Com., Hiram Patterson; Vice-Com., Charles L. Ellis; Rear-Com., John A. Evans; Treas., Albert E. Justice; Sec'y, Luke S. White; Meas., Thomas S. Condon; Trustees, Edward J. Gallagher, W. A. Purdy and C. H. Wilson.

The scheme of a yachting harbor at Norton's Point, Coney Island, is again under discussion in connection with a new organization, a "country club" under the name of the Sea Gate Club. Overtures have been made to the Atlantic Y. C. to establish its station on a proposed harbor and basin to be built inside the Point. The location is in many respects an admirable one, if existing obstacles in the way of expense can be overcome.

Eleanor, steam yacht, W. J. A. Slater, called at Valparaiso, Chili, for coal on Jan. 9, and sailed again for New York.

Star of the Sea, steam yacht, now owned by A. J. Cassatt, has been renamed Enterprise. She is still at Erie Basin, where a new boiler has been shipped and other alterations made.

Valiant, steam yacht, W. K. Vanderbilt, reached Port Royal on Jan. 10, where her owner joined her, sailing next day for Nice.

Hermione, steam yacht, H. L. Pierce, was at Brunswick, Ga., on Jan. 10.

The Atlantic Y. C. has nominated these officers, the annual meeting being on Feb. 10: Com., George J. Gould, smtr. Atlanta; Vice-Com., F. T. Adams, schr. Sachem; Rear-Com., John H. Hannan, smtr. Embala;

Sec'y, David E. Austin; Treas., George H. Church; Meas., H. J. Gielow; Trustees, Philip G. Sanford, Thomas L. Arnold, J. Fred Ackerman, J. Rogers Maxwell, Alexander P. Ketchum and Thomas L. Watson; Membership Committee, Louis F. Jackson, H. W. Banks, Jr., and Spencer Swain; Regatta Committee, John L. Bliss, W. L. Gerrish, Henry J. Gielow, David E. Austin and George W. McNulty.

The Corinthian Y. C. of Philadelphia, held its annual meeting on Jan. 8, electing the following officers: Com., Clement A. Griscom, schr. Alert; Vice-Com., R. E. Tucker, cutter Mermaid; Rear-Com., Robert Barrie, cutter Mona; Sec'y, Addison F. Bancroft; Meas., G. Herbert Millett; Regatta Committee, Addison F. Bancroft, William R. Ellison and Isaac W. Jeanes; Committee on Admissions, Charles H. Brock, Alexander Van Rensselaer, G. Herbert Millett, Robert K. Neff and Brereton Pratt; Trustees, to serve three years, Clement A. Griscom, John W. Brock, William L. Elkins, Jr., and Richard P. White. The remaining Trustees, whose terms will not expire for one and two years, are: Col. Anthony J. Drexel, Victor J. Petty, Robert J. W. Koons, Frank H. Rosengarten, Edgar T. Scott, Russell E. Tucker, Addison F. Bancroft and Robert K. Neff.

Beverly Y. C. fixtures, 1896, for Buzzard's Bay: June 17, open sweepstakes; 27, club championship; July 4, open sweepstakes; 11, club championship; 25, open sweepstakes; Aug. 1 and 22, club championships; Sept. 5, open sweepstakes; 7, open regatta; 12, club championship. The race of July 25 will be off West Falmouth; all the others off the club house on Wing's Neck.

John D. Barrett, of New York, formerly owner of the sloops Madcap and Swanannoa, has signed a contract with the Lawley Co., of South Boston, for a steel centerboard schooner from the designs of H. C. Wintringham. She will be 38ft. over all, 63ft. l.w.l.

Queen Mab, cutter, has been sold by Percy Chubb to N. L. Francis, of Boston.

The *Yachting World* is responsible for a blunder by which George Bullock, of Cincinnati and Oyster Bay, is confused with George Bulough, of the Isle of Rum, Scotland. It is the latter gentleman who has lately purchased the large Watson steam yacht Maria and renamed her Rhouma.

Canoeing.

A. C. A. Finances.

The following report of the Board of Governors of the American Canoe Association has been filed with Com. Huntington, and is here-with published for the information of members. The Association has much to be thankful for in the excellent showing due to the good management of its officers for the past two or three years:

BOARD OF GOVERNORS' STATEMENT.

Receipts.

Nov. 14, 1894, Charles E. Cragg, Secretary-Treasurer, A, as per report.....	\$609 15
Nov. 12, 1895, Thomas H. Stryker, Secretary-Treasurer, amount loaned C. E. Cragg Nov. 14, 1894, B.....	250 00
Thomas H. Stryker, Secretary-Treasurer, balance in full received from C. E. Cragg, Nov. 12, 1895, B.....	511 60
Interest to July 1, 1895.....	7 18
	\$1,377 93

Disbursements.

Nov. 14, 1894, C. E. Cragg, Secretary-Treasurer, as per resolution, Nov. 12, 1894, C.....	\$250 00
Thomas H. Stryker, Secretary-Treasurer, as per resolution, November, 1895, D.....	250 00
	500 00

In the Brooklyn Savings Bank.....	\$577 93
Dec. 26, 1895.....	
Audited and found correct, Jan. 3, 1896.....	

MORTON V. BROKAW,
H. C. WARD.

Toronto C. C.

The handsome and commodious rooms of the Toronto C. C. were the scene of a very pleasing event on the evening of Jan. 4, when a large number of friends of Mr. Herbert R. Tilley took the occasion of his recent retirement from the commodoreship (which he has held for the last two years) to express their hearty appreciation of his services. In a brief and very felicitous speech the present commodore, Mr. Geo. Wilkie, referred to the advances that had been made and the prosperity which the club had enjoyed during Mr. Tilley's term of office, and then, in the name of his many friends, presented him with an appropriately worded address, beautifully illustrated with sketches of canoeing incidents and scenery, and signed by over sixty of the club's most prominent members, the whole forming a highly artistic and handsome souvenir. In his reply Mr. Tilley warmly thanked those assembled for their good will and kindness, which affected him more deeply than he could express, to which the boys responded with three hearty cheers for the ex-commodore and a spirited rendering of "For he is a jolly good fellow." Laudatory speeches were also delivered by Captains J. T. R. Stinson and Geo. Sparrow and ex-Commodores J. L. Kerr, H. C. Neilson and G. R. Baker.

Rifle Range and Gallery.

Annual Meeting of the Hudson Rifle Club.

JERSEY CITY, Jan. 8.—The annual meeting of the Hudson Rifle Club was held this evening in the club's new headquarters. The attendance was unusually large, the election of officers for the ensuing year creating great interest. The following were elected: Captain, H. Mahlenbrock; Shooting Master, Henry E. Boddey; Corresponding Secretary, John L. Reynolds; Financial Secretary, C. Holden; Treasurer, John Rehban; Sergeant-at-Arms, Schuyler G. Coats. Board of Directors: Capt. H. Mahlenbrock, George W. Morgan, Samuel A. Middleton, Anton Braun, Sr., Thomas Howe. Board of Trustees: George W. Morgan, Thomas Howe, Henry E. Boddey.

After the election of officers the treasurer handed Capt. Mahlenbrock a handsome diamond ring on behalf of the members of the Hudson Rifle Club for his efficient services during his last term of office and the valuable assistance he has rendered toward securing the present headquarters of the club. The proceedings were brought to a conclusion with a lunch.

A match between teams from the Our Own Club, of Newark, and the Hudsons will take place on our ranges Thursday evening, Jan. 16. All riflemen of like organizations are invited to be present and inspect the model home of the Hudson Rifle Club, where any neutral match can be shot at any time. The ranges are at the disposal of any and all clubs who may wish to use them for team matches. Full particulars as to dates can be had by addressing Capt. H. Mahlenbrock, 21 Marion place, Jersey City.

Zettler Rifle Club.

NEW YORK, Jan. 7.—At the shoot of the Zettler Rifle Club, held this evening at the headquarters of the club, 219 Bowery, the following scores were made:

R Busse.....	235 240 215 242 242	H D Muller.....	236 236 240 237 239
Dr J A Boyken.....	232 240 240 241 233	H Munz.....	234 230 235 234 228

A MIDWINTER TOURNAMENT.

The following programme has been issued by G. A. Schurmann, secretary of the Zettler Rifle Club, B. Walthers, president, for Jan. 31 and Feb. 1:

Ring target: Open to all comers; any .22 caliber rifle, short cartridges, 25-ring target; 50 cents per ticket of three shots; number of tickets unlimited, but only one prize can be obtained by any one shooter on this target; best two tickets to count. The 15 best scores will receive prizes in order of merit as follows: \$35, \$30, \$15, \$10, \$5, \$3, \$2, \$1, 50c, 25c, 10c, 5c. Premiums for the most points will be given as follows: For the highest number of points—\$5; for second highest—\$3; for third highest—\$2.

Bulls-eye target: Open to all comers; 50 cents per three shots; 4in

bull, entries unlimited. Ten cash prizes for the 10 best bulls by measurement in order of merit as follows: \$10, \$8, \$7, \$6, \$5, \$5, \$3, \$3, \$2, \$1. Premium for highest number of bulls—\$3; for next highest number of bulls—\$2.

Shooting commences each day at 2 P. M. and closes each night at midnight.

Shooting committee: H. D. Muller, chairman; H. Holges, Phil. Feigel, M. B. Engel, Louis Flach. Shooting master—B. Zettler.

Prize Winners at Walnut Hill.

WALNUT HILL, Mass., Jan. 4.—To-day was the first shoot of the Massachusetts Rifle Association at Walnut Hill for the year of 1896. The scores made were as follows, the blustering wind having much to do with the scores:

Gold Seal Medal.	
Won on 10 scores of 85 or better by	
H E Tuck.....	88 88 85 86 89 89 85 86 86 87
The Bronze Membership Badge.	
Won on 10 scores of 100 or better by	
T E Russell.....	101 100 109 101 109 115 103 112 109 110
All-Comers' Off-hand Match.

The Cottage Rifle Club.

JERSEY CITY, N. J., Jan. 8.—The Cottage Rifle Club, with headquarters at 517 West Side avenue, are making remarkable progress. Several matches have been shot with the Hudson boys, the Cottagers giving a good showing of their strength in each instance. P. J. O'Hare was the organizer of the club; he is also a member of the Hudson Rifle Club, of this city. Any communications regarding matches can be addressed to P. J. O'Hare, 517 West Side avenue, Jersey City.

THE EAGLE.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Jan. 23-24.—UTICA, N. Y.—Mid-winter tournament on the grounds of the Oneida County Sportsmen's Association; live birds and targets. J. W. Fulford, Manager.

Jan. 30.—ELIZABETH, N. J.—100-target handicap race, \$5 entrance, targets extra. Nare Astfalk, Manager.

Feb. 1.—HOLMESBURG, Pa.—Third team race between All-Philadelphia and the Delaware State League, 25 men to a team. (Place of shoot not fixed.)

Feb. 25-26.—ELIZABETH, N. J.—Sixth bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds.

March 24-26.—NEW YORK.—Interstate Association's Fourth Annual Grand American Handicap, at live birds at Elkwood Park; \$1,000 guaranteed in the main event, all surplus added.

April 14-17.—ATCHISON, Kansas.—Thirteenth annual open to all, and second annual manufacturer's amateur tournament; \$1,000 added money and manufacturers' prizes. Lou Erhardt, Sec'y.

April 22-24.—WELLINGTON, Mass.—Tournament of the Boston Shooting Association; targets. O. R. Dickey, Manager.

April 30-May 2.—NEWBURGH, N. Y.—Annual spring tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

May 5-8.—NEW YORK.—Tournament of the American E. C. Powder Company; \$2,000 added money.

May 12-15.—MEMPHIS, Tenn.—Tournament of the Memphis Gun Club, \$2,000 added money.

May 12-14.—DAYTON, O.—Annual tournament of the Ohio Trap Shooters' League. Ed. Taylor, Sec'y.

May 19-22.—CINCINNATI, O.—Tournament of the Hazard Powder Co. R. S. Waddell, Agent.

May 20-24.—KANSAS CITY, Mo.—Nineteenth annual convention and tournament of the Missouri State Fish and Game Protective Association. J. H. Durkee, Sec'y.

May 26-28.—FRANKFORT, Kan.—Annual tournament of the Kansas State Sportsmen's Association.

May 28-29.—INDIANAPOLIS, Ind.—Tournament of the Limited Gun Club; nobody barred; targets. Royal Robinson, Sec'y.

May 30-June 1.—MILWAUKEE, Wis.—Eleventh annual tournament of the South Side Gun Club.

June 1-6.—CHICAGO, Ill.—Twenty-second annual tournament of the Illinois State Sportsmen's Association. H. B. Meyers, Sec'y.

June 8-13.—BUFFALO, N. Y.—Thirty eighth annual tournament of the New York State Association for the Protection of Fish and Game under the auspices of the Audubon Gun Club. E. W. Smith, Sec'y.

June 9-11.—DAVENPORT, Ia.—Annual tournament of the Iowa State Sportsmen's Association. R. B. Cook, Sec'y.

June 10-11.—FAROO, N. D.—Second annual tournament of the North Dakota State Sportsmen's Association; targets; \$500 added money. W. W. Smith, Sec'y.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlain Cartridge and Target Company.

June 23-26.—PITTSBURG, Pa.—Tournament of the Pittsburgh Gun Club; targets; \$500 added money.

July 30, 31.—GOSHEN, Ind.—Midsummer tournament of the Goshen Gun Club.

Oct. 7-9.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

DRIVERS AND TWISTERS.

Our Mountville, Pa., correspondent, Tell, writing us in regard to the New Year's shoot there, says: "The day opened very cold, and when the sun rose the wind rose with it, growing into a gale later in the day. As a result, although we had a fair crowd present, only ten shot. We began with five men, 10 targets, 25 cents entrance, targets extra. To my surprise, this style of event and entrance money was kept up all day, and during the afternoon several of the lookers-on got inspired with the sport and chipped in their quarters 'just for fun.' In all 1,500 targets were shot at during the day. Mr. Burnham, of York, Pa., who won the State championship at targets in '95, was the only shooter to make 10 straight, and he did it only once; the 'just for fun' men could not get more than 1 or 2 out of 10; it was hard to locate the targets correctly in the high wind that was blowing. All had a good time and lots of sport (and that's what we're after) at very little cost. I think the A. I. I. (all in it) system will bring back the shooters to the traps."

A. de Krulft, treasurer of the Zealand (Mich.) Gun Club, in sending us an account of the recent match between his club and the Holland (Mich.) Blue Rock Gun Club, gives a resume of the clubs' history, together with an account of the scores made in the team races: "The first contest for the championship of Ottawa county took place at Macatawa Park—one of the best and loveliest summer resorts on the shores of the lake—on Aug. 1 last; score: Zealand 123, Holland 81. The second contest was shot on our grounds on Oct. 15, the home club winning by 12 breaks; score: Zealand 101, Holland 89. The third race was shot on Dec. 26 on the same grounds, the home team again winning; score: Zealand 103, Holland 91. Both clubs were organized about the same time—a year ago last August—and since that time we have had several friendly contests with our neighbors, who beat us in the shoot for the West Allegan & South Ottawa Fair Company's medal; score: Holland 107, Zealand 103."

In our issue of Jan. 4 we made a note in "Drivers and Twisters" of a proposition made by Louis Duryea to shoot on six consecutive days with any six amateurs who were members of the Carteret, Larchmont, etc., gun clubs; Duryea to shoot with a different man each day and each race to be for \$100 a side, with something extra on the outside on the general result. During the Larchmont shoot on Jan. 10-11 the matter was talked about, the result being that a proposition was made to Duryea to shoot a race with six men, all members of the Carteret or Larchmont Clubs, but for a sum of \$250 a side each match, it being claimed that with \$50 to pay for the birds there was nothing in it at \$100 a side. To this change of his proposal Duryea objected, but said that he would stand by his original statement. The six men whom it was proposed to match against him were: Edgar Murphy, George Work, J. P. Knapp, H. Yale Dolan, H. E. Wright and Fred Hoey.

The programme for the midwinter tournament of the Oneida County Sportsmen's Association, which will take place at Utica, N. Y., on Jan. 23-24, has been received. The first day's events are at targets, entrance in all events is at the rate of 10 cents per target, 2 cents extra being charged for each target. The programme for that day contains one event at 25 targets, four at 20 targets and three at 15 targets, four moneys. The second day is live-bird day; the first event is 10 birds, \$5; the second event is the "Central New York Handicap," 20 birds, \$15, handicaps ranging from 26 to 32yds., four moneys; No. 3 is at 7 birds, \$5, three high guns. Entrance in the main event should be made to O. A. Wheeler, Utica, N. Y., by Jan. 20, a forfeit of \$5 being inclosed. The shooting grounds at Utica have been recently equipped for the special purposes of a winter shoot, so that all visitors will find that they will be comfortable, no matter what the weather is.

H. B. Perkins, Jr., ex-secretary of the Warren Gun Club, sends us the following report on the condition, financial and otherwise, of the club: "The annual meeting of the Warren Gun Club, Warren, Ohio, was held on Jan. 7, 1896. The past year has been a very successful one in every respect. Three public tournaments have been given, all of which have been well attended. The members have shown a keen interest in the regular club shoots, which have been once a week in the summer, and once in two weeks during the winter. The finances of the club are in very good condition. A handsome club house, tower house and a shed to cover the traps have been erected and the equipment is one of the best in the State. During the past year over 31,000 targets have been thrown and the percentage of targets hit for all shooters is 63.6. The following is a list of the officers for the coming year: President—G. D. Kirkham; Vice-President—Z. F. Craver; Secretary—R. W. Ewalt; Treasurer—W. H. Abell. Directors—W. A. Neracher, T. G. Dunham, G. H. Jones. Capt.—C. L. Schoonover."

Clinton C. Howell, secretary of the Independent Shooting Club, of Vienna, Warren county, N. J., writes us under date of Jan. 9 as follows: "The Independent Shooting Club, of Vienna, N. J., was organized on Dec. 26, 1895, with a charter membership of sixteen members. The following is a list of members and officers elected: Pres., W. B. Martenis; Vice-Pres., William Parks; Purchasing Agent, David Vreeland (all the above reside at Danville, N. J.); Sec'y, Clinton G. Howell; Treas., Aaron B. Howell, both of Vienna, N. J. The other members are: John Cox, Isaac Aber, Michael Preston, Edward P. Gibbs, R. Z. Flummerfelt, David Henry, John Jaynes, R. Ansel Parks, James Howell and Jay Oreager, of Danville, N. J., and Sanford L. Hibler, of Vienna, N. J."

During the progress of the Larchmont championship shoot last week some one remarked that whenever one of the clubs around New York was having a big shoot it ought to allow Murphy to enter and shoot free of charge, a receipt in full being given by Murphy's ready wit, good nature and abundance of good stories—some of them very mossy ones too, but still worth listening to when the "dear little Shamrock" relates them. His account of his 100-bird race with Bradley—given elsewhere in these columns—was the funniest thing we've listened to for many moons.

Nate Astfalk, of the Elizabeth (N. J.) Gun Club, announces a 100-target handicap race for Jan. 30, at 10 A. M. The entrance will be \$5, targets extra, an allowance of targets being awarded by a handicap committee composed as follows: Jacob Peutz, J. M. Taylor and Edward Banks. The event will, of course, be shot at unknown angles, A. S. A. rules to govern. It is some time since a 100-target handicap race has been shot in this part of the country. Astfalk's shoot ought to draw a good entry list; it is open to all.

The Rockaway Point Rod and Gun Club, of Brooklyn, N. Y., has elected the following officers for 1896: President, Joseph A. Bourke; Vice-President, Major E. Spott; Secretary, John H. W. Fleming (better known as Johnny Jones); Treasurer, Louis H. Schortemeier; Steward, E. J. Meyer. The Rockaways are generally known among their friends as the Cuckoos. They number among their members many of the best shots in New York city and Brooklyn.

The annual meeting of the Orange Gun Club was held on Tuesday evening, Jan. 7. The following officers for 1895 were elected: President, L. A. French; Vice-President, C. H. Edwards; Secretary-Treasurer, W. L. Mann; Captain, L. A. French; Directors, O. D. Hapgood and Moses Hilton. The secretary writes that "the club is in a thriving condition, and is anticipating lots of 'dead birds' next season."

The Pittsburgh (Pa.) Gun Club will give a tournament at targets on June 23-26, the week following the Chamberlain tournament at Cleveland, O. The club will add \$500 to the purses. On the first day of the tournament, June 23, there will be a 100-target handicap race. The shoot will in all probability be held at Homewood Park, within easy reach of the center of the city.

Messrs. Schoverling, Daly & Gales, of 302 Broadway, New York city, have assumed the agency of the Walsrode smokeless powder in the United States. Messrs. Schoverling, Daly & Gales write us that all the business connected with the powder in this country will be conducted through that firm.

The series illness of Mr. J. Seaver Page, of this city, is, we are glad to learn, passing away, although Mr. Page is as yet by no means ready to take up his gun and shells and walk to the score with the determination to bring down a "darter to the right." As a matter of fact Mr. Page's absence has been very much felt in the amateur shooting circles of this city.

Phil. Daly, Jr., that is, the management of Elkwood Park, N. J., where the Grand American Handicap is to be brought off, will give a valuable cup as a trophy for the winner in the Handicap. This will not be a challenge trophy, but will be the absolute property of the man who shoots all the others out, and will be a valued memento of his success in one of the largest live-bird events of 1896.

In another column Mgr. Shaner, of the Interstate Association, calls special attention to a further slight change in the dates for the Grand American Handicap. The change was made with the idea of giving visiting sportsmen a chance of seeing the Sportsmen's Exposition and taking part in the handicap with practically only one week's stay in New York city.

Plans are outlined in Pittsburg, Pa., for the organization of a club somewhat on the lines of the Carteret and Rivington gun clubs. The membership of the new club is to be limited to fifty. Brushton, on the line of the P. R. R., is hinted at as the probable location for the club house and grounds.

Louis Duryea's record of 47 out of 50 live birds, 23yds. rise, one hand only, is a mark that is likely to stand for some time. The same score made by any shooter who was allowed both hands would be good work indeed; as a specimen of one-handed shooting it is remarkable.

Dexter Park's live-bird handicap, which is to come off some time early in February, will be a popular event if one or two of the big fellows are barred.

EDWARD BANKS.

Doylestown Gun Club.

DOYLESTOWN, Pa., Jan. 3.—The second big shoot of the season was held on the Athletic Grounds here yesterday and to-day. Many well-known sportsmen were present. It was a two-days' live-bird and blue-rock tournament. The first day was occupied mostly with small sweepstake matches; the most interesting events occurred upon the second day. A high and piercing cold wind which swept across the grounds made first-class work impossible. Following are the target scores made on the

First Day.																								
Events: 1 2 3 4 5 6 7 8									Events: 1 2 3 4 5 6 7 8

														A. MACREYNOLDS.											

Protect the Amateurs.

CINCINNATI, O., Jan. 12.—*Editor Forest and Stream:* I read Mr. D. S. Wadsworth's article in your issue of Jan. 11, and it afforded me much matter to consider. I think he is partly right and partly wrong.

As I have mentioned before, I am an amateur and I am proud of it. Were I an expert I would be proud of that too; and were I a champion I would belong to a class which in numbers is not much less than the amateurs.

But out of the fullness of my heart I desire to say a good word for the professional; for, though he can shoot well with a gun, a pen is too light for the hand accustomed to the gun—a weapon so much more potent, so much surer, and so much more profitable.

Mr. Wadsworth directs his arguments more particularly against the manufacturers' agents—the class which works for a salary on the one hand and picks up the amateur's dollars on the other, sometimes concealing the fact that they are paid agents. No doubt such concealment is from their innate modesty, a desire to keep fame at a respectful distance. But do not the manufacturers' agents do much good? Do not they devote all their attention to the study of correct loads, experimenting as to the best powders, kinds of shot, primers, chokes, guns, etc.? And are they not ever ready to inform the amateur on any point desired? Do not the papers team with the results of their researches? Have they not shown us how a man can win shooting singly by himself and shooting in combination with his fellow agents, so that all the money is at their wish? A man with a talent sufficient to command a big salary on the one hand and sufficient to skin the amateur on the other is worthy of awe and veneration, particularly if he makes the amateur think he is having a good time while being skinned.

The much abused and long suffering class, the professionals, have my sympathies and my services in their defense. It is no ordinary class of men who can go forth in the land and blithely extract the amateur's dollars while the amateur is intent on having some fun. Of course, the paid agents might be paid in a class by themselves, but no amateur would for a moment sanction such injustice. It would so discourage talent that it might quit, and then the amateurs might have to struggle along by themselves. With no one to skin them, the sport would cease to be interesting. The amateur likes what he is used to.

I hope that Mr. Wadsworth will reconsider his opinions and withdraw his criticisms on a hard-working, two-handed class of men.

AMATEUR.

Lynchburg Gun Club.

LYNCHBURG, Va., Jan. 8.—Several members of the Lynchburg took part to-day in a shoot at the club's grounds. The weather was fine and the day a pleasant one for target shooting. As usual all the events were at 25 targets, unknown angles. Scores:

No. 5: Nelson 15, Terry 17, Scott 22, Dornin 23, Moorman 21, Dawson 14, Stearns 20.										F. M. D.									

Larchmont's Amateur Championship.

WHEN J. P. Knapp started out at the end of 1894 to get up a large live-bird sweepstake for the members of the prominent amateur clubs of this section, he fixed the number of birds at 100 per man, the entrance fee at \$100 each, and named the Larchmont Y. C.'s shooting grounds as the place where the shoot was to come off. The dates chosen were Jan. 11 and 12, 1895, and the title given to the event was the "Amateur Championship." On the above dates 9 men shot for the cup and the money (4 high guns), Knapp winning easily with the magnificent score of 95 out of 100. On the second day he scored 49 out of 50, his 62d bird falling dead out of bounds; this bird seemed to receive the full charge of shot from his first barrel and fell to the ground with its wings spread out; Knapp, thinking it was surely scored, broke his gun and left the score without using his second barrel; that spoiled a 50 straight, as the bird rose when the dog went to retrieve it, managing to get over the boundary before being gathered. The other scores in the shoot were: George Work 89, Louis T. Duryea 88, C. Fergusson, Jr., and F. G. Moore 86, Capt. Money and W. S. Edey 80, W. Wynn 79, and B. Madison 65.

IN 1896.

So successful was the above event that it was decided to repeat it this year. Entries came in very fast, and the gathering at the Larchmont grounds on the morning of Friday, Jan. 10, was a much more representative one than that of last year. The conditions of the shoot were precisely similar to those of the previous shoot: 100 birds per man, \$100 entrance, 30yds. mark everybody, cup valued at \$250 presented by the Larchmont Y. C., and 45 per cent. of purse to the winner, 25 per cent. to 2d high gun, 15 per cent. to 3d high gun, 5 per cent. to 4th high gun, and 10 per cent. to the club. As there were 14 entries, the purse of \$1,400 was divided as follows: \$630, \$350, \$210 and \$70 to the 4 high guns, and \$140 to the club.

The preparations for the shoot were very complete. Fred Knopf, the superintendent of the shooting grounds, having put everything in apple-pie order before the shooters arrived on Friday morning. There was thus no delay in starting on almost schedule time—10 A. M. on Friday morning, Jan. 10. The weather conditions were very similar to those which prevailed last year. There was about the same amount of snow on the ground, but perhaps a little more in the air, snow squalls being very frequent during the first day's shoot, particularly in the morning, when the air at times was full of snow. The wind on Friday, too, was very raw and cold, and was coming from the wrong direction, being almost directly in the shooter's face. Under the circumstances everything was against the birds and large scores were looked for.

Regarding the birds, something must be said in praise of them. With a cold, chilling wind right in their faces, with snow all round them on the ground, and with snow squalls in the air to add to their bewilderment, sitters were only to be expected. And plenty of them there were; but what a deceptive lot those same sitters proved to be! It wasn't very long before the shooters got shy of waiting for one of the "loafers" to be scared up; they were too hard to size up correctly. Many of the best birds of the day were some of those that shooters waited for patiently—in many cases to their regret. It is true that some of them flapped along lazily like owls, but there were several that took a sudden spring and were off like a flash to the woods on the right of the score. Those birds were hard to stop on account of the poor background.

THE GROUNDS AT LARCHMONT.

So far as background goes these grounds are about as bad as any in the vicinity of New York. To the left is a steep rocky little hill, whose gray rocks, bare of snow, and scattering trees make a pigeon that take a left-quarterming flight very hard to locate; in front is a swamp, an arm of Long Island Sound, we believe, the far side of it fringed with some heavy timber; to the right is a big bunch of large trees on a knoll, the base of the rise being practically the boundary line of the shooting grounds. As a matter of fact, the grounds would make a very pretty spot for a lawn tennis ground and summer house, but they are hardly up to the mark for pigeon shooting.

To return to the birds: Outside of the climatic conditions there seemed no reason why the birds should not have been great flyers; we have seen some excellent birds leave the traps under just the same conditions, and now and again during this shoot we struck a crate or two that created lots of havoc in the scores. Still it is a fact that the birds as a whole were below what they should have been when so much money and a certain amount of glory was at stake. The management had done their part. A stove had been specially erected so that the coop in which the birds were kept prior to being selected and crated for the match might be warm and pleasant for them. They were not placed in the crates for any length of time before being needed at the score, and when they did arrive at the score the crates were kept in the pulling house, where a small stove made things warm and comfortable for the trap-puller. Everything likely to make them slow had apparently been carefully guarded against, and the birds themselves were a beautiful looking lot; it was, therefore, a great disappointment to the management to have so many of them loiter when the traps were pulled.

NAMES OF THE SHOOTERS.

The entry list contained fourteen names, the draw for position on the score resulting as follows: 1, H. B. Wright; 2, W. Gould Brokaw; 3, F. G. Moore; 4, H. Yale Dolan; 5, Edgar Gibbs Murphy; 6, George Work; 7, Louis T. Duryea; 8, J. B. Ellison; 9, W. S. Edey; 10, Charles Macalester; 11, E. F. Thomas; 12, W. H. Stafford; 13, Fred Hoey; 14, J. P. Knapp. The above was the order in which the men went to the score, the detailed score, which is given later, placing the men in the order in which they finished. Fred Hoey was in doubt at first as to whether the No. 13 hole was a hoodoo; he is now of the opinion that there is more in those figures than meets the eye.

As usual John S. Hoey acted as referee, and did his best to hustle the men up to the score, as there was a big day's work ahead if the first 50 rounds were to be completed that day. But for the number of "no birds" called by the shooters and the referee, the 700 birds necessary to complete the 50 rounds could have been trapped before it was too dark to shoot; as it was 644 birds (46 rounds) were disposed of before Mr. Hoey called the shoot off for the day. The official score was placed in our charge, while A. L. Camancho faithfully braved the cold and placed red and white buttons on the score board in a thoroughly impartial manner. Mr. Camancho's efforts deserve special mention, it being by no means as easy feat for him to reach the two or three top rows on the board.

Taking this shoot right through from beginning to end, it was an exciting and highly interesting contest. The cup winner was not decided until a tie for first place had been shot off, Edgar Murphy and Charles Macalester tying on 92 each. In third place, but only 2 birds behind, was last year's winner and this year's favorite, J. P. Knapp; Duryea, Work and Wright were closely bunched with 1 kill less than Knapp's total. It was a pretty race, no less than four of the shooters having the lead at one time or another during the two days' shoot.

FIRST DAY OF THE SHOOT.

As above stated, the event commenced close on schedule time; it was just 10:10 A. M. when Wright stepped to the score and made the first kill of the race; everybody followed suit with the exception of Brokaw, who failed on a driver from No. 2 trap. Round No. 2 was marked by four losses, Moore, Duryea and Ellison losing easy birds, Stafford drawing a hard bird from No. 1 that fell dead out of bounds. In the third round Moore scored his second miss; this time it was a hard bird that fell to his lot. Brokaw lost his bird dead out of bounds, making his second miss too. The surprise of the round was Macalester's miss of an easy incoming bird. Work killed a fast bird from No. 5 in this round, using his second barrel with telling effect. In the fourth round Thomas was the only one to lose a bird, a driver from No. 3 getting a long lead before the second barrel was sent after it. Dolan's bird in this round was one of the "best birds in the match;" it was a splendid kill that scored it to him. Wright and Edey spoiled their straight scores in the fifth round, Wright's bird falling dead out of bounds; Stafford was unlucky enough to lose his bird in the same manner, though a little more care on his part should have saved the bird. The best birds in this round were Wright's, Work's, Duryea's and Macalester's, Wright's being a very fast one.

Duryea lost a bird in the 6th round, making his second cypher; Brokaw also scored a lost bird, this being his third marked with a white button by Camancho, who was rooting for him to the best of his ability. These were the only losses in this round. In the 7th round Work lost a very hard bird indeed, a right-quarterming driver from No. 5, that went like a streak as soon as the trap was opened, reaching the boundary before coming to the ground. Brokaw, Duryea, Thomas and Stafford also lost birds in this round, five white buttons in all being the result of the 14 shots. Murphy and Knapp spoiled straight scores in the 8th round, both men losing birds that they certainly should have scored. The only other shooter to miss in this round was Edey, who lost a comparatively easy bird, the pigeon like Murphy's falling dead out of bounds. Duryea, Ellison, Thomas and Stafford were the unlucky ones in the 9th round, their scores showing at this early stage of the proceedings: Duryea 4 losses, Ellison 2, Thomas 3 and Stafford 4. As there was something wrong with his old gun, Duryea at the end of this round changed to his new one, and killed from that point until the end of the shoot (the birds included) 94 out of 101, 3 of the 7 lost falling dead out of bounds. The 10th round saw but one white button go up, Edey being the only one to lose a bird. At the close of this round there were only 2 straight scores—Dolan and Hoey; 5 others had 9 each to their credit.

HOEY IN THE LEAD.

Fred Hoey was left in the lead after the 11th round closed, Dolan drawing a very hard bird that beat him out; Hoey's kill of his bird

was a good piece of work, the pigeon being a very fast one. In all 13 lost birds were scored in the rounds 11-15, inclusive: Wright 1, Moore 2, Dolan 1, Ellison 4, Macalester 1 (a very hard bird indeed), Edey, Thomas and Stafford 1 each. This left Hoey still with the lead at the commencement of the 16th round, there being 4 right after him with 14 each: Dolan, Murphy, Work and Knapp—a hot quartette.

In the 16th round Murphy, Ellison and Thomas drew hard birds, scoring them by good second-barrel work. There were only three lost birds in the 16th, 17th and 18th rounds: Brokaw's 16th, Hoey's 17th and Thomas's 18th. Owing to Fred Hoey's loss the leaders were closely bunched, but it was still very early in the game. The two next rounds saw Camancho place 7 white buttons on the board: Hoey and Dolan each got two, their 19th and 20th birds; the other three were placed opposite Work's, Edey's and Stafford's names. Hoey's 19th was a fast bird, but his 20th should have been scored; as it was it fell dead out of bounds. Work and Dolan drew hard birds in the 20th round. The score at the commencement of the 21st round, so far as the leaders were concerned, was: Murphy and Knapp 19, Macalester, Work and Wright 18, Dolan and Hoey 17.

Ten more losses were recorded in the next 5 rounds, 5 of them falling in the 21st round—Brokaw, Moore, Work, Ellison and Macalester. Everybody scored in the 22d round, Ellison and Edey being respectively responsible for a loss in the 23d and 24th rounds, both birds falling dead outside the boundary. In the 25th round three more white buttons went up on the board, but none of the leaders were candidates for them.

AT THE QUARTER POLE.

The close of the 25th round, one-quarter of the match, found the scores as follows: Murphy and Knapp, 24; Wright, 23; Dolan, Work, Macalester and Hoey, 22; Duryea, 21; Moore and Thomas, 20; Stafford, 19; Brokaw, 18; Edey, 17; Ellison, 16.

It would be tedious, perhaps, and take up too much space, to go through the shoot round by round; we will therefore only touch upon the more important features of the race, taking into consideration the scores of the leaders.

In the 26th round Macalester went back to join Duryea, a towering right-quarterming driver getting away from him. Then Murphy and Work lost their birds in the 26th round, Murphy joining Wright and Work following Macalester's example; this left Knapp alone in the lead by a single bird. The 30th round saw Wright go back to join Hoey and Dolan, both of whom were shooting very well. The next round, the 31st, saw Macalester again lose a bird; this time it was another difficult bird from No. 5 trap. The 32d round gave Camancho lots of work to do, 6 white buttons being required before the last man on the list had left the score. Among the six were Dolan, Work, Hoey and Knapp; the latter was once more tied with Murphy for first place. Murphy lost his 36th and 38th birds, while Knapp lost his 37th, the latter keeping the lead from the end of the 38th round until the referee called a halt at the close of the 46th round.

The scores at this stage of the proceeding were: Knapp 43, Dolan 42, Murphy and Hoey 41, Macalester 40, Wright, Work, Moore and Duryea 39, Stafford 37, Thomas 36, Ellison 34, Brokaw 33 and Edey 30. Owing to the match being less than half over, the referee decided that the three last-named shooters should retire in order that matters might be hastened.

THE SECOND DAY.

The second day, Jan. 11, opened clear, bright and cool. There was only a light wind, but that was rather more to the west than that of the previous day, and was therefore more favorable to the birds. The bright sun made the white of the snow very dazzling and painful

EDGAR MURPHY—IN SUMMER ATTIRE.

to the eyes. It hardly looked possible for the boys to roll up big scores, but they did; so appearances must have been deceitful and our judgment at fault. Some great scores were made to-day. The following is an analysis of some of the best work: Murphy, 61 out of 64; Macalester, 60 out of 63; Duryea, 60 out of 64; Work and Wright, 59 out of 64; Knapp, 47 out of 64. As a squad of six men, the above shooters scored 346 out of 373, an average of 92.7.

Shooting began at precisely the same time as yesterday—10:10 A. M., Wright leading off with a kill. As a natural consequence of the survival of the fittest, the scores were not so marred this day with white buttons, only 38 losses being recorded in the rounds 47 to 75 inclusive. The commencement of the 51st round found Knapp still in the lead with what seemed like a comfortable margin of two birds over his nearest opponent, the scores showing: Knapp 47, Murphy and Hoey 45, Dolan and Macalester 44, Wright, Moore and Work 43, Duryea 42, Stafford 40, and Thomas 39.

KNAPP LOSES THE LEAD.

The first 10 rounds of the 3d series saw quite a change come over the score board. Knapp, who had not been shooting in his usual steady and effective manner, managed to lose 4 birds and with them of course the lead. The 60th round, therefore, saw the scores as follows: Murphy 53, Macalester 54, Wright, Work, Hoey and Knapp 53, Moore and Dolan 52, Duryea 51; everybody bunched, as it were, and anybody's race. In the 65th round Wright and Work each lost a bird, both pigeons falling dead out of bounds and spoiling runs of 18 straight since the start this morning. In the 67th Murphy lost a bird, the shooter going back to join Macalester in a tie for first place. Work and Knapp lost their birds in the 69th round, Moore dropping his 70th, an easy circling incomer that fell dead against the house. At the end of the 70th round the scores stood: Murphy and Macalester 64, Hoey 63, Wright, Dolan and Knapp 62, Moore, Work and Duryea 61.

The next five rounds saw as many losses recorded on the score sheet; the unfortunates were: Murphy, Macalester, Hoey, Dolan and Duryea. The score at the commencement of the last series of 25 stood as follows: Murphy and Macalester 68, Hoey and Knapp 67, Wright, Moore, Dolan and Work 66, Duryea 65. If that's not a close race at the three-quarters pole with nine men left in, we'd like to know what is a really close race.

Macalester's loss of his 75th bird, which fell dead just over the boundary, was received with groans, the white button it called for bringing to an end a run of 28 straight since the start to-day, which added to the 7 straight he killed the previous evening made a consecutive run of 35 without a miss. Just about this stage of the proceedings, so cool and so sure was Macalester in his work that Murphy and the rest of the boys were whispering one to the other that it looked as if "Macalester was it." Duryea was plugging away in a quiet but effective way, making a run of 21 between his 52d and 74th birds. The scores for the third 25 were: Macalester, 24; Wright, Moore, Murphy, Work and Duryea, 23; Dolan and Hoey, 22; Knapp, 20.

SHAMROCK AND ORIOLE NECK AND NECK.

The last series of 25 was a hard fight; of the seven that finished in the race three scored 24, three more scoring 23, out of their last 25 birds. Murphy lost his 76th bird, a driver from No. 2, which he seemed totally unable to locate with his second barrel, his time being very poor. This loss made it look still more as if "Macalester was it!" The Baltimorean, however, evened up matters by letting his 81st get away with the loss of only a few feathers. From the 75th to the 85th rounds inclusive Dolan lost 3 birds, Work and Knapp 1 each, Hoey 4, the latter losing 2 dead out of bounds. At the 86th round then the score stood: Murphy and Macalester (the Shamrock and the Oriole), 77; Wright and Knapp, 76; Moore, Work and Duryea, 75; Dolan, 74, and Hoey, 73. With only 15 more birds to shoot at, there was still a chance for some changes, so closely were the leaders bunched.

The next ten rounds saw the retirement of Fred Hoey, additional losses in the 88th, 91st and 95th rounds making the requisite number of 15 white buttons on his score. Wright lost 2—his 90th and 95th birds; Dolan also scored 2 losses—his 88th and 89th birds. Work and Duryea lost a bird apiece; while Moore, who up to this time had been doing great work to-day, lost 3 birds in quick succession—his 92d, 94th and 95th. Thus, with only 5 more birds to shoot at, the scores stood: Murphy and Macalester 87, Knapp 86, Wright, Work and Duryea 84, Moore and Dolan 82, Hoey 80. In those next 5 rounds only 3 losses were recorded: Knapp's 96th dead out of bounds, and Moore's 96th and 98th, the latter causing his retirement. Moore's loss of 5 out of his last 7 birds was a great surprise, coming as it did after great shooting during the entire day.

The final scores showed Murphy and Macalester still a tie for 1st place with 92 each; Knapp alone for 3d money with 90; Wright, Work and Duryea tied for 4th money with 89 apiece; Dolan, the only other man to finish, came out with 87. As a proof of how tough a struggle it had been, we quote the following figures: Wright, Duryea and Work, who were tied at the close of yesterday's shoot with 39 each out of 46 shot at, to-day scored 50 out of 54; Macalester, who last evening was 1 bird behind Murphy, to-day killed 52 out of 54 to Murphy's 51 out of 54, ending by tying him for the cup.

HIS DEFEAT BY BRADLEY WIPED OUT.

Ties were ordered to be shot off at 10 birds. At the start of the shoot-off Murphy seemed to have entirely lost his time, being desperately slow on his first two birds, his friends being given cause for heart-failure on both birds. Then he quickened his time and came back to his old form when Macalester let his 5th bird, a slow circling incomer to the right, get over the boundary before being gathered. The last 5 birds didn't bother Murphy a bit, all were easy except the last but one; he didn't give it chance to get hard, but snapped it up within a few feet of the trap. He did, however, succeed in giving his friends one more little scare on his last bird; this was a slow incomer, which he cleanly missed apparently with his first; he then held his second barrel until the bird was less than 10yds. from him before letting it have the contents.

Murphy's victory was a very popular one, and he received many congratulations on his success. Macalester shot well enough to win almost any match, and it must be stated in all fairness that Murphy had a bit the best of the birds. That fact, however, should not be allowed to detract from the brilliancy of his victory, for a win in such company would be a feather in any shooter's cap.

One of the pleasantest features of the race to us was the form displayed throughout the match by Wright, who shot excellently the last day, and was by no means favored by the birds. We never like to question a referee's decision, much less a decision made by such an excellent one as Mr. John Hoey; we feel sure, though, that Mr. Hoey will not take it ill if we say that we think his ruling on Wright's 94th bird was acting a little too strictly to the letter of the rule and not taking into consideration its intent. As we were not at the score, we can only give Wright's account of the affair: The bird, a driver from No. 1, left the trap very fast and low; it was hit hard with the contents of the first barrel, the second barrel also hitting it; the bird flew to the boundary and fell against the wire fence; the dog went to retrieve it and the bird flipped up, getting over the fence before the dog gathered it. A balk was claimed by the shooter on the following grounds: First, that the dog was let go before the second barrel had been discharged; and second, because the trapper in his efforts to make fast time had started for the traps before the second barrel had been discharged. The question as we take it is: Was the shooter balked by either man or dog, or was the bird chased out by the dog being released too soon? Since the shooter used both barrels we think his claim to a balk on the first query is negative, and we think Mr. Hoey so ruled on a case in which Mr. Thomas claimed a balk on Friday, Thomas claiming that a rapping on the window while he was at the score balked him, causing him to miss the bird, his attention being attracted by the rapping. On the second query, we can only say that in our judgment the difference in time between when the dog did reach the bird and when it would have reached it had it not been released until the second barrel had been fired, would have been so slight that it would have made no difference in the result. Under the circumstances, the shooter having used his second barrel, we think he should have been made to abide by the result. Of course, we have only Mr. Wright's account of the affair to base our argument upon. The referee's decision was based upon the following rule of the Larchmont Club: "Rule 10. If, in the opinion of the referee, the shooter is balked by any antagonist or looker-on, or by the trapper or dog, whether by design or otherwise, he may be allowed another bird." Acting under such a rule, the referee was strictly within his limits; the only point we differ on probably is as to "opinion."

The tie for 4th money was shot off at 10 birds, Duryea beating out Wright and Work by killing his 10 straight, his opponents each losing their first tie bird.

THE HIGH RUNS.

During the two days' shoot some good runs were made, notwithstanding the uneven character of the birds, their very unevenness making no two alike for either speed or direction. The following are most of the double-figure runs: Macalester 35, 19 and 11; Murphy 24, 20 and 20; Wright 24, 16 and 14; Duryea 23, 20, 14 and 11; Knapp 23, 15, 14 and 10; Work 20, 14 and 12; Dolan 17, 14, 11, 11 and 10; Hoey 16, 14, 11 and 11; Moore 15, 15, 13, 10 and 10; Brokaw 10.

The above is a complete list of the guns, shells and loads of powder used by the shooters in this event.

HOW THE TRAPS FELL.

It is always of interest to know just how the traps fell to each shooter. In this event an automatic pulling apparatus was used, the traps being pulled for "good birds" just 1,173 times in the match itself; the traps pulled in the shoot-off are not included, as a comparison of the figures would then be hardly equitable.

No. 1.	No. 2.	No. 3.	No. 4.	No. 5.	Total.
Murphy.....	21	25	19	9	26
Macalester.....	18	23	13	12	34
Knapp.....	16	22	17	21	34
Duryea.....	20	29	13	13	25
Work.....	27	15	19	13	26
Wright.....	18	23	17	15	27
Dolan.....	23	24	19	12	22
Moore.....	17	28	15	15	23
Hoey.....	23	18	11	22	21
Thomas.....	9	20	15	9	18
Stafford.....	14	18	14	13	12
Ellison.....	3	17	8	9	46
Brokaw.....	13	14	7	5	7
Edey.....	11	9	14	4	8
	233	235	201	172	282

An average for each of the five traps would be about 234; No. 1 was just about right, but Nos. 2 and 5 were away above the average; No. 4 was pulled very seldom in comparison to the others. A curious feature is that Ellison drew No. 2 trap just 17 times out of 46.

THE SCORE IN DETAIL.

The score in detail, showing just what sort of bird each man drew, which trap it came from, and what was done with it, follows:

Trap Score Type—Copyright 1896, by Forest and Stream Publishing Co.

EDWARD BANKS

All-Philadelphia Won Again.

WILMINGTON, Del., Jan. 4.—In the second match between teams from the Philadelphia gun clubs and the Delaware State Sportsmen's Association the All-Philadelphia team won after a close fight by 9 breaks. The scores were 489-480. The conditions of the shoot were: 25-men teams, 25 targets per man, unknown angles. The following were the scores:

Baltimore Shooting Association.

BALTIMORE, Md., Jan. 4.—A special meeting of the Baltimore Shooting Association was held recently in the Carrollton Hotel, the meeting being very well attended. The president of the Association, H. A. Penrose, presided. The following is an account of the business transacted as reported in the Baltimore Sun:

"The report of the treasurer showed that the Association is not only self-sustaining, but that a small balance is in the treasury. The club had spent considerable money upon improvements in the last year, and it is now the desire of the members to liquidate the indebtedness, as quickly as possible. It was decided not to wait until next year's membership dues become available—which will be several months hence—to accomplish this, so a subscription list was started and nearly \$200 were quickly subscribed. The total indebtedness was but \$800 before the subscription was started.

"The Association determined to require the procurer of live pigeons to pay one cent into the club's treasury for every bird trapped. Heretofore the club has received no revenue from this source.

"Resolutions were adopted to have a meeting of the prize committee called and have it submit a report.

"To circulate the subscription list among the members to liquidate the indebtedness, the president being instructed to collect the subscriptions.

"To provide for the reimbursing of the subscribers as soon as the club's treasury contains sufficient surplus.

"To give James R. Malone exclusive privilege of furnishing live birds.

"To have the buildings and traps insured for the benefit of Messrs. Wilson and Harvey, the club creditors.

"To provide for the payment of the money now in the treasury to Messrs. Wilson and Harvey on account.

"The following were elected members: W. McKinney, H. W. Kingsbury, Charles Macalester and Thomas B. Whistler, of Baltimore; F. W. Sacket, Seymour Cunningham and James Green, of Washington, D. C."

SCORES MADE TO-DAY.

Bert Claridge and W. H. Kingsbury shot a 50-bird match to-day, Claridge winning easily, although his score was not a high one; this was no doubt due to the high wind and extremely cold weather. Kingsbury retired in the 42d round, the score standing: Claridge 33, Kingsbury 26.

Kingsbury also shot a 25-bird race with Thomas Whistler and again met defeat, the score at the end of the 23d round, when Kingsbury withdrew, showing Whistler 19, Kingsbury 16.

A couple of sweeps at 5 birds, \$3 entrance, were decided, the scores being as follows:

No. 1: Claridge, 5; Macalester, Sims and Penrose, 4; Kingsbury, Smith, Buck and Hawkins, 3; Whistler 1.

No. 2: Claridge, Sims and Macalester, 5; Penrose, Kingsbury and Hawkins, 4; Smith, 3.

Limited Gun Club.

INDIANAPOLIS, Ind., Jan. 1.—With a foot of snow on the ground and no cars running within a mile of the grounds, the New Year's pigeon shoot of the Limited Gun Club promised to be a failure for lack of entries; but the faithful would not be denied, and by 11 o'clock eighteen shooters were on hand. The out-of-town visitors were A. W. du Bray, of Dayton, Ky.; Ed. Voris, of Crawfordsville; Hyatt L. Frost and J. E. Shipley, of Connorsville, and G. G. Williamson, of Muncie, Ind. The birds were a fine lot of old strong fellows that had been properly handled and cared for, but they proved a poor lot of flyers—probably because of snow blindness. That was the only real drawback to the day's pleasure, but everyone was cheerful and enjoyed the big log fire and a dinner of turkey and "fixin's."

There was one 5-bird race, entrance \$3, and two of 7 birds, entrance \$5 each. George J. Maratt, who led with 18 out of 19, and John W. Cooper, who followed with 17, had never before shot a pigeon out of a trap. The following is a summary of the shooting:

Shot at. Killed. Shot at. Killed.

ROYAL ROBINSON, Sec'y.

Washington Heights Gun Club.

NEW YORK, Jan. 1.—The Washington Heights Gun Club held a shoot to-day, but after disposing of two events it was decided to postpone the remainder of the events until Jan. 11, the weather being so cold and windy. In the live-bird event Organ took first money alone on 9; Romer won second money after shooting off the tie miss-and-out. Score:

No. 1, 10 live birds: J. J. Organ 9, R. Searles, R. Romer and J. A. Belden 8, F. W. Sherry, Sr., and F. W. Sherry, Jr., 6.

No. 2, 15 targets, unknown angles: J. A. Belden 14, J. J. Organ 13, R. Romer 12, F. W. Sherry, Sr., and R. Searles 10, F. W. Sherry, Jr., and H. W. Oliver 9.

Keystone Shooting League.

PHILADELPHIA, Pa., Jan. 6.—Harry Thurman and W. H. Pack picked teams of 10 men and shot a match to-day on the grounds of the Keystone Shooting League, at Holmesburg Junction, the losing team to pay for the birds. Each man was to shoot at 10 birds—100 birds to the team. The result was an easy victory for Pack's team by 6 birds, the scores standing 82 to 76. The only straight was made by Landis, who during the shoot scored all his birds, killing 23 straight; W. H. Pack was right after him with 22 out of 23, one dead out of bounds. Of the two events shot in addition to the team race, No. 1 was a miss-and-out, \$2 entrance; No. 2 was a 5-bird sweep, \$3 entrance, one money. Scores were:

*Wolstencroft and Henry re-entered in No. 1.

At the annual meeting of the club the following officers were elected for the ensuing year: President, John C. Shallcross; Vice-President, I. H. Wolstencroft; Treasurer, Edward Johnson; Secretary and Assistant Secretary, to be chosen later; Field Captain, Harry Thurman; Assistant Field Captain, H. Landis Davis; Official Scorer, Nathan Swope.

West Lebanon Gun Club.

WEST LEBANON, N. H., Dec. 25.—The West Lebanon Gun Club held its last shoot for the season of 1895 on this date; the attendance of members was only small. Owing to the cloudy day, the scores were poor. This has been our first year at trap-shooting, and as most of our members never fired at a flying target until quite recently, we hope our poor scores are excusable:

Sportsmen at the Chicago Cycle Show.

There were more than 400,000 pretty girls at the cycle show in Chicago each night this week, and it need not be added that such sporting goods representatives as G. Harry Marlin, Paul North, Louis Ehrhart, of Atchison; Fred Quimby and other well-known ones were also gathered together to see what was going on in the cycle world. One would never guess how many sorts of cycles there are in these days if he had never seen the show. All the Chicago and all the outside firms had exhibits, and among names familiar to FOREST AND STREAM readers were those of Montgomery Ward & Co., A. G. Spalding & Bros. and the Hunter Arms Co. of Fulton, N. Y. Of course everybody knows the names of the above firms, but one might wonder what the Hunter Arms Co. were doing at the bicycle show with L. C. Smith guns to exhibit. The fact is that they had no guns along, but had instead the new Hunter wheel, which is as "good as the L. C. Smith gun" in every way, and apt to be as popular in the near future. The firm had an elegant display of new wheels, and did a good business with them. The display included five different models, in weight from 18 to 24 lbs., each showing all the '96 improvements, and each made fine as a watch. The record of the Hunter Arms Co. in the workmanship of their gun will be of lasting benefit to them in the sale of these wheels. The latter are very graceful and handsome, and are finished most showily in a strong "Hunter green" enamel. Mr. Quimby was at the exhibit, and Mr. John Hunter, Jr., and Mr. Robert Hunter were on from the firm. It is heard with regret that the senior of the firm and father of the big family of Hunter boys is at home very ill this week, though his condition is now improving. Mr. McMurchy is at the factory at work. He will read the opening sentence above with sincere regret.

"Canoe and Boat Building for Amateurs." \$2.

Three New Books of the Field.

North American Shore Birds.
A History of the Snipes, Sandpipers, Plovers and their Allies inhabiting the beaches and marshes of the Atlantic and Pacific Coasts, the prairies and the shores of the inland lakes and rivers of the North American Continent; their popular and scientific names, together with a full description of their mode of life, nesting, migration and dispersions, with descriptions of the summer and winter plumages of adults and young, so that each species may be readily identified. A Reference Book for the Naturalist, Sportsman and Lover of Birds, by Daniel Giraud Elliot. With seventy-four plates. Price \$2.50.

Mr. Elliot's purpose being to make a book which should be for the sportsman and bird lover rather than for the naturalist, he has written his descriptions so that they shall be plain and easily comprehended.

Scientific Duck Shooting in Eastern Waters.
By R. S. NYE. Cloth, 116 pages. Price \$1.25.

The author has something to say about duck shooting, and he says it without drawing on a thousand extraneous circumstances, or dwelling on others beyond their value, and having skillfully presented what he had to say, he stops—a matter not always truly appreciated by speakers and writers.

Caribou Shooting in Newfoundland, 1894.
By DR. S. T. DAVIS ("Shongo"). 52 Illustrations. Price \$1.25.

A vast fund of practical information is embodied, which will be invaluable to any one who takes a similar trip, and which was obtained by the author only after much correspondence, study and personal experience.

FOREST AND STREAM PUBLISHING COMPANY,
318 Broadway, New York.

The Spaniel and Its Training.

By F. H. F. MERCER To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price \$1.00.

The chapters are practical and sensible. There is no theory in them. Here is a man who trained his dogs; learned by experience how to do it; and now has put down that experience for the benefit of others. We predict for "The Spaniel and Its Training" that wide popularity and favor which of right belong to practical books by practical men for practical men. In addition to the chapters on training there are descriptions of the several varieties of spaniels, with portraits of typical specimens; notes on the spaniel in America, and the standards adopted by the English and American spaniel clubs.

FOREST AND STREAM PUBLISHING CO.,

Pocket Kennel Record.

The Trapper's Guide.

A Manual of Instructions for Capturing all Kinds of Fur-bearing Animals, and Curing their Skins; with observations on the fur-trade hints on life in the woods, narratives of Trapping and hunting excursions. By S. NEWHOUSE and other trappers and sportsmen.

This is the best book on trapping ever written. It gives full descriptions of all the animals which an American trapper is likely to meet with, tells how they live, how to trap them and how to care for and cure their pelts. No man who is interested in trapping animals, whether it be muskrats or bears, should be without this complete manual of instruction.

Ninth edition. Cloth. Illustrated. Price \$1.00.

FOREST AND STREAM PUBLISHING CO.,

FOREST AND STREAM'S OUTDOOR SCENES.

FROM ORIGINALS IN WATER COLORS AND OIL, PAINTED EXPRESSLY FOR THE FOREST AND STREAM.

AS PREMIUMS.

We have prepared as premiums a set of four beautiful and artistic reproductions of original paintings of realistic outdoor scenes. The art work is the best obtainable in New York; the pictures are rich in effect and are intended for framing. They are done in 12 colors. The yacht race is from an oil painting; the others from water colors. The scenes are shown in the small cuts herewith. The plates are $14\frac{3}{4} \times 19$ in. The pictures are sent both to **new** subscribers and to **old** subscribers upon renewal, on the following terms:

Forest and Stream one year and the four pictures, \$5.
Forest and Stream 6 months and any two pictures, \$3.

If subscribing for 6 mos. designate by title the two pictures desired. Single pictures will be sold separately, price \$1.50 each, or the set, \$5. Remit by express or

HE'S GOT THEM.

JACKSNIPES COMING IN.

postal money order, payable to Forest and Stream Publishing Co., 318 Broadway, New York.

The pictures are sent by mail, postpaid, wrapped in tube.

Copies of them may be seen at this office, and inspection is invited.

Circulars and full particulars furnished on application.

BURPEE'S SEEDS, Philadelphia

A postal card addressed as above will bring you BURPEE'S FARM ANNUAL for 1896, if you intend to purchase seeds, otherwise the price is ten cents (less than cost). It is a bright BOOK of 184 pages, with hundreds of illustrations and colored plates painted from nature. It tells all about the BEST SEEDS that grow!

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 98 pages. Price \$1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO., 318 Broadway.

Publications.

The Story of the Indian.

By GEORGE BIRD GRINNELL, author of "Pawnee Hero Stories," "Blackfoot Lodge Tales," etc. The first volume in the Story of the West Series, edited by RIPLEY HITCHCOCK. 12mo. Cloth, \$1.50.

The object of this series is to preserve the picturesque and individual types of a life in the real West which is rapidly fading away, and to offer the romantic stories of the Indian, explorer, cowboy, miner, soldier, and other representative figures in a permanent form. Mr. Grinnell's intimate personal knowledge of his subject has enabled him to draw an admirably graphic picture of the actual Indian, whose home life, religious observances, amusements, together with the various phases of his devotion to war and the chase, and finally the effects of encroaching civilization, are delineated with a certainty and an absence of sentimentalism or hostile prejudice which impart a peculiar distinction to this eloquent story of a passing life.

It is simply a true story of an interesting and fast disappearing people by one who knows them well and intimately. . . . It is readable from cover to cover—as readable as one of Cooper's novels.—*Jeannette L. Gilder in Chicago Tribune.*

The author is master of a peculiarly clear and graphic style and his book has a most fascinating interest.—*Boston Advertiser.*

For sale by all booksellers and by

FOREST AND STREAM PUBLISHING CO.,
318 Broadway New York.

"Outside the Danger Line."

Mr. Willmot Townsend's new drawing, "Outside the Danger Line," depicts a flock of broadbills alighting; and the study of action will readily be recognized by observing gunners as true to the life. The scene is on a calm day, when, with nothing to alarm them the ducks have concluded to rest a while far from shore. Reproduced by the artotype process, the plate being 16×21 in. Edition limited to 100. Price is \$3.

FOREST AND STREAM PUBLISHING CO.,
318 Broadway, New York.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream one year and the set of four pictures, \$5.

Forest and Stream 6 months and any two of the pictures, \$3.

Price of the pictures alone, \$1.50 each; \$5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

ADIRONDACK DEER.

THE recent official report on the destruction of deer in the Adirondack region last season is, we believe, the first attempt ever made to enumerate the deer killed during a given period in any one quarter of the country. It is not likely that the numbers reported are exact—possibly they are not even approximate—but we may feel assured that they are not overstated. Very likely the deer killed may have been many more than the number given. It is certain that they were not less.

Of the 5,000 deer reported killed more than half were females, and of these females it is altogether probable that four-fifths or more than 2,000 were breeders, which next year would have produced between 3,000 and 4,000 young. This gives a suggestion of what the deer supply in this region might become if the practice of killing female deer were entirely given up. Such a change in hunting methods in the Adirondacks would preserve the deer there for all time and would insure their existence in numbers quite up to the winter food supply of the region.

This report, together with Gov. Morton's remarks on the importance of preserving deer in the Adirondacks and the action of the State Association, have called renewed attention to this matter, and several bills looking to the preservation of the deer supply have been introduced in the New York Legislature. These bills cover the practices of hounding, jacking or fire-hunting and water killing.

The bill to forbid the killing of deer in the water, introduced in the Assembly by Mr. Husted, while praiseworthy in its motive, is loosely drawn, and even if it should become law is practically impossible of enforcement. It would be unfortunate to have this bill passed, for to enact game laws which cannot be enforced is only to bring such laws and the whole subject of game protection into public contempt. Water killing is not a practice that appeals to sportsmen. A deer may indeed be killed in the water by a good sportsman who is in need of meat, but he would not regard such killing as sport, any more than he would consider it sport to chop off a chicken's head or to slip a noose over the neck of a gentle grouse which he might find sitting on the lower limb of a tree near the trail. The true way to put an end to water killing is to remove the cause that obliges the deer to take the water. If an end were put to hounding there would be no more of the water butchery of which we hear so much.

Jack-lighting is justly objected to on grounds of humanity, both because it is practiced at a season when the fawns, being still dependent on the mother for nourishment, must starve to death if she is killed, and because of the large proportion of wounded deer which escape under cover of darkness and are not found at all, or if found later, are useless to the slayer, because the meat is spoiled. The practice is one which should be abolished, and he who should jack deer would carry with him a weapon more dangerous than a camera and some flash-light powder.

It is objected that, if water killing and jacking are put an end to, deer killing in the Adirondacks will cease for the general public; in other words, that few or no deer would be killed except by expert sportsmen. For a year or two something like this might be true; but by the end

of that time the deer would have so increased that successful still-hunting would then be possible by persons whose experience in this pursuit was very limited. On Dr. Webb's preserve, where neither jacking nor hounding takes place, it is an every-day matter for his guests—many of whom have never before hunted deer—to start out on foot and successfully still-hunt these animals. It cannot be doubted that if an adequate system of game protection were in force throughout the Adirondack region the deer would become so abundant that there would be enough for all, and that even tyros could without difficulty kill them by legitimate methods.

The two bills introduced in the Senate by Mr. Malby and in the Assembly by Mr. W. Cary Sanger, if passed and properly enforced, would do much to preserve the Adirondack deer, and the results of such preservation would soon be evident in an increased supply of these animals, which would bring joy to the heart of the hotel keeper, summer visitor, guide and hunter. We should be glad to see added to these, or to any other bills with a like purpose, a further provision that no deer without horns shall be killed at any time; for we believe that in the preservation of the females of any of our big game animals is to be found the means of indefinitely prolonging the existence of that species in any locality.

READ HISTORY.

WE have from time to time taken occasion to point out the reasons why the recurring scheme of a national game and fish protective association must inevitably prove futile. In doing this we have stated principles, and have not made any personal comment upon the individuals promoting the associations. For the most part we believe that they have been well-meaning enough, though mistaken. The national association project is something that appeals to those who do not closely and carefully consider the actual practicability of securing the results sought to be obtained. The present association is, if we mistake not, the fifth of the kind we have had in this country within the last twenty years. One trouble with the promoters of the scheme at this late day is that they refuse to read history and to be taught by its lessons. The correspondent in Iowa who sends us this week an elaborate plan for a new association, or for the modification of the one which already more or less exists, would find in the story of the associations which have gone before and are now of blessed memory abundant teachings of experience to prove the impracticability of such an organization as he proposes.

The same principle of human nature applies here as with the victims of the perpetual motion delusions. When a man once gets wheels in his head and dreams that he can discover perpetual motion, he shuts his eyes and his ears to the principles of physics and the teachings of experience only, and abandons his search for the impossible when life itself gives out. It seems to be asking too much of human nature to expect that the repeated failures of this national association project, each successive failure being due to the inherent principles involved, should have in them any deterrent influence upon the new victims of the delusion.

We need not rehearse the principles, which must now be familiar. The chief reason why the national scheme is futile is found in the fact that the delegates to such a body represent no solidarity. They are commissioned with power by nobody having any power to commission. They meet in convention and adopt resolutions to do things which they have no power to do and which no one can give them the power to do. The scheme appeals to persons who recognize the perplexity and complexity of their own local game protection problems and who are impelled by a vague conviction that if they can only unload their troubles upon a national association they will have solved all these local difficulties. When the delegates get through with their convention and its resolutions they go home, but they return with no more power to protect their own game than they had before, and the local situation remains precisely as it was before the national association held its convention and spoke its speeches and adopted its resolutions, and as it would remain after 365 conventions a year.

We question very seriously whether it is possible for a national association in these days to adopt a more high sounding platform or more resonant resolves than the platforms and the resolutions of the national associations which have gone before; and there is no reason for believing that talk at a national convention, though as cheap

as ever, will accomplish a whit more now than it could then.

The influence which a national association would be likely to have through its appointment, in different States, of gentlemen whose amiability prompts them to permit themselves to be named as Vice-Presidents of the National Game, Bird and Fish Protective Association is well enough shown in the case of New York State. The Vice-President for New York of the National Game, Bird and Fish Protective Association is, if we mistake not, Hon. Robert B. Roosevelt. Mr. Roosevelt is an accomplished sportsman, an author of some charming books on fishing and shooting, one of the most felicitous of after-dinner speakers in a city renowned for the plenitude of its post-prandial oratory, a delightful raconteur and a politician of influence. As president, whether of the Holland Society or of the New York (City) Association for the Protection of Fish and Game, he sheds luster upon each in turn; but his incumbency of the office of Vice-President for New York of the National Game, Bird and Fish Protective Association has absolutely no more effect upon game legislation or game protection in this State than it has upon the water supply in the canals of Mars.

What we are all of us concerned to know, in respect to our own several States, is how to care for our own game interests. Until we shall have solved that ever present problem, we cannot afford to throw away effort in trying to take care of the whole blessed country, no matter how enticing and powerful may be the notion of a national association.

Read history. Profit by the experience of the past. Don't dream that you have a brand new scheme when it is one which has been tried and discarded.

SNAP SHOTS.

The annual grinding of the grist of game legislation has begun at Albany in full force. Last week we noted the bill which embodies the recommendations of the senate committee with reference to the St. Lawrence River waters, and we specified the numerous amendments recommended by the State Association. In addition to these, measures have been introduced to forbid the hounding of deer at any time; to prohibit the use of jack lights for killing deer at any time; to forbid the killing of any deer while swimming; to exempt certain portions of Lake Erie from the law relative to nets; to provide a penalty of \$25 for killing minks, coons, skunks, muskrats or foxes in Wayne county from May 1 to Oct. 31, except that foxes may be caught in October; to permit bass fishing in Otsego Lake from Jan. 1 to Oct. 31; to forbid the hunting of rabbits in Ulster county, except from March 1 to Sept. 30; to permit the killing of rabbits in Chemung county between March 1 and Sept. 13; to make the open season for woodcock and partridge from Sept. 1 to Nov. 1, with possession from Nov. 1 to Sept. 1.

And so it goes. The outlook is for a greater infliction than ever of local laws and exemptions of certain waters from general statutes. The local bills should not have any attention whatever from the Legislature. This entire branch of legislation should be intrusted to a committee printing the Senate and Assembly Committees, the Fish Commission, the Chief Protector and the New York State Association. If the two Committees would agree to refer proposed legislation to a conference made up as suggested and would defer to the decision arrived at by such a conference we would be saved much foolish legislation, and the time of the committees and of the Legislature would be economized with advantage to itself and to the State. What we need in New York more than anything else is a game and fish code, good, bad or indifferent, unchangeable for a period of fifty years. We shall never have a law which will be given the respect of the community so long as this annual wholesale doctoring shall be permitted.

City-Attorney F. A. Williams, of Denver, has sent to Congressman Shafroth a bill, printed elsewhere, to forbid inter-state commerce in game. Is it true that the Inter-state commerce provision of the Constitution interferes with a State's control of game shipments? The Minnesota law and others have been upheld by the Supreme Courts, and the lesson to be drawn from them appears to be that the laws are quite efficient if applied. Mr. Williams' proposed law raises an interesting question as to the province of Congress in such matters.

The Sportsman Tourist.

WITH A SURVEYING PARTY IN THE INDIAN TERRITORY.

BY FRANK WINCHESTER, ONE OF ITS GUESTS.

Part I.

WHEN in 186—Congress granted a right of way over all Government and Indian lands in the Indian Territory, from the south line of the State of Kansas to the north line of the State of Texas, for a north and south line of railway, in the latter part of that year the incidents took place which will be narrated in this series.

On the 10th day of October of that year a small caravan of four prairie schooners (covered farm wagons), each drawn by four horses, was fording the Arkansas River, two miles south of the frontier village of Arkansas City.

The coverings of the wagons had been partly rolled up on the sides of each, exposing the bags and boxes with which each wagon was loaded, showing four men seated in each wagon and a number of guns tied to the bows holding the wagon coverings in place, while between the two colored men seated in the rear wagon a fine large water spaniel was to be seen. In front of the teams were four men riding upon Indian ponies, and hanging from the horn of each saddle was a short repeating rifle of large caliber, of a model then very popular upon the frontier and known by the name of "saddle gun." The horseman upon the right was a man of the age of 35, of a tall, muscular frame, answering to the title of Captain; next to him rode a large, robust man of 45, of a very dignified, sedate manner; the rider upon his right was a young man of about 25, bearing the appearance of a student; and the horseman upon the extreme left could not have exceeded 40 years, of a very spare yet muscular frame, with long dark hair and copper-colored face and hands, that showed him of part Indian blood; while gamboling in front of the horsemen were three large foxhounds.

A stranger to pioneer ways looking at the party, each dressed in a brown duck hunting coat and corduroy pants, with a broad-brimmed brown felt hat, would have asked, "What band of border ruffians is this and on what plundering expedition are they bound?"

A preliminary survey had been ordered of the line of railway to which the right of way had been granted for the north and south line of railway through the Indian Territory, and the horseman addressed as Captain was the engineer in charge of this party; the one riding on the extreme left was a noted half-blood hunter and guide, whose father, a white trapper, had married a woman of the Chickasaw tribe, and the son was one of the best hunters and guides to the Indian Territory then known on that frontier, having been named by his mother's tribe the King of Buck Hunters from his early success in deer hunting, which name had been shortened by the whites to Buck King or King, a name very pleasant to him and by which he was generally known all over the Territory. The sedate looking horseman was an eminent Western lawyer, who had very lately resigned from a district judgeship of one of the Western States; while the young horseman, the historian of the party, was a lawyer with a good practice, a former law student in the office of the Judge, and the occupants of the wagons were the axemen, Surveyor Cook and other employees of the party, and the servant of the Judge.

This surveying party was one of the many engaged in the preliminary survey, the object of this party being to find a suitable crossing of the South Fork of the Canadian River in the southern part of the Indian Territory, and the Judge and young lawyer, intimate friends of the Captain, were accompanying the surveying party as his guests to enjoy a much-needed vacation in the sports of the field, hunting and fishing, with the hunter King as guide to the party.

Our march to the southward was relieved, for us horsemen, of its tediousness by the daily excursions parallel to the line of march in pursuit of deer and antelope, with which the uplands of the Territory at that time abounded; or after our arrival at our evening camping ground the Captain, Judge and I would shoot grouse, quail and prairie chickens over the spaniel Carlo, who was a fine bird dog either setting game or retrieving. In the bird shooting King never joined, having, as he said, "No use for the scatter guns," as he termed our breechloading shotguns, but he gave us an evidence of his skill as a sportsman that won the admiration of the rest of the party and left the Captain, Judge and I badly defeated at our camp on the second day's close upon the banks of the Red Rock Creek.

Where we camped the Red Rock was but a succession of deep, rocky pools, connected by a small flowing stream of clear, pure, sweet water—sweet, because the alkali which impregnated the waters of the Arkansas and the Salt Fork of the Arkansas River, both of which streams we had forded on our march, rendering them unfit for use, was entirely absent from the waters of the Red Rock, and its pools were filled with a great number of large-mouthed black bass of large size. Within a few minutes after halting, the Captain, Judge and I, equipped with our jointed rods, reels and fly-books, were industriously at work "having some fun with the bass," as the Judge had expressed his intent as soon as he saw them in the pools; but if there was any fun, the bass had it all, for with all our skill not one of us could cause a "bass to rise" with the most tempting of artificial flies, although we worked until we were called to supper just at dark. And on entering camp we met King just coming in, with the haunches of a fine fat doe and a pair of antelope hanging to his saddle, the result of his afternoon's divergence from the line of march.

Why smoking after supper should be the almost universal rule of life in camping out is left to be answered by some person more inclined to inquire after the cause producing this effect than I am; but my experience, after thirty years of annual vacations spent camping out, is that the weed never gives as much solace and satisfaction as when at the close of a day spent on the tramp or in the saddle, after the supper is ended and a well-seasoned briar-root pipe is filled, a congenial party of hunters or fishermen surround the camp-fire for a talk and smoke.

After our pipes were lighted the Judge told King of our fishing experience, and opening his fly-book showed him the flies that had been used by him without success.

A smile overspread King's face as he said, "Those pretty

things were only made to catch the men who buy them. The Red Rock bass are no fools; wait till morning and I will show you how to catch bass."

The glowing accounts of past achievements with bass caught with such bait related by the Captain and the Judge produced no effect on King further than to cause him to shake his head and say, "Wait till morning." At early dawn we three were again at work with our flies, to meet with no better success than the night before, when King approached us prepared to fish. His pole was a young sapling to which was fastened a large line and hook, of which the best description was afterward made by the Judge to me when lamenting over the result, "To think that we should be beaten by a half-breed Indian with a pole just the right size for a liberty pole, a line large enough for a picket rope, and a hook just fit to fish for alligators with." Putting a large grasshopper upon the hook, King lightly cast it upon the surface of the water, when to our surprise and disgust a rush was made for it by a dozen or more of the largest bass, and King swung one out on the bank of about 4lbs. weight, with two more soon following it, with the same bait. It is needless to say that our flies were quickly consigned to our pockets, and we began work with grasshopper baits, but King's hook seemed to be charmed, as he caught more than the three of us put together, until about twenty beauties had been caught, when he wound up his line, saying, "Enough now; leave rest for next time," the truth of which was so plain that we reluctantly followed his example, the Judge speaking the intent of each of us three, "that we would yet beat King catching fish if it took till Christmas," which we never did, for he always "had such good luck" that we were fortunate if all of us together could equal his catch in the many contests we had that fall. At our camp upon the North Fork of the Canadian, where we were delayed a day by the straying of some of our stock, King badly beat us again by shooting more wild geese with his rifle than the three of us did with our "scatter guns." While it seemed as if the number of geese could only be computed by millions, they would only stop upon the sand bars in the middle of the river, and we could only use our shotguns, as they flew over us going out of the river to feed at daylight in the morning, returning to the river from the feeding grounds at 10 o'clock, going out again at 2, and returning again just at dusk, which gave us four flights a day; while he went some distance above us and waded out and secreted himself in a tuft of willows at the head of a sand bar about three acres in extent, erecting the ones he shot for decoys, and I have never seen his equal in arranging a dead wild goose as a decoy.

On the afternoon of the eighth day out from Arkansas City we approached the South Fork of the Canadian, and King led us down from the upland prairie into a gently sloping park region with a few trees, from fifteen to twenty-five to the acre, scattered over its surface, the varieties being the white, jack, burr, red, yellow, chinquaquin and post oak, mixed with a large number of trees of pecan and shellbark hickory, with the surface of the ground broken occasionally by ravines—mere depressions of the surface at the upper side of the park region, becoming deep, rocky cañons at the lower side of the park land, which ended in an abrupt rocky precipice from 30 to 50ft. in height.

Over the greater portion of the surface a fire had swept, long enough before our coming for the new grass to cover the ground with a soft carpet of emerald green, while the unburned surface was covered by a growth of blue-stem prairie grass from 3 to 4ft. high.

After a march of more than a mile through this park region King suddenly stopped his pony, and springing from his saddle said, "Here we camp." The Captain in surprise asked, "Where will we get water?" For a reply King walked a few steps to an outcrop of rock, and pointing below it with his hand said, "There." Gushing from beneath the rock was a stream of clear, soft, cold water, sufficient in quantity to have supplied the wants of a good sized army. Our stock was soon hobbled and turned out to graze, the tents erected, a camp fire burning, and we were settled in the camp which was to be our temporary home for nearly two months.

Camp life seems to bring out the best there is in a man and has no equal in rubbing off the dignity of official position, creating a freedom of intimacy, cementing friendships that time cannot break, as well as giving appetites and digestive powers to those suffering with dyspeptic stomachs and livers. The chief of the party, addressed as Captain on the first day's march, had become plain Cap; the writer, who had on the first day's march been called Son by the Judge, had become Son to all the members of the party; while the Judge had entered the abandon of camp life with a joyousness that would have badly shocked his city friends, while his dignity had disappeared with his dyspepsia and no one of the party was better liked; while the hardest worker of the party could not dispose of a quart of coffee, black and strong, drank out of a tin cup clear and accompanied with a ration of 2lbs. of bacon or game and three or four half-loaf sized biscuits made after the recipe of 7 parts flour, 3 lard and 2 of baking powder, with water enough to mix, with a better appetite than the surfeited Judge of the first day's march.

While the others of the party were arranging camp, the Judge, Cap, King and I walked a short distance from the camp to a little knoll, and seating ourselves upon the green sward drank in the beauties of the scene before our delighted eyes. From our feet the land, with a very slight and gradual descent, could be seen through the openings among the trees for a distance of over a mile, seeming to blend with the forest of heavy timber skirting the canebrakes along the river, over two miles away, across the grassy bottom lands, between the park lands and the heavy-timbered land by the river. The Judge broke the silence, saying, "We ought to be in a game paradise, King. What kinds of game can Son and I find about to here to hunt?"

"Bear, panther, bobcat, wildcat, deer, opossum, coon, wild turkey, pigeon, duck, geese, chicken, and more wild hog than the rest put together," was the reply.

"Why do you put wild hog last?" asked Cap. "Wild hog is a devil, and won't let us alone if we leave him alone. He is only good for coyotes to eat, unless you get a young one, and an old sow can whip the devil. We will have trouble in camp till we kill a lot of them," was the answer.

"Haden't we better build a fort about the camp, King, to keep wild hogs out?" smilingly asked the Judge.

"You'll see," was the reply.

But the second and third days following, when the wild hogs did charge our camp, a fort would have been very acceptable even to the Judge, the account of which we will give in its proper place.

The wild hog, or razorback, of the Southwest is of an unknown origin, those best acquainted with them contending that it is descended from tame hogs lost or loosened by the Spaniards during the period of American discovery, as it presents many of the characteristics of the tame breeds, and will not mix with the smaller native wild hog, the jacqui or peccary, of the timbered lands of the Southwest, with which it seems to be engaged in an endless war, soon destroying or driving it out of whatever region the razorback preempts for its home.

Seated about the camp-fire that evening, King stated that we were in a region more infested with razorbacks than any other part of the Indian Territory, due to the abundance of food in the acorns, pecan and hickory nuts, with which those trees were loaded, and he further said, "You hunters are likely to run against them everywhere, and they are devils, worse than panther and bear, and when you shoot at them, or they charge you without shooting, climb a tree as quick as you can, and shoot them out of the tree." To which the judge replied, "I'd like to see anything in the shape of a hog that would make me climb a tree," and he saw it next day, four of the party being treed by the devils, and he was one of the treed.

Next morning the Judge, Cap, King and I, taking our rifles and followed by the hounds, left camp to examine a large ravine, described by King as being about two miles from camp, to see if the same could be used by the railway to make a descent through the rocky boundary of the park region to the bottom lands below, and incidentally to take care of anything in the shape of game we might meet with on our travels.

As we approached the upper end of the ravine the Judge started the hounds ahead, saying to us, "The hounds need exercise, and it will do them good to start a deer and make a little sport for us."

King, with a very serious look, said, "They'll start fifty hogs before one deer."

The hounds crossed the ravine, and as the high grass upon its further side had escaped the fire, they at once disappeared from our sight.

In a few minutes we heard the tongue of one of the hounds, at which the Judge said with gladness, "That's Spot, boys; venison for supper," but even as he ceased speaking we heard the squealing of a young pig, followed by the whoops of older hogs and the yelping of the hounds. "Tree, tree, git up out of the way of the devils," shouted King, as he ran up the slope to a good-sized burr oak tree with low limbs, and rapidly climbed up into its branches, followed by all of the rest of the party but the Judge, who stopped at the foot of the tree and snorted out, "Cowards to run from hogs; stand by me and we'll have fresh pork for supper," and then faced the hounds, which, followed by the hogs, had crossed the ravine and were coming direct to our tree. The Judge tried to get an aim at the hogs, but dared not shoot for fear of hitting one of the hounds, until they had approached within about 100yds., when he shouted, "Home, home," at which the hounds changed their course and ran toward the camp, and the Judge shot three times at the hogs without effect, save that they changed their course and charged directly at the Judge. Realizing his danger, he dropped his gun and climbed up into the tree, just escaping the jaws of the foremost hogs. As the Judge placed himself upon a large limb Cap pointed down at the upturned heads and foam-covered jaws of the hogs and said, "There, Judge, is something in the shape of a hog that can make you climb a tree. It's a pretty big lot of pork for one supper, ain't it?"

"Don't insult me by thinking I would taste of a piece of one of that drove of devils," was the reply; "but if I hadn't dropped my gun I'd soon be even with the whole lot."

"How many did you kill shooting from the ground, Judge?" asked Cap, but no answer came from the Judge.

By King's advice Cap and I had followed his example and had left the straps fastened to our guns by which we slung them from our saddles, and we had followed him in throwing the straps over our shoulders and taking our rifles up the tree with us, the benefit of which we realized as King said, "Boys, we've got to kill every one of those devils before we leave this tree," as he pointed his gun at one of the hogs and fired. Cap and I joined him in the shooting, and in a few minutes we had the entire drove of thirteen stretched out under the tree, and then descended to the ground, satisfied with the result, but not very much elated with our new experience in being hunted in place of being the hunters, and in addition we had to listen to the mirth of the balance of the camp that night when the Judge described our marksmanship, saying, "I never saw such a waste of ammunition; it took five loads to each hog, and they were so close they touched them on the backs with the muzzles of their guns, and yet one of them made a clean miss and splintered the stock of my gun where it was lying on the ground." One of our bullets or a tusk of one of the hogs had chipped a piece out of the stock of his gun, but he always insisted it was done by a bullet.

Looking over the bodies of the hogs, King pronounced them all old ones but one small sow, which he quickly dressed for taking into camp, and while we had "fresh pork for supper," it had a strange flavor from the mass upon which it had been feeding that was entirely new to every one of the party but King, and yet it was excellent juicy and tender.

That night, while taking our smoke around the camp fire and laughing about the incident with the hogs, the Judge, with pretended seriousness, regretted that the rest of us had killed all the hogs without giving him a chance, and closed by saying, "The most I am sorry for about it is that I'm afraid you killed all the hogs before the hound had got used to them so they could have some fun with them."

King's reply was, "Wait, our trouble with the devil has not yet begun."

The next day, Sunday, all of us lounged about the camp except King and the two darkies. While King left camp in the early morning to make a visit to a Chickasaw village some miles away, the negroes, taking Carlo with them, took a walk out in the direction of our hog killing of the day before. After cleaning and oiling our rifles we leaned them against a pole placed in two crotches a

one side of the camp, and had just seated ourselves for a quiet smoke, when one of the men called to us from a short distance below the camp that he had found "some pecan trees just loaded," and we all joined in the gathering of the pecan nuts, leaving our guns in camp.

To our surprise in a few minutes the hounds burst in sight a short distance away, followed by a small drove of razorbacks, and everyone of us hastened up a tree as quickly as possible, while the hounds, followed by the hogs, passed on to camp. All our tents had been shut up to keep the dry leaves and dirt from blowing in except the store or provision tent, through which the hounds charged, while the hogs stopped at the door of the tent a moment and then entered and began feeding on our provisions. The Judge, Cap, Shorty, the assistant engineer and I descended, and making a circuit of the camp soon had our rifles, and each one of us taking position by a tree up which we could climb if necessary, when a shot was fired by Cap and the hogs came charging for us, only to be killed before any of us were forced to tree. An examination of the hogs showed them to be five old sows, which were hauled out away from camp for a treat to the coyotes, which had nightly been serenading us. King returned in the evening, accompanied by two large-sized, disreputable looking Indian dogs of some mongrel breed, which made their triumphant entry into the camp by quickly whipping the spaniel and the hounds, while King, as if to add insult to injury, calmly said when asked why he brought those worthless curs to camp with him, "Them dogs are worth more for hunting in this country than all the hounds west of the Missouri River." After he had been told of the capture of the camp by the hogs he gravely said, "We'll have trouble with the devils as long as them hounds are loose, and they ought to be tied up."

The Judge replied, "No, no, let the hounds run a few days till they get used to the hogs, so that we can use them hunting bears and panthers in the canebrakes down by the river."

Next morning, just as we had gathered around our breakfast table—composed of the loose top side boards of the wagons resting on two poles supported by four crotched stakes—the camp was charged by the hounds and seven razorbacks, and we treed until we could shoot the hogs, which in the meantime had been helping themselves to our breakfast, and the Judge ordered his black boy, Sam, to "tie up the hounds and keep them tied."

The Friday afternoon following the Judge and I had been down in the river bottoms with our shotguns, shooting quail over Carlo, and climbing up through a break in the rock wall of the park land had gone along the top of the wall until we came up with the surveyors at work, when we were startled by the faint yelping of the hounds down near the river, either in the timber or canebrakes. As the entire party walked to the edge of the park land the Judge stated that he had told Sam to let the hounds loose for a run after we had been gone three hours, supposing they would follow our footsteps over the bottoms, and down in the bottoms there would be no chance to run against any hogs. King startled the whole party by saying, "All through the heavy timber close to the river are lots of white oak and pecan trees, and there are lots more hogs down in that timber and the canebrake than there is on the bluffs."

The hounds were then seen coming out of the heavy timber on a burned strip, followed by hundreds of hogs, running toward the rocks on which we were standing, and when they reached the rocks the drove of hogs was about a hundred yards away; but we were standing at the inner point of a bend of the rocky wall, and the drove surrounded the hounds upon the bottom side, cutting off any chance of escape along the side of the rocky wall. While the Judge and I fired all our heavy shot at the advancing hogs, we could not break their ranks, and in a minute or so at the bottom of the rocks there was a tumult of angry hogs, in which the hounds disappeared. When the hogs went back toward the river in a short time the only trace we could see of the hounds was some widely scattered bones.

In his anger at the death of his hounds the Judge declared a vendetta against the hogs, and as long as we remained in camp he never let an opportunity slip to kill every hog he could get a shot at; and thereafter never left the camp for bird shooting with a shotgun unless followed by Sam, carrying a rifle to use if any hogs were seen.

When seated around the camp-fire that night King told of a squaw-man (a white man married to a squaw) who, concluding to catch some young pigs to tame and fatten, had caught two young pigs and put them into his wagon, when their squealing called up a small drove of four old sows and a boar, which charged his team and killed his horses by ripping them open before he could shoot all the old ones, and thus disastrously ended his pork speculation.

The Judge, who had listened attentively to King's narrative, at its close asked the chief, "Can King go with us to-morrow, and can I have one of the teams? I've got a new plan for a hunt to-morrow, and need three men to help me besides a teamster and Sam."

"Certainly; I am only sorry that the work is in such shape that I can't leave it to go with you, or I'd only be too glad to go myself," was the reply.

In the morning the lightest wagon and fleetest team were selected, while the Judge and Sam fastened two spring seats, facing backward, near the rear end of the wagon. When his reasons for the placing of the seats in that position was asked, the Judge only said, "It is part of my plan, and you'll see the good of it before we get back to camp."

Directed by him, each of us filled the pocket of our hunting coat on the left side, as well as our belts, with cartridges, and King and I took the middle seat, while the Judge and Sam took the rear one, and we were driven up and out upon the prairie about five miles to a thicket of hazel and sumach bushes, near a timbered ravine and the edge of the park land.

Giving Sam his rifle to hold, the Judge jumped out of the end of the wagon and ran into the bushes, from which a loud squeaking was soon heard, and the Judge then came out of the bushes, grasping in each hand the hindlegs of a young pig weighing about 20 lbs. Calling to me to change seats with Sam, the Judge ran to the side of the wagon and handed the pigs to Sam, ordering him to hold fast to them; he then jumped into the rear end of the wagon, with the order to the driver of "Run your

team for camp as fast as they can run." Before we had gone 100 yds. a drove of ten razorbacks broke out of the bushes, led by a gaunt boar of an extra large size, and came charging after us, while we began shooting as fast as we could fire. One after another of the hogs dropped until the boar alone was left, upon whom our shots seemed to have no effect, when, from stumbling or stepping into a badger's hole, one of the horses fell, the wagon upset, and we were all thrown sprawling upon the ground except King, who striking upon his feet ran off quartering a short distance from the charging boar, when he stopped and by a well directed shot brought him to the ground, where a second shot finished him before he could rise to continue his charge.

While we were righting the wagon the Judge stated that King's story of the squaw-man the night before had recalled to his mind an account he had read of the Russian way of wolf-hunting, and having discovered the nest of young pigs a few days before while looking through the brush for wild turkeys, he had concluded that the Russian way of wolf-hunting would be a good plan to shoot wild hogs with, and though the plan worked all right he had made no calculations for any chance of the wagon being upset by one of the horses falling into a badger hole, and one such trial was enough to last him a lifetime.

On my inquiring of King, "Why did you run off to one side to shoot the boar?" he led us back to the body of the boar and told me to take my knife and rip his hide open on the neck. Taking out my sheath-knife, which had a razor edge, I made a slight stroke at the hide, when, to the surprise of all but King, the knife seemed to make no impression upon the hide. He then took the hide and by careful and continued cutting opened the hide upon the back and skinned it down over a shoulder, and cut off a piece of the hide, which to our astonishment was over 3 in. thick. He then stated that as a wild boar grows old from some cause his shield or hide over head, neck and shoulders thickens and hardens until it becomes bullet-proof, and is his great defense in his battles with others of his kind, and with bears and panthers, which he does not hesitate to attack, generally coming off victorious. He then pointed out places on the shield where our bullets had hit him and glanced off, making slight scratches, and said that he ran off to one side to get a shot at the boar behind his shield.

Returning to the wagon, the Judge asked Sam what had become of the pigs, and Sam replied, "King threw them out of the wagon before we got upset."

King then explained that he had cut the throats of the pigs and thrown them out of the wagon to stop their squealing, and had just thrown the last one out as the wagon upset, and but for the upset the boar, when he came to it, would have stopped to examine it until we got out of the way.

The bodies of the pigs were picked up and taken to camp, and while we found the roast pork delicious, and thereafter during our camp life used it frequently to vary our bill of fare, none of us ever cared to hunt hogs again after the Judge's improved Russian plan, and the pigs we roasted thereafter were obtained by careful work of the Judge, King or the writer, always watching and shooting the old sow first, and then killing the pigs by shooting them through the head, taking no chances of causing them to squeal to call up a drove of old ones.

A BOAR HUNT IN FRANCE.

CHATEAU BAUDELLOT MIGEON, à Harancourt, Ardennes, France.—The woods of the Ardennes, noted throughout Europe, are located in the extreme northwest of France and border the countries of Belgium and Germany. They cover an immense district and belong to the French Government. The province of Ardennes has always been famous for its wild boars and other game, for Kings Charlemagne and Clovis had hunting lodges in them and used to come with their courts for an annual hunt in its famous woods. It has also been a battlefield, from times immemorial, upon which some of the most momentous events of history have been transacted. The Normans left countless ruins behind them in this historic province, and the battlefield of Waterloo is almost within rifle shot of it, and the fateful battle of Sedan (its capital) bathed its peaceful valleys and hills in blood, and marked the transformation of France from a monarchy into a republic and the downfall of the Napoleonic dynasty.

The sun was vainly struggling to find its way through the clouds; from the chateau window could be seen the fog, in woolly like masses, tumbling among the tree tops on the hills across the valley. Within all was comfort, there was the merry blazing logs in a huge open fireplace, and the song of birds came to the ear softly from amid the foliage of an adjoining conservatory; without, dampness and drizzle and fog—fog everywhere. Suddenly there came the quick tapping of finger tips on the window, and the animated face of Charles Albert Antoine Baudelot was disclosed, his eyes blazing with excitement. "Hola!" he cried, "the wild boars! Uncle's gamekeeper has just come in and reports that several were in the woods near Montjoie, in the preserves. We must not lose a moment!"

No fire, no earthquake, could create more excitement in an Ardennes chateau than the cry of "wild boars!" In a moment servants were scurrying hither and thither to notify neighboring gentlemen to come and join in the chase, for a wild boar hunt to be successful needs not only courage, but numbers. It seemed but a trice when behind a giant gray mare—which the excited Albert, a very youthful cousin, urged at a smart pace along the broad macadamized road—we were on the way. Albert explained how every morning the gamekeeper makes a tour around the forests and keeps with an observing eye about him for signs of game. This morning his practiced eye had seen in the soft mud the imprints of the feet of the wild boar, the toe marks all pointing to the forest, and as no footprints were seen leading away he knew the boars were still there; for they are nocturnal animals and nest secluded during the day in the shades of the wood, and they were likely to be there all day; so the faithful fellow hurried to the chateau to give the tidings.

The Ardennes are not all forest; it is one of the best cultivated parts of France, only certain hills and valleys not specially cultivatable are reserved by the wealthy for wood for fuel and hunting preserves. The forest of the Ardennes proper is a deep fringe of woods bordering on Belgium mostly.

Our way to the forests of La Comette, the preserves where the boars were seen, led us upward through

a peaceful cultivated valley—the same by the way in which the exhausted French army slept after the battle of Beaumont on the eve of the battle of Sedan—and Albert pointed out the places in the woods where in 1871, unknown to the sleeping army of France, the videttes of the German army looked down upon them, sure of their prey on the day following. Very soon we left the main route and journeyed over a road through the fields, always upward. To the right could be seen the mist enshrouded valley of Veudresse and rising above the fog the bold outlines of Storm Mountain, once in ancient times a camp and burial place of the Romans, and over which still runs one of the famous roads, beautifully paved and 50 ft. wide, but now overgrown and running without any deviation for hill or ravine as straight as a line for 131 miles, from Rheims, France, to Trave in Germany.

On and up, still we toiled. In half an hour [the forest of La Comette comes into view, a long, low line of wood across the top of the mountain, dipping down into the mist-covered valley of the Storm. For generation after generation La Comette has been used for the chase in the same family, and it has roads and paths especially devised for convenience in passing through its hundreds of acres. In its depths is a little hunting lodge located for shelter from wintry winds in an old narrow quarry.

The chase began about time of our arrival. The hunters had all assembled with guns and dogs. Absolute silence was maintained, for the wild boar is a timid animal when not wounded, and then he becomes a fiend incarnate and fights desperately. We carefully hid our horses in the edge of the forest and waited, while the master of the hunt, a tall, grizzled veteran, placed the hunters around the piece of forest the boars were thought to be in. Silently and surely was the cordon drawn; even the dogs seemed to catch the spirit of silence, and uttered not a sound. Albert and I being guests and unarmed were placed at the best point of observation—at a corner of the wood looking down a road through the center, and to the left affording a view along the side of the forest. We were enjoined not to speak above a whisper. It was a dramatic sight—the view to our right down that narrow forest avenue—to see, stationed a few rods apart, a line of four or five armed men standing like statues, silently awaiting their savage quarry, when the signal should be given that all was ready and the dogs should be let loose to hunt the boars out. Minutes passed, and to us they seemed hours, as we stood there amid the dripping boughs with ears strained, waiting to hear the bay of the dogs as a signal of commencement.

Albert leaned over and whispered, "In the excitement and hurry of leaving I forgot to bring a revolver, which it would be well to have in case we are attacked by a wounded boar."

"Ah, Albert! you are a forgetful boy! Why not a gun?"

"Oh, no, no!" answered Albert, "neither of us have hunting permits, for hunting is an expensive luxury in France; every one who is lucky enough to have a place to hunt in must pay the French Government a good round sum for a permit to carry a gun."

"Do you feel easy here without some sort of arm?"

"To tell you the truth I don't," whispered Albert in reply.

Suddenly the stillness was broken by a wild and prolonged bay from a dog, which rang out, echoed and re-echoed through the woods with startling force.

"The hunt is on!" cried Albert. "Keep your eyes open," and quickly following came redoubled the frantic yelps of the dogs keen on the scent; then gun shots and cries of "hoo! hoo!" from the hunters at the other side of the woods. It was wildly exciting to us as we stood there gazing at each other and not knowing what was taking place in the woods out of our sight. We were, however, not destined to remain long in suspense; there was a crash and snapping of boughs and twigs in the forest very near us; then there came out into the open not more than a rod from us a huge wild boar. The bristles on the back of his great brown body stood erect, like the spines of a fish, his mouth was agape, with tongue lolling, and his gleaming tusks were clattering viciously together. He saw us at the same moment and half paused, turning his great long head for a better view, and then with a snarling growl, half grunt, he turned and loped cumbrously over a plowed field, on the edge of which we were standing, and disappeared into the valley beyond, leaving us not very fully recovered from our astonishment and consternation.

Of all the wrathful sights of man or beast, commend me a wild boar! Never will I forget that clattering display of tusks.

"If he had been wounded he would have attacked us," said Albert.

"Albert, how did he look to you?"

"About the size of an elephant, with a mouth the size of a barn doorway and teeth a yard long," replied Albert.

"Bang! bang!" "Yow, yow, yow!" from the dog. We were again in the midst of it. It seemed as if the hunt was concentrated around us two poor, unarmed and badly scared spectators, and so it was. There was another great crashing and snarling in the bushes at our left, and a huge boar broke through, closely followed by dogs. He leaped across the road and disappeared in the forest at the other side. Hardly had we recovered our startled senses from this when the smashing and breaking of branches near us was renewed; a shot rang out, and a great wild boar tumbled with a half somersault almost at our feet, dead. At the same moment Cousin Emil Baudelot appeared with a smoking gun, preceded by his dogs.

"Il est mort!" ("He is dead!") he shouted.

The other hunters rushed up and congratulations were showered on young Emil, only 20 years old, and this his first boar.

That day two wild boars were the result of the hunt. Space forbids the telling of how the hunters all adjourned to the old Chateau Montjoie; how in the banquet hall came the feast and toasts which invariably follow a successful hunt, and at which stories were recounted of adventures with wounded boars in long past hunts, songs were sung, and the liver of the day's quarry was served, smoking amid a savory sauce, as had been the custom for centuries past in the same old hall; for in this country, whose civilization dates back into the dawn of history, a century is but as a decade.

THEO. H. SEYMOUR.

* Signal that boars were seen.

ABOUT OUR CHRISTMAS NUMBER.

Editor Forest and Stream:

The writer, as doubtless all the other readers of FOREST AND STREAM, was deeply impressed by the extraordinary excellence of the Dec. 28 number of "our own sportsman's journal." It would be difficult or impossible to find elsewhere grouped together such an array of talent and ability in this field as is presented by the galaxy of stars who constitute the list of contributors to that number, and I may remark in passing that FOREST AND STREAM appears to be coming out stronger from year to year in the number and ability of its active contributors.

Mr. Robert T. Morris heads the list with an idyllic description of "Hopkins's Pond," and arouses a lively sympathy in the bosoms of all the old boys who cherish the memory of boyhood days. Mr. Rowland E. Robinson gives "A Bee Hunter's Reminiscences" in his usual happy vein, which never fails to enchain the interest of his readers. I learned from a chance allusion of one of your contributors that Mr. Robinson has been totally deprived of his eyesight, in which affliction he will certainly have the warmest condolences of a host of FOREST AND STREAM readers.

Next comes Mr. Charles Hallock, with a most enjoyable description of "A Christmas on the Rio Grande." Then "Close Quarters with a Grizzly," by Mr. Morton Grinnell, is a well-told and most interesting narrative.

Your readers will all share in regrets at the recent death (announced in a late number of FOREST AND STREAM) of Mr. Edward Jack, who contributed a short but very interesting sketch of the "Maliseets and Mohawks."

The gifted El Comancho soars aloft among the cloud wreaths of dreamland most entertainingly in "The Talking Pine," with a suggestion that we will have further opportunity to enjoy the production of his mystical pen in the No. 1 in the caption of his article.

I have reserved the adjective "charming" to characterize Alice D. Le Plongeon's little picture of domestic life in British Honduras, in "Cat, Kittens and Kid."

"Teal and Tarpon at Tampico," by F. S. J. C., is a well written and most readable narration.

Mr. Paul Pastnor deserves a place away up in the art gallery for his very amusing and highly entertaining story of "The Christmas Grouse," with its lucid illustration of the battlefield.

But where has Ransacker been keeping himself all this while? Surely he has been most reprehensibly "hiding his light," and withholding from FOREST AND STREAM one of the raciest pens that has adorned its pages. While contemplating the magnificent array of rich contributions in FOREST AND STREAM's "banner number," amid a good many doubts as to their comparative excellence, I believe I am inclined to cast my vote to "At Sunrise in the Sierras" as being entitled to the prize.

I trust we shall hear more from Ransacker.

Mr. W. S. Smith's description of his trip "To the Eckenlockhatchee" is exceedingly "picturesque" and full of refreshing scenes of forest and stream.

And now I come to our own inimitable Mr. E. Hough, in whose fascinating pen all of FOREST AND STREAM's readers feel a proprietary interest, for he belongs to all of us. An attempt at commendation from my Faber No. 2 would be a bootless task—a "measuring of a mountain with an ell yard wand." I hope we shall soon have Mr. Hough's story of his second bear hunt with Bob Bobo in the Mississippi canebrakes, where, as Horace Kephart says, when a man enters "he is alone with his maker." Mrs. M. E. Warren's delightful chat about "Curly" has made me fairly in love with—the dog—I might have said with Mrs. Warren, if I knew she was a widow; but in these days of annihilated distances a possible Mr. Warren might possess an arm long enough to reach away down in Mississippi, with an intimation that I would better keep my affections until called for or words to that effect. Last, but not by any means least, comes "The Realization of a Dream," in which Mr. H. N. Curtis "does himself proud" in a good story, well told and superbly illustrated.

In thus briefly noticing the principal contributions in FOREST AND STREAM's Christmas number I have of course done poor justice to any of them, as each one of the articles affords matter for extended comment, my purpose being to express my high appreciation, which is shared by thousands besides myself, of FOREST AND STREAM's growing excellence and of the individual merits of each and every one of her splendid corps of contributors, which I do without any feeling of constraint, being myself a "back number." COAHOMA.

Natural History.

CUNNING COCKROACHES.

In the Caribbean Sea we once had to take passage in a small sloop that was a regular Noah's ark, such a diversity of creatures had been stowed therein.

On the deck there was only one clear spot large enough for a human body to repose at full length, and that space was in possession of a man from Spanish Honduras.

On the floor of the cabin, which was 10ft. long and 6ft. wide, a few turtles, each weighing 300 or 400lbs. lay helpless on their backs, their flaps sewn together. From time to time those victims heaved gasping sighs. Finding sufficient room to lie down on the floor, I utilized the soft side of a turtle in the absence of a more inviting pillow. When quite exhausted, a weary mortal can sleep under any conditions.

Never having been partial to cockroaches, I had sent no invitations to those inhabiting the sloop. Nevertheless, Neptune had only just lulled me to sleep when a company of winged callers assembled and, finding me in a passive mood, simply walked over me. The visitors were well worthy of consideration, being of the full grown 3½ in. kind; and when one member of the party bestrode the bridge of my nose I felt called upon to arise and resent such unjustifiable intrusion. After some persuasion the impertinent wretches retired, my pillow and I heaving a sigh of relief. The largest cockroaches are not necessarily the smartest. Those Caribbeans were big, but in cunning they could not be compared with some that invaded our domicile in the city of Merida (Yucatan, Mexico). They lacked beauty, but were as clever as they were ugly.

All the apartments of our house were on the ground

floor, in a line, parlor, bedroom, dining-room, kitchen, in very primitive style. The cockroaches preferred the kitchen, and they being much given to nocturnal wanderings whole regiments paraded the walls after nightfall. As there was no chimney, the walls were begrimed with soot, but the enterprising insects cared nothing about that. We were assured that the invaders could not be exterminated, but we had a decided objection to their multiplying to such an extent as to prevent the cook from doing her work. We decided to enlist the co-operation of a snow-white, frisky, sagacious hen. At 9 o'clock at night we lifted her from her perch. She was indignant at being forced to get up in the middle of the night, and loudly expressed her opinion. Coaxing her into calmness we carried her and a lighted candle to the stronghold of our enemies, that were out in full force. The amiable chicken entered into the business indicated to her with considerable spirit and besides frightening many of the winged tribe killed a few, though each execution was a task. The cockroaches, obeying an instinct which is common to many creatures, availed themselves of the damp and sooty stains on the wall, hurrying to such as were of their own color, thus making it more difficult for the hen to see them. The lazy cook had left small pieces of charcoal scattered over the floor. These were at once utilized as dodging posts, each being held by a wily insect that, peeping upward and round the corners, kept a sharp lookout and shifted from side to side evading our ally's beak. As soon as the dear creature lost patience and turned her head in another direction the dodger scampered off to seek better shelter.

Anyone who has studied the cockroach family knows that the above is all quite true.

Every night we induced our chicken to renew the campaign and we thus prevented a too rapid increase of the winged colony. ALICE D. LE PLONGEON.

SOME FEATHERED FOREIGNERS.

Editor Forest and Stream:

I have been pleased at reading lately in American sporting papers that clubs are being formed to shoot *Passer domesticus*, and hope they will continue at work until he is exterminated; but I beg to protest, for several reasons, against the name "English sparrow" being given to him. Firstly, it is annoying to see England credited with being the source of such a pest; secondly, I have read in an American paper that the bird was really introduced by a German clergyman; thirdly, the sparrow is no more English than he is French, German, or Russian. He inhabits the Old World from the western coasts of Europe to, I believe, the eastern coasts of China. He swarms in India, where the grain annually destroyed by him amounts probably to millions of bushels.

Some individuals who believe that "everything was created for a wise purpose" contend that the sparrow does more good than harm by eating insects and the seeds of weeds. So far as I have been able to ascertain he collects caterpillars and grubs for the nestlings, but only while they are unfledged. From the time the young birds can fly they subsist almost entirely upon vegetable food, and the damage they do in gardens is most irritating.

Early in the spring sparrows pluck bunches of blossom off the currant bushes and drop them on the ground, apparently from sheer mischief. Later in the season they eat the currants.

Young peas must be protected by netting as soon as the shoots appear above ground, otherwise the sparrows stop their growth by eating the tops. When the pods begin to fill, sparrows peck holes in them, eat one or two peas in each pod and leave the remainder to shrivel.

I once planted a large bed with radish seed and neglected to cover it with netting for two or three days. In that time the sparrows worked so industriously at digging up and swallowing the seeds that only six radishes ever grew.

Although sparrows sometimes rob house martins of their nests, they do not drive away our insect-eating birds to the same extent as is reported in America. Our robin, which greatly resembles your bluebird in structure, size and habits, is such a desperate fighter that sparrows are afraid of molesting him. If it were not for this pugnacity I would gladly see him introduced into the States, but fear that he would hunt away the lovely little bluebird from the neighborhood of houses. He is certainly one of the most useful birds in this country, singing for about ten months in the year and living almost entirely upon insects and worms. He may perhaps occasionally eat a few currants and will take bread crumbs in cold weather. He is so tame that he often hops within 2 or 3 yds. of anyone digging in a garden, ready to pick up wire worms and grubs. During a very sharp frost he sometimes comes inside our houses and remains until the weather becomes milder.

Not long ago I read in an American paper a suggestion to import the European blackbird, but earnestly hope that this will not be attempted. The blackbird sings beautifully during three months out of twelve, and lives largely upon insects. He is also, unfortunately, the greatest stealer of fruit in this country, beginning with the earliest currants and raspberries, and stripping whole bushes if not stopped. All through the rest of the season he feasts upon plums, cherries, grapes, figs, pears and apples. Of the last he destroys fully four times as many as he eats, by pecking holes in them and leaving them to decay on the trees. At one residence I had a small orchard where the blackbirds spoiled in this way many bushels of apples annually. They are so watchful when stealing and quick at putting a tree between themselves and a gun, that a man who can shoot one out of every four that he catches a glimpse of ought to be a match for the wariest old ruffed grouse or woodcock.

In another American paper I saw an objection made to the European starling being introduced on the ground that he is mischievous. The writer must have been misinformed about him, for it is doubtful whether there is a more innocent and useful bird in existence. During the whole year his food consists of grubs and insects, although he will eat bread crumbs when starving in frosty weather. He has indeed been occasionally accused of taking fruit, but I have never seen one starling doing so, and they have built nests in the chimneys of every house I have lived in for many years past. The accusation probably arose through young blackbirds being mistaken for young starlings, which they resemble in size and color before the bills of the former acquire their bright yellow tint.

I lately spoke about this to a friend who is very fond of natural history and has always lived in houses where starlings bred. He stated that he had never known them steal the fruit.

Starlings make great efforts to sing, but only succeed in producing a low warbling noise. If they persevere in this for a few more thousands of years, they will perhaps develop into fine songsters.

I find a paragraph in FOREST AND STREAM about the successful introduction of pheasants into the States. It is to be hoped that they will be protected until they spread over wide tracts of country. Besides being first-rate game birds, they devour immense quantities of wire worms and other pests by which farmers are persecuted.

If the raleej or silver pheasant has not been imported he would be quite worth trying. He lives on the slopes of the Himalayas up to a height of 6,000ft. above the sea—so would probably thrive in the mountains of the Southern States.

Another bird which ought to repay the trouble of acclimatizing is the large bustard of India. He subsists to a great extent upon beetles, grasshoppers and above all locusts, so he would be especially useful in Utah and some of the other Western States. His flesh is excellent and he affords fine sport with the rifle, being as difficult to stalk as an antelope.

There are two smaller kinds of bustard in India, called houbara and floriken. Both of them live upon insect food and are good for the table. They are less wary than the large bustard—so can usually be approached within range of a shotgun. J. J. MEYRICK.

SOUTH DEVON, England.

BIRDS, NOT MONKEYS.

Editor Forest and Stream:

Darwin was a very great man, but like a man he made his mistakes, and probably the most remarkable of all was that he should have believed that men were mere improved monkeys. Of course no one believes that now. Lots of people used to think monkeys were mirrors, reflecting their own faces and forms and all that, but they would feel insulted if they were told they looked like monkeys or monkeys looked like them now. The real ancestors of the human race were, of course, birds; of one kind or another, not yet exactly determined. It is evident, however, that the birds of paradise (*Paradisea*) family are as closely allied to the human race by way of brains, the artistic senses especially, as any, while the human form is not so different from the heron family as might be. The seeming difficulty in the matter of teeth and bills is not so hard to explain. The *hesperornis* had socketed teeth, while the mandibles of birds themselves are nothing but projecting jawbones.

Monkeys don't build houses, men and birds do. The housekeeping of many birds is not dissimilar from that of human beings. It is the male bird who seeks the favor of the female, and although we consider the male birds handsomest as a rule, who is to say that the males of birds do not have a "fairer sex?" Surely no one till the languages of birds are understood. And there is a bird language of which we are already able to distinguish this much: love songs, war cries and cries of fear of many if not all birds.

Many birds are human in their actions, or shall we say many actions of mankind are birdlike? We do say so. We admit it in our language. In the southern Adirondacks there is a dance in which two of the figures are expressed by "Birdie fly in and hawkie fly out, birdie fly out and give hawkie a swing." I doubt not that in the dances of the herons there is a "Birdie fly out" call, but do not know as to the "Hawkie fly in." We say: "She is a bird," a "dove" and "now, birdie!" all of which expressions in one form or another appear in the written literature of all languages and ages, indicating the closeness of birds' lives to our own.

We have a custom of giving to our relatives or friends a little tidbit or ornamental trinket. It is the old bird instinct that crops out in our lives. The bower and gardener birds, who are our next of kin as far as brains go, when they visit their wives or sweethearts in the reception room of their country house always take along a flower, a beautifully colored feather, a bright shell, a handsome insect or a bit of ornamental fruit, not a few of which articles are acceptable to human sweethearts and wives. These birds are not American birds, but no doubt there are American birds that give presents.

Vanity is not lacking among human beings (*Ornithus humanici*) or birds. In fact, the most beautiful birds are as conscious of their splendor as any human beau, and there are a lot of birds who think they are lovely when they are not, likewise as in the human family. And there are birds that do not think much of personal adornments, and if we only knew their talk what wonderful histories, romances, fables and tales of travel, might we hear from the plain night birds—herons, owls and the like; and what a lot of bad stories the cowbirds must have to tell one another. The feathered sportsmen, or, as we would say, feathered pot-hunters, hawks, eagles and so on, no doubt tell one another about sly partridges and quail quite as much as do our sportsmen.

How immeasurably above the improvident bluejay must the one that has stored up its acorns, bush nuts and the like feel, and how he must swagger around when the improvident one whines when hungry. What a punishment must the improvident one get when it gets caught stealing the wealthy one's fortune. And when human beings do such things they are but carrying out the old bird instinct.

Then there are families of birds in which, when half a dozen of them get together, they pitch on to some one little bird and proceed to do him up. It is the English sparrow (*Passer domesticus*) that is most notorious for this. This little immigrant has got an idea it owns all birdland, going about in bands of half a dozen or more to prove it. There is a little bird not quite so big as the English sparrow, belonging to the same class, known as the chipping or American sparrow (*Spizella socialis*). Six of the English sparrows proceeded to whip one American sparrow out on Long Island once. It looked pretty serious for the Yankee bird for a while, with all the others a-pecking him from all sides, but pretty soon the Yankee got in enough blows to make the others stand back a bit. After that he soon had all but one of the birds out of sight. This one paraded around like a cock turkey till the Yankee sailed in and sent it clear up on to the fence, pecked it along for 20ft. or so, and pretty soon

the English sparrow took refuge in a cedar tree where the American bird couldn't find it. After that the same six tried to whip the Yankee bird again, but got whipped as badly as before. When human beings stand up against odds for their rights, it is but the cropping out of the bird instinct as shown in this case of *Socialis*. (D. G. Elliot, *FOREST AND STREAM*, Vol. II., p. 23.)

In regard to the games played by birds and men there is a marked resemblance, which shows conclusively the survival of old bird instincts. Tag and hide-and-seek are as popular among children of men as they are among the birds. Variations are frequent in both families. Puss-in-corner is but a development of bird play.

One sees a high-hole (*Colaptes auratus*) fly at another perched on a tree branch. The other flies away, only to return and fly at the first as it had been flown at. Swallows are the swiftest tag flyers. The instinct to chase one another still abides in human beings, having been ingrained before our letters were formed. Some crusty old men are very cross at boys for making a noise. A drum is one of the most used, most acceptable presents one can give a boy; toys with bells or rattling joints are more popular than mere books with pictures in. Boys delight to yell, to shriek, to blow whistles and horns of all sorts. In fact, the blowing of horns is not confined to small boys, as witness New Year's, when the more noise a man can make the better he likes it. The boom of cannon is thrilling. We are an odd mixture of bird life. The boom of guns, cannon and drums is but the echo of our pheasant ancestors calling to their sweethearts. The small boy who delights himself while going down to the village street rasping the picket fence with a stick is but carrying out the instinct he inherited from the woodpecker family, whose chief delight is in the rattle and bang of some splinter of an old dead tree. The whistles, horns, shrieks and cries are but the quaverings of birds' voices in the distance of past ages.

When men were more like birds than they are now many of them found it difficult to break off their old habits of life. This is no better shown than in the workings of our divorce courts. Some men live happily all their lives with their wives. So do some birds. Other birds must needs change every year, and so some men feel as though they ought to. They are not to be blamed too harshly; it is the old bird instinct.

A moment ago I spoke of the herons' dances. Herons are not the only feathered dancers, but those whose forms most resemble the human form dance most. I have seen the little tip-up, so common along our country streams, in a kind of dance. These dances are as varying as the dances of the human family. Jigs are not unpopular with both; gliding, graceful marches, two-steps, double and single dancers and all together in forms intricate and simple. Spectators are not inconsiderable in either class. The glittering of a ball room crowded with human beings glistening with jewels is no more inspiring now than it was in the days when the human race had wings and feathers. The colors on our ancestors' backs were just as beautiful to their eyes as the jewels of to-day are to ours, and the love of glittering objects is as manifest in the babies as it is in the birds. A bluejay will steal a thimble from an open window and a baby will reach for the moon, or a gas or wood flame. For brilliancy of color, the splendor of sunsets is as much admired by birds as by men, as witness the worship of the sun by the Aztecs and by the best known bird of paradise (*Paradisea apoda*), the great emerald, which "flies from branch to branch, opens its wings, extends them to their full length, raises and depresses its long plume-like feathers, * * * utters loud cries" on seeing a brilliant sunrise or sunset from the tops of the tallest trees, where it "abandons itself to the most passionate excitement" (*FOREST AND STREAM*, Vol. II., p. 66). This most beautiful of birds feels the thrill of beauty which we feel on seeing the sun, tended by the colored clouds, in the low west or east.

"We love our brothers," too often "not wisely, but too well." The young boy, and many an old one, delights in a bird in a cage. Hundreds of nests each year shelter life only to be robbed of it by a boy who wants a pet bird. We like to have a bird around the house singing, or if they won't sing we look to them joyful at their life. We even kill them and perch them, dead and stuffed with straw or something else, in our rooms to look at. Many a bird would be glad to have a mounted man or man cub in its playground. The gardener bird (*Amblyornis inornata*) of Papua, for instance, would be most pleased if it could take one of those little white china dolls, the size of a crow's bill, to its sweetheart in its reception room, where the doll would be one of the most conspicuous of ornaments. No creatures agree quite so well as birds and men. In a few days a man in an isolated hut in the woods will have a dozen or hundreds of fearless visitors of the feathered tribe if he will but act the chickadee or duck, instead of the hawk or shrike. It is brotherly love.

Columbus yearned toward the west for years. There was a tearing at his heart. Voices without him said, "Come!" Voices within said, "Go!" He went. And here we are in America while voices from all directions say, "Come!" It is the old migrating instinct of the goose. Travelers among us tell their tales of far-off lands, of what they saw, just enough to make us wish to go there too. The old ganders tell the goslings of the far-away south, of food a-plenty, of beauties, of kinsmen and friends, and a little perhaps of dangers. The trials, the storms, the gauntlet of hawks, eagles and men of prey are scarcely thought of. A voice says, "Come!" We go. As there are men who have never tried on their wings—the awkward beam ones we have made to serve the purpose—there are birds that are also sedentary. I have known a partridge (*Bonasa umbellus*) that never traveled a dozen miles from his native hillside in his life; so have I known men that never cared to migrate.

We win our wives by our good looks, our genius, our wealth, our skill or by main strength, whipping all our rivals, fighting them to the death with our artificial spurs, or we don't win them. It is the same with birds. The *Amblyornis inornata* that builds the finest bower and makes the most beautiful presents is the lady *Inornata's* choice. As the taste as to what is finest differs among women, so it differs with birds.

"What on earth can she see in the likes of him, I'd like to know" is spoken quite as often among birds as it is among our kind. If you don't believe it study the birds next spring as they are waiting. Every year there are bachelor birds and these birds raise all sorts of trouble in bird life. Take the crow for instance. Seldom

in a large swamp, never in a small one, is more than one nest built. Let another crow come near that swamp and one of the crows of the nest starts for it, whereupon the other follows and the two birds put the one to flight quickly. Sometimes there is no rush at the odd crow and it is but justice to presume that one of the mates is away intriguing perhaps. If that characteristic don't show in the human family what does? The two are alike. The *Cervidae* are allied to the *Paradisea* distantly and men are allied to both. It has been argued with some effect on not over exact minds that the tree instinct of monkeys still abides in man. It is said that the delight of boys and girls and men in climbing up steep cliffs or grasping topmost branches of tall trees is the cropping out of monkeyism. But we have gone farther than the monkey ever could conceive of. A monkey can climb to a treetop, but only a bird would think of going beyond. Why was a balloon invented? Why do inventors pass their lives trying to make themselves a machine that will bear them aloft? The bird in us will not down. We must fly, and till we are birds in the air once more we will be dissatisfied.

We like to be among the trees, in their branches. The lull and soothing music of rustling leaves puts us to sleep as quickly now as when our nests swayed on the tree branches. Our easy rocking-chairs are substitutes for treetops, our hammocks are orioles' nests.

RAYMOND S. SPEARS.

BROOKLYN, N. Y.

California Academy of Sciences.

THE officers elected for 1896 are: President, David Starr Jordan; First Vice-President, William E. Ritter; Second Vice-President, H. H. Behr; Corresponding Secretary, J. O'B. Gunn; Recording Secretary, G. P. Rixford; Treasurer, L. H. Foote; Librarian, Charles A. Keeler; Director of Museum, J. Z. Davis; Trustees, W. C. Burnett, W. S. Chapman, Charles F. Crocker, W. S. Keyes, E. J. Molera, George C. Perkins, G. W. Stewart.

Game Bag and Gun.

FIXTURES.

March 16 to 21, 1896.—Second annual Sportsmen's Exposition, under the auspices of the Sportsmen's Association, at Madison Square Garden, New York city. Frank W. Sanger, Manager.

TO APPEAL TO CONGRESS.

WE have received from City Attorney F. A. Williams, of Denver, Colo., the following report of an interview printed in the *Denver Times*:

The problem of protecting the wild game of this and adjoining States is becoming more and more serious, and seems to require Congressional aid. City Attorney Williams yesterday sent to Congressman Shafroth, by arrangement with him, a copy of a bill for an act to prevent interstate commerce in the carcasses, meat, hides and horns of wild game.

In conversation with a *Times* reporter Mr. Williams explained the purpose of the bill. He said: "All the wild game killed by ranchmen and sportsmen in the ordinary course of things would not greatly reduce the game still remaining in this State, and, were it not for the wholesale slaughter made by Indians and pot-hunters, the elk and antelope would be preserved a long time, and deer would always take care of themselves. During the season when ranchmen and sportsmen can reach the game, the game is scattered; but when the annual migrations occur, and the game is collected in great herds, it is easy to destroy them in great numbers. This has been done every year for a series of years, and I understand that the destruction this fall by Indians was alarming in extent.

"The decision of Judge Riner, in Wyoming, in the habeas corpus case against Racehorse, one of the Bannock Indians, is probably good law, but unless reversed or modified by the Supreme Court I fear it seals the fate of wild game in Wyoming and Colorado unless the treaties with certain Indian tribes can be altered. This is a matter requiring attention on the part of the representatives of these States in Congress, and I am hoping that when the matter can be brought in the proper way to their attention and the proposition formulated that these treaties can be so altered that an Indian will have no more right to destroy the natural attractions of these States than a white man.

Indians and Pot-Hunters.

"The motive for Indians and pot-hunters is the same—the hope of gain. The Indians dispose of the hides to their agents and the agents to merchants. It is not difficult, therefore, to understand that Indian agents are very willing for the Indians to take their annual hunt in Colorado under the pretext of looking for 'ponies.' I think hides bring the pot-hunter about 50 cents each and the Indian much less, and for the sake of this small sum an animal is destroyed, for the pleasure of taking which a local sportsman would spend anywhere from \$35 to \$100, and a non-resident \$200 to \$300, in money that would be distributed principally in the immediate vicinity of the game preserves.

"One of the principal difficulties confronted by the game wardens is the fact that the game preserves lie so near the boundary line of other States. The game is killed in this State, taken over the line to Utah or Wyoming, and on the representation that it was not killed in those States is shipped to markets extending all the way from New York to San Francisco, some of it being shipped directly back to Denver and other points in Colorado. The hides nearly all go East to the glovemakers, and the number shipped from points in Colorado is something appalling.

States are Handicapped.

"Every State is handicapped in attempting to prevent the shipment of hides and meat out of the State by the limitations of the United States Constitution, which reserves to Congress the sole power to regulate interstate commerce. We can prohibit shipments from points within to other points within this State, but not from points within to points without the State. If we could prevent interstate traffic in the hides and meat of wild game there would be no motive for Indians or pot-hunters, as there would be no sale for the hides or meat, and the wholesale destruction of our rapidly diminishing herds would be arrested.

"It may be said that Congress has no interest in the preservation of these local attractions, and ought not to exercise the federal power for the preservation of State interests, but this argument fails when we consider that because of the reservations of the federal Constitution the States are powerless, and it is therefore right for us to ask the assistance of Congress.

"The bill gives federal aid only so far as it is necessary to enable each State to protect itself, and while in terms absolutely prohibiting the interstate traffic, practically leaves the matter to the regulation of each State by statute.

"The reason why the States of Colorado, Wyoming and Utah are alone included in this bill is that their interests in the matter are inseparable. I believe the principle is correct, and there is no reason why the bill should not be made general in its application throughout the whole country. If adopted it should be supplemented by a suitable act of the Legislature of each State affected."

Following is the bill as prepared by Mr. Williams:

The Bill.

A bill for an act to regulate interstate traffic in wild game.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled:

"Whereas, It is necessary to the preservation of wild game in the States hereinafter named that interstate traffic in the hides and meat of the wild animals hereinafter mentioned should be regulated and prohibited; and

"Whereas, By reason of the exclusive power of Congress to regulate interstate traffic, the States are powerless to regulate or prohibit the transportation of said articles to other States, and the enactment of the following provisions will enable each State by legislation to protect the wild game within its own borders; therefore,

"Section 1. It shall be unlawful for any railroad company, express company, or other common carrier, or any of its agents, officers or servants, to receive for shipment or to transport, or for any person or corporation to ship or to offer to any common carrier for shipment, from any place within the State of Colorado, the State of Wyoming or the State of Utah to any place without the same State, for market or for storage, any carcass, meat, hides or horns of any deer, elk, antelope, bison or Rocky Mountain sheep.

"Provided, That nothing herein contained shall prohibit the shipment of any such of the said articles and in such quantities as may be expressly authorized and permitted by the laws of the State in and from which the shipment is made; or the transportation of any of the said articles through any of the said States from any place to any place without said States.

"Section 2. Every person and corporation guilty of violating this act shall upon conviction be fined in a sum not less than \$100 nor more than \$1,000 for each offense, or punished by imprisonment not less than one month nor more than one year, or by both such fine and imprisonment."

Mr. Bostwick's Views.

The reporter called upon Mr. H. M. Bostwick and asked his opinion of the bill. Mr. Bostwick said: "I approve the bill and think if it can be passed it will prove a great benefit; in fact, I believe that law breakers fear punishment in the United States courts more than in the State courts. If this law can be passed and the transportation companies will lend their aid and the Indian treaties can be modified the game in this State will steadily increase, as it has in Maine since the passage of the protective laws there.

"The railroads recently refused to receive a shipment of 20,000 lbs. of deer meat at Grand Junction which had been killed in Colorado, taken in wagons over to Price, Utah, where the Rio Grande Western Railroad refused to ship it, and which was afterward hauled to Grand Junction, where the other roads refused to receive it. The railroads can do more than the officers of the law, and if they will maintain this stand we will have little use for protective laws except to justify them in refusing to receive such shipments."

THE MASSACHUSETTS ASSOCIATION.

BOSTON, Jan. 17.—*Editor Forest and Stream*: Under the lead of President B. C. Clarke, the governing board of the Massachusetts Fish and Game Protective Association are getting into shape for the active work for which they were elected, and it will not be his or their fault if they do not make an excellent showing in the interest of fish and game protection the present year. The board held a largely attended meeting at the Copley Square Hotel last evening, at which the following committees were appointed. On publication, President Clarke, Secretary Kimball, Heber Bishop, Dr. J. W. Ball, Dr. W. G. Kendall; on enforcement of the fish laws, Wm. B. Smart, Rollin Jones, Chas. G. Gibson, Secretary Kimball; on enforcement of the game laws, Arthur W. Robinson, Chas. A. Allen, Loring Crocker, Secretary Kimball, Luther Little; on legislation, President Clarke, Secretary Kimball, John Fottler, Jr., Edward P. Brown, Dr. Heber Bishop, Dr. John T. Stetson, Wm. F. Ray, J. Russell Reed, Geo. W. Wiggin, Robert S. Gray, Loring Crocker; on finance, Charles Stewart, Sidney Chase, Edward T. Barker; on entertainments and meetings, President Clarke, Secretary Kimball, George W. Wiggin, Edward E. Small, Chas. A. Allen, Wm. B. Smart, Dr. Heber Bishop. It is understood that among the subjects of legislation to be brought before the Legislature now in session is that of shortening the season on black duck, which is now from Sept. 1 to April 15, and while there is an honest difference of opinion as to dates, that the question is one of importance no one doubts. It is well known that in the southern part of this State, on Cape Cod and in Plymouth county, a good many ducks are to be found in the winter, and wherever there is open water on the coast or inland they are to be found, and it is needless to say that they are slaughtered right and left. In the months of January and February it is often difficult for the birds to get proper feed, and they are not fit to eat, much less to be killed; and it is the opinion of all concerned that the season ought to be shortened to a considerable extent. But there will be opposition, no doubt, as there always is, and it will come from those who don't want any close time at all, but want to shoot anything that flies at any and all times.

WILLIAM B. SMART.

ADIRONDACK DEER.

Editor Forest and Stream:

In your last week's issue appeared two articles from your able correspondents, Messrs. Oliver and Spears, who take the most common sense view of the situation, and solve at once the problem which is now being agitated in reference to the better protection of our Adirondack deer. Living in the Adirondacks all the year, I can vouch for the truth of the statements of your correspondents. From personal knowledge of the facts I would say that the proportion killed by hounding and floating where one is killed by all other methods combined.

The simplest remedy must be apparent to all, namely, prohibit hounding and floating. There can be no effectual protection of deer so long as hunting them with dogs is permitted. To shorten the season for hounding might prevent a few deer being killed by sportsmen who go into the woods and employ guides, and would not kill more than the legal number of deer—but it would make but little difference with the horde of people who live all around the borders of the woods. Call them pot-hunters, meat-hunters or sportsmen—it does not matter; but this is the class that is decimating the deer. They occupy every lake, pond and stream all around the woods, employ no guides and camp on the ground. If only one week of hounding was allowed all of this class of hunters would go to the woods during that week, and the woods would be so full of hunters and dogs that wherever a deer might run when fleeing from the hound it would be killed. One week would suffice to clean out all the deer in a given locality.

Some have suggested that to stop killing deer in the water would be a great protection. This would strike only honest sportsmen who employ guides, but it would afford no protection from the other class, for where are the game protectors to watch the hundreds of lakes and ponds? These hunters will not report each other. It would be an easy matter for the hunter to place himself where the deer will come out of the water and shoot the deer when it gets well on the bank. Besides, there is such a multitude of hunters that they kill hundreds of deer on the runways in the woods. I have known about 100 deer killed in one season along the road leading from Number Four to the State dam. This road runs parallel with the Beaver River. About 100 men and boys would string along this road within shooting distance of each other, then put out their dogs on the opposite side of the road. A deer when pursued by dogs almost invariably runs toward the river and is killed when crossing the road. I am credibly informed that one hunter took out from along this road thirty-five deer in one season.

It is reported that during the past three or four years dead deer have been found in the woods during the latter part of the winter. Guides and hotel men that want hounding continued know the cause. But they endeavor to impose upon the ignorant by reporting the plausible story that deer are getting so plenty that they are starving to death. A moment's reflection will convince any man of common intelligence that this cannot be so. Away back in the fifties I traveled all through the Adirondacks during February and March on snowshoes. For the purpose of trapping marten and other furs. I have passed through deer yards where I have no doubt there were a thousand deer on two or three miles square. And in all my travels in the woods during fifty years I have never found a dead deer whose death could not be traced to other causes than starvation until the past four or five years, since hounding became general. It must be borne in mind too that at that time there were probably at least twenty deer in the Adirondacks where there is one now. Yet they found plenty of food to pull through the winter. There is as much food for deer as there ever was and only a comparatively few deer to be supported.

The cause of deer dying of late is brought about by being run by dogs until overheated and then plunging into the cold water. What few deer escape the hunter are likely to be so crippled that they can't get about in the deep snows and then starve when plenty of food is all around them. I have seen deer on the bank of the North River in Essex county so crippled by being run into the cold water that they crawled out on the bank, laid down and died there, being unable to get on their legs again. I have come across deer while still hunting in the woods so crippled in the same way that they were hardly able to keep out of the way. Hounding is responsible for all the dead deer that have been found in the woods of late years.

Again I assert that there will be no effectual deer protection so long as even the shortest time is allowed for hounding. Deer dogs are rapidly increasing and are educated by being taken to the woods on the deep snow and allowed to kill a deer. The preservation of our Adirondack deer is made plain by your correspondent. Simply abolish hounding—the most inhuman, the most unsportsmanlike, the most destructive method of killing deer.

MUSSET.

NUMBER FOUR, JAN. 13.

Editor Forest and Stream:

I have recently received two letters, brimful of the right sort of game preservation ideas, from a valued friend and correspondent of FOREST AND STREAM who has spent a lifetime in the Adirondacks, but I regret that I have not his permission to have them published, or I would send them to you.

I, however, take the liberty of quoting from them, and as they are the opinions of one of such a long experience and a most careful observer they have—with me at least—a sort of *ex cathedra* weight. He says, "From my long experience I am satisfied that there can be no real deer protection so long as hounding is permitted, no matter if for only a week each year." This gentleman's experience tells him that as soon as the hounding season opens, men, women, children and dogs living on the outskirts of the wilderness flock to the woods for meat after the manner of our Western Indians on their annual meat hunts; and, like Mr. Lo, these people are not sportsmen, employ no guides, stop at no regular camps or hotels, but camp on the trail and watch every lake, pond, stream and runway, and the chances for escape of any deer started by dogs belonging to them or anyone else are slim indeed. Again he says, "To become a successful deer butcher in the hounding season no experience is required; a dog, a boat, an old shotgun, even an axe or a club will answer, and the women and children can accomplish as much in a killing of this sort as men." I am satisfied that these statements are correct and that in nine cases out of ten

where deer are started and the party owning the dogs fail to kill, the chances are that one of the other fellows got him.

In one of his letters the gentleman took me to task mildly for having in a recent article sent to FOREST AND STREAM suggested the cutting of the hounding season one-half instead of wiping it out altogether, and in this connection permit me to say that an amendment to prohibit hounding will always find in me an earnest advocate, and my only reason for suggesting a half-way measure was the idea that nothing better could be had at this session of the Legislature. The interest in the matter shown by Gov. Morton in his recent message may tend to bring about better results than I had anticipated, and the anti-hounding measure introduced by Senator Malby may become a part of our game law. I fear, however, that absolute prohibition of hounding and jacking will not be brought about until the scarcity of deer in the Adirondacks makes the necessity for action apparent to even the average legislator. This discouraging view of the case will not, however, deter me from doing everything in my power in the interests of the Malby bill, and trust that the effort in that direction will be general among the friends of game preservation and that we may succeed.

M. SCHENCK.

TROY, N. Y., Jan. 18.

MARYLAND ASSOCIATION.

BALTIMORE, Md., Jan. 17.—Many interesting things were done at the annual meeting of the Maryland Game and Fish Protective Association last night at the Carrollton Hotel. The meeting was largely attended by representative men from every section of the State. The rapid destruction of the game and fish of the State, was discussed from the standpoint of experience and study, and laws were recommended as absolutely necessary for the continuance of Maryland's supply of game and fish. If the solons at Annapolis give a sympathetic ear to the delegations which the Association will send to offer these laws, there will be a closed season for 1896 for partridges, rabbits and woodcock. If this law is passed and strictly enforced, as the Association means to see it enforced, the Baltimore market for partridges, rabbits and woodcock will be sealed during the balance of the year. Anyone possessing these things for the proscribed term will suffer the penalty, so that that sort of game may not be sent to this market from other States.

In addition to this protection to the game, the bill provides for the appointment of a game warden by the Governor. This warden is to receive \$1,000 a year and a share of the fines imposed on those caught violating the game laws. Game wardens will be appointed throughout the counties, and commissioned by the Governor, with the same power of arrest on sight as possessed by constables.

The bill that is to protect bass, pike, pickerel and other game fish of the Potomac was also unanimously favored. This law was recently fully explained in *The American*.

A law was proposed to prevent the pollution of streams of the State.

Committees were appointed to frame laws for the betterment of the ducking interests of the Susquehanna, and for the staying of the destruction of food fishes on the Chesapeake, and for the propagation of insectivorous and song birds. Officers for the ensuing year were elected, and a number of new members elected.

The meeting was called to order by the president, Judge D. G. Wright. There were present a number of gentlemen from various sections of the State, who represented branches of the organization in those counties.

After the meeting had been called to order, the first business was the reading of the report of the law committee, which had been instructed to frame certain laws to be asked of the Legislature. Mr. George Dobbin Penningman read these bills, and explained them fully. The first read was for the appointment by the Governor of the game warden, and a system for this warden's recompense and of the recompense of the deputy wardens in various sections of the State. This law contemplates that the only expense to the State for the protection of its game and fish and for the enforcement of the game laws will be the salary of \$1,000 to the game warden, the compensation to the other wardens being gotten from their share as informers of the fines, as already provided for violations of the game laws. If this bill becomes a law, the Governor will make the appointment immediately, the term of the warden's office to be until April, 1898, when appointments of the warden are to take place every subsequent two years. The warden's province in game will be deer, wild turkeys, pinnated grouse, ruffed grouse, Mongolian and English pheasants, wild geese and all species of wildfowl. It shall be the duty of this warden to prosecute any person or corporation having in possession any game or fish contrary to law. This will operate to prevent the restaurants and dealers from handling game out of season, and it is calculated to stop the abuses of the pot-hunters by shutting off the market. The laws already provide for the payment out of the fines for information of violations of the game laws. When the game warden wants deputy wardens, he is to arrange with them for payment out of their share of the fines, and then to ask the Governor for their appointment. These deputy game wardens will be fully commissioned to make arrests, and they will wear badges like policemen.

Col. McCarthy thought that the members of the Association should be appointed to these positions, but it was pointed out that the Governor would give such powers to so many people. Mr. Wm. H. Armstrong thought that it would be a multiplication of offices to make a game warden, and that the ends could be accomplished by the Association. Ex-Mayor Latrobe thought that the game and fish interests of Maryland were surely worth \$1,000 a year. He and Judge Wright thought people had not reached that state of moral rectitude when the mere passage of a law meant its enforcement, and Mr. Penningman pointed out that the people were not crying against useful offices, but mere sinecures. The motion to present the bill was unanimously passed.

The matter of the closed season brought out some discussion. Mr. Miller, of Montgomery, thought rabbits were already plentiful in his neighborhood, and that they did much damage to young trees. Others thought that men armed with dog and gun for rabbits would very likely blaze away at any birds that came their way. Dr. Massamore said he believed more in feeding the birds during severe weather than in closing the season. The motion for a closed year was unanimously carried.

As an addenda to the game warden bill, one will be offered empowering the various game protection clubs of the State to employ game detectives in the same manner as corporations employ policemen. By this method the clubs will ask the Governor for the commission of the man or men, and then pay them.

The matter of the destruction of game fish in the tributaries of the Potomac, of good fish in the Chesapeake, and ducks on the Susquehanna, was discussed in general by nearly all present. It was decided to appoint a committee to frame laws for these matters, which laws were to represent the sense of the Association.

Accordingly the following committees were appointed: On ducking and fishing on the Chesapeake and its tributaries, ex-Mayor Latrobe, M. H. Ould, Joseph Rosenfeld, J. Olney Norris, H. C. Coburn, R. H. Gilbert, Walter T. Jackson. This committee will meet to-day in Gen. Latrobe's office. On game fishes in the tributaries of the Potomac and the pollution of the streams of the State, Wm. H. Armstrong, H. H. Miller, Dr. W. Harlan, F. F. McComas and A. C. Strite.

Officers elected were: President, Judge D. Giraud Wright; Vice-President, Hon. Charles E. Coffin; Secretary-Treasurer, Dr. George W. Massamore; Counsel, W. H. DeCourcy Wright; Executive Committee, George Dobbin Penningman, James Scott, John Henry Keene, Jr., L. M. Levering, E. C. Eichelberger, William H. Fisher, Col. William H. Love, M. A. Ould, M. Gillet Gill, Col. W. F. Mason McCarty, H. A. Penrose, Dr. George W. Massamore, F. C. Kirkwood, F. C. Latrobe, A. T. Dressel, Robert Gilbert.—*Baltimore American*.

ON BACK CREEK.

I took the night train leaving the Grand Central Depot, New York, at 7:30 P. M. and reached Alexandria Bay the next morning, proceeding by rowboat to St. John's Island, my father's summer home, where I meant to fit out as our old Rideau party, whose voyages of discovery you have more than once chronicled, had been wont to do. None of them could go with me this time, so I went alone, with William Patterson for guide.

Bill and I took a wagon and drove out into the wilderness south and east of Alexandria Bay about fifteen miles with the intention of ascending gradually some of the many streams until we got well into the Adirondack Mountains. We pitched our camp on Back Creek, near where it joins Murder Creek, and spent our days hunting for ducks, porcupines and partridges, and our nights dreaming of them. We found game very shy, but all other creatures very bold. Frogs climbed up the sides of our tent in thousands every night and sat on the ridge pole singing "We won't go home until morning;" snakes intruded on us in the most unseemly manner, and as to the foxes, they almost stole our shoes off our feet.

Three days after we were settled in camp we found a perfect beauty of a little raccoon fast in a trap we had set for an impertinent fox, and on the same morning shot a porcupine, the first I had ever seen. When I went to pick him up he filled my skin as full as his own with his tooth-pick quills. We lugged him home to camp and then went out after partridges, hoping to stumble over some in the thick brush on the hillsides. We didn't, but we stumbled over a 20ft. bluff instead. Bill received all the damages, filling his left breast and shoulder with ugly little cuts and bruises. Consequently I sent him back to civilization to carry home the porcupine and raccoon, to be stuffed and mounted and himself patched up. I remained in camp alone for ten days. It was a cheerful experience and calculated exactly to drive away the blues.

Back Creek is the outlet of Butterfield Lake, near Redwood, N. Y., and runs nearly twenty miles parallel or nearly so to the St. Lawrence into Black Lake, which is twenty miles long, and whose outlet empties into the Asswegatchie River, and that in turn into the St. Lawrence below, at or near Ogdensburg. Now you can find the spot.

The creek itself is not over 50ft. wide in all its twenty miles of length, and is bordered on each side by a bottomless swamp which is utterly impassable. At times rocky hills approach the water, seldom getting nearer to it than a couple of hundred yards, with the swamp intervening. Trees grow along the banks in great profusion, and in many places arch completely across it. An artist would find it beautiful. The animals, birds and fishes are numerous, but very wary, although if you are not armed they are bold enough to sit in your lap. Frogs sit in rows on every log, of which there are millions, and knocking off their heads with a small rifle is a simple way of earning a savory dinner. There are, besides, cranes and herons and ducks, raccoons, foxes, a few wildcats, porcupines and muskrats.

The day after Patterson left I was walking unconcernedly in the woods when an old tree about 120ft. long fell across my path. I took the hint and went back to the tent. Another day I wished to get ashore, and stepped out of my punt into the mud, going up to my armpits and losing my revolver, hunting knife and temper at the same time. Our camp site being chosen with characteristic skill, we were half a mile from the nearest spring of drinkable water, and one evening when I upset the pail by accident I went forth in the dusk and filled it. Coming home, I attracted the friendly but entirely undesired interest of a large, gaunt animal, who escorted me to camp, evidently fearing that I should get lost. As I had no gun with me at the time, and being naturally bashful with strangers, I did some rather quick traveling through the dark woods, spilling on the way every drop of water in the pail. But I had lost my appetite for water. That was why I did not go back for more. I was not frightened. No indeed.

The next night all the rain in the region of Jefferson county fell on the two hills on each side of my tent, slid down their sides, and uniting just above my canvas home flowed through it. Being very clean already, I felt that it was unnecessary. In addition a thunderstorm raged and the lightning was incessant, enabling me to see the wreck that the deluge was making, while my anathemas were accompanied by the creakings of a dead giant pine tree which from its position could only fall one way—across my tent—if it fell at all.

The last night I stayed in that villainous spot I found three men, one of them with an exceptionally evil face, spying on me through the bushes. They were in a canoe in the creek, and their only response to my repeated hails was to drop their paddles into the water and go back the

way they came. Being alone, I dared not go to sleep, but got into my punt and shoved it out of sight—a tremendous labor—in the reeds on the opposite side of the creek, where I remained until 3 o'clock in the morning, intending to take them in the rear if they returned during the night to loot my tent, as I believed from their actions and the place's name and reputation they would do. I was armed with a Winchester shotgun, and even in the dark felt confident of killing all three from the position I occupied, in case of matters coming to an exchange of shots. They did not come, but the next day I went home anyway, thinking that the presence of such neighbors was too rich for my blood. Besides, I was tired to death of my own cooking. Being in camp alone, I had to cut my own fire-wood, hunt for my food, and having shot, trapped or caught it, cook it myself. All these were labors, but the real hard trial was the eating of it. Having no alternative but to eat my own cooking or starve, I ate, but I felt all the time like a newly wed man whose wife has been at a cooking school.

I enjoyed my experience greatly despite getting only three ducks. I could have killed many, but as I had no dog, without which it was impossible to secure one out of ten on account of the marsh, I let them go by in flocks unmolested. The creek would delight the eye of an artist. If any of your correspondents feel like taking advantage of the first-rate facilities for summer and autumn outings in that section of the country, the Redwood Lakes and Back Creek, the Rideau Lakes on the Canada side of the St. Lawrence, or the twenty miles of the St. Lawrence itself in the neighborhood of Clayton and Alexandria Bay, I will be glad to give him any information in my power about it. Fifteen very happy summers passed in that section and several autumn hunting trips have contributed to give me considerable knowledge of its secrets.

FRANK LAURENCE DONOHUE.

DON'T SHOOT!

Editor Forest and Stream:

It is decidedly amusing to note the manifold remedies suggested by FOREST AND STREAM correspondents to augment the rapidly diminishing game supply. In all these suggestions laid down I read between the lines as plainly as ever Daniel did the handwriting on the wall, "Preserve the game, so I can shoot it."

I put myself in the list when I say that probably the most selfish class of people on earth are the sportsmen. When one of us finds a good woodcock cover, grouse thicket or deer lick, do we at once advertise the fact? When we meet a friend with his gun over his shoulder, wearing a broad smile and a hunting coat with plethoric pockets, do we ask him, "Where did you get 'em?" with any idea that he will answer truthfully? Certainly not; for we know our selfish question is only worthy of a selfish response.

One man wants the game laws changed so that the open season will come at the time of his vacation; another cries, "abolish hounding;" a dozen others, backed by our beloved journal, shout, "stop the sale of game." A few wealthy ones band together and by virtue of a large outlay of money block out a tract from the virgin forest for their very own, police it and protect it for their selfish purpose. States enact non-resident laws engineered by a few selfish, influential sportsmen, prohibiting the citizens of other States from hunting within their borders without paying an exorbitant fee. Non-export laws prevent the shipping of game into other States; and underlying the whole thing crops out that petty selfishness that makes a man blush for his kind.

Listen to the voice of Mr. Lakey, of Kalamazoo: "How can we best check and in a great degree stop this hellish work is the main object of our National Association." And he asks "Who is it that makes up the powerful lobbies in our State legislative halls? Is it the lovers of field and stream sports, or is it composed of those whose only object is self?" I don't know much about State legislatures, but it really looks as though those "whose only object is self" were making a big effort to get a crowd down to Chicago Feb. 12 and try to fix the thing to suit themselves, in spite of "the powerful lobbies in our State legislative halls."

The "information blank" of the "National Game, Bird and Fish Protective Association" is a rare addition to the comic literature of the day. In reading it over I am reminded of the life insurance agent's question to Artemus Ward, "Did you ever commit suicide, and if so, how did it affect you?" For general irrelevance they take the cake. Still there are two of them I will answer according to my lights. "Who are the true sportsmen? What is their object and chief delight?" They are those who have fired a gun at least three times, and their object and chief delight consists in getting all the game they can and concealing the source of supplies from their dearest friends, although they have been known to give away some of the game they could not use.

"Who are the pot and market-hunters? What is their chief object and delight?" They are exactly the same as the sportsmen, only poorer, and their chief object and delight consists in selling their game instead of giving it away.

Game legislation, like tariff legislation, is based on the selfish ends of the party in power. Sportsmen should have nothing to do with it. No two of them think alike. What A. considers needful for his section B. declares would not do at all for his. The growing scarcity of game, the increase in sportsmen and improvement in sporting weapons have developed an alarming state of selfishness in lovers of field sports that is rapidly eliminating all semblance of the old-time camaraderie that existed in those good old days before a network of laws made shooting possible only to the few and made poachers out of honest men.

But there is one way that game can be made to increase, and only one. Stopping the sale won't do it. Legislation won't do it. National conventions and "Information Blanks" won't do it. Tinkering with the game laws won't do it. But voluntarily to stop shooting it will. Now I don't advance this proposition as a feasible one, but it is a fact nevertheless, and just as feasible and much more sensible than nine-tenths of the suggestions printed in these pages. How many of the readers of FOREST AND STREAM will recall with pleasure the series of articles published years ago under the heading "Hunting Without a Gun." What delightful camera trips are detailed in these columns, where the only report that breaks the forest quiet is the click of the shutter. Oh, it is not

all of shooting to shoot. There was a time, not so many generations ago, when the shooting of game was a necessity, wild game was the main article of food in the settler's cabin, and even to-day in some sections of our land the same conditions prevail, but to ninety-nine out of every hundred readers of this paper the killing of game is only a dearly bought luxury. Then why not give the game a chance? Don't give up the woods, the camp, the tramp, nothing of the sort. Let so-called sportsmen make what laws they choose, they all will learn that it will do no good. Take your vacation without the gun, you will never miss it, and I am very sure in time you will take far greater delight in seeing game increase than you ever did in trying to bring it to bag.

H. W. D. L.

NATIONAL ASSOCIATION NOTIONS.

DES MOINES, Ia., Jan. 17.—*Editor Forest and Stream:* I have noticed the National Game, Bird and Fish Protective Association information blank printed in your last week's issue and beg to submit the following outline, which is of course subject to much elaboration:

1. The National Association should consist of every shooter and fisherman in America—I would call it the National Sportsmen's Association of America. Each member should be subject to fixed yearly dues, and there should be a national organ devoted to the interests of the Association, published monthly, and be furnished each member free of cost, a part of his dues being reserved for that purpose.

2. There should be national officers elected each year or once in two years, their duties to be provided for in the constitution. There should also be State officers, and each election could be the promoter of a grand meeting and tournament and general fellowship. The State officers should endeavor to have necessary laws passed to meet requirements of their State. There should be local consuls in every town, appointed by the State officers, who should look to the prosecutions. Each member of the Association should consider himself a special committee to see that the game and fish laws of his State were not violated, and should file information with his local consul. Local consuls so far as possible should be attorneys and should receive compensation from their State Association funds for each conviction only. Where the local consul is not an attorney the county attorney should conduct prosecutions and receive the same compensation. Fines should go either all to the State for maintenance of State wardens and other expenses, or part to the State and part to the informant.

3. I believe the above would be in a sense national protection, as members of the Association would endeavor to have only such men in Congress as were in sympathy with their interests, and their vote could be made effective through the official organ.

4. A true sportsman shoots no game bird or animal with a shotgun that is not on the wing or run. He never chases rabbits into a sack with ferrets. He never nets or snares any game bird, animal or fish, nor spears a fish except perhaps those which are known never to take the hook. He kills only a reasonable quantity of game or fish and can be contented with total failure occasionally. His object and chief delight are in owning a fine outfit and in using it lawfully and skillfully. He loves the sport for the recreation and pleasure it gives him, not the profit, for every bird, fish or animal that he kills costs him many times its market value. The term true sportsman is synonymous with true gentleman, and the man who takes advantage of a wild creature is not to be trusted implicitly. Laws of the National Association should prohibit members killing game and fish by any of the above methods.

5. The pot and market-hunter is the opposite of the true sportsman. His object is to kill two birds with one stone, and the whole flock if he can. His chief delight is when he does it.

6. A uniform license law does not seem practical on the ground of being too easily evaded. If a sportsman belongs to the National Association his dues will be his license.

7. I do not see that spring shooting is any more harmful than fall shooting. If a bird is killed in the fall he can have no family next spring, which is the same as if killed in the spring. There may be exceptions in the case of birds which do not re-mate when once separated in the spring, if there are any such. To offset this, it should be considered that birds in the fall are young and more easily killed. In the spring they are veterans. Let us shoot a little at both seasons; we would rather kill only one-half as many each time than be deprived of going. Let us at all times hunt from love of the sport, not to see how much game we can slaughter.

8. It does not seem practical to have State preserves in all States. Let all State laws be as nearly uniform as consistent with the conditions existing in each State. I here beg to say a word about State license laws. Because we have no forests or natural habitat in Iowa, is it right that we should be compelled to pay a license to hunt deer or other game in any State which has these conditions? Are the residents of any State to be credited with preserving their forests or their lakes for sporting purposes? Is it due to the efforts of these States that they still have their forests and their lakes? Where did they get them in the first place? Did they plant the forests and build the lakes? If so, then people who live where there are none have no right to use them without license. There is manifestly no sense of justice in these laws, and those who are responsible for them would do well to have them repealed and not identify themselves with pot-hunters and, to use a bicycle term, road hogs. I am equally opposed to laws which prevent game being taken out of a State. These should be modified to allow it when accompanied by the sportsman who killed it, oftentimes at a great expense of time and money.

9. I think with proper restrictions that fish should be allowed in the markets at all seasons.

The propagation of fish is much more easily accomplished than of game, and a body of water, though entirely depleted, can easily be restocked in a few years. Besides the absence of fish in the markets would be felt many times more than of game.

There is nothing to take the place of fish as food. There are domestic fowls and animals to take the place of wild game. I believe the greatest factor in the destruction of our game is the market, and am convinced that in closed seasons should be entirely prohibited.

I believe the first offense for violators should be a fine, the second a term in the penitentiary.

There is no use in mincing matters when dealing with willful violators. As to whether game should be allowed in the markets during open season is, perhaps, a matter for each State to regulate according to existing conditions, both as regards its own supply of game and that of adjoining States.

10 and 11. I think national and State wardens should be maintained and should co-operate with national and State officers of the National Association. Yours truly,

HAWKEYE.

CHICAGO, Jan. 17.—*Editor Forest and Stream:* In your paper of Jan. 11 there appeared a short vindictive editorial against the National Game, Bird and Fish Protective Association. This is the last of several unpleasant things your paper has said about this infant organization. When it was only a few days old you began making faces at it. Though precocious, it has manifested a very amiable disposition and has not in any way resented or noticed your intended annoyances.

As one of the officers of this organization, I deem it my privilege and duty to address this communication to you. I am well convinced in my own mind that you know little of the aims and purposes of our National Association. If you did you would know that it is not in any way antagonistic to your personal interests nor to the cause of game protection; that we are not working for revenue or glory. You say that "it is a self-constituted organization." Well, it is a body containing more than 200 members who reside in different parts of the United States. We inquire if it is not evidently of as much importance as the self-constituted enemy and critic, who is one individual who speaks through the only sportsman's paper that has shown an unfriendly spirit toward us. We inquire respectfully and reverently that you please inform us from whom we should have had permission to organize. If from yourself you should have given notice long ago. However, I will explain how it came about that there was a national association created.

For some years past, as all know, there has been a strong sentiment frequently expressed through sportsmen's journals and elsewhere that there should be a national association to look after the game and fish interests of the whole country, to see if there could not be a greater interest aroused to have better laws passed in many of the States and a combined effort to have all the States work in harmony in having uniform laws and better methods of enforcement for the protection and increase of game. The past and present condition is this: Each State makes its own game laws regardless of what neighboring States do, often antagonistic to each other's interests. For instance, there is a wide difference in the dates for open and close season on game in all the Northern States, as well as in the Southern States. Again, many Western States forbid shipments of game out of the State and only allow it to be killed and sold at certain seasons. The game laws of several Eastern States allow its citizens to invite shipments from these Western States the year around. The effect of this is to encourage the Western pot-hunter and illicit game dealer to violate the laws, and is one reason why the game of the West is rapidly disappearing in the Eastern markets. Last winter was an illustration of how the business is carried on from another view of the case. Just before the close of the selling season of game in Illinois dealers in Chicago had a large quantity of game on hand which had accumulated and which could not be sold here—game which should have been alive to increase in its native domain. It had to be gotten out of here. The officers of the National Association had given notice that the law would be enforced against possession of game here after Feb. 6. What must be done? Why, send it down to New York city. (The amount of game sent, according to Mr. Barnett's statement last year before the game committee in the Illinois Legislature, was over \$40,000 worth.) There where our critic resides it may be sold at any time of the year right under his nose and the game dealers can listen with unconcerned com- placency to the sweet music of his weekly organ (the FOREST AND STREAM), "We are opposed to the sale of game." It will be only a few days until there will be another cleaning up and a scurrying time to get the game all out of this State down to where you sit scolding us fellows who have our coats off enforcing game laws. The success that you have had in having good laws in your own State makes you appear about as ludicrous as the boy who whistled against the wind thinking he would change its course.

Now, the thing which seems to have most aroused your enmity to us are eggs, eggs, Alaska eggs. Ever since last summer you have been excited about eggs. We are at a loss to understand that since no one has objected to your indulging in a continuous adulation of yourself in what you did in the egg business, that you should get so awfully fired up at the National Association. We are all ever so glad that you found out that nobody was robbing the wildfowls' nests away up in the Northwest, although your proof did seem to come almost entirely from persons who were supposed to be accessories to the crime. Nevertheless, you positively know that for years there have been rumors that the eggs of the wildfowl in the far North were being gathered by Indians and natives and sold or used. You also know that at our annual meeting last winter among many reports was one from W. A. Story, Portland, Ore., which stated that the Indians were gathering wildfowls' eggs in great quantities and shipping them. This was simply a reiteration of the old story. You know that shortly after this the Hon. J. J. Mitchell from Oregon presented a resolution in Congress to have this matter investigated, and every one felt that this was a most proper and highly commendable thing to be done under the circumstances. Since the events referred to have transpired the officers of the Association have been busy with other matters, but we discover that you have been determined to keep the subject before your readers, and now I entreat you in the name of the Association and for the sake of those who are associated with you to quit fumbling with these eggs; get them out of your sight and mind. You are on the verge of eggphobia. Further contact with them may make it necessary to purge yourself of something worse than "contempt."

Finally, Mr. Editor, I am sorry that you do not know more of the plans and good intentions of our N. G., B. & F. P. Association, and that you are not acquainted with some of the splendid men who belong to it. Some of us take your paper and often say nice things about you. I

was recently told that you were a splendid fellow and that I would like you if I got on the right side of you. Now do not try to tear us up by the roots, let us go on awhile and see if we do not amount to something.

MAURICE R. BORTREE,
President of the National Game, Bird and Fish Protective Association.

[We print Mr. Bortree's letter partly because he asks us to and partly because of the interesting revelation it gives of Mr. Bortree himself as president of the "National" Association. The chief officer of an institution which aspires to recognition as being national in its sympathies, scope and influence, must be possessed of certain qualities fitting him for the place. Among these are elevation of thought, breadth of horizon, personal dignity and an uplifting consciousness of the greatness of his cause. All of these qualities or any one of them would forbid his falling into such coarse and vulgar personality as marks certain passages of this letter. The fact that Mr. Bortree has written a letter of this character should be taken into careful account in making up our estimate of the spokesman of the association which he here assumes to represent.]

TROPHIES AND CAMP LIFE.

Editor Forest and Stream:

As I am a constant reader of FOREST AND STREAM of course I derive an immense amount of pleasure therefrom, and the accounts of hunting and fishing trips are for the most part thoroughly enjoyable, but occasionally I read of some exploit of arms which is enough to wring tears of blood from any thoughtful sportsman. I refer particularly to the recent account of the Western duck hunters and their slaughter of 4,102 ducks, and also the Long Island duck shooters' score of 264 ducks. These are not the only ones, as a perusal of FOREST AND STREAM for 1895 will show.

How in the face of everything that is just and fair and honorable a man or a party of men can commit such depredations on game, as well as against their fellow men, in this day and age, is a question I have seen propounded in this paper for years, and I have never yet seen it answered except in bitter denunciations of such transgressions against a written or an unwritten law. But I suppose until game is exterminated such men will be found, utterly regardless of other men's present or future sport and heedless of the damage they are committing upon their own. While there are always a few who will indulge in and defend such practices, I know and rejoice in the knowledge that the vast majority of the sportsmen of America are not of the class who uphold these wrongs.

But, to speak on a more pleasant subject, having read an unusually great number of reports from big game hunters who have visited Maine this past season, I am led to make a few remarks. I observe from a careful perusal of many of these interesting bits of reading that a great number of hunters seem to consider the trophy or head of deer or moose the prime object to be sought in a hunting trip. If Mr. A. shoots a moose with a spread of antlers of 54in., Mr. B., who hears of it, can hardly be satisfied until he has taken a better one. The mere fact of having shot a fine moose or deer counts for little. Now, while the desire for a nice head is all right in a way, and while I am only giving my opinion, and do not wish to criticize any who are actuated by the true love of the sport, still I think those who go to the woods simply for heads fail to put upon game its true value.

As it seems to me camp life in forest and on stream or lake where game and fish abound is the true essence. I do not mean to be understood as putting camp life alone ahead, but living in the grand free woods, shooting plenty of deer, moose or other game, making sumptuous fare from the meats and fish so taken, and finally staying just as long as you can; all this, I believe, is what gives to game its real and highest value. Of course if you are fortunate enough to secure good heads, they will be prized for the associations.

I have been with a party to the Maine woods in October for several successive seasons. We have each time got deer in abundance to use and some to take home to friends. To be sure the chance of getting good heads at that time of the year is small, but we believe that our game will afford us a higher degree of sport at that season than if we waited for snow and all made a try for a fine set of antlers. Some may not fancy the camp life and will use it only as a means to an end, and such sportsmen will of course choose the manner of hunting or object in hunting from which they derive the most enjoyment.

However, I am sure that anyone who as keenly enjoys as do I every phase of woods life and hunting could not be satisfied alone with the killing of a fine head of game.

L. A. J.

A QUERY.

In these days, when game is steadily growing scarcer, we are becoming a trifle "finicky" as to what constitutes true sportsmanship. There was a time when "dogging" deer and "shining" deer were considered perfectly legitimate acts—the ex-reverend "Adirondack" Murray approved of them, anyhow—but hyperfinical sportsmen have of late condemned such methods because they do not give the game a fair chance for their lives. It may also be said that they give the pot-hunter a better chance than the highly moral sportsman has. The latter knows when he has killed enough and quits; the former keeps on killing as long as there is anything to kill, and then brags about his big score.

There is one practice, however, which is common to all classes and distinctions of hunters, one that I have never seen questioned in these columns or elsewhere in print. Having in mind the torrent of ridicule and—I had almost said abuse—and scorn which was poured down upon the devoted head of poor Dr. Ellzey after his statement that the black bass are not addicted to saltatory performances in the air, I shall take very good care not to set myself up as a court of final appeal regarding this practice aforesaid, but will meekly ask a question and then proceed to compare it with a practice which is generally condemned as unsportsmanlike.

This is the question:

Is moose calling any better than deer "shining"?

I have been a party to moose calling in the long ago, and my recollection is that it was a mighty cold and

tedious piece of business. Also, that the only part which I took in it was to do the shooting after my guide had succeeded in calling a moose up to me.

The conditions necessary for successful moose calling are these:

1. A caller who can imitate the cry of the cow moose with some degree of faithfulness.
2. The presence of a bull moose within hearing of the call.
3. An inclination in the bull strong enough to overcome his natural caution and lead him to the supposed cow.
4. Sufficient skill in the use of the rifle to enable the hunter mortally to wound the bull when he comes in to the call.

Now, as there are very few moose hunters who have acquired the art of calling, the great majority must depend upon their guide or some other hunter to do it for them; consequently their part of the business is covered by the fourth condition only. True, it requires no mean skill to hit a moose in the evening twilight, by moonlight, or in the gray of the early dawn, but the animal usually comes up within short range and his bulk is so huge that the shooter has only to keep cool—he is pretty sure to be cool in body if not in mind—and the game is his.

Considering that the bull moose is not himself during the rutting season, that his judgment is warped and his caution largely destroyed by the raging passions within him, has the sportsman very much to be proud of when he has slain one which has been called up to him by another person?

The conditions necessary for successfully "shining" deer are these:

1. A party to paddle who can noiselessly handle a canoe or boat and who otherwise knows his business.
2. The presence of deer in or near the particular water on which the "shiners" are.
3. Sufficient curiosity on the part of the shinee to cause him to await the close approach of the shiners.
4. Skill enough on the part of the shooting partner of the firm of shiners to fatally wound the shinee, whose blazing eyes only, reflecting the light of the "jack," can be seen.

As in moose calling, the part played by the shooting partner is covered by the fourth condition, but he must be a more skillful marksman than the moose hunter to bring down his game with certainty.

The "shiner" has much the pleasanter time of the two, because his hunt takes place when the weather is still warm, and has he not as much reason to feel proud of his game as a moose caller? Has he not done just as much to insure success?

If there be a great similarity in these two methods of hunting, so far as the shooter is concerned, and if "shining" is unsportsmanlike, then what is moose calling? Is it all right?

F. A. MITCHELL.

MANISTEE, Mich., Jan. 15.

CALL DUCKS.

COLD SPRING HARBOR, N. Y.—*Editor Forest and Stream:* In your issue of Jan. 4 I ventured to explain what call ducks are, and it has brought me so many letters of inquiry that I wish to say: I have none of these birds, and do not know who has any for sale. Mink killed all mine. A change in my business has forced me to part with all my pets, and I have not a wood duck, teal, mandarin or pintail left. Should opportunity offer, I will again take up this fancy of domesticating our beautiful wildfowl and will import some call ducks, which are not wild, but so tame that they may be picked up from the ground, if kindly treated.

The letters that my note called out show what interest is taken in call ducks all over the land, for they came from Texas to British Columbia and from Montreal to California. I notice, however, that all wanted them for actual work, and some wanted to know about "anchoring" them. This might make them wild; but the female, if alone in a box, will call all day long from any place. Three years ago I sold a few pairs at the Poultry Show in Madison Square Garden to people who wanted them for pets, for, as I said, they are dwarf mallards, and valued like bantams in proportion to their smallness. None of these persons raised any young, or if they did they lost them, or they were all drakes.

One writer questions my statement that only female ducks make a loud quacking call and cites the mallard as one where the drake calls. This is contrary to my observations. A drake mallard has a call that on a still day may be heard 100ft. or more, but it is comparatively soft and not like the loud harsh "quack" of the female.

Who ever heard a pintail call? I have kept them for years and never heard the call but once. As the giraffe is an animal without a voice, and the pintail is a long-necked bird, I had come to consider them to be related somehow in the distant past before the process of evolution had gone so far as to develop hoofs from webbed feet. The voices of our wildfowl have received no attention in FOREST AND STREAM, and perhaps this may start some one to write of them. Did you ever hear a pintail, sprigtail, or whatever you call it, make a sound? FRED MATHER.

Calibers for Big Game.

Editor Forest and Stream:

Mr. A. H. in your issue of Jan. 11 appears to be in the same state that I am in, viz.: expecting to have a chance of a shot at big game at some future time, and I fully agree with all his views.

I have studied the subject from all points presented by the rich stores of information of FOREST AND STREAM and have come to this conclusion: I shall take a double-barreled shotgun, 12 cylinder bore, fitted with a Lyman shotgun rear sight, loaded with 3½ to 4drs. of good powder and a well fitting patched round ball of soft lead. This load will carry about 100yds. point blank, and I should like to see the animal that will stand the shock of such a missile, and will not bleed to death in a very short time from such a wound.

It would of course be necessary to experiment with such a combination at home before starting, so as to get the hang of the business and to know what the gun and the load will do. Besides such a gun gives one a chance for a shot at ducks or grouse with small shot if desired.

What say others to such verdant views of a

GREEN AMATEUR.

Game in Louisiana.

NEW ORLEANS, La., Dec. 28.—*Editor Forest and Stream:* This is the only week that finds me home since last February. It was a pleasure to receive FOREST AND STREAM and enjoy its readings during my few leisure moments on the road.

I have had the pleasure of several good days' sport fishing and hunting this summer and fall, never at any time making large bags, partly on account of not having the proper dogs, chiefly on account of bad shooting, on one occasion having one quail in nineteen shots.

Birds are plentiful, especially quail and snipe. Woodcock have arrived and some good bags are reported. One at Rayne, La., numbered fifty-one.

One of the best days on snipe which came to my knowledge resulted in a bag of eighty-four, killed by Mr. H. Hebert, of Jeanerette, La. He started at 8 A. M. and returned at 2 P. M. for dinner the same day.

Ducks in Acadia and Calcasieu parishes are numerous, and the professionals have already put in their appearance.

One day recently was one of the pleasantest of my life. We were shooting quail. The bag was small, though we found enough birds to have killed fifty. Our dog, Spot, was the champion of flushers. Our little friend Master Armand Leland kept up with the dog, while Mr. F. A. Cousin, Jr., and myself located the flushed coveys, then kicking up the birds singly while the dog was held back. We bagged fifteen quail and one cottontail. After our return to New Orleans, at the pretty home of Mr. Cousin, we enjoyed a dinner fit for kings, which was awaiting our neglected appetites. Mr. Cousin is one of New Iberia's leading trap shots, and he also can shoot quail. He possesses a good and lively disposition which alters not on or off the field. ANODRAC.

A Grouse-Hunting Incident.

FITCHBURG, Mass.—While ruffed grouse hunting with a friend a very singular thing happened. I was taking the edge of a cover, with my chum about a gunshot inside, and the dog covering the ground between us, when two birds flushed wild ahead of us and flew back through an apple orchard which joined this cover and sailed into the woods behind us. After working the woods through, I told my friend that we would go back and come up over the same ground, he going out in the orchard, and then if they tried that trick over again we would be enough for them. We went around and started in again, and had gone only a short distance when the dog made game and drew to a point. I walked in, and up got an old biddy and flew straight ahead. At the report of the hammerless down she dropped with that ever welcome thud. We had sent the dog to run down a winged bird that morning, and consequently he was a little fresh; so I put him to heel, and started leisurely along toward where I thought the bird fell. When I was nearly there, up jumped the bird right at my feet as lively as ever. Quick as a flash the gun spoke, and she was down again. "I wonder if she will stay down now!" I exclaimed to my friend, who was just over the wall in the orchard. As it was quite open here, I went on to pick up the bird, keeping the dog at heel. When I arrived at the place where the bird had fallen the second time, I called, "Herb, come here." What did we see? Not one bird, but two, lying there side by side, flat on their backs, toes up, dead as a hammer, and the span of my hand would touch them both. OMAR.

Mongolian Pheasants in Illinois.

MACOMB, Ill., Jan. 12.—*Editor Forest and Stream:* Mr. Simpson, of Alexis, Warren county, Ill., turned loose on his farm four miles west of Alexis seven pairs of Mongolian pheasants three years ago, and now there are large flocks of them, which can be seen gathered together any day a short distance from his farm. This looks as if this beautiful game bird has come to Illinois to stay when we take into consideration that Judge Denny only put eleven of these birds out in Linn county, Ore., twenty years ago, and now the State boasts of having millions there.

The Chuckor partridges that were turned loose in the spring have not been heard of since the 1st of September. They are somewhere in the country if they have not been killed. We knew of one being killed nine miles from where he was turned loose. He was among a man's domestic chickens and was taken for a prairie chicken.

W. O. BLAISDELL.

Camp-Fire Flickerings.

"That reminds me."

Pattern Good, but Poor Penetration.

ST. AUGUSTINE, Fla., Jan. 16.—Two of our darky mill hands had a quarrel about Christmas. One of them became so enraged he drew his pistol and shot the other one square in the forehead. The pistol was .38cal. The bullet, instead of entering the darky's skull, flattened out almost as flat as a penny, and was afterward cut out with a knife. The darky was laid up for a few days from the shock, but soon recovered and is now at work.

This may seem like a tough story to tell, but we have the bullet here in our office to vouch for it. E. H. R.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Mon. day and as much earlier as practicable.

A Stray Shinplaster
Comes to us once in a while for a copy of "Game Laws in Brief," but shinplasters nowadays are scarcer than Moose in New York; and 25 cents in postage stamps will do just as well.

Sea and River Fishing.

THE BIG TROUT OF BLOSSOM'S HOLE.

BOB was a long-legged boy, fond of books, angling and shooting. Or, perhaps, to put it more accurately, fond of books and passionately in love with his rod and gun. Who should know this better than the writer, who was, long years ago, Bob himself. It was as many years ago since that same Bob was a youth of 15 that the writer can scrape but a partial acquaintance with him. He seems to be a kind of pathetic, shadowy self, who enjoyed all the pleasures and but few of the cares of life. A boy whose only anxiety was lest he should be kept at home on his Saturday holidays in the glorious months of May and June, before the summer droughts had shrunk his beloved stream and the trout had deserted the shallow ripples to skulk in the shadowed depths of the deep pools.

July and August were abhorred months in the boy's calendar. Neither fishing nor shooting could be enjoyed, because the trout would not bite, and no well-brought-up boy would shoot anything in that season of the year. At that time the passenger pigeon was still fairly plentiful in that part of the country and gave some summer sport, but that was all.

The following event so often occurs to Bob's older self that he recalls it for the pleasure of other "brothers of the angle," even at the risk of having the story—if story it be—considered too juvenile. It may be somewhat mouldy, it having occurred forty years ago, but still the writer hopes it may not be a "chestnut."

It had gone out through all the surrounding country that there was an immense trout living in Blossom's Hole. None of your ordinary big trout such as are chronicled every season, but a Big trout, with a big B—one that was known by the boys as "an ol' sockdolager," or "an ol' whopper." One that caused the juvenile eyes to protrude from their sockets when caught a glimpse of, and that caused an angler's heart to jump up and lodge crossways in his throat when he came lazily wagging his way up for a nearer inspection of the gaudy cheat that danced so alluringly over the surface of his favorite feeding ground.

He was a trout of great dignity and deliberation, as became a fish of his age and size. He had been discovered in the pool soon after the ice went out, and had been lured with every device known to honest fishermen, but as the end of June approached he still remained untouched by steel. He was seemingly untroubled in the presence of man, and never ran back into the recesses of the pool unless threatened by too palpable demonstrations. His feeding ground, which he strictly policed and preserved for himself, was just at the foot of the riffle, where the turbulent rush of the water broke into and merged with the deeper waters of the pool, and where the boils and swirls came whirling to the surface of the calmer reaches. Here he could be seen, day after day, lying without apparent motion, about midway of the stream.

Among the shadows of the rippling waters, it was not given to every eye to detect him. But once seen it was impossible to see anything else in the wide pool. He filled the eye and captivated the heart.

The river, in which this monster of the trout family dwelt, was a little one as rivers go, but a lasting pellucid stream. It ran within wooded banks almost from source to termination. Its life was a turbulent one throughout its course. Running through a hilly country with steep and broken banks, unfit for the husbandman's use, excepting for pasture for stock, its waters were unsullied by the debris washed in from cultivated fields. It was an ideal stream for trout, and anglers made long pilgrimages to worship at its shrine. Bob loved it as he loved no other inanimate thing, and knew every pool, rapid and shallow in it for ten miles, better by far than he knew his arithmetic.

Blossom's Hole was the largest pool on that portion of the stream. The hills at this point receded from the stream in a semi-circle, leaving a beautiful little meadow, or intervale, on the south bank, some half a mile long. Just at the upper end of this opening in the hills the river came dancing down a long chute of broken limestone, and plunged with a headlong leap into the level of the little valley. Here it plowed out a deep pool, limited on the south side, against which it leaped in its spring fury by a strong bulwark of limestone. On the north side the head of the pool was banked by water-worn boulders growing gradually smaller as one went down stream, until it ended in a long sweep of silvery sand, covered with ripple marks and the prints of feet of various creatures. Here of old the moose, the caribou and the deer came to quench their thirst; but even as early as Bob's day these creatures had receded before the wave of incoming humanity, and at the time we write of anything larger than a coon's footprint was matter of serious talk in the neighborhood.

This pool received its name of Blossom's Hole in the earliest days of settlement, in the end of the last century. A pioneer settler of that name chose a home on the banks of the river, of which this little valley formed a portion. He came in one summer and cleared a part of the rich intervale and planted a crop. He garnered it into stout log buildings erected by his own hands, when autumn had ripened his corn and the frosts had withered his potato vines. When the frost king came and had locked the little stream fast in his tightening arms, and had blanketed the earth with its winter mantle, our sturdy settler started out for the settlements to claim a waiting bride and bring her to this rough but cosy home. He yoked up a pair of oxen that he had brought in with him, and with a load of corn upon an ox sled started through the woods for the double purpose of getting his corn ground at the distant mill and to bring back his flour, together with his bride and what "plenishing" she might chance to have. Those were not the times of journeying for pleasure. Those were *fin de siècle* days, but an entirely different kind of a *siècle* than the one we are enjoying.

Those were the days when one had to travel on horse-back or on ox sleds, along stumpy trails, cut through the primeval forest; and across corduroy bridges, where the way was too swampy to venture without these safeguards against sinking into the oozy depths, where only the bull-frog could safely go.

In these days of steam, electricity and bicycles, we look back with a shudder upon what we call such hardships! But those hardy pioneers asked no commiseration at any

one's hand. Their lives were healthy, happy and honest. Can we boast of as much?

But I have digressed from the main theme. At this rate Bob will be gray-haired before he catches that trout.

On starting out for his bride, Blossom crossed the river at this point, and the new ice being treacherous in the middle of the pool, dumped the whole outfit into the depths of the icy water.

He rescued everything after a gallant struggle, and the next day started again with a new load of corn.

This unpropitious start proved to be of no ill omen, as I knew him long years afterward as a bent and gray-haired man, finishing out the end of a well-spent life in a comfortable home.

But from that day this pool in the river was known as "Blossom's Hole."

In this particular summer that I write of, when Bob was 15 years old, this big trout was discovered. Whether Bob was rightfully entitled to this trout by virtue of first discovery I have no means of knowing, but he always believed he was. But others soon found him also, as the noise of his fame soon spread; and Bob would rather have lost one of his front teeth than to have given it away that such a monster trout dwelt in the whole river.

He wanted the glory of capturing that noble fish himself; and when the whole fishing fraternity knew the secret, what chance was there for him?

He fished for him early and late. He got up at 3 o'clock in the morning and fished till schooltime—and sometimes later! He resumed after school hours, and stayed with his job till the darkness settled down and he had to quit. His mother scolded and his father threatened, but the boy was bewitched and could not leave off.

He tried the dunghill hackle and all kinds and devices of flies that his slender pocket money would afford. Under his grandfather's direction—who fully entered into the spirit of the thing and was Bob's aider and abettor all through—he manufactured flies of all kinds, sorts and description. He created devices that, after they were completed, he could have safely worshipped untroubled by the decalogue, as they resembled nothing "in the heavens above, or on the earth beneath, or in the waters under the earth." He tried all kinds of worms he could dig out of the earth or find lurking under stones, the barks of rotten trees or in the wood itself. He tried minnows and the ventral and thoracic fins of other trout and suckers. All kinds of grasshoppers and flying things were in turn shown to that trout without avail. He and his grandfather even bred some "gentles" in a piece of liver, but with no better success. And then came the great time of anxiety in the boy's life. Whenever he went for another try he would find some one else after the same object, and would sit eating his heart out, fearing that they would succeed where he had failed.

At last one day he gave up hope, when he saw the greatest pot-fisherman of the whole country sitting trying to snare the fish with a wire loop. That was the time when Bob took a solemn vow never to snare a fish "because it was a low-down kind of way to catch 'em." "Unsportsmanlike" it would be called nowadays. But old king *Salmo salvelinus* was "onto his job," and paid no more attention to the snare—only to avoid it—than he did to all other devices. When he saw the tremendous loop approaching his nose or tail he would edge away with a gentle motion, and when it had passed by resume his old station. When the loop-wielder became too persistent he turned and darted into one of the caverns of the rock and was seen no more that day. In these days of dynamite such a fish would not have lived a day with such a man in his vicinity. But, thank God! dynamite was unknown in those days, and a fish with wits had a fair fighting chance.

Bob had procured a nice little reel, carrying 50yds. of line, and, with his grandfather's help, had woven enough line out of horsehair to fill it. This he attached to a home-made rod of good temper, and still hoped for victory.

He had a chum named Sandie, the son of a newly-arrived Scotchman, who had "guddled for trout" in Auld Scotia, and he tried his skill upon the fish. The boys first alarmed the trout and drove him into his rocky fastness, and then Sandie dived after him. Bob could see his gleaming white skin at the bottom of the pool, as he lay clutching the rocks with one hand as he sought to beguile the fish with the other. Suddenly the trout shot out in positive alarm and sought safety in the deepest part of the pool, where he disappeared under some huge boulders.

Sandie came blowing to the surface with his eyes protruding with excitement.

"Losh, mon!" said he, "but yon's a gran' troot. I gruppit him weel, but he wes that muckle that my han' wadna haud him, an' he just slippet through ma fingers as easy as ye wad say humph!"

And so another scheme came to naught; and Bob was glad of it. He wanted the honor of the capture himself.

It was approaching the end of June, and the maple leaves were losing their green and brittle tenderness and were getting leathery. The grass was ready for the mower's scythe, and the bobolink's song was losing some of its rollicking freshness. Wild strawberries were going out, and raspberries would soon be in. And worst of all, school would soon close, and summer heats would put an end to fishing. And still the great trout held undisputed sway in his little kingdom, but was dropping more and more into the shadow of the rocks.

And then came a big storm and summer freshet, and the boy's heart leaped, for he knew that this gave him one more chance.

On the last Saturday in June Bob and Sandie started for another try at his majesty. The storm had ceased, but light clouds were still sailing across the sky. A pleasant south wind was blowing and everything was so fresh and beautiful that the boys were intoxicated with the mere fact of existence—though they knew it not.

The water was subsiding fast, but was still murky from the effects of the storm. The boys could not see into the water and consequently the trout could not see out. Bob slipped his shoes and stockings off and softly approached the bank, bidding Sandie stand afar off to await the result. With a common brown hackle and green drake on his cast, he once more threw his line across the pool and let his flies drift down in a pretty curve over the home of the trout.

A breathless instant, and then came a swirl of the water, a heavy weight on the springing rod—and the fight was on! The boy's heart fairly leaped into his throat and

choked him. For one awful instant he thought he was going headforemost into the water, so dizzy was he, and then, with a yell to Sandie, he braced himself for the fight.

It is of no use trying to recall the incidents of that battle. The whole affair passed in a whirl of delirious excitement, and the only clear-cut fact remains that victory perched upon the banner of the boy.

After some moments of hard and desperate fighting by the fish, and the use of some skill and more luck on the part of the boy, the giant trout came gasping into shallow water, where he was "grupp'd" through the gills by Sandie, and borne in yelling triumph far up the bank to be gloated over.

The brown hackle and muddy water had finally deluded the king of the stream—the big trout of Blossom's Hole.

AREFAR.

CONNECTICUT FISHING INTERESTS.

HARTFORD, Conn.—*Editor Forest and Stream*: I think perhaps it may interest some of your readers to read of how the future of Connecticut's fish and game interests looks, and perhaps some may like to discuss plans for still further advancement. By the courtesy of the management of this paper I was permitted to have published an open letter, in which I called upon Connecticut sportsmen to rally and help in an effort to advance at least on a line with other States. They responded to that, or to others, I know not which, but I never expect to see a more determined support accorded any measure than was given to the bill for the reorganization of our Fish Commission. Mr. Collins and myself, though personally behind the measure, do not for a moment take but our individual share of the credit and success, and it is most gratifying to know that Connecticut sportsmen are a unit in this line of advancement now so splendidly begun under the guardianship of a most practical and energetic commission.

But our work is not done. We can advance further, and I want to see if we cannot rally against the market-shooter and fisher (at least so far as game fish are concerned). The future value of game and inland game fish cannot be measured by their market value. Their value is represented by what they create by being sought after, and therefore we should stop their passage through the open market and turn the productiveness of their existence directly into the more remote districts where they live. That is a method of distribution of wealth, although not great in one place, yet out of the many resorts there is much.

When we consider that the sportsman buys of the dealer in tackle, pays carfare to the railroad, pays for livery teams at the hotel, board, hire for guide, often a sum for privilege to enter private land and many other expenses which help distribute money in numerous channels, will any one say that the value of wild game and game fish is measured by the market price? Then if it is not, why not take at least game, which we cannot propagate artificially, out of the market and make it a permanent source of revenue, as above stated?

This may seem radical to the more conservative, but it is the only alternative if we save our game as a permanent source of wealth. No law of any kind concerning game or game fish should be tolerated if it does not permit the districts where the game and game fish are found to reap all the benefit possible.

Our State law regarding trout prevents July fishing, and I am fully convinced it is wrong, as more general good would come from having that month open season than any other, for that is a month of vacations, and if trout are not intended for laboring people to catch, then the State should stop propagating them. As regards low streams at that time we had lower streams in June of 1895 than July; it was a simple question of rain, and it is as likely to come in July as June. Let us start now on a crusade against the open market and ultimate extermination, and in favor of a broad and liberal distribution of benefits to be derived from the pursuit of game, together with its permanent preservation. CHAS. W. HALL.

A Fresh Mullet from the Sky.

OXFORD, Fla., Jan. 15.—Yesterday afternoon, while sitting on our front piazza enjoying the warm sunshine and deeply interested in reading *FOREST AND STREAM* about the "Lost Man," my attention was diverted from that very strange character by the swooping noise that is often made in this country by a buzzard from a very great height by closing his wings and pitching toward the earth at a great speed. I also have heard the same sound made by brant and geese.

Almost at the close of the swooping noise was a heavy, dull thud on the earth not exceeding 50ft. from where I sat, and on looking in that direction I saw a 1½lbs. mullet lying in the yard. I then bethought me of the screaming, noisy racket I had heard from the fighting birds, and on looking up saw the fish hawk and eagle half a mile away, both wending their way coastward. I then made a more careful survey of my supper, which as a supper for the eagle failed to connect. It was still wet with sea water, and only for the fall from so great an altitude would have been alive, as it was only slightly marked by claws and beak of the fish hawk. It certainly was a very fresh mullet for one living fifteen miles from the Gulf, and made a good breakfast for three of us in family.

J. P. M.

Michigan Bass Season.

ANN ARBOR, Mich., Jan. 18.—*Editor Forest and Stream*: Will you kindly inform me through the medium of your valuable paper whether the inclosed cutting from *Game Laws in Brief* giving the Michigan law on black bass can be construed to mean that there is a close time on that fish in this State?

HENEAGE GIBBES.

Trout, Landlocked Salmon, Grayling, Muskallonge, Bass.—Act of May 24, 1889.—Sec. 1. No person shall catch any speckled trout, landlocked salmon, grayling or California trout, from the 1st day of September in each year until the 1st day of May following thereafter; nor shall any person catch any muskallonge, or any black, strawberry, green or white bass, by any means whatever, except by hook and line, from any such lake, river or stream, from the 1st day of March in each year to the 1st day of July following thereafter.—*From the Game Laws in Brief*.

[The law makes a close time only for modes of fishing other than with hook and line, and permits hook and line fishing the year around.]

TROUT FISHING IN WISCONSIN.

ASHLAND, Wis.—*Editor Forest and Stream:* As I live on the shores of Lake Superior it is natural I should take an interest in the FOREST AND STREAM, as there is probably no better hunting and fishing territory so readily accessible as Ashland county and Bayfield county, Wis. I can catch a good string of trout any day in Hazard's Creek, a half mile from the end of the street car track. They are the wild brook trout in their native retreat, and not the liver-fed, sluggish fish called "trout" in cultivated ponds.

I was going to challenge anyone to show a like condition of affairs so near a city of 20,000 inhabitants, but on second thought I don't believe there is such a chance to catch trout in the United States. Sitting outside one day by the Knight Hotel here I told a couple of guests I could catch wild trout within a mile and a half of where we were then sitting, or half a mile from the end of the street car line. This nearly paralyzed them with astonishment, but I furnished the baskets and rods and took them out. We were gone from the house two hours and a half and returned with a large and beautiful mess of trout, on which we dined that evening. The boys spent the rest of the evening writing home (East) about their fishing trip.

In Lake Superior, all along the rocky shore on the other side of Chequamegon Bay, opposite Ashland, you can catch fine brook trout. Of course they come from the numerous trout streams emptying into the bay. But I have a boy who knows better than I do where the trout streams are. I think FOREST AND STREAM has inspired him considerably. We have taken this excellent magazine for a long time. This keeps up our interest in fishing and hunting, and, as Ben says, prepares him for some of my tall hunting stories. But a poor fishing or hunting trip discourages us, and we stop buying FOREST AND STREAM for a while. I have not seen a copy lately, as our last trip was not very successful. As Ben likes the paper, he endeavors to have me successful—well knowing that if I come back empty-handed I will denounce FOREST AND STREAM as a fraud. So, on our last trip across the bay, while I had "set" my line and was eating dinner off to the left with my back to the line, Ben made himself busy about it. When I returned to the pole I found Ben eating his lunch in the distance, and noticed my pole bending toward the water. I supposed I had a prize. Ben said I bent over and crawled up quickly, as though I had a two-pounder. I grabbed the pole and made ready for a long fight, but drawing up steadily I found a stone instead of a fish. I stopped taking FOREST AND STREAM then for three weeks, but I am on good terms with it now.

JOSEPH COVER.

Tri-County Association.

PORT HURON, Mich., Jan. 15.—A meeting of the Tri-County Fish and Game Protective League, comprising the counties of Wayne, Macomb and St. Clair, was held in Detroit last week. J. F. White represented the Port Huron fishermen. A letter was read from Chase S. Osborn, of Sault Ste. Marie, State game and fish warden, informing the league that Henry L. Avery, of Detroit, had been reappointed county game warden and deputy game warden for 1896. The announcement was received with satisfaction. Mr. Avery has been diligent and untiring in his duties, and the league is working hard to have his salary increased to \$600 per annum. A. R. Avery was elected vice-president of the league and H. N. Botsford a member of the executive committee. J. B. McGregor, A. R. Avery and H. N. Botsford were appointed to represent St. Clair county in all matters pertaining to the league. It was the unanimous opinion that the work of Special Deputy Avery has been especially valuable. Fish now have a chance to breed and grow, and hook and line fishing is fast getting back to its old-time form on the St. Clair flats.

The Kennel.

FIXTURES.

BENCH SHOWS.

Feb. 19 to 22.—Westminster Kennel Club's twentieth annual dog show, Madison Square Garden, New York. James Mortimer, Supt.
March 3 to 6.—City of the Straits Kennel Club. R. Humfrey Roberts, Sec'y, 6 Merrill Block, Detroit.
March 10 to 13.—Chicago.—Mascoutah Kennel Club's bench show John L. Lincoln, Sec'y.
March 17 to 20.—St. Louis Kennel Club's show, St. Louis. W. Hutchinson, Sec'y.
April 20 to 23.—New England Kennel Club's twelfth annual show. D. E. Loveland, Sec'y.
May 6 to 9.—Pacific Kennel Club's fifth annual show. H. W. Orear, Sec'y.

FIELD TRIALS.

Feb. 3.—West Point, Miss.—U. S. F. T. C. trials. W. B. Stafford, Sec'y.
Feb. 10.—West Point, Miss.—The Field Trial Champion Association's first trial. W. B. Stafford, Sec'y.
Sept. 2.—Morris, Man.—Manitoba Field Trials Club. John Wootton, Sec'y.
Oct. 28.—Greene county, Pa.—The Monongahela Valley Game and Fish Protective Association's second annual trials. S. B. Cummings Sec'y, Pittsburg.

CROPPING.

A. K. C. Powers.

It has been paraded with much affectation of earnestness that the A. K. C. has no right to meddle in the matter of cropping; that it had no right to take any action which would harm a member; though whether one member had a right to harm all the others was wisely left sleeping.

The second article of the A. K. C. constitution, aside from other pertinent legislation, in defining the object of the A. K. C., reads as follows: "The object of this Association shall be the protection of the mutual interest of its members. It shall admit such clubs to membership, or persons as associate members, as may be deemed desirable. It shall adopt and enforce such rules as shall tend to uniformity in the regulations governing bench shows and field trials, and to the proper conduct of persons interested in the exhibition, breeding or sale of dogs. Furthermore, it shall publish an official Stud Book and a Kennel Gazette."

It is plain to those who will read the constitution of the A. K. C. that it has jurisdiction in the matter of cropping. It would seem that a delegate should know the constitution of the A. K. C., and not be groping in the dark in representing his club. The argument of the absence of

jurisdiction has not been dignified by even an attempt to prove it. It is possible that some members take it as a pretext to avoid the issue and a record. No doubt but what if it is settled that the A. K. C. has jurisdiction, some other pretext—no matter how absurd—would be seized upon as a makeshift argument.

Of course, the A. K. C. should legislate for the benefit of its members. When a majority of the delegates vote to adopt or abolish certain things after careful deliberation, whose wishes should prevail: those of the majority or minority?

It is claimed that to abolish cropping would work a harm to the specialty clubs which have jurisdiction over it or which have adopted it. It has not been shown that any harm would be done. The claim is empty. It has not been shown that any club has adopted it. It has not been shown that any specialty club has jurisdiction over it. That is, it has not been shown aside from assumption and assertion.

But the issue on cropping is not a one-sided affair. The question is whether cropping is so obnoxious to the fifty odd clubs which make the A. K. C. membership that they will abolish it from their jurisdiction. The practice of cropping may do more harm to the forty-seven than it can possibly do good to the two or more specialty clubs, if good there be.

The fanciers of cropped ears can still enjoy their ideas of the beautiful regardless of the A. K. C. The latter can say that it considers the mutilation harmful or obnoxious, and will not permit cropped dogs to participate in its benefits. Section 655 of the Penal Code covers all the rest.

The question when broadened is not alone whether the abolishing of cropping would be harmful to a few specialty clubs, but whether it is not harmful to all the clubs in the A. K. C. membership. The mutilation is not a type. It is not a matter over which any specialty club can sustain a claim to jurisdiction. As individuals, nearly all the croppers admit it is not right, but as club members they claim it should not be abolished lest it harm some one's financial interests; yet in their official capacity they make speeches in support of it, disclaiming all cruelty, and thus they cannot believe their own speeches, since their convictions are otherwise than their speeches.

A few skirmish on the outskirts, making wry faces, referring to the ancients, yet steering quite clear of the issue and the moderns, and particularly steering wide of Sec. 655 of Title 16 of the Penal Code of the State of New York, and similar laws of all the other States.

The right inheres in every organized body, which has a legitimate existence, that it should protect itself from unfriendly forces from within and without it, which may or do threaten its peace, safety or integrity. The A. K. C. has that right quite as much as any other body, and exercises it. The fancy of the individual cannot be set up as against the public good. It would be most absurd to assume that an organization was to remain passive while forces affecting its peace, safety or integrity were in action. Nearly all public bodies which have been properly organized have specifically adopted rules against harmful agencies, the A. K. C. being no exception.

And in this matter, by the way, however much we all may differ on the matter of cropping, let us all rejoice at the proper juncture with those timorous, though discreet, individuals who are astride the fence accumulating a hoarse bellow, the which to discharge later when they fall off pleasantly on the safe side, the successful side, whether it be for or against.

Dr. Foote's Resolution.

The resolution which is to be presented at the next A. K. C. meeting, and which is to abolish all mutilations after a certain time, is faulty in its ironclad requirements. There are mutilations which are justifiable and there are others which are accidental. It is justifiable to cut off a dew claw, since it is more or less a constant source of trouble to the dog; is often sore, yet being pendulous and rudimentary, causes no serious pain in its removal or afterward. Rounding the ears of hounds can be defended on grounds of utility, as can also the docking of spaniels' tails. Till these matters are definitely settled, the resolution should be qualified to read "justifiable mutilations," then it would conform to the law and to the humanities.

Cropping and the Law.

The duty of considering cropping as being opposed to the law of the land is unpleasant, though necessary. It is regrettable that circumstances exist which make unavoidable such consideration of it. It is regrettable that any practices in the kennel world should in the eye of the law be in the same category with cock-fighting, dog-fighting and the host of other wanton cruelties which it covers. There is a humiliation in discussing fashion, cruelty and law all under the head of cropping, when the law condemns it in terms too plain to be misunderstood, and there are dog fanciers, on the other hand, who seek to ignore it or dispute it. No doubt but what the law is not generally known, nor its sweeping force understood.

Dog fanciers have been advocating the elevation of the dog to a higher place in public esteem. They have appealed to better classes of society and have sought for the canine world an atmosphere of greater refinement. Deserved success attended their efforts. The dog has grown more and more in public appreciation. He has been conceded an intelligence akin to that of man, and better than ever before the public knows that from time immemorial his friendship and fidelity have been proverbial. In the advancement of the dog in public favor individuals of the kennel world have many times been convicted of wrong-doing, but their acts were considered individual and were never countenanced by organized clubs. Were clubs to advocate violations of law what would the effect be upon the public mind, aside from all consideration of doing right for its own sake?

Bench shows have been great object lessons for public instruction. At them could be seen the dogs, their owners; in short, the kennel world. In the future the bench show has its mission as in the past. After the direct issue on mutilation and cruelty has been raised so publicly, and the law is found to be so stringently against it, can any club advocating mutilations hope to hold public favor? Will the esteem of a law-abiding public be with those whose law-abiding is in question?

To the end that the law and its bearings on the subject may be placed in their full light before the kennel world, FOREST AND STREAM recently sent a member of its staff to interview on this subject Mr. John P. Haines, the president of the American Society for the Prevention of Cruelty to Animals.

In this connection it will be necessary to show how much at variance is the law governing mutilation and cruelty with the law as expounded by Mr. Clifford Wood, delegate of the Great Dane Club, in his speech delivered at the recent A. K. C. meeting. It is but fair to mention that Mr. Wood's speech did not do him justice. As he disapproves of cropping it is probable that he had no faith in his own arguments against it. He seemed to presume more on a false estimate of the intelligence of his audience than upon sound argument, law or merit.

In regard to the A. S. P. C. A., Mr. Wood stated that, on consulting the Society's counsel, he had learned that the Society had secured no convictions for cropping. So ambiguous is this statement that one is left in doubt as to whether the Society had tried cases and lost them or had not tried, or what you please. He could not mention any cases, no, but he knew there had been cases. In short, it was all vague and general; glittering irrelevancies.

On this point Mr. Haines said that there was not the slightest doubt of the unlawfulness of cropping. The great trouble was in securing evidence. Cropping was done guardedly in secret, out of the public sight and the sight of those who would testify against it. There was not the slightest doubt about the meaning and efficiency of the law. A conviction was merely a matter of catching the offender and securing evidence. He was quite sure that convictions had been secured for mutilating dogs. The law in its general term, "unjustifiably mutilates" or "injures," covered definitely all mutilations and cruelties. To give the law vitality it was not necessary to enumerate all cruelties or mutilations specifically.

One very important point had been settled by repeated decisions; that is, that fashion does not justify mutilation. The plea that a mutilation is a fashion or a fancy is no good in law. This is a very important point in reference to cropping. Thus to plead that it is a fashion is no defense in law, and to plead that it is a preventive of canker has no support from law, veterinary practice or common sense.

Mr. Wood held that the English law, under which conviction and punishment were secured in England, was different from the law in this country. Here he is wrong again. The English law does not specifically mention cropping. The general terms of it are much like those of the American law. Before a conviction in England was made the same difficulty was encountered in obtaining convictions, that is, obtaining evidence. The efficacy and intent of the law were never in doubt.

Mr. Wood held that the English law had nothing to do with the American law. Wrong again. The English law and decisions in these matters are recognized as precedents in this country. But is our humane law, supported by the sentiment of society, any different from the English law? Are our standards of humanity different from the standards of a similar race of people? It has been said that the matter should rest till a conviction was made before cropping was abolished. A conviction has been made in England beyond all doubt, under a law similar to our own, by people who speak the same language as ourselves and whose interests in dog matters are similar and equal to and possibly greater than our own.

There is no merit in obedience which comes only from the strong hand of the law in action. Obedience then is compulsory. It is much better to graciously and voluntarily abolish the offensive practice. All the credit then would be with the dog fanciers themselves. Wait till the law compels obedience and the credit is not with the fanciers. A few who base their conclusions on the recent vote of the A. K. C. may think that the matter is definitely settled. It is far from settled. That vote was but a beginning. Those who are interested would do well to think of it deeply and wisely.

The A. K. C., instead of meddling in the matter of cropping unwarrantably, is endeavoring to help the specialty clubs and all the clubs to set themselves right before the world and the laws of the land. Advocacy which contemplates a violation of law is not a proper appeal for public countenance.

A Test Case Desirable.

If a test case were made it would undoubtedly settle the point definitely. If cropping is lawful and beneficent there is much to gain and nothing to lose in a test case.

Mr. Haines was asked what would be the probable outcome of an exhibition of cropping, a test case made before the officers of the Society. His answer was prompt and earnest. He said he would arrest the man at once. He said further that he would give \$50 reward for information and evidence of cropping that would lead to conviction—the direct evidence is all that is necessary to procure conviction.

Here now is an opportunity to act as well as talk. Take some cocaine and scissors and balsam and other delectable things which confer so much pleasure to the dog in having his ears cut off, then slice away, explain that it makes a type and prevents canker, then take the \$50 reward. The chances are a million to one that conviction and the penalties will follow; still they might not, for has not Mr. Wood said that the Society has secured no convictions.

No one will make a test case. No one dare make it. The affectation of belief in the law's incompetency is sham. The fact that dogs are cropped in secret goes to show a recognition of public disapproval, and the offensiveness, inhumanity and unlawfulness of the mutilation.

A Cure for Warts.

PROVIDENCE, R. I.—*Editor Forest and Stream:* Hamden (see his cure for warts in a recent issue of FOREST AND STREAM) is evidently one of those men to whom "one swallow constitutes a summer." But when he has puzzled his brain over the uncertainty of medicines he will have less faith in alum water. Remedies are usually given credit which have produced like results in similar cases after repeated applications only, and to use valuable space with guesses reminds me of a cure for warts given me when a boy by an old lady.

Her remedy was: Roast three chestnuts (and only three), bury them under a stone on the north side of a barn. I employed her remedy and kept my warts. Just here let me say if Hamden understood the physiological action of the drug he applied to the stumps of the amputated warts or growths, namely, nitrate of silver, he then would see why the vegetations were removed. The silver applied caused an extra flow of saliva, which became in

corporated with it, and bathing as it did the entire mucous surface the warts were cured. No fault to find with Hamden, but "every man to his own trade."

DR. W. H. HACKER.

445 WESTMINSTER STREET, Providence, R. I.

FOOT BEAGLES.

THE decadence of this old English breed and its decline in popular estimation is a matter of real regret to all sportsmen who venerate and love and jealously preserve those national breeds which have helped to make our English sport what it is. The desire for "some new thing," so characteristic of the present age, has attracted into the ranks of the "Basset hound fancy" many a young fellow, sound in legs and wind, to whom we should have looked as the natural supporter of our national breed; and a meretricious admiration has been inculcated for the foreign dog by the yard, with legs by the inch as crooked as art can make them, utterly opposed to an Englishman's idea of a hound in almost every particular. They are fashionable, and that is sufficient. It matters not that at every high bank or thick fence the entire pack await the panting master to lift them over or to take them round by an easier path to try and regain a scent left to cool until convenient to begin hunting again.

But the beagle has suffered also from the modern desire for pace; the old love of seeing these little hounds working out the scent for themselves perseveringly, musically, slowly, but very surely, over a bit of plow or on a bit of dry road, has been quite replaced by a frantic desire to "get on and kill," "keep up the average," and show to the field that the master "knows how to kill his hare." In consequence the size of the hounds has been increased, pace is bred for, and a modern pack "go off" in a manner which destroys all pleasure for foot-hunters, and renders necessary the presence of at least one horseman in the company; so the proceedings are voted "rather dull." It is true that, thanks to the hare, the pack will surely come again to those who know how to wait; but as most of the pretty pieces of work and exhibition of hound cleverness take place out of sight, there is not much to recommend the modern beagle pack. The fall is between two stools. A field on foot see little except perhaps the find and the finish; a mounted field seldom get a good gallop, and often receive scant welcome from the sorely tried farmer. If hounds were kept only for their legitimate business all this would be altered. In large open tracts of country, where little damage can be done, much sport will be provided by the speedy 17in. or 18in. harrier, and enjoyed by those whose means are too limited to allow of fox hunting, or whose increasing years warn them to take their pleasures more sedately. The true vocation, however, of the beagle is quite different from that of the harrier; none but those who have tried it know the amount of sport which can be given by a little pack rigidly kept under 12in. On a burning scent, the strongest and the best must do all he knows to keep with them, but soon the hare gets far ahead, her scent gets colder and very catchy; real hound work now begins, and nothing can be more fascinating than to watch a few couple of these clever miniature hounds working out for themselves a solution of the great problem. Seldom, indeed, should the master interfere with beagles; it rarely helps them much; they are self-opinionated little personages, entirely devoted to the scent, and so long as a particle is left, "a lift" is not a proceeding for which they are thankful; it often takes a considerable time to again get them on a line once their own plans have been upset by human interference. Besides, it should be remembered our object is not the same as in fox hunting; we are out for a good healthy run across country, young men and maidens, old men and children, to enjoy the pleasure of seeing beautiful little hounds hunting every yard of a run; watching what they will make of that bit of plow, how they will work that hedge row, race over the meadow, pick it up again in the lane; notice what a good voice that puppy will have, and how well that first season hound worked in the turnip field; observe how cute old Melody is hitting off the line on that main road just when we were giving it up in despair, and we are all there to see it, every bit of it; then before we get cold, a fresh burst of music, a touch of the horn, and we are off again. Very possibly we return without our hare, but we have had what we wanted, a good run, have got up a healthy glow, and have done much to dissipate many of the ills to which our flesh is heir. At very slight expense we have provided amusement for the young and old alike, without doing a bit of harm to our neighbors' crops, hedges or gates.

But supposing there are no hares? Still can we get real fun out of our miniature pack; only in this case our hounds must be reduced in size to still smaller dimensions, and we must try to obtain what used to be called the sleeve, pocket or toy beagle, which should never exceed 10in. By carefully netting a few rabbits, and turning them down quite uninjured in a field of roots or a hedge row far from their usual haunts, an afternoon's excellent sport will be obtained. Giving bunny twenty minutes' law to shake off any feeling of stiffness or fright and enable him to take stock of the new country, we bring up the toys. Let them find him, hunt him, kill him if they can, all by themselves. You are not there to kill the rabbit, but to see your toy hounds hunt him like a little pack of tigers with a burst of music which will often put to shame the local pack of foxhounds. However small our hounds, there is no danger of the field getting cold. Short sharp bursts, then a pretty bit of slow hunting, up jumps bunny again, down the hedgerow, through and out of sight, but lay forward for another burst, the little toys working like demons after the excitement of their "view." Many a corner you will have to cut if you wish to be always there, even with these hounds; but the rules of the game must be observed. See that your rabbit is perfectly uninjured before he is turned out. Give him a fair start, i. e., no shaking out of a bag in front of the hounds, make them find him. Do not cramp your rabbit up in a small box or dark bag for twenty-four hours before expecting him to run. Do not help your pack; bunny is sufficiently handicapped by the strangeness of his surroundings. Do not let your hounds exceed 10in. Then even rabbit hunting will give you and your friends many an hour's amusement and drive away many an ache and pain. In the sporting world what can exceed the beauty of a well-bred pack of these beautiful little toys busy at work? See them picking up the line over the grass field—sterns lashing with excitement, coats shining like satin, the brilliant

black, white and tans, the favorite blue mottle, the somber hare color, the lively tan and whites of various shades—all blending together in one harmonious whole. "Toys" they may be, but they seem terribly in earnest about the business on hand, and Mr. Cony must look very sharp if he means to run again another day, even although you should be able, if the necessity arises, to carry home in the great coat pocket an average specimen from your pack.

There is yet another use we can make of our miniature hounds. We all know the pleasure boys—and sometimes pretty old boys too—find in a paper chase. It seems natural for us to hunt something, if only our fellow creatures, laboriously marking out their steps with bits of paper. With a few "toy beagles" this fun and excitement can be increased tenfold, and a new joy found for the Christmas holidays. Give an active boy fifteen minutes' start with a rabbit skin attached to a piece of string, his orders being to keep it on the ground, but to twist and double and cause all the difficulties he can invent. Then put on your hounds; however small, they will soon give the best among you enough to do, and it will be real hunting with cheery music. The master must be a good goer on his own legs, always with his hounds, watching and legitimately helping them when help is required, for our little pack have to compete now with human intelligence, and many a useful lesson may be learned, even when hunting a drag.

Again, if within our shooting rights we have patches of gorse holding rabbits, nothing can be better than a few couple of small beagles; they will creep about through the smallest rabbit runs, and sooner or later force every rabbit in the patch to face the gun posted half way between that and the next. A burst of music coming nearer and nearer will warn you to be ready and quick, for the pace at which bunny will make for his new haven renders his death by no means a certainty, even with an experienced shot.

Having tired of rabbits, we can go and try for that old cock pheasant in the copse; our "toys" will hunt him with equal joy, and eventually force him up when they have driven him to the corner, where a gun awaits him, or should await him, for this combined hunting and shooting requires some activity in order to be at the right spot, guided by the music of your pack, and you may be kept running backward and forward for half an hour before the old cock will condescend to rise, which he generally does when you least expect him to do so.

Yet, with all this fun to be obtained out of "toy beagles," the true breed has become nearly extinct; but the formation of a pack, the breeding difficulties to be overcome, the various types of beagle now existing, and the true type at which we should aim ought to be discussed.—Breeder, in *London Field*.

Pace in Shooting Dogs.

WAVERLY, Miss.—*Editor Forest and Stream*: In a recent issue of *FOREST AND STREAM* I noticed that very sensibly written article of Capt. McMurdo's under the above caption.

The Captain's position is well taken, as my observation has been that it is not always the fastest dog that is the most effective bird finder.

Pace is necessary when it is regulated to within the compass of the possessor's endurance; but if a dog uses his greatest efforts to maintain the high rate of speed of which he may be capable, he is apt to select ground as free from obstructions as possible in order that he may go as fast as he wants to, and his thoughts are not on finding birds when racing in such a frivolous manner.

Speed is something that can be spared to a greater extent than any other quality possessed by a first-class dog, and my experience is the same as the Captain's, namely, that wherever a dog is very, very fast, in the majority of cases he is not a first-class bird dog.

A dog with the proper stay-out qualities, and whose pace is uniform, will search out a larger scope of country, and generally find more birds; for while the dog's pace is sufficient to enable him to hunt the country within a reasonable distance by systematically beating it out with good judgment, and with as little tax on his endurance as would be necessary, he also does it in a more thorough manner, going well up into corners of every field, and often by his more leisurely methods getting scent and finding birds where his more speedy competitor passed by too hurriedly to be successful.

It is really surprising how little speed is needed to cover as much country as is needed when the dog stays out and loses no time in passing in and out, keeping track of his handler, avoiding getting lost by not casting too far out of the reach of the gun, not running himself down, and then taxing his already exhausted condition by racing hither and all over the country to find his master. A stay-out dog never does this; he hunts out the country as he comes to it, and does so in such a thorough manner that he finds all the birds possible to find, generally showing himself at stated intervals on some knoll or rise just long enough to be directed or to see if you are still pursuing the same course.

Such dogs add much pleasure to a day's hunt. To begin with, at the start they are not racing or keeping their owners constantly on the alert to make them remain at heel. They either take a position at heel or calmly saunter along the side of the road, investigating such matters from time to time as generally interest a passing dog.

A dog should be a clean galloper, and his pace should be natural enough to need no great effort on the dog's part to maintain it. He should carry a high head and pay no attention to any scent that was not strong enough to allow him to determine the whereabouts and location of the bodies that produced it, unless of such nature he could by good judgment road to his birds.

It has always been a mystery to me why spectators at a field trial always manifest more enthusiasm over a point made by a dog that jumps right into it than one with less snap, but made through a good nose and good judgment in following up a faint scent until the birds could be located.

A dog that jumps into a point looks pretty, I admit. His posture is unstudied and apt to be more spirited, but the very evidence of his surprise, manifested by his actions in pointing, shows the scent was met abruptly and unexpectedly, and all he did was what any good dog should do, and that was to point. In other words, the find was accidental in one sense, while in another he

was hunting out the country with the object of finding birds in view.

Still, at the same time, the birds were right there ready to be pointed and he could not escape pointing any other way than by flushing them. It is a different matter when you see a dog cast down into a ravine getting the wind at a certain point from a bevy on the opposite side of it perhaps. The moment the dog passes below the scent, loses it and casts back, strikes, but loses it again; he casts down the ravine and up, but being too low fails to get the scent, then swinging up the opposite side-hill a passing air brings to his delicate nostrils a faint indication of the source of the scent. With head high in the air he gallops up nearer and nearer, until the gallop subsides into a trot, the trot into a walk, and presently, with head erect and tail quivering with delight as he daintily poses it in a graceful attitude, he stops, having found and pointed birds that could only have been found through his judgment and bird sense.

A very fast dog would have passed without noticing it the slight scent that he caught in descending the hillside, and unless he had cast to the right place on the hill opposite where the bevy was, he would not have found them.

The point I wish to make is that the dog that did find them would also have jumped into the point as the other dog did, had he come on to birds unexpectedly, which a dog doesn't often do when he is always looking for birds.

A dog can be moderate in pace, have a good nose, plenty of bird sense and judgment enough to "stay out" and keep hunting, and at the end of a day's hunt he will be doing effective work, while his speedier companion will have shot his bolt long before and only be able to keep up with the procession without hunting—which means "at heel."

W. W. TITUS.

The Bull-Terrier Club of America.

PITTSBURG, Pa.—*Editor Forest and Stream*: At a meeting of the executive committee of the Bull-Terrier Club of America, held in Pittsburg, Jan. 13, the following resolutions were adopted:

Resolved, That it is the sense of the executive committee of the Bull-Terrier Club of America that, although Mr. Raper is perfectly satisfactory as a judge to the Bull-Terrier Club, still as matter of precedent, we, the executive committee of the Bull-Terrier Club, wish to notify all kennel clubs holding bench shows at which we offer specials that we would deem it an act of courtesy to ourselves to have such clubs, if they do not select a judge from our list, to at least consult us as to whom they will have judge the breed.

Resolved, That it is the sense of the executive committee of the Bull-Terrier Club of America, that Dr. H. T. Foote and Mr. H. F. Schellhass, by their persistent and unreasoning assaults on the practice of cropping and on those who practice it, have constituted themselves enemies of the Bull-Terrier Club of America; and that the said Dr. H. T. Foote, by his proposal to disqualify all dogs not in "a natural condition," is assuming a hostile position toward the exhibition of spaniels, fox-terriers, poodles, great Danes, bull-terriers, Boston terriers and black and tan terriers, and is hereby hostile to the American Kennel Club, which is maintained for the advancement of all canine interests regardless of breeds; and, be it further resolved that a copy of these resolutions be sent to Dr. Foote, Mr. Schellhass and the American Kennel Club; also the various press mediums for publication.

The following specials will be given by the Bull-Terrier Club of America at the Westminster Kennel Club bench show: Club's silver medals for best dog and bitch in open class over 30lbs.; club's silver medals for best dog and bitch in open class under 30lbs. To be competed for by members of club only.

W. D. BRERETON, Sec'y.

The Status of Field Trials.

WAVERLY, Miss.—The papers have not made the effort for field trial prominence in their columns for the past several years that has been necessary, and many of the comments and criticisms, while merited as applied to the individuals for whom intended, yet they have been accepted by the public as representing the general tenor of field trial goers, and the result has been a falling off of interest in field trials. It is impossible for the public to know anything about field trials, except what they read, unless informed by a friend who has been present, or by being present themselves.

When non-field trial goers ask a party who is going, "What he is going down among that crowd of wranglers and mud slingers for?" it would be very interesting to know through what influence or medium of information he arrived at such opinion of field trials in general.

If he gets his impressions from what he reads in the sporting journals, then those papers, instead of being a benefit to field trial interests by reporting matters as they are, have been a detriment by prejudicing sportsmen who probably would enjoy field trial sports if they would only go and see for themselves. A public press is a great blessing, but too close a scrutiny of matters to be made public cannot exist.

Public sentiment in such matters generally represents pretty fairly the views in general regarding it, and I have never in all my recollection heard so many harsh comments as I have in the last three months.

A party with a grievance is always to be found in any description of competitive contest I have ever witnessed, from the insipid game of croquet all along the line, not even expecting yacht racing. It is time when that character of men seeks the public journals for means of airing their "grievances" that they should furnish the best of proof that what they accuse of is so, and unless they can do so refuse point blank to publish their communications. I know the stand taken by *FOREST AND STREAM*, and I am glad to see the matter being treated heroically by others.

It is no doubt but what this style of field trial criticism is harmful. It gives the impression as it exists in the brain of the disappointed competitor, and oftener by those who were not present and make the complaint on hearsay without first hearing the other side. W. W. TITUS.

Game Laws in Brief.

The Game Laws in Brief, current edition, sold everywhere, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

WINTER MEET OF THE BRUNSWICK FUR CLUB.

THE seventh annual winter meet of the Brunswick Fur Club was held at Brunswick, Me., during the week of Jan. 13. The meet was a successful one. The club headquarters were at the Tontine Hotel, where everything possible was done for the accommodation of the visitors.

Too much praise cannot be given to the club members residing in Brunswick for the many courtesies heaped upon their club mates and visitors, and to their efforts in due the pleasure of the week.

Foxes were easily found and the hunting conditions were unusually favorable for midwinter. A little more snow would have been an advantage, but the weather was excellent and there was no room for fault finding.

The work of the hounds was good. Clay, the veteran of many a hard chase and field trial, was hunted every day, and bore himself as gallantly as in the past. Bonnie ran as true as ever. Billy was in the thick of the fight each day. Jerry showed great endurance, and had the happy faculty of getting into most of the runs whenever he was hunted. Piper showed some wonderful bursts of speed, and almost every hound in the pack earned words of praise at one time or another.

Among the sportsmen present during the week were: Dr. A. C. Heffenger, W. A. Bragdon, Portsmouth, N. H.; J. W. Jones, Needham, N. H.; H. A. Dwell, Weston, Mass.; L. E. Conant, W. B. Stone, Waltham, Mass.; F. C. Mower, Auburn, Me.; E. H. Bragg, North Sidney, Me.; A. B. McGregor, Poland, Me.; Bradford S. Turpin, Roxbury, Mass.; G. S. Ellis, Portland, Me.; Allen Chamberlain, Boston, Mass.; F. W. Noyes, C. A. Chandler, Nathan Stewart, H. C. Harmon, Ed Barker, Gorham, N. H.; S. L. Adams, Minneapolis, Minn.; Geo. Johnson, Bailey's Island; E. M. Snow, F. E. Roberts, S. Knight, Jr., H. A. Stetson, H. J. Given, E. A. Graves, F. P. Shaw, Hon. C. J. Gilman, W. A. Stetson, E. S. Bodwell, Edgar Barron, Melville Thomas, A. G. Hall, Capt. E. B. Nickerson, Brunswick, Me.; A. McDonald, Rockland, Me.; Marshall Parks, Bradford, N. H.

The hounds at the meet were:

White Oak Hill Kennels' b., w. and t. dogs Clay and Duke (Goodman), and b., w. and t. bitches Sunmaid (July) and Frisky (July—Goodman).

F. C. Mower's blue mottled bitch Gypsy (Buckfield).

M. Park's tan dog Billy (native).

A. W. McDonald's b. and t. dog Texas Jack and b. and t. bitch Queen (natives).

L. E. Conant's b., w. and t. bitch Nancy (native) and b. and t. dog Bonnie (Conant).

E. A. Graves's b. and t. dog Hunter (native).

E. E. Barker's b., w. and t. dog Rex (imported from France).

N. Stewart's b., w. and t. dog Bud (English—Cook).

W. A. Bragdon's b., w. and t. dog Piper (Walker) and b. and w. dogs Minstrel (native—English) and Dock (Walker).

H. J. Given's blue ticked dog Jerry (native).

F. H. Wilson's blue ticked dogs Banker and Wonder (natives).

W. H. Stetson's b., w. and t. dog Golden Rod (Cook).

G. F. Smith's b., w. and t. dog Boney (native).

President Heffenger called the annual meeting to order at 8 o'clock on Monday evening. Secretary's and Treasurer's reports were accepted. The club is in a good financial condition. Following is the list of the official foxhound judges of the club: Messrs. John Davidson, Roger D. Williams, A. C. Heffenger, J. M. Taylor and Joseph Lewis. The election resulted as follows: President, Dr. A. C. Heffenger; Vice-Presidents, L. O. Dennison, S. Knight, Jr., O. F. Joslin; Master of Hounds, R. D. Perry; Secretary, Bradford S. Turpin; Treasurer, W. A. Bragdon; Executive Committee, A. B. F. Kinney, A. G. Hall, G. W. Pierce, A. McDonald.

F. J. Hagan, Louisville, Ky., was elected an active member of the club, and H. L. Aldrich, Sheldonville, Mass., and W. H. Flagg, Waltham, Mass., were chosen honorary members.

The week of Oct. 19 was selected for the field trials. H. J. Given was appointed M. F. H. to serve during R. D. Perry's absence. President Mower, of the Monmouth Fur Club, made a brief speech, inviting all B. F. C. members to the annual hunt of his club, to be held at Dixfield, Me., during the week of Jan. 27.

L. E. Conant, H. J. Given and Geo. E. Carr were appointed the Committee on Membership. R. D. Perry, Bradford S. Turpin, W. B. Stone, A. B. F. Kinney and A. McDonald were chosen as the Committee on Field Trial Grounds. O. F. Joslin, N. Q. Pope, W. A. Bragdon, H. A. Stetson and W. R. Dean were appointed to select field trial judges.

Hon. C. J. Gilman, of Brunswick, made an address of welcome.

Tuesday.

The club was favored with a perfect day for a winter hunt. There was no wind, the thermometer was about at the freezing point, and an inch or two of snow covered the ground. The hunt took place in Topsham, in the section of country known as the "Undivided." It is a beautiful hunting ground, partially wooded with spruce and pine, and giving many opportunities in the open pastures and clearings to view the chase.

Four foxes were started during the day. The first one jumped was driven prettily by Bonnie, Nancy, Hunter, Billy and Texas Jack. They followed him for an hour before any one got a shot. Then Mr. Conant was the lucky man, but he did not succeed in stopping the fox, though he hit him hard. The hounds were close behind, and it was thought that they would run down the fox, but he escaped.

While this chase was going on a second fox was started by Duke, Clay, Sunmaid, Frisky, Piper, Dock and Minstrel. He ran but a few minutes when Mr. Parks secured a shot, failed to kill and the fox quickly went to earth.

Another fox was started later in the day by Frisky, but how the chase ended is unknown.

A fourth fox was jumped by Gypsy and was doubtless shot by an unknown outside hunter.

During the day Clay broke through the ice while crossing a small river and narrowly escaped drowning.

Wednesday.

The day was clear and cold, but the enjoyment of the chase was greatly diminished by the high wind, which made it impossible to hear the hounds unless they were directly to windward. Foxes were easily found, but the

hunt as a whole was dull. Part of the hunters went to Rocky Hill and others to the grounds that were hunted on Tuesday. On the Freeport road, on the extreme eastern boundary of the Rocky Hill grounds, Gypsy was cast off alone. The little Buckfield hound soon trailed to a start and jumped a fox which refused to give the hunters any sport at all. He led off through the Thousand Acre Swamp and nothing more was heard of the chase during the day.

At the west end of the grounds two foxes were started. Billy drove one prettily along the banks of the Androscoggin far to the south. Finally Reynard turned to the west, but only to go to earth at the first opportunity. The other fox was followed by Hunter and Jerry. He crossed the Durham road safely, though a number of hunters were on the lookout for him, but a few minutes later George Johnson brought him to bag. The fox proved to be a remarkably handsome one—a woods gray with glossy black ears, legs and brush.

Further north Bud and Rex started a fox from the first thicket they entered. He ran to the southward and the chorus was soon swelled by the voices of Hunter and Jerry, who barked to the running hounds. When he crossed the Durham road E. A. Graves fired at him, but failed to score. The chase led away toward the Androscoggin, where the pack was thrown off and made a complete loss.

Far to the south Wonder, Banker and Gyp started two foxes. Gyp drove one far out of hearing, and did not bring him back. Wonder and Banker followed the other for some time and supplied some excitement for the sportsmen in that vicinity.

Meantime Sunmaid, Clay, Frisky, Dock and Minstrel had been cast off in Topsham and were having the best run of the day. For seven hours the chase continued, and then a farmer put an end to the fun by wounding the fox. He was probably run into by the hounds and killed.

Mr. Johnson's fox was on exhibition in the evening and excited general admiration. It was a vixen and weighed 9½ lbs., and put its owner in the lead for the handsome *skis* offered as a prize for the largest fox.

Thursday.

The morning was clear and still, with the thermometer 3° below zero. The bitter cold, however, did not last long, and by noon the mercury stood at 20° above. The day was a comfortable one, as there was no wind.

All the hunters went to Rocky Hill, and the hounds were put in on both sides of the Durham road. Two foxes were jumped on the west side. Nancy and Jerry took one, and made a pretty drive along the river bank. The fox was shot by an outsider. Meantime Billy and Bonnie drove the other across the Androscoggin River and to the grounds in Topsham, where the first day's hunt occurred. The race was one of the best of the week, and continued till sunset. Then his brush was captured by a local hunter.

Clay, Frisky, Sunmaid, Piper, Dock and Golden Rod were cast off on the east side of the Durham road. Piper and Dock drove a fox for an hour or more, and finally ran him to a loss. The others, joined by Nancy and Jerry, had an exciting chase in the Thousand Acre Swamp, and at last brought the fox within range of E. A. Graves. He improved the opportunity and captured a vixen weighing 9½ lbs. He also won the 25-cent pool which had been made up for the hunter who secured the first brush. Mr. Johnson killed the first fox, but was not in the pool.

In the evening the club was entertained with banjo, guitar and mandolin music, and the fun lasted till a late hour.

Friday.

Another perfect hunting day much warmer than Thursday. The Thousand Acre Swamp was the scene of the hunt. There was no trouble in finding game and the music began almost as soon as the hounds were cast off. Banker, Wonder and Boney started two foxes which ran for some distance together, but no one was fortunate enough to see them and the chance to make a double was lost. Meantime Clay, Billy, Nancy and Hunter were driving a fox toward Quaker village. They pressed him hard and finally drove him to earth after a two hours' race. They then started another fox, but quickly lost him. This was a handsome fellow that looked almost black when running.

The meet was now at an end. George Johnson was the winner of the handsome *skis* offered for the largest fox killed during the week.

Some of the visiting sportsmen returned home on Friday evening and the others on Saturday morning.

J. A. F.

Fox Hunting in Virginia.

BOYDTON, Va.—*Editor Forest and Stream:* All lovers of sport will read with pleasure and pride a fox chase which occurred in Halifax county, Virginia, in December last. It is the most remarkable race within the knowledge of the writer, and he doubts whether the most experienced fox hunters among your readers can recall its equal.

The frozen ground and cold weather had not terrors sufficient to induce those veteran huntsmen, the Hon. R. G. Sneed and Mr. E. A. Lewis, of Townsville, N. C., to forego a camp hunt which had been planned for the middle of December. For some time they had heard of a certain old red which had had his way for so long that he seemed to defy hunters and their packs. It was believed by some that he had been run half a hundred times, and those best acquainted with him were of the opinion that he would not be caught. When they learned of the determination to catch him on this occasion, they prepared to gey the hunters at the end of the chase, believing it would result in broken-down horses and dogs, sore riders and a free fox with new laurels.

On Dec. 14 the above-named gentlemen, who rode sixty miles through the country to get to the hunting ground, in company with Col. W. B. Wilkins, Thos. Adams and Samuel Oliver, of Halifax county, Va.; C. A. Raine, of Danville, Va.; Nat Palmer, of Milton, N. C.; Walter Jones, of Person county, N. C.; John B. Boyd, of Boydton, Va., and several others began their camp hunt of a week.

After hunting several days without success, and while considerably disheartened, as the prospects seemed poor for a test of speed and endurance between dogs which had never failed to catch whatever got up before them

red foxes not excepted, and the old red whose reputation was co-extensive with that section of country, they were delighted, about 11 o'clock on Thursday, to receive assurance from the energetic and indefatigable pack that they would at least have the chase.

From the locality and the trail, some of the hunters felt satisfied that it was the famed old red, and that he was preparing for one of his long journeys. In this they were not mistaken. In a few minutes he was seen about a mile in front of the pack and was recognized by those who had previously chased him. At the sight of him their enthusiasm knew no bounds. With full confidence in the superiority of the fox, they rose in their stirrups and yelled, "There he is, now catch him!"

The fox had the advantage of being familiar with the country, while very few of the dogs had ever hunted there before. His long experience made it unnecessary for him to consume much time in determining what to do.

Starting near Pace's Ferry on the Dan River, he virtually followed the river, passing News Ferry and Barksdale's Ferry and going thence to Milton, N. C., which on a straight line is fully thirty miles from the starting point. He then turned and went by South Boston, Virginia, and finally came back to his starting point. Whether it was his intention to take this long jaunt again can only be surmised. After getting back to the starting point, he turned again toward News Ferry and ran seven miles. As dog after dog gave up the race, it seemed that his admirers had not claimed too much for him; that he was destined to win another victory. None of the hunters any longer doubted his ability to break down the majority of foxhounds, and they were beginning to doubt whether any of the thirty-five dogs which started in the race would be equal to the occasion. They were not allowed, however, to remain in doubt, for at 3:35 o'clock this proud old hero of many similar contests had to succumb, and thus prove the superiority of the few dogs which had followed him through the entire race.

It is estimated that he ran not less than seventy-five and perhaps one hundred miles. The chase lasted four and a half hours. In the beginning of it the pack numbered thirty-five, but only thirteen had the endurance to run it through. Ten of the thirteen were bred by Messrs. Sneed and Lewis and Dr. Wm. Townes, of Memphis, Tenn.; two were bred by Consul-General W. T. Townes, and one, an imported Irish bitch, was from the Homer Kennel of Memphis, which is owned by J. W. Alley. Those which ran the entire race are Maud S., Nancy Hanks, Sophie, Davy, Leate, Domino, Rio, Venus, Sal, Limber, Rock, Rye and Old Lottie.

The last named is 9 years old, while all of the others are not less than 5 years.

The old red weighed 11½ lbs. after the brush had been removed, and minus some of his entrails.

No account of this hunt would be complete which did not specially mention the fact that the party was entertained by Col. W. B. Wilkins, and to those who know the full meaning of it nothing more need be said than that he entertained in the true old Virginia style.

JOHN B. BOYD.

City of the Straits Kennel Club.

THE board of directors of the City of the Straits Kennel Club are now making active preparations for their fourth annual bench show, to be held in the Auditorium March 3 to 6. The following Bench Show Committee have been appointed: President George M. Hendrie; Secretary R. Humfryes-Roberts, and A. T. Knowlson, Ed. Wiles, R. McDonald, Major James C. Cuillott, W. Howie Muir, Chas. A. Parkinson.

Committee on Specials: Chairman, Miss Anna N. Griffin; W. Howie Muir, George M. Hendrie, Richard Bangham. Advertising Committee: Chairman, James R. H. Wagner; A. T. Knowlson, Guy D. Welton; R. Humfryes-Roberts, Secretary.

The bench committee have begun their work, and the following judges have been employed: Special judge for collies, R. McElwen, London, Ont.; for spaniels, E. M. Oldham; New York; Messrs. James Mortimer, New York, and John Davidson, Monroe, Mich., will divide the other classes between them.

The premium list is being prepared and shows an increase of about \$400 over last year, being very near \$2,000 now, and the Committee on Specials hope to increase this to \$2,500. The Secretary is in active communication with several of the large breeders and handlers already. The show comes after the New York Show and before the Chicago. The Committee feel hopeful that they can gather in the large Eastern kennels, which will exhibit later in Chicago.

A great deal of enthusiasm was aroused by the local show held in December, and there is no doubt that Detroit dogs will compare favorably with the best specimens which prominent outsiders will bring here.

The Committee on Specials report that they are meeting with a liberal support from the merchants and admirers of the dog in general and hope to swell this year's special beyond that of any former year.

Sportsmanship and Field Trials.

WINNIPEG.—I read with some interest "A Review of the Year," but I cannot quite agree with the conclusions re field trials. I am "on the fence" now, and I think I can look at them as they were, as they are and as they should be.

When you eliminate sportsmanship from field trials or any other branch of athletics, and replace it for pecuniary considerations, then I am willing to agree with you as to their management and success. But I say right now, and I am speaking from no slight experience, that if field trials are run for sportsmen it does not require one dollar of capital to run a field trial club.

The Northwestern Field Trial Club held three successful trials. They donated 90 per cent. of the total of moneys received for entry and starters' fees, besides valuable trophies, and for three years no member was called upon to contribute a single cent; in fact, not even their annual club dues were collected.

If you organize a club with expensive machinery, then you must have a very liberal support or you die a natural death; but I contend there are enough of the genuine article of true sportsmen to be found who are capable and willing to be the machinery. However, for their services they demand a guarantee that they will be supported by

those who have not the almighty dollar in mind the whole time.

It has and was demonstrated at the late Manitoba trials that dogs were "born" and not made to order by a professional handler. You will bear me out when I mention Dido, the winner in the Amateur Stake. No, money is no longer the desideratum for a successful field trial, but a genuine love of sport is; and my contention is—and it is based on fact and experience—that field trials can be successfully run if properly managed, and the capital required is a few thorough sportsmen, who are willing to give their services to what many think the greatest encouragement to the development of the pointer and setter.

THOS. JOHNSON.

From the Seat of War.

WAVERLY, Miss.—*Editor Forest and Stream*: Little Ned, the pointer who has made quite a field trial reputation, arrived here on Jan. 12, and he will face the judges again in the U. S. trials at West Point next February in the All Age Pointer stakes.

Mr. W. N. Kerr, Little Ned's owner, has been shooting over him at Thomasville, Ga. I judge he has given Ned plenty of good substantial work, as he is as hard as rocks and looks as though he was ready for business to-morrow if necessary.

It is surprising how many up-to-date sportsmen shoot over dogs of either field trial reputation or quality good enough to run in any field trial company.

Mr. J. Tredwell Richards, who has been shooting in this vicinity and for whom I have some dogs in training, owns and had with him a very superior bitch which he regards as his best shooting dog, and he makes no mistake when he does so. She has plenty of pace and range, good bird sense, handles sweetly to the gun, is one of the old time retrievers and is a pleasure to take in the field. Mr. Richards brought her over to get my opinion of her field trial qualities, with the view of running her in the future if I thought favorably of her, which I did.

I got a letter not long ago from Jack White, inclosing me a cocked hat in outline cut from a sheet of wrapping paper, and on it he informed me that he had organized a guerilla corps in view of preying on the shipping and merchant service of England, should matters proceed to that unpleasant extent, and if they did not, he thought that he would declare war against England any way on his own account *à la* Dr. Jameson. The cocked hat he informed me was the first instalment of our uniform and that I held the position of lance corporal, and was on the list for early promotion.

Since Bradley was appointed to the position of "auger bearer," as Jack thought he could wade out about half way across to England, and scuttle the ships by boring holes in their bottoms with his auger. By the way, Jack arrived in West Point last Wednesday, and as he had previously written to me in reference to a location, I had him one picked out near Griffith, and sent him there. He had nineteen dogs, among which was the well-known pointer Sandford Druid, who will run in the pointer stakes of the U. S. Club. When Jack unbuttoned his trunk after his arrival, he found that a bottle of blackberry cordial he had therein, presented to him by a sweetheart of his in the old North State, had become fractured and the contents had become (cordially) acquainted with his clothing. The stains left thereon resemble in color the kind of gore that Jack expects to revel in, in his warfare against Great Britain.

Mr. C. E. Buckle writes me from Landsford, S. C., that he will arrive in West Point about the 29th, and if he can secure a good location, he will remain and handle his puppies, for next season's trials, until April 1st or thereabouts.

The West Point field trial grounds I noticed were badly burned off as I passed through them the other day on my way to West Point, to meet Jack White. I also hear lots of shooting over in that direction, but then there is shooting in every direction, and it is pretty hard to locate it.

Mr. Tatham, of the shot manufacturing people, was a shooting companion of Mr. J. T. Richards and Mr. Theo. Sturgis for a week or so.

I learned through Mr. Richards that both Mr. Sturgis and Mr. Wm. Hammond, his trainer, are delighted with their location. Mr. Hammond averages in the neighborhood of thirteen bebies daily, which is good enough.

Mr. C. A. Draper, a friend of Prof. E. H. Osthaus, from Toledo, O., is at present in the country near West Point on a shooting trip. He is accompanied by a friend whose name I did not learn. I have not heard what success they are having, but expect it will be satisfactory, as they are in a good bird locality.

Mr. C. A. Tucker was out to see me last week. He was in search of a good locality, where he could handle the youngsters of the Rancocas Kennel, of which he has about thirty very promising puppies. Charley thinks that out of the bunch he will get Derbies of the right kind of field trial quality to carry the colors of the Rancocas Kennel right up to the front in field trial competition the coming season. He went to Eupora and Grady, west of West Point, on the Southern Road, but did not find open country enough to suit him, and had about decided to locate at Baldwin, Miss., just north of Tupelo. Nat. Nesbitt in writing to me recently casually mentioned that he had Jingo out for a three hours' spin in his preparatory work for the Champion Stake and that Jingo found fifteen bebies, and made single-bird points in a way to have delighted any one that was not running in competition against him. In the setter line Nat. thinks he has a wonder in a puppy by King Leo out of Minnie T. He writes that he expects to make things hot in the All-Age Stake next season with this same dog.

I hope to have some good ones myself, but I have not got time to give any attention to that matter just now. What I am worrying about is not the "future," but the "right now," which means the coming trials in February.

George Gray did not think the country was open enough at Una, Miss. He moved ten miles north to Buena Vista, Miss.

In a letter recently received from Mr. E. O. Damon he speaks of Minnie T. and Strideaway possibly running up against each other in the champion, so I infer that Strideaway will be a starter. Mr. Damon is to be congratulated on his decision to start him, as he can lose nothing by defeat, and as he has an equal chance with any for winning the cup it shows great wisdom on the part of Mr. Damon.

W. W. TITUS.

New England Beagle Club.

Editor Forest and Stream:

The first futurity stake of the New England Beagle Club closed Jan. 15 with thirty-seven nominations, as follows:

Howard Almy's b., w. and t. bitch Miss Quinn (Diamond—Nancy Lee), Aug. 15, 1895.

Howard Almy's b., w. and t. dog, unnamed (Clarion of Glenrose—Trill), July 22, 1895.

George F. Reed's w. and t. ticked bitch Mag R. (Zeno—Nell R.), April 12, 1895.

George F. Reed's w., b. and t. dog Scorch (Wanderer—Triumph), April 14, 1895.

George F. Reed's b., w. and t. dog Lead (Bugle—Betsy Lee), Oct. 25, 1895.

George F. Reed's b., w. and t. dog Millard R. (Millard—Haida), July 31, 1895.

Joe Lewis's b., w. and t. dog Robins II. (Ringleader—Spinaway), Aug. 30, 1895.

Joe Lewis's b., w. and t. dog Ringwood (Ringleader—Spinaway), Aug. 30, 1895.

Wm. Saxby's b., w. and t. bitch Dime's Daisy (Clyde—Dime), Jan. 25, 1895.

H. S. Joslin's b., w. and t. bitch Whaler (Wanderer—Triumph), April 14, 1895.

H. S. Joslin's b., w. and t. dog Trick (Clyde—Lady Novice), June 29, 1895.

C. J. Prouty's b., w. and t. bitch Rachel (Diamond Forest—Zoe Reed), Oct. 7, 1895.

C. J. Prouty's b., w. and t. dog Rubin (Diamond Forest—Zoe Reed), Oct. 7, 1895.

Mrs. S. A. Parry's w., b. and t. bitch White Thorn (Drive—Nancy), June 15, 1895.

Mrs. N. A. Smith's w., b. and t. bitch Fancy S. (Little Corporal—Frances), March 31, 1895.

H. L. Kreuder's b., w. and t. bitch Gypsy Buckshot (Buckshot—Blanche), Jan. 18, 1895.

H. L. Kreuder's b., w. and t. dog Bob of Rockland (Frank Forest—Zillah), June 10, 1895.

Awashonk Kennels' b., w. and t. dog Starlight (Zeno—Fannie Reed), Jan. 21, 1895.

Awashonk Kennels' b., w. and t. dog King Philip (Spark R.—Welcome), Aug. 10, 1895.

W. E. Deane's w., b. and t. dog Glenwood (Little Corporal—Frances), March 31, 1895.

W. E. Deane's w., b. and t. bitch Topsy Glenwood (Rove—Wenonah), July 7, 1895.

A. D. Fisk's w., b. and t. dog Bradford (Clyde—Lady Novice), June 29, 1895.

A. D. Fisk's w., b. and t. dog Clyde II. (Clyde—Lady Novice), June 29, 1895.

F. W. Chapman's b., w. and t. bitch Impetuous (Clarion of Glenrose—Trill), July 22, 1895.

F. W. Chapman's b., w. and t. dog Grit (Paderewski—Gypsy A.), Aug. 6, 1895.

F. W. Chapman's b., w. and t. dog Ripple (Thor—Beatrice), Nov. 30, 1895.

F. W. Chapman's b., w. and t. dog Glide (Bannerman—Butterfly), Aug. 27, 1895.

F. W. Chapman's b., w. and t. dog Preble (Bannerman—Iona), Nov. 18, 1895.

Robt. Hindle, Jr.'s b., w. and t. dog Tenney Lee (Lake—Sweet Fern), July 6, 1895.

W. S. Clark's b., w. and t. bitch Lou Burr (Ringleader—Baby Deane), June 1, 1895.

W. S. Clark's ——— (J. Bull—Sunbeam), January, 1896.

W. S. Clark's ——— (J. Bull—Sunbeam), January, 1896.

W. L. Redfern's w., b. and t. bitch Mischief (Melrose—Louise), 1895.

H. A. P. Smith's ——— (Clyde—Slip), 1896.

H. A. P. Smith's ——— (Clyde—Slip), 1896.

Frank Whalen's b., w. and t. bitch Alice Rattles (Lake—Sweet Fern), July 6, 1895.

Arthur Parry's w., b. and t. bitch Bell of Franklin (J. Bull—Belle), July, 1895.

W. S. CLARK, Sec'y.

POINTS AND FLUSHES.

Mr. James Mortimer, Superintendent of the W. K. C. show, under date of Jan. 18, writes us that "we have an unprecedented demand for premium lists and entry forms, not only from exhibitors in this country, but also in England, and there is every indication that we shall beat the record. We shall be glad to receive from intending exhibitors photographs of dogs for illustration in the daily press." Do not forget that entries close on Feb. 4, and that premium lists, entry blanks and all necessary information can be obtained of Mr. Mortimer, Room 26, 32 Pine street, New York.

Mr. E. M. Williams, Charlottesville, Va., writes us: "I have sold to Mrs. Smith, of North Carolina, my fine Skye bitch Scotland's Bonnie Belle. I have also had such a demand for puppies through your grand paper that I am now reduced to one. I have imported recently a very handsome Skye bitch. She is very handsome, and if I show her she will make many Skyes take a back seat."

The officers elected at the annual meeting of the Philadelphia Kennel Club were: President, Francis G. Taylor; Vice-Pres., W. G. Fleer; Treasurer, S. Murray Mitchell; Secretary, Dr. A. Glass; Delegate, Francis G. Taylor. A large number of members attended. In the matter of a preserve for field trial and shooting purposes, the club agreed to lease 10,000 acres near Thomasville, N. C., the shooting members of the club to pay \$25 dues instead of \$12; kennel members, \$12. It was decided to hold a bench show which would follow Boston, and steps to secure a building will be taken at once.

Mr. N. T. De Pauw, of New Albany, Ind., made a very pleasant call in FOREST AND STREAM office this week. He is justly confident that his celebrated pointer Jingo will make an excellent competition in the forthcoming trials. Jingo is a reliable dog every time when cast off in the game country.

The Great Dane Club (England), in consequence of the English Kennel Club's rule against cropping, dissolved on Dec. 31.

On this action *Our Dogs* says: "If, however, a club can only exist upon an illegal, as well as inhuman practice, which 'cropping' is, then in our opinion the club is better dead. This being so, we consider the death of the

Great Dane Club an inglorious one. A new club is being formed upon more up-to-date lines." *Our Dogs* continues: "One of the first objects to which the new club will have to address itself will, of course, be the size and carriage of ears of the Dane, which, we are sure, can be bred with as pleasing ears as the Irish terrier, mastiff, or St. Bernard. It is all use. There was the same cry against the abolition of cropping among a section of the Irish terrier fancy, with the mighty difference that, instead of this club being in favor of continuing this inhuman practice, it was, to its everlasting credit be it said, the first body to take initiatory steps for its abolition. Now, a cropped Irish terrier looks wrong and something short about him, so used have we all become to the neat drop-ear with which all our best Irish terriers are adorned."

We are indebted to Mr. H. L. Keyes, Worcester, Mass., for a spirited portrait of his setter dog Montell (Mark's Mack—Katie B.). Mr. H. B. Tallman is the painter of it.

In our kennel advertisements this week Mrs. E. M. Williams, Charlottesville, Va., offers Skye terriers. Mr. H. W. Page, Auburndale, Mass., offers English setters. Waban Kennels, Newton, Mass., offers St. Bernards. Seaforth Kennels, Orange, N. J., announces the St. Bernard's Rose King and Sir Hugh at stud.

There will be a meeting of the executive committee of the Spaniel Club on Tuesday of this week. On Thursday the Metropolitan Kennel Club will hold a meeting.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address. Prepared Blanks sent free on application.

BRED.

Seaforth Kennels' (East Orange, N. J.) Lady Anna (20,331), rough-coated St. Bernard bitch, Nov. 16, to champion Melrose King (21,885).

Mr. C. G. Hopton's (Roseville, N. J.) La Belle Charlotte (39,162), rough-coated St. Bernard bitch, Jan. 9, to Seaforth Kennels' champion Melrose King (21,885).

Mr. G. W. Patterson's Clara Barton, St. Bernard bitch, Dec. 10, to Altoner.

Lady Lomond, St. Bernard bitch, Nov. 26, to Count Odo.

Eulalie II., St. Bernard bitch, Nov. 9, to Jim Blaine.

Mr. E. B. MacNair's Beverwyck Luna, fox-terrier bitch, Jan. 9, to Hillside Royal.

Nancy, smooth fox-terrier bitch, Jan. 13, to Wawaset Trick.

Mr. Ashton H. Tatum's Fox, fox-terrier bitch, July 23, to Hillside Royal.

Mr. B. S. Horne's Warren Damson, fox-terrier bitch, Oct. 22, to Hillside Royal.

Mr. F. L. Cheney's Clytie, Boston terrier bitch, Dec. 23, to Commissioner.

WHELPS.

Prof. L. P. Braive's Lady Beaumont II., Gordon setter bitch, whelped Dec. 2, eleven (seven dogs), by Buck.

Mr. B. S. Horne's Warren Damson, fox-terrier bitch, whelped Dec. 17, four (one dog), by Hillside Royal.

Mr. E. B. MacNair's Nancy, fox-terrier bitch, whelped Aug. 7, four dogs, by Hillside Royal.

Mr. A. R. Tatum's Fox, fox-terrier bitch, whelped Sept. 18, four (three dogs), by Hillside Royal.

Mr. F. T. Peet's Beulah I., Gordon setter bitch, whelped Dec. 25, eight (five dogs), by Merikland Ranger.

Mr. Robt. L. Soper's Duchess, Gordon setter bitch, whelped Aug. 28, eight (four dogs), by Gordon Grouse.

SALES.

Miss Cecelia Evstaphie has sold Wawaset Royal, fox-terrier dog to Dr. Jas. Ferris Belt.

Dr. James Ferris Belt has sold Wawaset Royal II., fox-terrier dog, to Mr. Wm. H. Churchman.

Wawaset Molly, fox-terrier bitch, to Mr. Robt. Wallis.

Wawaset Royal, fox-terrier dog, to Mr. B. S. Horne.

Yachting.

MR. AND MRS. C. OLIVER ISELIN sailed from New York on Jan. 15 for England their purpose being to make a long trip abroad. There is every probability that Defender will not be fitted next season.

If any evidence were needed of the serious mistake made in holding secret sessions of the special committee, it may be found in the comments heard about New York from non-yachtsmen. The popular and general interest in the Dunraven charges and investigation is still very active, and among business men and persons entirely unconnected with yachting the question is constantly heard as to why the report is withheld and what the committee are doing with it that cannot be made public. The impression thus far made immediately at home by the original secrecy and the apparently needless delay is distinctly bad, and it is likely to be much worse on the other side of the water. Strong as its case has been from the first, the New York Y. C. cannot afford to weaken it by even a groundless appearance of shirking the most complete publicity.

The report of the regatta committee is at last made public and covers very thoroughly the details of the famous foul in the second race. There is little room for doubt that the blame lay entirely with Valkyrie on account of her erratic maneuvers just before the gun; she had ample room inside of Defender to clear the committee boat, though it is possible that she would have been at the line before the gun. The report does not give the evidence of both sides as taken by the committee, interesting as it would be.

In these great international races the yachtsmen of the two nations have certain rights, and unless some special reasons exist to the contrary it is in every way desirable that such questions as that of the foul, and of the variation of Defender's trim, should be investigated in public and the evidence given out at once.

ONE of the results of the continued attempt to withhold the report of the special committee is the premature and unauthorized publication of a large portion of the evidence by a New York paper. The decision itself is not yet known, but by some means the paper in question has apparently obtained a copy of the evidence. The responsibility for this premature publication is disowned by the club, the matter being characterized as follows by the secretary of the special committee:

"Mr. Rives states with regard to the publication of the evidence taken by the investigating committee this morning, that he has not examined it to see whether it is a correct transcript of the proceedings before the committee or not. If it is a correct statement of such proceedings, or any part of them, it must have been obtained by theft or by some other means equally dishonorable to the newspaper that published it."

This is all very well, but it is extremely unjust to those journals which have waited in good faith for the general publication of the re-

port that they should be unable to obtain it even after it has practically been made public by underhand means. Taking the matter from first to last, it must be said that it has been very badly managed so far as the great public of both America and England is concerned. It might now be in order for the club to appoint a committee and investigate the circumstances attending this premature publication of the evidence.

YACHT DESIGNING.—IV.

BY W. P. STEPHENS.

[Continued from page 59.]

SPEED, as it is properly understood in yachting, is not the actual rate of a vessel in knots, or miles per hour; but it is the ratio of this actual speed to the sum total of the speed-giving elements, whatever they may be; and for lack of a better term we are compelled to use "size" to express this total. Indefinite and inadequate as it is, no better term has yet been devised to express this general idea. "Measurement," "rating," "mean length," "corrected length," "tonnage" and other similar terms have been used at various times for the same purpose, but they are even more limited in their application. The "size" of a yacht is not measured by any one dimension, even length, nor the sum of a number of the dimensions; it is not the sail area nor the sail-carrying power, but it is a combination of dimensions of hull, sail area, amount and depth of ballast and of other less plainly apparent elements. Thus far, after two centuries of yachting, nothing approaching an accurate and scientific formula including the main elements of speed in their true relations has been produced; and yachtsmen are perforce content with some rough and ready approximation which is more convenient than accurate.

One of the most mischievous and erroneous of the many attempts to measure "size" in a simple manner is the length rule, based on length alone, taken in various different ways. The general acceptance in this country, as well as in other places at times, as an axiom, of the false and misleading statement that "length gives speed," has worked no end of harm to yachting in the production and perpetuation of faulty models. As long as it is recognized that no possible combination of all the dimensions of a yacht has yet been discovered which will give a reasonable measure of her initial elements of speed, it is idle to expect that one single dimension will do so. Another fallacy which hindered and impeded the progress of design for years was that so long used as the basis for the measurement rule of Great Britain, that any product of length, breadth and a third function, which bore no relation whatever to any dimension of a yacht, but was purely imaginary, constituted a true measure of the "size."

The assumption that "length gives speed," for many years the practical basis of American yacht racing, is true in a limited sense only when associated with the very important qualification, "other things being equal," and the same applies to the old tonnage and many other rules. In yachts of exactly the same proportions, model and ballasting, a single dimension or a very imperfect formula of measurement may give very satisfactory results; but when applied to yachts of different types they fail entirely and encourage some one special type, the skimming dish or the narrow cutter, or something equally exaggerated and undesirable, to the exclusion of all others.

The best of the many rules yet tested in actual practice is the "length and sail area" rule, based on the rough assumption that, while length is used directly, the two other important dimensions, beam and draft, are reached indirectly through their resultant, the sail plan that they will carry. In this country, with a comparatively limited amount of building and keen class racing, the rule worked well in actual practice for over a dozen years, or as long as it was applied to yachts which, whatever their proportions, carried the ballast directly attached to the hull. The introduction of a long lever, of no appreciable displacement, the fin-keel, between the hull proper and the ballast, a lead bulb, has produced certain important elements of speed of which the rule takes no cognizance, and it now fails to measure fairly the honest keel yacht, such as *Minerva* and *Gloriana*, alongside of the fin-keel racing craft.

In Great Britain, with more building and racing in established classes and under different modifying conditions, the same rule in a slightly different form lasted but five years, from 1887 to 1892, before the introduction of the fin type destroyed its value.

Those elements of "size" which are most plainly apparent are length, beam, draft, displacement, amount of ballast, depth of ballast, and sail area; and as the relative values of these may vary in different types, such as the shoal and wide centerboard yacht, the moderate cutter and the racing bulb fin, it is hardly to be hoped that any satisfactory formula expressing the sum total of their values will ever be discovered. In the meantime the best that can be done is to adopt such a formula as may be practical, convenient of application, and reasonably fair to existing yachts, and at the same time tend to produce a better and not a worse type. However carefully framed, and however well it may work for a time, the best of such formulas will sooner or later develop some weak points which will produce undesirable types. They must be watched continually and amended as occasion demands, before the evil has gone so far as to require a radical remedy that will be opposed by "vested interests."

In this connection we would point out that every yachtsman who is in any way interested in racing has a direct and personal interest in the question of measurement and classification; he should post himself as far as possible upon existing rules and those that have been tried and discarded in the past; he should discuss the question with other yachtsmen, and he should study carefully all complaints against the existing rule and proposals for its improvement; being prepared to take deliberate and intelligent action when such proposals are discussed and voted upon.

Unfortunately there are many even among good racing men who pursue an opposite course; as long as their own yachts do fairly well under the existing rule they care nothing how unfair it may be to other yachts or how bad in its tendencies; they oppose all movements for a change and discourage all attempts to "talk shop" in discussing the question. Their interest in the matter only begins when, through one chance or another, their own yachts are adversely affected; and even then the consideration is purely a selfish one, and they work only for themselves and not for the general good of the sport. While there is small ground for the hope that a satisfactory formula

of measurement, universally applicable to all types and for an indefinite time, will ever be discovered, there is still a wide field for practical and valuable improvement in racing rules, and it should be the pride of every earnest yachtsman to aid in the good work.

So far as the immediate subject is concerned, the designing of yachts, it rests with the designer almost at the outset to take the rule as it stands and study it carefully with a view both to its intent and its possibilities, as the success of his yacht, as we have already pointed out, depends on its performance as measured by the rule as a standard. It is quite possible that the yacht may be expensive to run, hard to steer, of inconvenient draft and generally useless, but still she may be a success in that she wins the prizes under the given racing rule. Of course the case is somewhat different in a cruising yacht, but there are comparatively few even of the cruising classes that do not find the occasion to race at some time during their career, and in nearly every yacht the designer should consider the existing rule and its classes.

It is hardly to be expected that the designer will throw away his chances through a purely sentimental regard for the general good of yachting; but in studying the rule with a view to building under it, he will do well to consider first what its intent may be, presumably the production of a yacht of all-round excellence, and, as far as the conditions will allow, to conform to it. There is comparatively little credit to a designer in winning merely by taking advantage of some extension or evasion of the letter of the rule that has thus far escaped notice; and though the competition of match sailing must always put a premium on making the most out of the rule, it will be more satisfactory for the designer and better for the sport if he rests content with the average dimensions and construction of the class, and relies on superior care and skill, than if he takes some one detail and carries it out to an extreme degree. The temporary triumph which results from the latter course is dearly paid for by the infliction of a new extravagance or absurdity on future yachts.

However he may interpret and observe the intent of the rule, the designer cannot afford to neglect its utmost possibilities; and after assuring himself of them he must decide what good features are possible under the rule, what extreme ones and what evasions, and which he will accept and which reject. It is possible that he may foresee some development of the rule which, though undesirable, is so plainly inevitable that there can be no good reason for neglecting it. On the other hand, he may discover some weak point in the wording by which he may evade the plain spirit of the rule and gain an unfair advantage for the season, or until the rule can be amended. It is not always an easy task for the designer to decide just what he may and what he will do under a given rule; but his judgment should always be influenced by a spirit of fair play and a regard for the general good of the sport.

We have already pointed out that the work of the naval designer is done under many more limitations than that of the architect on shore, and a thorough consideration of these limitations and of the general conditions is the first step in designing. The various limitations and conditions may be divided under three heads: the measurement rule, local conditions and the special requirements of the owner. In the case of a purely cruising yacht the former may be disregarded entirely; but it is well, even in such a yacht, to build under the rule and to recognized class limits. It very frequently happens that an owner builds a yacht with no intention of racing, selecting such dimensions as chance suggests; when the yacht is completed she turns out a smart craft, and the owner is seized with the desire to race her, but he finds that she is between two classes and needlessly handicapped. As a rule it is quite as easy to build closely to the limits of some one of the many existing classes as to fall in between, and the owner may change his mind and wish to race himself, or he may desire to sell the yacht, in which case her value will be decidedly higher if she comes within some regular class.

Assuming that a yacht is to be built under some one rule and for a certain fixed class, the first point is to study the rule both as to the various factors included in it, such as waterline, beam, sail area, girth, etc., and the relative value of each in the formula. In the case of the present "Seawanhaka rule," in which the factors are both length and sail area, the best proportions for each must be decided, and this is dependent in turn on whether the classification is by waterline length alone, or by the racing length as found by the rule. The details of measurement of waterline and sails, the limitations of crew and ballast, must all be carefully considered in determining the general dimensions and type of the proposed yacht; certain existing yachts in the same class, whose dimensions, etc., are known, being used as the basis of the investigation. An inspection of these, the unsuccessful as well as the successful, will suggest a certain type and various dimensions as giving the best promise of success.

Closely associated with the rule and class limits are the local conditions, the nature of the waters, open or sheltered, with low shores or surrounded by hills and mountains, the direction and force of the prevailing winds, the extreme depth of water allowable on the anchorage grounds and the usual racing courses; these and many other considerations have an important influence on the design. To reconcile the limitations imposed by these natural conditions with the requirements of the owner is no easy task, but one involving much thought and deliberation before the designer is ready to set pencil to paper.

The demands of the owner are many and conflicting. In the first place is safety, including certain qualities of seaworthiness and non-capsizability—at least under all ordinary conditions and with reasonably skillful handling. This is only to be obtained at a certain sacrifice of speed, and also of that convenience of use which comes from very light draft.

Speed, on the other hand, if carried to any extreme, involves extra cost, both of construction and running, a loss of certain cruising qualities, limited accommodation owing to the large crew space, sail lockers, etc., a shorter life to the yacht, and a lower sail value after the first two or three seasons.

In all but the extreme racing craft the questions of comfort and convenience appeal strongly to the owner, but these involve a loss of speed through smaller sail plan, greater weight of fittings, smaller crew space, and higher freeboard and cabin trunk, as well as a greater draft than is always desirable. Headroom and floor space, a mini-

mum of 6ft. for the former and 30in. for the latter, are essential to comfort in most yachts, but they involve considerable draft and high freeboard. The latter is good in many ways: it gives room below, an increased range in stability, and dry decks; but it involves an amount of windage and a raising of the weights which are seriously detrimental to speed, especially where the sail area is a material factor in the rule.

The draft is a dimension which it is always desirable to reduce to the lowest possible limit consistent with other essential features; even though an extreme draft may be justifiable through the room that it gives, the added safety and weatherly qualities, and the fact that the yacht is used mainly in deep waters, as in offshore cruising, there will be many times when it will be more convenient, if not safer, to draw 10ft. than 12, or in a smaller yacht 6ft. than 8. The advantages of a comparatively deep yacht are too great to be ignored; but the designer should use every effort to secure a fair average of these advantages without taking an amount of draft that is excessive under the conditions of the case. In the first rough planning of a design it is well to remember in laying out the various dimensions that the height of a man, or about 6ft., is the common measure of both height and length; a headroom of 6ft. under the beams is necessary in order to stand erect; and the fore and aft accommodations are regulated by the length required for sleeping, or about 6ft. 3in. for each compartment.

A very careful survey of the whole situation is necessary in order to decide on such dimensions and general features as will produce a yacht that will fit a certain class under the given measurement rule, and will embody a fair average of those requirements demanded by the individual tastes of the owner.

In most cases the yacht may be considered in two parts: the vessel viewed purely as a floating structure, and the house, including the various living compartments; each opposed to the other. It must be borne in mind that at the outset the vessel is usually limited to a certain length of waterline and a certain extreme draft, and that these of necessity impose certain limits on the size of the house. It is very often the case that the owner after fixing the waterline and draft proceeds to carry out the hull in long ends, builds up a high freeboard and caps the structure with a lofty cabin trunk, giving fine room below; but when he has finished his house is out of all proportion to the vessel which is to carry it and the result is a failure. The limit of length is one that appeals to a man at once as one of the main factors of cost; the limit of draft is also readily appreciated from a knowledge of the waters where the yacht will be used; the natural limits to the expansion of the out-of-water body are quite as real and as rigid, but not as plainly evident at first sight.

Save in exceptional cases, and these only in racing, the way to success in yacht designing is not through the use of certain good features to an extreme extent, but through a thorough harmony of all details of the design, producing a well balanced whole. This applies to dimensions, to the general arrangement and to the actual lines; it is not enough that a part should be perfect in itself, but it must harmonize with all others, and this idea should be before the designer from the start. Later on we shall come to specific facts and figures relating to the selection of dimensions, type, etc., but in this work aid is always at hand, not only in those yachts within reach of the designer, but through the many designs of yachts that are now published in yachting books and periodicals. In default of a long personal experience, such designs afford the material for that comparison which is the basis of practical designing.

The Report of the Regatta Committee.

THE annual report of the regatta committee of the New York Y. C. was made public last week, containing much interesting information concerning the celebrated foul of the second international race. The report gives the usual summary of the events of the year, with winners and prizes, all of which has already been published as the races occurred. The most important part, that relating to the foul, we reproduce in full, as follows:

The Match for the America's Cup.

NEW YORK, SEPT. 7, 10 AND 12.

DEFENDER.—Wm. K. Vanderbilt, ex-Com. E. D. Morgan and C. Oliver Iselin (in command)—of the New York Y. C.—for the club.
VALKYRIE III.—The Rt. Hon. the Earl of Dunraven, K. P., and others—for the Royal Yacht Squadron.

OUTLINE OF CONDITIONS.—It was agreed between Valkyrie and the Cup committee that the match should consist of best three out of five races, over two courses to be sailed in alternation; one, 15 miles to windward or leeward and return, and the other, once around a triangle 10 miles to a leg. The start was to be made from Sandy Hook Lightship, but when the direction of the wind would not permit laying the first course from the Lightship, the start was to be made further out. The preparatory period was ten minutes, and two minutes were allowed to cross the line. The regatta committee could postpone a race on account of fog; they could also postpone the start until 1 P. M., with the assent of both contestants, and from 1 to 3 the matter was left to their discretion; but no race was to be started later than 3 o'clock, the time limit for each race being six hours. Subject to these limitations, it was obligatory on the committee to make the preparatory signals at 10:50 and the start at 11. Reasonable time was to be allowed for the repair of accidents prior to the preparatory signal, and in case of accidents occurring during the race sufficient time was to be given for their repair before the next race was started. But from the time of making the preparatory signal the racing rules applied and the race was on, with all of its responsibilities and obligations.

COURSES, ETC.—The starting points were well out at sea; and as the courses were laid seaward, they were "ocean courses, outside of headlands," as called for by the deed. The turning points were floats carrying a 14x10ft. red flag with horizontal white stripe, on a 16ft. pole. Each float was marked by a two-masted tug showing an 8ft. red ball swung from the triatic stay, from 45 to 50ft. above the water. To distinguish them from other tugs these marking tugs (which were among the largest and most powerful ocean tugs on the United States coast) were instructed to fly no flags unless a float were wrecked, in which case the tug marking it would take its place and display the club burgee in addition to the ball.

The courses were laid by Lieut. C. McR. Winslow, U. S. N. (N. Y. Y. C.), in charge of the ocean tug *Edgar Luckenbach*. In order to reduce the chance of error in laying out the courses, Mr. Winslow, assisted by Lieut. V. L. Cotman, U. S. N., took the tug to the Lower Bay on Sept. 6 and adjusted her compasses by swinging her on channel ranges using a pelorus. He also compared the New York Y. C.'s patent log, which he accepted as a standard, with the tug's log, and found that they differed by "5-100 of a knot in a 6-knot run." The N. Y. Y. C.'s log and the deviation tables obtained from swinging the tug were used in laying the courses. On Sept. 10 (triangular course) Mr. Winslow set the first float and remained to mark it until relieved by Lieut. Henry Morrell, U. S. N. (N. Y. Y. C.), who had assisted in patrolling the start and the earlier portion of the race with the *E. L. Luckenbach*. When relieved, Mr. Winslow delayed at the first turn in order to give both yachts a lead down the second leg, and then proceeded to run the second course, allowing for 20 of easterly deviation, as called for by his tables. Both yachts had already received the compass course for this second leg by signal; the weather was clear, with no sea, and the wind broad upon the quarter; and excepting Mr. Winslow's tug there was nothing on the course (which was only ten miles in length) ahead of the leading yacht, which was Valkyrie, except a small tug well off to the northward and westward. Mr. Winslow recorded the time of setting the second float and of Valkyrie's turning; and as his report shows the float was anchored and the ball displayed when Valkyrie was over two miles distant. Mr. Winslow

CRUISING CANOE YAWL TRENT.—DESIGNED BY W. P. STEPHENS.

Cleveland Y. C.

THE annual election of the Cleveland Y. C. was held on Jan. 8 at the club house and resulted as follows: Com., Geo. H. Worthington; Vice-Com., Percy W. Rice; Rear-Com., P. P. Wright; Sec'y-Treas., Benton D. Munhall; Treas., F. W. Radcliffe; Ass't Treas., R. Carleton; Surveyor, H. Richter; Fleet Surgeon, E. E. Beeman. Regatta Committee, P. P. Wright, G. H. Gardner, W. R. Huntington. House Committee, J. D. Cox, Jr.; F. G. Overbeke; E. W. Radder. Auditing Committee, W. R. Huntington, G. H. Gardner, J. R. Miller.

The following constitute the Board of Directors for 1896: J. D. Cox, Jr., G. H. Gardner, W. R. Huntington, E. W. Radder, B. D. Munhall, L. Allen, G. H. Worthington, F. G. Overbeke, W. P. Francis, H. K. Lyman, J. N. Richardson, P. W. Rice, P. P. Wright, E. E. Beeman, John Barth.

The new club house is now fully paid for and the club is in a most flourishing condition.

Com. Geo. H. Worthington and Dr. E. E. Beeman proposed at this meeting the establishment of an international challenge cup, valued at \$1,000, to be known as the Cleveland Cup and to be sailed for by any first-class schooner on the Great Lakes. There are about a dozen such boats on the lakes, including Priscilla, of Cleveland; Idler, of Chicago; Oriole, of Toronto; Wave Crest and Wasp, of Buffalo, and others. Among the members present \$500 was pledged toward this cup. The racing for it, together with the Cleveland centennial regatta, should give yachting quite a boom, not only in Cleveland, but over the whole chain of lakes.

YACHTING NEWS NOTES.

A meeting of the board of governors of the New Rochelle Y. C. was held at the Grand Union Hotel, New York, on Jan. 13. The following officers were nominated for the annual meeting on Feb. 3: Com., Henry Andruss, slip. Sasqua; Vice-Com., Henry Doscher, slip. Bantsee; Rear-Com., Wm. H. Simonson, yawl Aura; Sec'y, J. C. Lippincott; Treas., B. B. Strong; Meas., H. A. Gouge; Trustees, Ph. J. Krackehl, John W. Rough, E. T. Smythe, G. W. Fuller and O. W. Adams; Regatta Committee, Charles P. Tower, L. Talbot and Wm. N. Bayer; Membership Committee, Eugene Lambden, Wm. S. Spencer and Wm. E. Moore; Law Committee, John F. Lambden and Chas. W. Voltz; Delegates to the Yacht Racing Union, Chas. P. Tower and Henry A. Gouge.

The dispute between the Royal Canadian Y. C., of Toronto, and the Hamilton Y. C. over the Queen's cup sailed for on Dominion Day of last year, and won by Vedette, who was protested by Echo, of the latter club, as measuring over the class, has been referred to the commodore and sailing committee of the Royal St. Lawrence Y. C. for a decision, on the suggestion of the Governor-General of Canada. The decision was unanimous in favor of Vedette.

The annual dinner of the Philadelphia Y. C. was held on Jan. 11 on board the old war ship St. Louis, training ship of the Naval Reserve.

The following nominations for officers have been posted at the New York Y. C.: Com., E. M. Brown, steam yacht Sylvia; Vice-Com., H. C. Ward, schr. Clyde; Rear-Com., L. Cass Ledyard, schr. Montauk; Sec'y, J. V. S. Oddie; Treas., F. W. J. Hurst; Fleet Surgeon, Dr. Morris J. Asch; Regatta Committee, S. Nicholson Kane, Archibald Rogers and Gouverneur Kortright; Committee on Admissions, F. T. Robinson, Charles McK. Loeser, L. Cass Ledyard, Daniel F. Worden and Joseph Stickney; House Committee, E. E. Chase, Arthur Ingraham, H. Edwards Ficken, Robert S. Bourne and Frank M. Cronise; Library Committee, Fordham Morris, A. H. Clark, Theodore D. Zerega; Committee on Club Stations: No. 1, Bay Ridge, W. H. Thomas; No. 2, New York, W. Butler Duncan, Jr.; No. 3, Whitestone, L. L. Clarence McKim; No. 4, New London, Conn., L. Vaughn Clark; No. 5, Shelter Island, N. Y., Tarrant Putnam; No. 6, Newport, R. I., E. P. Sands; No. 7, Vineyard Haven, Mass., G. S. Payson; No. 8, Atlantic Highlands, N. Y., Henry C. Ward.

On Jan. 17 the Hudson River Ice Y. C. elected the following officers: Com., Archibald Rogers, of Hyde Park; Vice-Com., Norman Wright, of Poughkeepsie; Sec'y and Treas., John Hopkins, of Hyde Park; Meas., Thomas Newbold, of Hyde Park; Regatta Committee, Archibald Rogers, Guy C. Bayley, Thomas H. Ransom, C. W. Swift and H. Livingston.

The annual meeting of the Hull Y. C. was held on Jan. 11, the following officers being elected: Com., Wm. H. Crane; Vice-Com., Henry W. Lamb; Rear-Com., Albert L. Pope; Sec'y, Wm. A. Cary; Asst. Sec'y, Caleb Nichols; Treas., James E. Hooper; Meas., Wm. E. Sheriffs; Executive Committee (for two years), Wm. Lambert and J. W. Dutton; Membership Committee (for two years), L. Stewart Jordan and Geo. A. Dill; Regatta Committee (for two years), Clarence V. Souther.

The annual meeting of the Hudson River Y. C. was held last week, the following officers were elected: Com., E. Langerfeld; Vice-Com., J. E. Grover; Sec'y, A. G. Buckholz; Ass't Sec'y, John Kelly; Treas., E. Spencer Peets; Meas., C. Walden; Fleet Surgeon, D. B. Spence, M.D.; Steward, J. T. Hufnagel; Regatta Committee: J. E. Grover, A. G. Buckholz, Wm. Pink and E. Spencer Peets; Finance Committee: John Kelly, Wm. May and J. E. Grover; Board of Trustees: John Kelly, chairman; Dr. E. J. Ranhofer, Joseph Stilger, E. Spencer Peets, John Wallace, C. Walden, E. E. Voelmy, Wm. Pink, J. E. Grover and R. V. Freeman. R. V. Freeman declined renomination as treasurer, after serving almost a quarter of a century in that position.

The Williamsburgh Y. C. has elected the following officers: Com., James Schuessle; Vice-Com., John Lawes; Rear-Com., John Esmen; Rec. Sec'y, Wm. Martin; Oor. Sec'y, Wm. Schleicher; Treas., Joseph Northrup; Meas., Wm. E. Long; Sergeant at Arms, H. Anderson; Steward, J. Clifford; Board of Trustees: Wm. B. Richards, Joseph Lange, A. Fredericks, N. C. Roekell and J. White.

Canoeing.**TRENT.****A Handy Canoe Yawl.**

WE are glad to say that we still receive many applications for designs for small cruising craft such as were in vogue a few years since, before the advent of the *fin de siècle* racer with bronze fin and mahogany double skin; and it is evident that the use of such slow, but safe and comfortable, craft as Vital Spark and Windward has not entirely ceased. This week we have had an inquiry for a canoe yawl from two young men who propose to take a long cruise, which suggests the publication of the accompanying design. With the full details which we propose to give, the little yacht, as she really is, may be built by

any intelligent amateurs who are familiar with tools and in a general way with boat building. The boat described was built by a carriage builder, C. L. Scott, of Gagetown, N. B., who made an excellent job of the construction.

The little keel craft of the Mersey that first gave their name to the type had much to recommend them as safe, snug and inexpensive for the young amateur or the single-hand cruiser, and, apart from racing, they are as good to-day as they ever were.

In this and the following number we shall give the complete building plans for such a boat, which is quite within the powers of a careful amateur builder. The lines of the Vital Spark, built by Bond, of Liverpool, in 1892, are well known to canoeists through Dixon Kemp's "Yacht and Boat Sailing." Some years ago the writer was the owner of an 18ft. boat nominally built from these lines, but by no means what such a boat should be. The various experiences of her good and bad points, the latter predominating, suggested the idea of a new design

TRENT—SAIL PLAN.

on the same general dimensions, but in which the form and details might be considerably improved. After the new design was completed, no opportunity presented of building to it, but it was finally turned over to a correspondent of the **FOREST AND STREAM**, Mr. L. I. Flower, of MacDonald's Corner, New Brunswick, whose canoe and boat cruises on the St. John's River are familiar to our readers. The boat was built in 1890 and is, we believe, still in use, having proved very satisfactory. She was intended, in this special case, for afternoon sailing in summer on Washademoak Lake, an offshoot of the St. John's, and for short cruises with two or three aboard, so the large sail plan shown was given her; for such single-hand cruising in open waters as these boats are mainly used for, a smaller and different rig would be used. The midship section of the old boat was practically retained,

with the same beam, length and displacement, but the draft was increased about 5 in., with a more effective keel outline. The dimensions and elements of the Trent, as she was named by Mr. Flower, are:

Length over all	18ft. 7 1/2 in.
l.w.l.	18ft.
Beam, extreme	5ft.
l.w.l.	4ft. 8 in.
Freeboard	1ft. 2 in.
Sheer, bow	2ft. 9 in.
stern	2ft. 9 in.
Draft, extreme	2ft. 9 in.
mean	2ft. 9 in.
Displacement	2,440lbs.
Ballast, iron keel	1,006lbs.
inside	200lbs.
Area, midship section	3.92sq. ft.
l.w.l. plane	49.22sq. ft.
lateral plane	36.87sq. ft.
rudder	3.90sq. ft.
Fore side of stem to midship section	10ft.
C. B.	9.45sq. ft.
C. L. R.	9.65sq. ft.
C. E.	9.20sq. ft.
center of mast	5ft. 6 in.
Mast, deck to hounds	14ft.
hounds to truck	6ft.
Bowsprit beyond l.w.l.	6ft.
Boom	16ft.
Gaff	10ft.

The foundry weight of the iron keel proved to be 1,006lbs., to which was added 200lbs. stowed close inside. The boat carried her sail well and proved quite fast in sailing in company with other local boats, though she has never raced. Though a crew of two or three is needed to carry full sail in a breeze, the sails and spars are so light that they are easily managed by one man alone. The details of construction, which we shall give next week, have been worked out very carefully to insure a strong, light hull, with as much internal room as possible at a moderate cost, and the work itself would not prove difficult to any one familiar with ordinary boat building.

Steam Launches for Mexico.

The first of several steam launches, of special design for Southern Mexico, has just been shipped by the Marine Iron Works, Olybourn and Southport ares, Chicago, the destination being 3,200 miles from that city. Shipments of this character are safely made by rail for the small and medium-sized launches, but for larger work the same company build only the "complete outfits" of marine machinery and equipment for the native boat builders.—*Adv.*

Rifle Range and Gallery.

Cincinnati Rifle Association.

CINCINNATI, O., Jan. 12.—Messrs. Payne and Hasenzahl shot their third 50-shot match to-day, Hasenzahl winning by 4 points, the scores standing: Hasenzahl 401, Payne 387. The scores given below were also shot to-day by members of the Cincinnati Rifle Association. Conditions: Standard target, 200yds., strictly off-hand, 7-ring black: Gindele.....85 84 80 89 Randall.....77 74 73 62 Louis.....78 75 73 73 Topf.....69 69 63 60 Payne.....88 86 86 84 Speth.....74 76 72 71 Weinheimer.....75 74 71 70 Brumback.....81 74 71 70 Wellinger.....78 75 73 78 Drube.....82 74 71 69 Roberts.....83 82 77 79 Strickmeier.....70 68 67 64 Frank.....68 57 53 54 Murphy.....53 62 56 70 Hasenzahl.....82 82 80 81

Revolver Shooting in England.

LONDON, England, Jan. 10.—The season's shooting at the London Revolver Gallery in Swallow street, Piccadilly, finished on Dec. 31, 1895. Walter Winans won the challenge revolver bowl with a highest possible score, and is now the holder of that trophy. The bowl has to be won three times in succession, at intervals of four months, to become the absolute property of the winner. It was instituted on Oct. 1, 1895, so Mr. Winans is the first holder. The conditions are 6 shots, 20yds., any revolver and ammunition. Mr. Winans used a Smith & Wesson and U. M. C. gallery ammunition, black powder. After making a highest possible, he shot 15 shots more in case of a tie. This was not necessary, as no one else equaled his score.

Zettler Rifle Club.

NEW YORK, Jan. 14.—The scores made at the weekly shoot of the Zettler Rifle Club held this evening at the club's headquarters, 219 Bowery, were as follows: R. Busse.....239 240 243 243 243 H D Muller.....244 241 237 243 243 Dr J A Boyken.....235 241 240 244 244 E Muenz.....234 237 231 235 244 S Buzzini.....238 239 233 239 232 G A Nowak.....235 242 241 244 241 G W Downs.....231 232 242 238 237 F C Ross.....245 240 244 245 247 M B Engel.....238 236 240 240 239 C G Zettler.....244 240 235 240 239 L Flach.....245 244 243 247 238 243 245 244 241 242 246 242 242 246 247 B Zettler.....241 244 245 242 244 H Holges.....238 241 239 243 246 F Fabarius.....185 219 234 218 180

Dominion Off-Hand Rifle Association.

PARRY SOUND, Ont., Jan. 10.—The scores for the January shoot of the Dominion Off-Hand Rifle Association were shot to-day by the different clubs forming the Association; the Bradford Club did not shoot.

The weather was bitterly cold and the scores are below the average owing to the inclemency of the weather. At 200yds. we use an 8 in. bullseye, a 4 in. bull at 100yds. Scores as made:

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Jan. 23-24.—UTICA, N. Y.—Mid-winter tournament on the grounds of the Oneida County Sportsmen's Association; live birds and targets. J. W. Fulford, Manager.

Jan. 29.—YARVILLE, N. J.—Live-bird sweepstake at Fair Grounds; 25 birds, \$25, birds included.

Jan. 30.—ELIZABETH, N. J.—100-target handicap race, \$5 entrance, targets extra. Nat Astfalk, Manager.

Feb. 1.—HOLMESBURG, Pa.—Third team race between All-Philadelphia and the Delaware State League, 26 men to a team.

Feb. 12.—BALTIMORE, Md.—Baltimore Shooting Association Handicap; 25 birds, \$25; no one allowed back of 30yds. Stanley Baker, Sec'y.

Feb. 22.—ROCHESTER, N. Y.—Return match at targets between teams of the Rochester Rod and Gun Club and the Audubon Gun Club of Buffalo.

Feb. 23.—MARION, N. J.—All-day shoot of the Endeavor Gun Club; targets.

Feb. 25-26.—ELIZABETH, N. J.—Sixth bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds.

Feb. 26-28.—DAVENPORT, Ia.—Forest Gun Club, live birds and targets, open to all comers. J. F. Kroy, Sec'y.

March 24-26.—NEW YORK.—Interstate Association's Fourth Annual Grand American Handicap, at live birds at Elkwood Park; \$1,000 guaranteed in the main event, all surplus added.

April 14-16.—CHARLESTON, S. C.—Tournament of the Interstate Association, under the auspices of the Palmetto Gun Club.

April 14-17.—ATLANTA, Ga.—Thirtieth annual open to all, and second annual manufacturer's amateur tournament; \$1,000 added money and manufacturers' prizes. Lou Erhardt, Sec'y.

April 20-24.—HOUSTON, Texas.—Twentieth annual tournament of the Texas State Sportsmen's and Game Protective Association. J. Emmett Harvey, Mgr.

April 22-24.—WELLINGTON, Mass.—Tournament of the Boston Shooting Association; targets. O. R. Dickey, Manager.

April 29-30.—BIRMINGHAM, Ala.—Interstate Association's tournament, under the auspices of the Birmingham Rod and Gun Club.

April 30-May 2.—NEWBURGH, N. Y.—Annual spring tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

May 5-6.—ALGONA, Ia.—Annual tournament of the Algona Gun Club.

May 5-8.—NEW YORK.—Tournament of the American E. C. Powder Company; \$2,000 added money.

May 12-15.—MEMPHIS, Tenn.—Tournament of the Memphis Gun Club, \$2,000 added money.

May 12-14.—DAYTON, O.—Annual tournament of the Ohio Trap Shooters' League. Ed. Taylor, Sec'y.

May 19-22.—CINCINNATI, O.—Tournament of the Hazard Powder Co. R. S. Waddell, Agent.

May 20-24.—KANSAS CITY, Mo.—Nineteenth annual convention and tournament of the Missouri State Fish and Game Protective Association. J. H. Durkee, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 318 Broadway, New York.

In our report of the Larchmont Amateur Championship, which appeared in the issue of Jan. 18, we criticised a decision of the referee, John S. Hoey, in regard to Wright's 94th bird. In that criticism we argued that "the referee was strictly within his limits, the only point we differ on is probably as to opinion." At the time of the occurrence, owing to Mr. Hoey's sudden departure to catch a train, leaving before the ties for second money were shot off, we were unable to talk to him in regard to the bird, our only information being the story as told by Wright. A letter from Mr. Hoey explains the reasons for his decision. "Man and dog were both in the field when the second barrel was fired and a balk was claimed; the bird was hit with both barrels. While the dog was running for the bird (which was within bounds), I asked Wright, 'Quick; do you positively claim a balk?' He replied, 'Yes, it's a balk.' This was before the dog got the bird, which was still in bounds. As he positively claimed a balk, I would not have given him a good bird, even had it been retrieved in bounds; as I acknowledged his claiming a balk, it had to be a 'no bird.' The club rule on this point, as quoted in our issue of Jan. 18, says: 'If in the opinion of the referee the shooter is balked * * * by the trapper or dog * * * he may be allowed another bird.' In Mr. Hoey's opinion, therefore, and he was so situated as to be able to judge correctly, the presence of man and dog in the field did balk Wright, and a balk being claimed he allowed him another bird. Under the circumstances and under the above rule, we repeat 'the referee was strictly within his limits.'

H. S. Lippack, of Dexter Park, Brooklyn, N. Y., announces that he will hold a live-bird handicap shoot at his grounds on Feb. 6, the shoot commencing at 10 A. M. sharp. The following are the conditions: 25 live birds per man, handicaps ranging from 26 to 31yds., 50yds. boundary, \$10 entrance, birds extra; if 10 entries, \$15 added to purse; if 15 entries, \$25; 20 entries or more, \$40; class shooting, four moneys, A. S. A. rules to govern. Entries close Feb. 4, and must be accompanied by one-half of the entrance fee. All communications on the subject should be addressed to H. S. Lippack, P. O. Station E, Brooklyn, N. Y. Jacob Pentz, Major J. M. Taylor and Edward Banks will act as handicapping committee. The above should prove a popular event, Long Islanders not having had a chance of joining in such a shoot for some time.

The annual report of the Knoxville Gun Club is given in another column. In sending us the report, Secretary Van Gilder writes: "I wish more of the gun clubs would follow these same general lines, and let the shooters know what they are doing, even if it is only once a year." We echo Mr. Van Gilder's sentiments, and would point out that it is a fact that a live club has a live secretary, and that it is the live secretary that keeps his club before the shooting public. The natural conclusion is, therefore, when you don't see anything about a certain club in **FOREST AND STREAM** for a month or two that club and its secretary are both dead.

J. Emmett Harvey, manager of the Texas State Sportsmen's and Game Protective Association tournament for 1896, writes as follows under date of Jan. 16: "Please announce that I claim the dates April 20, 21, 22, 23 and 24, for the twentieth annual tournament of the Texas State Sportsmen's and Game Protective Association, at Houston. Open to the world; \$1,000 in cash and merchandise prizes. There will in all probability be a Texas State championship challenge handicap at live birds inaugurated at this meeting, for valuable diamond badge and \$500 cash, 25 live birds, \$25 entrance, badge open to State shooters only, money open to the world."

At the annual meeting of the Endeavor Gun Club, of Jersey City, N. J., the following officers were elected for 1896: President—Z. P. Fletcher, M. D.; Vice-President—Frank Post; Secretary—J. A. Creveling, 371 New York avenue, Jersey City; Treasurer—J. D. Polhamus; Captain—G. H. Piercy; Directors—E. P. Ingram, H. L. Corson and G. H. Piercy. The club had a very prosperous season in 1895, and has increased its membership by 12. It was also decided to hold an all-day shoot at the club's grounds, Marion, N. J., on Washington's Birthday, Feb. 22.

Fred. Hoey shot a marvelous uphill race on Saturday last, Jan. 18 on the Hollywood grounds. With Louis Duryea 4 birds ahead at the commencement of the 76th round, it looked like a foregone conclusion that Hoey would be in the rear when all was over, but by killing 44 out of his 25 he managed to tie Duryea, who lost 5 birds out of his string. Both men scored 86 out of 100; this does not sound such very big work, but it should be remembered that the birds were a capital lot and that the Hollywood boundary is only 21yds.

The South Side Gun Club, of Milwaukee, Wis., held its annual meeting on Jan. 7. The following is a list of the officers chosen for the year: President, John F. Burnham; Secretary, Adolph Gropper; Treasurer, C. W. Milbrath; Directors, T. M. Drought, H. S. Siefeld, and Dr. J. P. Carmichael. The club is formulating plans for another series of State team shoots to take place at its grounds, Lake Station, during the coming season. The Secretary's address is 350 Twenty-eighth avenue, Milwaukee, Wis.

A 25-bird sweep, \$25 entrance, birds included, will be decided on Charlie Zwirlein's grounds at Yardville, N. J., on Wednesday, Jan. 29. Zwirlein writes: "I think I will have 20 entries if half of those who have promised to come show up at the traps. I have a fine lot of birds on hand now and will have about 600 in my coops by the above date, so there'll be lots of birds to pick from." As a general thing, Charlie doesn't have to "pick" much; they're all good in his coops.

In sending us a report of the Rochester-Buffalo target shoot (which report unfortunately came too late for this issue), DeWitt, of Rochester, says: "The Buffalo boys did all they could to make things very pleasant for us (the Rochester team). At the return match, which comes off on our grounds on Feb. 22, the Buffalo team will have a good old-fashioned time which they will not forget for a long time."

Elmer E. Shaner is in the city, making final arrangements for the successful outcome of the Grand American Handicap at Elkwood Park. Elmer regrets that he could not do better than break 16 out of his last 25 in the 100-target sweep at the Herron Hill grounds on Jan. 14. His only comfort is that his grand total of 81 beat the totals of Jim Crow and Old Hoss.

Paul North writes us that the programme for the Chamberlin tournament will be ready for distribution next week. The programme will be a work of art and contains a great deal of information that will be of much use and interest to members of gun clubs and others interested in trap-shooting. Paul adds: "Send stamp for 1896 catalogue and programme of tournament." We'll do nothing of the kind, Paul; we're deadheads, sure.

In writing us in regard to the E. C. tournament next May, Noel E. Money adds a postscript that has a good deal of pith in it: "At San Antonio we took first, second and third averages for the whole five days, while the E. C. cup was tied for by Parmalee and Worthington, both of whom broke 49 out of 50, and both of whom were using our powder."

In our list of guns, shells and powders used by those shooting in the Larchmont championship event on Jan. 10 and 11, we stated that Murphy shot a Purdey gun. This was an error, as Murphy has always of late years shot a Francotte gun, and did so on this occasion, when he won the cup, beating out the best amateurs of this section of the country.

It looks like old times to see the name E. D. Miller in the list of those shooting at San Antonio. It's a long time since Enoch picked up his stakes and joined the boys in front of the traps at any large tournament. Let's hope that this is but a beginning, a turning over of a new leaf for the season of 1896.

The Endeavor Gun Club, of Jersey City, N. J., will shoot a series of team races with the Boiling Springs Gun Club, the first of the series taking place to-day (Jan. 25) on the grounds of the Boiling Springs Club, at Rutherford, N. J., at 1 P. M.

A new gun club has been organized at Cambridgeboro, Pa., under the title of Cambridge Springs Gun Club. It has the following list of officers: President, W. D. Rider, Jr.; Secretary, Clark D. Eckels; Treasurer, F. L. Winchester.

George Work and J. P. Knapp shot a series of four 100-bird races last season, breaking even, each winning two. This season thus far they have shot a couple of races, and in each one Knapp has easily beaten his opponent.

The Forester Gun Club, of Davenport, Ia., will hold a live-bird and target shoot, open to all comers, on Feb. 26, 27 and 28. For further particulars address J. F. Kroy, secretary, Davenport, Ia.

The Algona, Ia., Gun Club will hold its annual tournament on May 5 and 6.

EDWARD BANKS.

South Side Club, of Milwaukee.

MILWAUKEE, Wis., Jan. 16.—At a meeting of the board of directors and officers of the South Side Gun Club, of this city, the prizes for club scores, season of 1895, were awarded to:

Class A: H. F. Seefeld first, 288 out of 300; J. H. Johnson second, 283 out of 300; Dr. J. P. Carmichael third, 277 out of 300; Wash. Okershauser fourth, 271 out of 300; E. Hirschbush fifth, 233 out of 300.

Class B: T. M. Drought first, 291 out of 300; W. C. Holtz second, 262 out of 300; John Muenier third, 258 out of 300; C. W. Milbrath fourth, 254 out of 300; J. F. Burnham fifth, 238 out of 300.

Class C: J. E. Roehr first, 238 out of 300.

Best attendance prizes were awarded to H. F. Seefeld, Class A; F. M. Drought, Class B, and J. E. Roehr, Class C.

The club is getting up a State team shoot for the John F. Burnham medals; 5 members of any regular organized gun club of the State of Wisconsin to constitute a team, 50 targets per man, to be shot off in squads of 4, rapid-firing system, targets to be thrown from 3 traps. Entrance per team, \$10, which sum will be refunded to the team winning against the South Side Gun Club team. The John F. Burnham medals are 5 fine gold medals, and will be awarded to the team making the highest score. The shoots are to take place on Saturdays, beginning about May 9.

The club will also arrange for a State championship team shoot for the Pfister Hotel medals, which are diamond medals valued at \$100, 2 men of any organized gun club of this State to constitute a team; 50 birds per man. The date for this shoot has not been set yet, but we will make it known later.

ADOLPH GROPPER, Sec'y.

Warren Gun Club.

WARREN, O., Jan. 16.—The following scores were made to-day by members of the Warren Gun Club, each event being at 25 targets, unknown angles:

No. 1: R. W. Ewalt 23, W. A. Neracher 16, W. Wakefield 11, A. J. Sutcliffe 9, Stambaugh 11.

No. 2: W. A. Neracher 13, A. J. Sutcliffe 16, Stambaugh 15, C. L. Schoonover 20.

No. 3: C. L. Schoonover 19, W. A. Neracher 17, R. W. Ewalt 22.

No. 4: C. L. Schoonover 22, W. A. Neracher 15, R. W. Ewalt 21.

ROBERT W. EWALT, Sec'y.

Trap at Watson's Park.

CHICAGO, Ill., Jan. 15.—The regular monthly shoot of the Audubon Gun Club, of Chicago, Ill., was held to-day at Watson's Park, Burnside, Ill. C. E. Felton won the club shoot with 13 out of 15, Kleinman and Bingham not being members. Following is the score: C. E. Felton 13, J. E. Price 12, J. H. Amberg 12, H. Foss 11, J. Macaulay 11, C. Morris 6, *G. Kleinman 15, *Eddie Bingham 13, *Barro 11, *Levi 11, *Cummings 10.

Interstate Tournaments in 1896.

PITTSBURG, Pa., Jan. 16.—Editor *Forest and Stream*: The Interstate Association has made arrangements to give tournaments as follows: Charleston, S. C., April 14, 15 and 16, under the auspices of the Palmetto Gun Club; Birmingham, Ala., April 29 and 30, under the auspices of the Birmingham Rod and Gun Club; Portland, Me., July 22 and 23, under the auspices of the Portland Gun Club.

ELMER E. SHANER.

Enterprise Gun Club.

BRIDGEPORT, Conn., Jan. 17.—The Enterprise Gun Club, of this city, held a live-bird sweep at Rye, N. Y., to-day. The main event was a 10 live-bird sweep, of which the following is the score: Morris Beers 10, W. Burroughs 5, Tom Wilson 9, E. James 7, G. Metcalf 3, J. Clarkson 8, Wm. Tuttle 9, V. Blakslee 8, G. Saunders 8, R. Sealey 7, Jas. Wilson 9, Wm. Thomas 7.

Sparrows vs. Pigeons.

WILLIAMSBURG, Ind.—During the past year a good many of us in this section have been shooting English sparrows at the trap and find them very satisfactory. They are as hard to hit as pigeons but I think fewer of the hit ones get out of bounds. In killing sparrows the shooters are riding the country of an unmitigated nuisance instead of killing pigeons, that are so pretty and innocent that it goes against the conscience of a good many men to hurt them, and hurt the feelings of a good many tender-hearted people who do not shoot them. They are cheaper than the pigeons, costing here only 7 cents each. In many places they are so numerous that they could be furnished for a nominal price. Pigeon traps will do to trap them from

HERRON HILL'S BIG TARGET SHOOT

Washington Heights Gun Club

NEW YORK, Jan. 11.—The Washington Heights Gun Club, with grounds at 175th street and Kingsbridge road, held its shoot-to-day six members shooting in the club event, which is at 10 live birds. The pigeons were a good lot of strong flyers, hard to stop when once fairly on the wing. J. A. Belden and C. E. Terwigger tied for first money of 9 out of 10. On the shoot-off, miss-and-out, Belden won by killing birds to Terwigger's 1. J. J. Organ and R. Romer tied for second money, shooting off miss-and-out. Both missed their first tie bird. Organ ultimately winning by killing 2 to Romer's 1. Scores:

San Antonio's Midwinter Tournament.

SAN ANTONIO, TEX., Jan. 11.—The great tournament which closed here to-day demonstrated clearly what pluck and a determination to carry out an object in view can do when the right people are back of it. Few, if any, shooters thought it possible to gather together, away down here in Texas, such a representative body of trap-shooters as stood before the traps in the Jockey Club's grounds, and took part in the midwinter tournament promoted by Messrs. J. M. George, Albert Steves and O. C. Guessaz. Both in quantity and in quality the number of shooters reached the highest point estimated by the most sanguine, and very seldom has there been a tournament that was productive of so much good fellowship, and which gave such general satisfaction to all concerned.

San Antonio's welcome to her visitors was most cordial, the management and the citizens doing their best to make them feel at home. Everything was thrown wide open to them, and all was done that could in any degree make the time pass pleasantly. When Capt. Money said that the only thing he regretted was that the tournament was over, he voiced the sentiments of the crowd very correctly. It is hardly necessary to add that in 1897 all present at this tournament will be found on deck again, if it is possible for them to get to San Antonio, and will bring their friends with them.

LOCATION OF THE GROUNDS.

The tournament took place in the grounds of the San Antonio Jockey Club, about two miles from the center of the city. A line of electric street cars landed shooters at the entrance to the grounds, so that no trouble was experienced in reaching them. The appointments at the grounds were thorough and complete and were up to date in every respect. Everything that one sees at all large tournaments was in evidence, except that there was no awning to protect the shooters, and this was not necessary at all, with the climate of San Antonio at this season of the year to guide one.

The officials and their assistants were well up in their work and the whole shoot ran along without a hitch. The programme each day was finished in ample time to permit of an extra or two being shot off. The programme was strictly adhered to throughout, although some efforts were made to get the management to change the conditions of the State team race, in order that more entries might be had; several States could have entered two-men teams, but the management wouldn't have any change.

Jim Elliott had charge of the traps (five sets of empires throwing empire targets) and the trappers; that everything worked all right may be inferred from the fact that Jimmy shot through the entire programme, and that there was never any delay beyond a single break in the wire of the pulling apparatus. The traps were placed directly in front of the beautiful club house, the property of the Jockey Club, where the shooters found everything at their disposal; nothing was lacking and the house was theirs for the week.

EACH MAN GOT A MEDAL.

When the visitors arrived at the station they were met by the management and escorted to the hotels, where rooms had been engaged for them in advance. Each guest was presented with a souvenir of solid silver in the shape of a medallion, on which was stamped in bold relief a miniature of the Alamo, encircled by the words "Midwinter Tournament, San Antonio, Texas, 1896." On the reverse side, surrounded by a wreath, were the names of the three citizens of San Antonio who had brought the midwinter tournament into being.

In addition to the above souvenir of a great shoot, the management also presented each visitor with a bronze medallion nearly 3 in. in diameter. On one side were the figures of a white hunter and a red man, their guns and dogs being very artistically portrayed; in the background were the tepees of an Indian village; around the edge were the words: "Midwinter Tournament, San Antonio, Texas." On the reverse side were the names of the management, encircled by a wreath bearing the date of 1896. So pleased were the shooters with the souvenirs and the enterprise of the management that, at the close of the tournament, they presented to each one of the three promoters, Messrs. George, Steves and Guessaz, a solid gold counterpart of the silver medal, with a suitable inscription. These were presented to the management along with a resolution of thanks, referred to in the notes, which appear at the end of this account of a big shoot.

It was a cause for much regret that official duties kept Mr. George away from the tournament during almost the entire shoot. Mr. George is postmaster of San Antonio, and on Tuesday he was called away by wire to attend the trial of a man who had sent a certain letter through the San Antonio post office; Mr. George therefore had to appear as a witness against him, and was detained at the trial through the entire balance of the shoot. The responsibility, therefore, of running the shoot and of entertaining the visitors fell upon the shoulders of his colleagues, who were equal to the occasion.

THEY CAME TO STAY.

That the majority of shooters had come to stay was evidenced by the regularity with which the entry lists on each day of the shoot were kept full. Altogether 39 shooters shot through the entire programme; these figures will explain to the initiated how successful the tournament must have been. The highest number of entries in any one event was 64; the lowest (on the last day) 45.

The weather during the whole week was propitious, with the solitary exception that it rained the whole forenoon on Monday, the preliminary day, making it wet and disagreeable under foot. On Tuesday the sun came out and soon dried things up.

On Tuesday, Fred Gilbert, of Spirit Lake, Ia., who recently won the Du Pont Smokeless Powder cup at Baltimore, Md., carried off first honors with a percentage of 94.3.

COULDN'T KEEP HIM DOWN.

On Wednesday, however, Rollo Heikes came once more to the front with a percentage of 93.7. From that point until the close of the tournament Rollo kept smashing the targets in a way that landed him top of the heap when all was over.

The main event on the third day was the contest for the E. C. Powder cup. This event was responsible for some remarkably fine shooting. Frank Parmalee and Redwing tied for the cup on 49 out of 50, Parmalee losing his 34th bird. Gilbert and Redwing ran straight until the 40th round, when both lost one, Gilbert losing another almost immediately afterward. The tie was shot off under the same conditions: 50 targets per man, unknown angles. Parmalee won the shoot-off, scoring 47 to Redwing's 45. In all Parmalee scored 96 to his opponent's 94. Parmalee also won first average for the day with 95.8, the highest yet made.

OHIO'S BIG FOUR.

On the fourth day the main event on the programme was the State team race for four-men teams. Before the shoot it was generally conceded that Ohio's Big Four would win, and so they did, piling up the fine score of 185 out of 200 at unknown angles. The surprise of the day was the excellent showing made by the team representing the State of Illinois, which gave the Ohio men a great race, finally landing in second place, only two breaks behind the leaders. During the day John Conner, of Knoxville, did some great shooting, missing but two birds all day, and running out with a percentage of 93.3 for the day.

The highest average for the fifth day was made by Frank Parmalee, who ran up an average of 97.5.

THE SAME OLD STORY.

When it comes to figuring up the general averages the same old story has to be told once more, Rollo Heikes being in the lead as usual with a percentage of 93.3 for 770 targets shot at. Next to him came O. R. Dickey, of Boston, Mass., but 3 breaks behind Rollo, with an average of 92.9. In third and fourth place respectively came two of the cracks of the country, John Conner and Chan Powers, with 92.7 and 92.4. The table below shows how those who shot right through the tournament averaged for their 770 targets.

SHOOTERS WHO WILL REMEMBER SAN ANTONIO.

Among those present were: C. H. Calhoun, Weir City, Kan.; G. W. Sergeant and J. A. Thurman, Joplin, Mo.; K. M. Moore, Farmersville, Tex.; E. D. Miller, Springfield, N. J.; John W. Conner and Judge Lindsay, Knoxville, Tenn.; C. S. Burkhardt, Buffalo, N. Y.; Miles F.

Miller and Wallace Miller, Austin, Tex.; Frank Parmalee, George Loomis, J. C. Reed and John Field, Omaha, Neb.; C. A. Young, Springfield, O.; C. W. Budd, Des Moines, Ia.; Charles Grimm, Clear Lake, Ia.; H. G. and W. D. Thompson, Paducah, Ky.; John J. Sumpter, Jr., and George Hughes, Hot Springs, Ark.; Joe Genery, Minneapolis, Minn.; William Thielman, St. Cloud, Minn.; F. E. Rodgers, Hiawatha, Kan.; J. A. Jackson, Austin, Tex.; W. C. Hope, Wayside, Miss.; W. Y. Sedam, Denver, Col.; Col. A. W. Adams, Chicago, Ill.; J. A. McIlhenny, Avery Island, La.; Henry Hank, Grand Rapids, Mich.; J. C. Highhouse, St. Paul, Minn.; Chauncey Powers, Decatur, Ill.; Percy Allen, Houston, Tex.; D. J. C. French and Dick Merrill, Milwaukee, Wis.; T. J. Liles, Aurora, Mo.; Tom Marshall, Keithsburg, Ill.; J. E. Haney, Houston, Tex.; T. W. Latham and Ralph Worthington (Redwing), Cleveland, O.; H. G. Wheeler, Marlboro, Mass.; Fred McKay (Pon Jay), Minneapolis, Minn.; L. J. Lockett, Brenham, Tex.; W. H. Wheeler (McGinty), Hempstead, Tex.; F. L. Pfeiffer, Centralia, Ill.; J. D. Smith, Oakdale, Ill.; W. J. Graber, Brenham, Tex.; E. J. Nally, Austin, Tex.; John Ellis, Galveston, Tex.; Bryan Heard, Taylor, Tex.; Oliver Lippincott, Jr., Waco, Tex., and W. A. Settle, Madisonville, Tex.

The sporting goods dealers and manufacturers were well represented: R. O. Heikes, J. A. R. Elliott and Ferd. Van Dyke representing the Winchester Repeating Arms Company; O. R. Dickey—Parker Bros., of Meriden, Conn.; Fred Gilbert and Ralph Trimble—Du Pont Smokeless; B. A. Bartlett and C. A. Damon—Burgess Gun Company, of Buffalo, N. Y.; J. H. Mackie—King's Smokeless; T. H. Keller, U. S. Cartridge Company; Capt. A. W. Money—American E. C. Powder Company, Oakland, N. J.; E. D. Fulford—Schultz Powder and Shooting U. M. C. factory-loaded ammunition; U. M. C. Thomas—the representative of the U. M. C. Company, of Bridgeport, Conn.; W. H. Skinner—W. A. Powder Company, of New York.

EACH DAY'S SCORES.

The following tables give the totals of each day's scores, with each man's score in any one event, together with his average for the day:

First Day—Jan. 7.

Sixty-six shooters in all took part in to-day's events, the scores and averages being as below:

BURPEE'S SEEDS, Philadelphia

A postal card addressed as above will bring you BURPEE'S FARM ANNUAL for 1896, if you intend to purchase seeds, otherwise the price is ten cents (less than cost). It is a bright BOOK of 184 pages, with hundreds of illustrations and colored plates painted from nature. It tells all about the BEST SEEDS that grow!

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 98 pages. Price \$1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO., 318 Broadway.

Publications.

The Story of the Indian.

By GEORGE BIRD GRINNELL, author of "Pawnee Hero Stories," "Blackfoot Lodge Tales," etc. The first volume in the Story of the West Series, edited by RIPLEY HITCHCOCK. 12mo. Cloth, \$1.50.

The object of this series is to preserve the picturesque and individual types of a life in the real West which is rapidly fading away, and to offer the romantic stories of the Indian, explorer, cowboy, miner, soldier, and other representative figures in a permanent form. Mr. Grinnell's intimate personal knowledge of his subject has enabled him to draw an admirably graphic picture of the actual Indian, whose home life, religious observances, amusements, together with the various phases of his devotion to war and the chase, and finally the effects of encroaching civilization, are delineated with a certainty and an absence of sentimentalism or hostile prejudice which impart a peculiar distinction to this eloquent story of a passing life.

It is simply a true story of an interesting and fast disappearing people by one who knows them well and intimately. . . . It is readable from cover to cover—as readable as one of Cooper's novels.—*Jeannette L. Gilder in Chicago Tribune.*

The author is master of a peculiarly clear and graphic style and his book has a most fascinating interest.—*Boston Advertiser.*

For sale by all booksellers and by
FOREST AND STREAM PUBLISHING CO.,
318 Broadway New York.

"Outside the Danger Line."

Mr. Wilmot Townsend's new drawing, "Outside the Danger Line," depicts a flock of broadbills alighting; and the study of action will readily be recognized by observing gunners as true to the life. The scene is on a calm day, when, with nothing to alarm them, the ducks have concluded to rest a while far from shore. Reproduced by the artotype process, the plate being 16x21 in. Edition limited to 100. Price is \$3.

FOREST AND STREAM PUBLISHING CO.

THEN AND NOW.

"THE good old days," a phrase so often uttered with tenderness and regret, appeals to nearly every hearer who has arrived on the middle ground of life, where work is earnest and pleasure-seeking is only for times often far between. The good old days, associated with the hopes and pleasures of youth and mellowed in memory by the passage of time, seem better than all other days.

Then, as pictured in memory, everything was rose-colored. Friends were truer, hospitality was greater and more genuine, human nature was better, and the game birds, animals and fishes were more abundant. The sun shone brighter, the birds had sweeter songs and the flowers were more beautiful. There were no irate land-owners who rudely ordered the wandering shooter off their grounds, nor were there fears of the more methodical ones who posted up notices tersely proclaiming that all hunting was forbidden on their premises, and that trespass would be followed by prosecution to the extent of the law.

The shooter with gun and dog simply sauntered forth at pleasure. Sport then seemed to have a zest which is absent from the changed conditions of later years. The times seemed more pleasurable and life was more worth the living. And yet no legend is more deceiving than that of "the good old times."

In youth or early manhood everything is comparatively new and novel. Life is accepted for all it appears to be on its face, and the future seems to be a perspective of pleasure, success and happiness. In youth everything seems to reflect one's own faith in the beautiful, the good and the useful. The cares, labors and responsibilities which accumulate as the years pass by, and the hard lessons which life teaches to all, are unknown. When they do come, greater knowledge comes with them, and the individual is prone to think that the world is changing when the change is in himself.

Sportsmanship is no exception in the estimate in respect to things of the good old days. Regrets for the pleasures and better ways in the sportsmanship of times gone by are not uncommon.

And yet what we are pleased to call the old ways and old methods are not old when measured by the lapse of time. The muzzleloader with its percussion cap is now considered obsolete. The flint-lock gun is now a relic whose associations and uses seem to be far back in the vague and ancient past. Yet it is but a few years since the muzzleloader was in common use, and elderly sportsmen are still living who have shot many days afield with the flint-lock gun. Changes have followed changes in such rapid succession that the transformation process has left a great distinction between the so-called old and the new. The practice of sportsmanship has been revolutionized. The improvement in sporting implements and their uses has taken place so gradually and so naturally that they have been accepted as a matter of course. The innumerable intermediary stages between the practical sportsmanship of to-day and that which obtained twenty-five years ago have been stages of incessant improvement. The lapse of time between the old and the new has been within the lives of men who are yet active hunters. The old methods were once their methods. The old ideas were then the best. They were in the good old days. In reverting to those days, who would really care to be thrust back a quarter of a century in the world's progress?

In those days the hunter was forced to rely on his own ingenuity, skill and industry from the time he resolved on a hunting trip till its realization. Did he need gun wadding, he must use his judgment in selecting it from such refuse material as had incidentally such texture as would serve his purpose, hence the common use then of old newspapers, hornets' nests, etc. Old cardboard boxes and old shoes were approved by the more painstaking hunter, who with mallet and wad cutter laboriously punched out one by one his supply of wadding. He was venerated as a man of exact science, for did not his tight-fitting wads drive the air through the nipples with a sharp hissing, and was not his loading done so quickly as to appear marvelous?

The hunter then carried his powder in bulk, sometimes loose in his pocket, or in the original brown paper package as it came from the store, or in a bottle or tin spice box; and it was much the same with the shot. The perfect equipment was a metal powder flask with fantastic hunting scenes stamped in relief on the sides and a leathern shot pouch, both of which were carried slung over the shoulder. In loading, all was left to individual judgment. The powder was poured into the palm of the hand till the shooter's eye was satisfied. The same measure served for the shot.

Did the hunter use a rifle, he cast his own bullets, cut his own patches, and had his own personal theories as to the best loads and the best twist to make the bullet "hold up." For success, it was necessary that he should know the habits and haunts of the game; in short, he must have a knowledge of woodcraft. He had to rely on his own efforts. Gossip with his neighbors and local comparison of methods were his sources of improvement.

How changed is the new order of things. The hunter of to-day, in an age where specialties have made rapid action and enhanced the value of time, determines to take an outing or "go on a hunt." He consults FOREST AND STREAM for the whereabouts of the best game country and finds information covering the ground from ocean to ocean. He consults the Game Laws in Brief and finds the laws of all the States. He takes a parlor car and rides swiftly to the very middle of his game country. He employs a guide who furnishes all the lore of the woods. He takes a rifle or shotgun using fixed ammunition. To reload he has but to push a lever. In short, he is brought directly to the game with no cumbersome detail to delay him, and to enjoy his sport he has but to aim and pull the trigger. As between the bang of the gun in the old times and the bang of the gun in the new, there is a difference.

THE NATIONAL PARK BUFFALO.

THE testimony taken in the case against Courtenay, the buffalo killer tried last December in the Yellowstone Park, shows very clearly how weak the case against him was. While it may very probably be that Courtenay killed these buffalo in the Park, it is yet within the bounds of possibility that they may have been killed in Idaho, and the Government evidence contained nothing which directly connected Courtenay with the Park. The testimony for the defense was direct, and though some of it appears to have been flat perjury, yet the burden of the evidence could not be disregarded.

The arrest and trial of the man Courtenay can hardly fail to have a good effect on the Idaho poachers, who from it have learned that Capt. Anderson is well acquainted with their methods. He has had detectives living right among them for a long time, and their reports have taught him not only what men he must look out for, but how and when they perform their wicked work.

It must not be forgotten that it is the great State of Idaho that is responsible for this most recent slaughter among this diminished herd of buffalo. A few years since the Idaho statutes protected the buffalo, but a new law—passed, we believe, in 1893—repealed the protective clause and left any one who wished to do so free to kill these animals in Idaho. There are not a few well-informed people who assert that this repeal was passed at the request and for the benefit of the Henry's Lake poachers, who were sharp enough to see that the repeal would give them free license to prey on the Park herd. For at that time there was no Federal law protecting the Park and its game. It is hoped that before the last buffalo shall have been killed the State of Idaho—though so late—will pass a law protecting these animals.

At a meeting of the Board of Regents of the Smithsonian Institution held recently in Washington, it was proposed to capture the Yellowstone Park buffalo *en bloc*, and to transfer them to the National Zoological Park at Washington. Here is a proposition for the lawful extinction of the wild buffalo in the United States which is most extraordinary, and could have been made only by people who are ill-informed respecting the animal in question and of the regions which this herd inhabits. We believe it to be true that no adult buffalo captured and closely confined has ever lived more than a few hours. At all events we have personal knowledge of many cases in which buffalo have been caught and tied up for transportation, but most of the individuals died within an hour and all within a day. The capture and close confinement of the adult buffalo of this herd would mean to

them death as certain as the bullet of the poacher could bring. If such a capture could be made the Smithsonian Institution would have a lot of heads and hides, but the buffalo would be extinct indeed.

However, the rough, broken and wooded character of the country where the buffalo inhabit makes it quite certain that no attempt at wholesale capture can be made. Probably none will be attempted, but if it be attempted it is foredoomed to failure. A few animals may be captured in Captain Anderson's buffalo trap, and in course of time may be so gentled that it may be possible to ship them, but even this cannot be done without great risk.

The Yellowstone Park buffalo should be protected and allowed to increase. It will not be time to try fool experiments with them until after they have become more numerous than they are at present.

SNAP SHOTS.

The non-resident license system for visiting sportsmen came up for consideration in the recent meeting of the Maine State Sportsmen's Association. The plan of such a tax was suggested as a remedy for out-of-season game killing in the woods. Violators of the law, it was alleged, were principally sportsmen from other States; and to put an end to their killing game in September a tax of \$10 was advocated for the license to take moose in season, and \$5 for deer. The convention did not indorse the proposition; and even if it had done so, we question if the Maine Legislature would have followed the recommendation.

Just how the purchased privilege of hunting in the open season was to prevent illicit slaughter in the close season was not explained. It is something which we have never yet seen clearly explained by those who recommend the non-resident tax system. Neither has it been demonstrated in actual practice where non-resident restrictions have prevailed. So far as our observation goes the demand for non-resident tax licenses comes from quarters where the game has been cleaned out by residents and non-residents working together in season and out, killing for sport and killing for the market; and the proposed recourse to a non-resident law is to provide something new in the way of legislation, where there is already quite sufficient legal restriction if it were half-way enforced.

Our estimate of these non-resident discriminations as being un-American in spirit has been expressed frequently and freely. Such considerations aside, would it be good business for Maine to impose a penalty upon her visiting sportsmen? There is no other State in the Union whose fish and game interests constitute such an important natural resource. Sportsmen visitors leave in the State hundreds of thousands of dollars every year. The revenue is increasing annually with the growing hosts of tourists. No one questions that if the game supply shall be maintained the revenue will continue. As a business proposition, then, the policy to be adopted by Maine would appear to be this: Encourage the coming of sportsmen and keep up the supply of game to bring them into the State. That is the system to bring money into Maine pockets. It is a system which is perfectly practicable with the laws already on the statute books.

Our correspondent H. W. DeL. alleges that sportsmen are actuated by selfishness in their discussion of the various phases of game legislation and game protection. What if they are? Personal interest is an impelling motive in most walks of life, where it is recognized as perfectly natural and altogether commendable. Why should it not obtain in the activities of sportsmanship and game protection? The fact that one is a sportsman does not eradicate his human nature. More than this, self-interest or selfishness is the impelling motive to the active agency of which we must look for the accomplishment of whatever is attained in these fields as in all others. If it had not been for the alertness of the multitude of sportsmen, each individual prompted by his personal self-interest, and so all together working for the common good, we should have been in a much worse condition as to game supply than we are.

We are informed by a sportsman who resides in the deer district of Long Island that there are constant violations of the law protecting deer. Since the death of Mr. Benjamin some weeks ago, there has been no one to take proper interest in the law's enforcement,

The Sportsman Tourist.

UNCLE LISHA'S OUTING.—X.

Le Feu Follet.

THE northern horizon was glowing with the pulsating flame of the aurora, and the dark forest of the eastern shore echoed at intervals with the solemn challenges of the horned owls, remotely answered by their brethren who held sway over the somber realm of the Porterboro woods that stretched their dark expanse along the west bank of the South Slang and beyond the sluggish rivulets of its source.

"'Cordin' tu the signs we're a-goin' tu git some sort o' fallin' weather," Uncle Lisha remarked as he gave an eye and ear to these prognostics of a storm.

"The north'n lights is shinin' tol'able bright," said Joseph, peeping through the trees at the celestial display. "If the sun hain't crawled 'raoun' an' sot back side o' Canerdy. 'Roarer Borer Alice,' Solon calls it."

Antoine rolled himself off his seat onto all fours, and in that position intently regarded such glimpses of the flickering arch as could be seen between the tree trunks that stood in black relief against it.

"Wal, Ah'll a'n't hear it roar, me, but Ah'll can see it bore some in de sky. Dat was what Solon prob'ly call it de borer Alice for, a'n't he? But Ah do' know what for he'll call it roarer, hein."

"Wal, the fact on 't is, Solon val'es words 'cordin' tu the bigness more 'n the meanin', seems 's 'ough," Joseph explained, while Antoine, turning his searching gaze to the creek, descried a light moving about in the black shadows of the further shore.

"Look, see dar!" he said in a suppressed tone of alarm, as he pointed to the moving light. "Dat was de feu follet!"

"Few follies is better 'n many, Ann Twine," said Uncle Lisha; "but that 'ere hain't nothin' but someb'dy nuther wi' a lantern."

"O, no, no, no, Onc' Lasha, dat a'n't belamprin, sah; dat was feu follet! Ah do' know haow you call it in Angleesh, but he was very bat t'ing, Ah tol' you."

"What is 't, Ann Twine?" Joseph inquired; "sort of a one-eyed lew grew critter sech as you was a-tellin' us on oncte?"

The Canadian watched the light till it vanished in fitful gleams among the woods, and then heaving a sigh of relief he turned and stooped to the camp-fire to rekindle his neglected pipe before he answered.

"No, seh, Zhoeff, he'll a'n't so hugly for keel someb'dy lak de loup garou; he more kan' o' funny for fool-ish somebody. Ah'll had some experiments of it mahsef, an' Ah'll goin' tol' you of it, me."

Before seating himself at the fire he looked again in the direction where the light had disappeared. If he had been given the vision of an owl he might have seen a boat with two figures in it stealthily landing at the further shore; but the faint light of the aurora, that barely defined in dimmed silver the course of the channel, revealed nothing to him.

"W'en Ah'll was leewe in Canada," he began, as his pipe responded satisfactorily to his energetic drafts, each ending in a smack like the stroke of a paddle blade upon the water, "one tam, w'en Ah'll han't more hol' as 20 year an' was goin' for see de gal one naght—he a'n't Ursule, but nudder one dat Ah tink more of as ev'rybody dat tam," he paused a moment in dreamy retrospect of long past days when eyes were bright and cheeks were rosy that now were dim and faded, and then resumed, "wal, seh, Ah'll was rode 'long on mah leetly mare. Oh, he was good one, Ah'll tol' you, for draw, for rode, for go fas—ev'ryt'ing 'cep' t'rashin' machine, dey a'n't gat it den, an' it was kan' o' daks in de naght, an' Ah'll see lit over in mah fader, hees farm where dey was be some swamp side of de meader. Ah'll a'n't know if he was somebody steal de hay or what he was do, but Ah'll tink he a'n't gat some beesness dar, an' Ah'll go see what he was do. So Ah hitch mah hoss—dat was, mah mare—on de fence an' gat on de lot for see what Ah'll see."

"Ah'll go very softle as leetly maouses, but more funder Ah'll go de more funder de lit was go. Den Ah'll begin for run fas, but he run more fastes' as Ah was, an' den Ah'll gat mad an' run more an' more faster, an' de more Ah run de more Ah'll gat mad, an' de more Ah'll gat mad de more Ah'll run an' holler sco'ndrel name to it an' tol' it for stop, an' what beesness he got, go to diab' for see his Onc'—ev'ryt'ing Ah can tink me, but he jus' jomp raoun' dis way, dat way on de swamp an' say not'ing, only mek motion, an' dat mek me so mad Ah'll run on de swamp at it."

"Ah'll fregit Ah'll gat on all mah bes' clos'. Ah'll gat mah new moccasin, mah bes' tow traowser, mah han'-some shirt mah mudder weave pruppis, an' seh, fus' Ah'll stubble mah toe an' sloop! Ah'll go all over raght on de black mud an' water. Den Ah peek up mahsef' careful, an' w'en Ah scoop de mud off mah heye, Ah'll see de lit go dance 'way off 'cross de swamp where somebody can never go, an' den Ah'll know it was de feu follet, an' Ah feel 'f Ah'll a'n't wort' much, me."

"Wal, Ah go back where mah mare was, spluck, spluck, in my wet moccasin, an' seh, mah mare he a'n't dar. He gat scare an' run home, an' Ah gat for go 'foot all de way; spluck, spluck, all de way. My clos' all sp'il up so Ah'll can' go for see de gal dat naght, an' sem naght nudder feller go an' see it an' cut me all off, so Ah'll lose it. Dat was pooty bad lucky for me, but not so very bad, for den Ah'll go marry Ursule, an' she more as feefy paoun' bigger as dat gal."

"Why, man alive, what you was a skivin' raoun' in the maash arter wan't nothin' but a jack o' lantern. I s'pose it's fox-fire 'at's broke loose from rotten wood an' sich, an' goes fluripin' an' driftin' 'raoun'. But what you seen over yonder was jest someb'dy wi' a lantern, Samwil's niggers a fishin', like 's not. I wonder what's come o' Samwil," and Uncle Lisha got up and moved restlessly about, peering out upon the creek and toward the landing. "Good airth an' seas! I don't see what in tunket he wants to be a rarin' 'raoun' nights for, when honest folks ort to be abed. I wouldn't never ha' come here with him 'f I'd s'posed he was goin' tu cut up so. I'm a dum good min' tu go tu bed an' let him go tu thunder, I snum I bel!"

Preparatory to the execution of this threat he retired into the tent and spread his blankets, but presently came

forth, sat down by the fire and lighted his pipe, emitting snorts of impatience between silent intervals of listening. The owls had quit their dismal calling and not a sound was to be heard from the woods nor waters save the occasional splash of a fish or a waterfowl or a muskrat busy with its nightly labors.

"What ye s'pose has become o' that 'ere tormented boy?" Uncle Lisha demanded sharply, after some inward fuming at the apparent apathy of his companions, "or don' ye car' whet'er he's draounded or lost in the maash? Why don't ye say suthin'?"

"Wal, Ah guess Sam gat hol' 'nough for took care hee-sef' of it, prob'ly," Antoine answered with some sharpness. "He'll a'n't leetly boy, a'n't it?"

"I was kinder meditat'in' it over in my mind," Joseph said apologetically, "an' I don't seem tu feel r'al'y oneasy 'baout Samwil, ner yet ezackly easy, it don't seem 's 'ough. It's a-gittin' consid'able kinder late, an' then ag'in it hain't so late as it might be."

"I wish't I had a rope hitched 'raoun' his neck, I'd fetch him almighty quick. I don't see what in tunket's come o' him," and Uncle Lisha stumped about, making the circuit of the fire, and gazed out into the surrounding darkness. "Wal, it's high time honest folks was abed, and I'm a-goin' right stret off."

Again he retired within the tent, where he could be heard laboriously pulling off his boots, and with deep-drawn sighs disposing his stout form upon his low couch. But not many moments elapsed before he reappeared in his stockings. Uncle Lisha deigned no reply to the Canadian, but asked anxiously:

"Wal, Onc' Lasha, you a'n't so hones' you tink you was, a'n't it? Hain't that 'ere tarnal boy come back yit? Wal, I swan." Then after a moment of intent listening, "Wal, I'm a dumbed good min' to holler, anyway. I c'n make him hear if he's alive with'in a mild o' here."

As he drew in his breath for a mighty shout they heard disturbed waterfowl, one after another, nearer and nearer, taking sudden flight, the flutter of uprising and cries of alarm continually drawing nearer, till at last the thump of a paddle was heard at the landing, and then the lantern began to sway and undulate, now hidden behind a tree or knoll, now shining brighter till it's sprinkled light disclosed Sam's illuminated legs quite close at hand.

"Wal, folks, here I be," he announced as he let the full light of the candle upon his face through the open door and then extinguished it with a puff.

"An' high time 'at you was," and Uncle Lisha spent his hoarded breath in a growl. "What ye be'n shoolin' 'raound these 'ere ma'ches for, a ketchin' the fever 'n' aig an' freezin' tu death? I'm a tarnal good min' ter shake ye, so I be. Sed daown there by the fire an' warm ye whilst I put on some more wood. An' say, Ann Twine, hain't ye got a col' duck for him an' a hunk o' bread? I know he's hungry."

"I hain't a mite hungry, ner cold nuther," Sam declared, seating himself by the fire and preparing for a restful smoke. "On'y a leetle mite tired. I staid tu Mr. Bartlett's longer'n what I meant tu an' it's kinder slow poky work a-keepin' the channel in the dark 'specerly in the Slang. I'm sorry you got worried."

"Sho, I wan't worryin' none, but I was a leetle riled," said the old man as he ran his hand down Sam's long shank. "Why, your laigs is kinder damp. You want to dry 'em good 'fore you go tu bed! I'm a goin' naow, tu stay."

"Hol' a'n't worry!" Antoine scoffed. "Bah gosh, seh, he was be fusster, fusster raoun' more as one hol' sheekin wid one hen."

"Yah, if you ever tol' the truth folks 'ould b'lieve you oncte in a while," Uncle Lisha growled back from the depths of the tent, where, after a prelude of sighs and yawns, there came a regular succession of sounds where-with he was wont to proclaim his presence in dreamland.

"Wal," said Joseph sleepily, "I s'pose if I don't never go tu bed I shan't never git up, an' it's the wust o' goin' tu bed 'at you du hafter git up some time er nuther," and he went to join Uncle Lisha.

"Say, Sam," Antoine whispered cautiously, "Where you was, hein?"

Sam cast a scrutinizing glance upon him as he answered, "Why, up to Mr. Bartlett's. Where d'ye s'pose. Le's go tu bed."

ROWLAND E. ROBINSON.

THE TALKING PINE.—III.

The Wind Dance.

"COME, T'solo the wanderer, when the wind is strong in the southwest, and see the wind dance and hear the wind song of the pines." So said my friend, the Talking Pine, when we parted the last time.

This wise pine, which is so old that it can remember the first white man's coming, had promised to tell me the secrets of the woods and this was to be the first lesson, so when the wind came from the southwest I got in my canoe and journeyed across the Lake of the Mountains until I came to the place where the wise one lives.

The Talking Pine and all his large family and all their relations were dancing the wind dance and singing the wind song when the canoe scraped the sand.

The Talking Pine saw me and nodded his head, but did not stop dancing, for you must know that when the pines once begin dancing they will sing and dance the wind dance just as long as they can get the wind to help them with the music. They love to swing and sway with the wind that comes from the sea to help them sing, and you know the pines cannot sing alone and they always sleep when the wind goes away.

I came to the foot of the Talking Pine so he could talk as he danced, and he told me why the pines dance the wind dance and sing always when the wind is in the southwest. This the Talking Pine said about the wind dance:

"Many, many years ago, before I was born, or my father or my father's father was born, when the Wind was still a little boy, there were many strange and horrible creatures in the world and they were always at war."

"Far away to the southwest was a Skall-lal-a-toot that the wind loved to play tricks on."

"This Skall-lal-a-toot had a daughter about the same age as the Wind, and the Wind loved the little one for her winning ways and pretty face, for you know they are all this way. The old Skall-lal-a-toot loved his daughter very much too, and hated the Wind because he was always traveling and playing tricks, and had a bad temper."

When the Wind got old enough to marry he went to this girl and wanted her to go away with him to his lodge. She was willing, but the old Skall-lal-a-toot was very angry and hid his daughter.

"Now, you know the Wind can make himself very small and invisible too, so he came in the night and took the Skall-lal-a-toot's daughter in his arms and started away across the big water to take her to his lodge. Soon the old Skall-lal-a-toot missed his daughter and went to find the Wind and get his daughter back, and at the same time to punish the Wind for the trick he had played on him."

"After a long journey he overtook the Wind, and while the Wind slept he took his daughter and then struck the Wind so hard on the head that he was like a dead man for a long time."

"Then the old Skall-lal-a-toot took his daughter and started for home again."

"When the Wind woke up he was pelton in his head, crazy the white men call it, and he could not remember anything, and had lost the power to change himself back to his visible shape again, so now you can only hear him sing, but can never see him."

"After a long time the Wind remembered that the Skall-lal-a-toot's daughter was with him, and he thought she had been stolen, so he went to look for her."

"The Wind was very strong in his body because he was wrong in his head, and he traveled very fast and got very angry when he thought of the old Skall-lal-a-toot, and at last he overtook the old man with his daughter and fought him a great battle, away out over the big water. Soon the Skall-lal-a-toot was forced to drop his daughter and take care of himself, and when her father let go of her the girl fell down into the big water and was drowned."

"Then the Tah-mah-na-wis took her up in the sky so the Wind could not see her always."

"The white men call her the Moon, but they do not know why her face is white like the face of a drowned person or why you can always see the ghost of the moon in the water when you look on moonlight nights. That is because she was drowned in the big water, and now she must always stay there until the Wind finds her, and the Wind is crazy and does not know her face, but travels always and looks for his wife and sings to call her from the woods."

"The Wind thinks the pines know where his wife is, and he is always singing to them to tell him, then he gets crazy again and thinks she is with him, and he goes away laughing and singing."

"The Wind loves to dance and to sing, and the pines always help the poor fellow and he tells them many things that he sees in his travels."

"He is not always crazy and then he moans and cries for his wife and looks everywhere, but soon he gets crazy again and sings and shrieks, and rushes along looking for the old Skall-lal-a-toot again."

"The Tah-mah-na-wis changed the wicked old Skall-lal-a-toot into the sun and put him in the sky, and now he is always running away from his daughter and she is always following him."

This the Talking Pine told me as he danced the wind dance and sung the wind song.

"I would sleep now, T'solo the wanderer," said the Pine when the Wind went away.

"When there is more to know I will tell you by a message and you will come then, T'solo the wanderer, and we will see more."

Then the pine slept and I came again to my lodge.

EL COMANCHO.

BEE HUNTING.

Editor Forest and Stream:

The communication on bee hunting in your columns has stirred my old memory box clear down to the bottom. Next to hunting and fishing, "bee lining" was the pride and joy of my boyhood days. When the boy grew to manhood it was a toss up as to which of the three sports afforded greater pleasure.

You say in your pleasant editorial on the subject, "Who shall say that bee hunting may not become a fine art among sports, and that in the increasing dearth of fish and fowls and beasts of venery the wild honey bee may not come to be legitimate game, and the hunting thereof the contemplative man's recreation?"

I say amen to this sentiment, and would add: That the lover of sports who has never enjoyed the pleasure of bee hunting has missed one of the most enjoyable things of this life.

It would be useless for any one to attempt to "line" bees without some knowledge of the manner in which the sport is conducted. For the benefit of those who may desire instructions, I will give the method followed in the State of Maine, where "bee lining" is reduced to a fine art.

First, let us start right. The sport is not called bee hunting for the same reason that trout fishing is not called trout hunting. "Bee lining" is the term used.

The first requisite is a bee box. The dimensions are usually as follows: Length 6in., width 4in., depth 3½in. The box is in two parts, connected by brass hinges. The lower part, or bottom, is 1½in. in depth. The upper part is fitted with a slide at the bottom and glass at the top. The slide should be the full width of the box, and when closed should project about 4in. The projection can be whittled down into a convenient handle. Fit a piece of empty honeycomb into the lower half of the box if you can get it, otherwise use a block of wood filled with shallow holes. Your box is now ready to take into the field.

You will have to procure some strained honey, the pure article; made honey don't go. Dilute your honey with water—about one-third water. The pure honey is too thick to run well when you are filling the empty comb, and it takes the bees too long to load up. Besides the bees daub themselves and are worthless while they are cleaning their wings and bodies. Do not mix over one-half pint of honey and water at a time, as the mixture sours in warm weather.

The next requisite is a slender staff about 4ft. in length. Whittle one end to a point and nail a shingle or small piece of thin board on the other end.

A light axe and a compass should be added to the outfit and then you are ready for business.

When you find a locality which you think will afford wild bees thrust the staff into the ground and you have a handy stand for your bee box. Take the empty piece of comb out of the box and go in search of bees. When you

find a bee on a flower open your box and thrust it over him, immediately closing it. Turn your box glass up, pull out the slide and the bee will come to the light; close the slide and you have your first prisoner. Follow this up until you have the required number. Most "bee liners" catch only odd numbers—three, five or seven. Seven is usually the limit. It takes so much time to catch a larger number that the first bees caught grow restless and will not "line."

One might think that trapping bees was unskilled work, and that the amateur could equal the expert, but this is not the fact. In any locality where wild bees abound tame ones will also be found. The amateur would not know one from the other, while the expert would seldom make a mistake. He would know the wild from the tame bees not by any distinguishing mark, but by their actions. The tame bee is acquainted with man, and when approached will drop off the flower, swing to and fro before the intruder, as if scolding him for his intrusion, but finding he will not go away concludes to seek other flowers. The expert would not follow him, but the amateur would probably chase him till caught. The wild bee will usually cling to a flower till brushed off. The expert knows the bees apart because the tame bees are wild and the wild bees are tame.

You will now take your bees to the stand. Put the comb in the lower part of the bee box and turn on the honey. Now close the box and pull out the slide. Exclude the light with your coat or a soft hat and the bees will soon find the honey. After the bees get to work gently open the box. The first bee to load will rise 1ft. or more above the box, swing to and fro, examining the whole outfit, until he is satisfied that he can find the spot when he shall return. He will then commence to fly in circles, the circles increasing in size as he rises higher and higher. The other bees will follow the same line of action.

The bee evidently finds the way to the hive through his keen sight. In the "bee lining" affair he is carried in a box until he is bewildered and lost. The only course open to him is to rise and circle, that he may see some familiar landmark by which he may shape his course to the hive.

The bee will circle the second and sometimes the third trip, after which he will drop off the box and go directly to the hive. It would seem that a bee is very much like a human being, and must become familiar with a path to be assured of the right direction.

It takes a bee anywhere from ten to thirty minutes to make a trip, owing not so much to the distance as to other things, one of which is a long crawl into and out of the tree.

It will take three hours or more to get the bees to work in any great number. You need not wait so long, but can commence work so soon as some of the bees give you the course. Do not expect a "bee line." You will have to look in the books for that. While a bee keeps to a general course, he swings a good 50ft. each side of a straight line.

You will now be guided by circumstances. If the line is to a narrow strip of woodland, and you know there are open fields beyond, you must imprison a few of your bees, pull up the staff, and with your whole outfit remove to the other side of the woodland. Set up your stand and handle the bees just as you did before. If you find the bees take the back track you know the hive is in that belt of woodland. If the bees go the other way you have saved yourself the useless work of searching the trees on or near your line in said woodland. Some of FOREST AND STREAM's correspondents claim that the bee will not return if carried by the hive or tree. I have carried bees by the hive scores of times, and I can remember but one time when they refused to "line," and it was my fault then. I had let the bees have access to the honey while carrying them, and when loaded they made frantic efforts to escape, daubing themselves with honey meantime. When I released them they dropped into the grass and spent an hour or more cleaning up. Under such circumstances bees will not "line."

When you desire to take bees to a new spot turn your box cover over them before they have time to load. Shake or rap the box and they will fly up to the glass, when you can shove in the slide and keep them away from the honey. Bees so caught will "line" no matter where you carry them, if not over four miles.

We will now suppose that your first line leads into the forest, with no fields beyond. In such case you must imprison a few bees. Leave the honeycomb on the stand and take your box, with another piece of comb, one-half mile to the right or left of the first line. Place the box on a rock or stump and bait your bees as at first. Stay there until the bees "line." Then if you are on high land you may form an idea as to where in the forest the two lines intersect. Take your box and return to the first stand, leaving some honey for the bees to work on. Place your compass on the stand and get the course of the first line. Follow this line into the woods, cutting enough brush so that you can use your compass.

Do not make an extensive search for the bee tree. Content yourself with examining the trees near your line. When you are satisfied that you are beyond the hive, leave this line and go to your second line and follow it into the woods. If your first line extends beyond the hive or bee tree the second line will intersect it, and you can feel assured that you have your bees corralled near where the lines intersect.

Don't imagine that the bees swarm in and out of the tree and that you cannot miss them. If you will take notice of a hive of tame bees you will find that they come and go, while at work, singly. Wild bees follow the same law and you must search every tree with great care. An opera glass is an excellent aid when searching lofty pine trees. If you fail to find the tree after a diligent search, go to the stand and trap a half dozen bees and take them into the woods and set up your stand where the two lines intersect. You will not have much trouble after this. The bees will be so near home that they will arouse the whole hive and you will have them all about your ears. Watch the loaded bees and they will direct you to the bee tree.

There are two methods of "taking up" the bees when found. One is to kill the bees with brimstone and the other to cut down the tree while the bees are very much alive.

Most bee trees are hollow or rotten from the ground up. By cutting into the tree you can introduce the fumes of burning brimstone which will rise and kill the bees. The tree is left a few days so the honey may cool off. The

honey can be handled, when cool, much better and a saving is made. The "bee liners" for revenue almost always follow this method.

I did not take kindly to the brimstone method in my "bee lining" days. First, I did not care to add murder to robbery, and second, I rather enjoyed the excitement of "taking up" a hive of wild bees.

The killing with brimstone must be done toward night, when the bees are all in the hive. If possible the hole used by the bees should be plugged.

When "taking up" a live swarm you will need a hat with a wide stiff brim. A veil made of netting should be tied about the crown of the hat and buttoned under the coat. It is necessary to have this netting bee-proof, or you will want your life insured. Thick gloves that button over your coat sleeves are also desirable. If the bees are in the top of a high tree you will not need the veil until the tree is down. Do not fell the tree on the bare ground. Chop down several small trees for "bedding." This will break the fall of the tree and save the honey from being wrecked. After your tree is down put on your veil and gloves and chop out the honey. The first blow will bring two or three quarts of red hot bees onto your veil and hat. Tell about your buck fever. It never commenced with bee fever. The angry onslaught, the spiteful determination, will usually demoralize an amateur, and he will often drop his axe and run away.

When the honey is uncovered a singular thing happens. The bees, realizing that they are to be robbed, cease fighting and commence to load themselves with honey. Now you may take off your veil and gloves, take off your coat and roll up your sleeves and work in comfort. The bees are harmless. The fierce warriors of a few minutes ago are now peaceful and earnest workers.

A wasp, after his nest is destroyed, will chase you all over a ten-acre lot to get revenge. A bee is too wise to fight over a "lost cause."

There are yet other ways to "line" bees. After you capture your first swarm you will have on hand dark and broken comb. To get the honey from this you must resort to straining through a thin cloth. This strained comb can be used to "line" bees. A basketful (about four quarts) placed near your stand will soon attract the bees. You can carry the basket into the woods along the line, if you stop now and then to give the returning bees a chance to find the comb. I have carried a basket of comb, with not less than a quart of bees at work, directly to the tree.

There is one other method, called "matching bees." This is never engaged in until the weather is too cold to allow the bees to work on flowers.

To "match bees" you go into the woods where you think there is a swarm and kindle a fire. Heat a flat rock and burn honeycomb on it, at the same time have your stand with honeycomb near by. If there are bees outside the tree they will scent the burning comb and you will quickly have a "line."

You must choose a sunny day. Do not try this method early, when the weather is warm. The bees will then seek the flowers and too you would "match" hornets, wasps and flies until you would be reminded of Egypt's plague.

HERMIT.
GLOUCESTER, Jan. 9.

WITH A SURVEYING PARTY IN THE INDIAN TERRITORY.

BY FRANK WINCHESTER, ONE OF ITS GUESTS.

Part II.

WHILE enjoying for our supper the juicy roast pigs secured in the Judge's improved Russian style of hunting, he expressed his regrets that all the comforts of civilized life could not give such delight as it was our good luck to find encamped in the woods, 150 miles from any town or city; and while he had enjoyed canvasback and terrapin with champagne, etc., in some of the famous Eastern clubs, yet for a good supper he had never seen anything to equal ours of roasted pig, roasted venison, and fat quail spitted and broiled over the coals, and he did not believe anything known could better it. To this Cap replied by inquiring, "Judge, have you ever tried roasted possum or coon, stuffed with sweet potatoes?"

"No," was the answer; "and I would as soon eat a muskrat as eat a possum."

Cap's reply was to turn to the darkies and ask, "Boys, how would roast possum and coon and sweet potatoes compare with this supper?"

With staring eyes they looked at each other without replying.

"Speak up, boys; don't lie about it," said the Judge. And the cook replied:

"Oh, golly, Massa Judge, you and Son git me some coons and possums, and you'll say dis supper hain't nowhere."

The manner of the cook in saying this brought a hearty laugh from all the party, and the Judge, with shaking side, said: "Boys, I'm beat; but if we get the coons and possums, where will you get your sweet taters, Jim?"

"Oh, I've been keeping half a bushel sweet taters for de coons and possums," said Jim, whose eyes fairly shone with the delight of expectation.

"Well, King, I guess Son and I will have to get Jim the coons and possums, if you will tell us how it is done," said he Judge.

"Find a good 'simmon grove and there'll be no trouble, and there are a good many close here; and I'll bet Son found one this afternoon and got three turkeys near it."

"How do you know?" was my surprised reply.

"Oh, I saw the turkeys' crops were full of 'simmons when Jim drewed them, and that you had your coat pockets full," was the reply.

"Son, have you got a private 'simmon and turkey farm that you are hiding from me?" asked the Judge.

"I have not been hiding it, for I only found it this afternoon, and intended to tell about it after I had my pipe lighted. All there is to it is that while out on the prairie after grouse and chickens this afternoon, about three miles from camp, I marked some chickens down near a grove in a large swale, and not knowing but I might start a deer out of it I put in some heavy shot, and when I got close to the grove a large flock of turkeys ran out to take wing and I dropped two on the ground with one barrel, and one on the wing with the other one, and on examination I found the grove was nearly all persimmon trees, and that it ran down to the timber land, and

while the ground was littered with ripe fruit, the trees were still covered with bushels of perfect fruit, well ripened and frost cured," and emptying the pockets of my hunting coat, the persimmons were passed around for dessert. They were pronounced most excellent by every one, and Cap ordered Jim to be sure and keep a good supply on hand for every meal as long as possible.

When we had our pipes all lighted after supper the Judge asked King, "When will we go for possums and coons?"

"There is a full moon and if you all ain't too tired we'll go to-night."

Every one in camp volunteered to form a party and start at once, but the Judge said, "Boys, a possum hunt is a darky's private snap. They ought to go, and who will keep camp? It was finally settled that the two darkies, Sam and Jim, two axemen, King, Cap and the Judge and I should form the party, and at 8:30 we left camp with Carlo and the Indian dogs, King carrying his rifle, while Cap, the Judge and I carried our 10-gauge shotguns, as King had said, "We won't need our guns for possums and coons, but we are liable to run on to bigger game on a night trip like this one." Under my lead the three miles were quickly passed over, but as we approached the grove King took the lead and commanded perfect silence. When we reached the junction of the grove with the timber land, King by a wave of his hand started his two dogs into the grove, from which in a few minutes there came the sounds of snarling, growling and the yelps of the dogs. "More razorbacks," said the Judge.

"No, bear," said King, as he hurried toward the sounds of the conflict, which suddenly ceased except some short barks from the dogs. "Treed," said King, as he ran to the foot of a large pecan tree, which the dogs were trying to run up. Some large animal could easily be seen near the upper portion of the tree in a fork of the tree.

"Put in your heaviest loads," said King, as he walked from the tree toward the moon for a short distance; then turning he took careful aim with his rifle and fired, seemingly without having any effect.

"You've missed him," said the Judge.

"No, I've killed him, and he won't move as long as he can hang on to the tree, but when he drops he'll drop dead," said King, and in a minute or so a dead body fell from the tree, which proved to be that of a young black bear "about 3 years old," as King said, "and fat as butter."

Sending the axemen back to camp for a team and wagon we started up the grove, when King called our attention to some balls upon the limbs of the persimmon trees and said, "Possum." Cutting a green pole while Jim climbed the tree, he handed it up to him, and a smart blow upon each ball caused it to fall to the ground, where a shake from one of the dogs converted each ball into a dead possum.

When one tree had been cleared of five the Judge said, "Enough," but Jim, the cook, said, "No, no, Massa Judge, we're about out of lard, and hog fat hain't in it with possum fat for short'nin'," which statement King said was true, and he and the whites filled their pipes and sat down for a quiet smoke, while the darkies and dogs continued the war upon the possums, moving up the grove.

"Are there any more large trees in the grove?" asked King, and the Judge asked before I could reply, "Where will we get our coons?"

King's answer was: "If there is another large tree up the grove the noise made by the dogs and bear will have every coon in the grove treed in it, and that's why I asked Son if there were any more big trees?"

"There is one more big pecan tree near the upper end," was my reply, and King led the way up the grove.

When we came up to the darkies Cap inquired, "Boys, how many possums?"

Jim's reply was, "Nearly a hundred, but we hain't warmed up yet," and they followed up to the foot of a large pecan tree near the upper end of the grove.

"Coons!" said King, as Judge, Cap and I each aimed and fired our guns, each bringing one to the ground.

"Stop that shooting; it's no fun for the dogs, and a coon fight always does dogs lots of good," said King. Sam then volunteered to climb the tree and knock the coons down. "No, no knocking down, stamp limbs and coons will come down in fighting shape," said King.

Two good fights were the result of Sam's stamping upon the limbs, in which the dogs were easy victors, but when Sam had stepped upon the third limb and stamped once he called out: "Oh, Massa King! dis coon's eyes shine like de debble!" when to our surprise the creature made a spring and Sam and it came tumbling down among the limbs, Sam catching upon a lower limb. The animal struck the ground upon its feet near one of King's dogs, which it whipped in an instant, and then sprang at the other dog, which turned and ran. "Shoot! shoot! wildcat!" yelled King, and Cap's gun and mine instantly spoke, putting a quietus upon it, and upon examination it proved to be a bobcat, or a short-tailed wildcat as large as a good-sized pointer dog, but very thin in flesh. On examining the dog's ears we found them cut with its claws, as if cut with a sharp knife. Sam came down to the ground, and although badly scared was uninjured in everything but his courage, which was badly shocked, as he said, "When dat debbil jumped I done forgot whar I is and fell ober backwards just as he landed on my breast, but de fust limb knocked him off; but dis chile don't clime no mo' trees for coons in dese woods."

We then returned to our bear, gathering possums as we went along, and found ourselves possessed of nineteen possums, five coons, one bobcat and one bear. While waiting for the team King asked Cap, "Will the three turkeys Sam brought in to-day be enough for all of us for one meal?" To which Cap replied, "Not if the Judge's appetite keeps on growing, for he told me to-day if it kept on he would yet be able to eat a whole deer for one meal."

After the laugh was over, in which the Judge joined loudest, King said: "While we are waiting for the team we can go to a big roost about a mile from here that I found the other day, and get three or four more turkeys, if you fellows will be satisfied to shoot one apiece and quit at that, as it is no use to kill more than we want to eat."

Each promising to be satisfied with one shot, we had to start a fire and leave King's dogs with the scared darkies before we could leave them, and then King silently led us to the head of a ravine, in which many large oak, sycamore, walnut, pecan and cottonwood trees were standing, and conducting us in the shadows of the trees he led us beneath a large pecan tree and pointing up to what

looked like squirrel nests, he said in low tones, "Turkeys; take sure aim and all fire when I say shoot." Each one took aim and as King gave the word there seemed to be but one report. Then King said, "Sit down and keep still" in the same low tones, and he and Carlo left us for a few minutes. When they returned he gave each one of us a turkey, and carrying one himself he silently led us away from the roost. When we were nearing the fire he stated that the roost was a very large one, and by keeping quiet and only shooting once we would not break up the roost, but could "get turkeys whenever we wanted them." When the Judge expressed wonder how he could aim a rifle by moonlight, he said it was easy, "Turn your back to the moon, get your end sight, draw it down to your hind sight and then draw it on the game and you can shoot nearly as well as by daylight." (We were surprised at the result of our subsequent trials of moonlight rifle practice by this method.) Reaching the grove we found the wagons waiting and we soon ended our triumphant march to camp.

As the Judge and I had adopted and were rigid adherents of the rule of only killing game when we could make use of it, we spent the next day in lounging about camp cleaning guns, loading shells and watching King and the darkies dress the game and prepare it for the table. While our bear was fat and in prime condition, I must award the prize of fatness to the opossums; I have never yet seen anything that would compare with them.

After the game was all dressed King left camp with a basket for about an hour to return with a basketful of tubers, which bore some resemblance to artichokes and were called truffiles by the Judge, but King called them camas roots. As we afterward learned, they were the tuberous roots of a kind of lotus or pond lily.

When the game was prepared for the roasting the 'coons, possums and turkeys were filled and heaped over with sweet potatoes mixed with these camas roots, some persimmons and some boiled acorns of a small sweet variety; King and Sam each striving to make our supper a feast to long be remembered. While I will not attempt to estimate the number of pounds of roasted meat that graced our rude table that night, there was yet sufficient for all of every kind—bear, raccoon, possum and wild turkey—and the charm of the flavoring imparted by the filling made it one whose pleasant recollections yet imparts a relish to an appetite whenever memory lingers upon that supper, accompanied as it was with pure spring water and strong black coffee, free from trimmings.

Feasted at the clubs of famous epicures of the East as the Judge had been, he awarded the honor to that supper, it was the richest and rarest feast he had ever enjoyed; and while we had frequent repetitions of it during our camp life, subsequent feasts lacked the charm of the novelty of the first one. Yet neither of us could ever find anything in the game line to compare with the flavor of an acorn and persimmon fattened turkey and an opossum. When we were smoking about the camp-fire that evening, the "possum" was voted by a unanimous vote *par excellence* the game of all game for a table luxury. As we kept adding new persimmon groves weekly to our domain, we always had a dozen or more possums festooning the trees about the camp. As the Judge said, "Like the Dutchman who put up thirteen barrels of sauerkraut for family use, 'we had shust a little kraut (possum) on hand to use to keep off sickness.'"

[TO BE CONTINUED.]

WITH THE BOBO BEAR PACK.—I.

A Goodly Party.

THEY went into camp with the Bobo bear pack, after bears, in the Delta of the Mississippi. The party was a goodly one, and embraced Capt. R. E. Bobo and son Fincher, and Mr. Felix Payne, of Bobo Station, Miss.; Messrs. T. A. Divine and L. J. Lockwood, of Memphis, Tenn.; Mr. R. W. Foster, of New Orleans, La.; Col. Dick Payne, of the Yazoo Valley, Miss.; Capt. N. L. Leavell, of Clarksdale, Miss.; Col. Bob Edwards, Mr. James Dunn and Mr. James Dailey, of Coahoma county, Miss.; Mr. Noel Money, of the E. C. Powder Co., Oakland, N. J., and others to the number of a dozen or more, who joined the party when they moved in from the railroad or after they had gone into camp. These, with their servants, made quite an extensive body for operations against the bears of the Delta. The total number of the pack at the beginning of the hunt was fifty-three dogs, and the famous pack of the famous bear hunter had never been in better fighting shape.

Nov. 17 had been set by Messrs. Bobo, Foster and Divine as the date for going into camp, and promptly at the appointed hour, as the society reporter says, the high contracting parties moved down the aisle. All was merry as a marriage bell—in camp. Here in Chicago it wasn't. An unexpected crowd of business had kept me from joining my friends on the date mentioned, and I was made the more unhappy by telegrams from them. At last I concluded the business very nicely by pitching it in a heap and taking the Illinois Central train South. The hunt had then been in progress four days.

At Memphis I was met at the train by Tom Divine, whom I had supposed to be down in the woods killing bears. It seemed that he and Mr. Lockwood had both been called home by business. Mr. Divine calmly told me that the party had killed six bears before he left. "Go on down in there and kill yourself a few bears for your winter meat," he said. "They're thicker'n rabbits." Then he told me where to go and I went.

"Right Here."

I am not at liberty to say where Mr. Divine told me to go. "Right here let me say," as the amateur writer always remarks. Yes, right here let me stop the story of the Bobo bear pack and say something important.

Last fall, as I related in the "Sunny South" articles in *FOREST AND STREAM*, I was the guest of Capt. Bobo, who took me out with him and gave me a royal hunt in which we killed three bears in four days. In describing this hunt I took pains to say that the country was not open country for the public, that non-residents could not hunt without invitation in Coahoma county, and that Capt. Bobo was not a hunter nor a guide, but a gentleman planter who hunted only for his own pleasure. Reference to those issues will show that while I did not wish to keep such pleasant experiences altogether secret, I deprecated attempts on the part of strangers, who did not understand the ways of the country, to duplicate such experiences *in*

toto. I was afraid then that some annoyance would ensue to the kindly man who had been my host, and who had still left near his home one of the rarest of all possessions in America—a bit of good game country. In speaking enthusiastically over this country and over Capt. Bobo's prowess as a hunter—for beyond doubt America never at any time saw his equal as a hunter of bears, nor one who approaches him in the number of bears killed—I had no thought of injuring that country or that man. I had some uneasiness when I found I had to ignore some bold requests from strangers to be "put into" that country with Capt. Bobo. Still it never occurred to me that strangers would write to Capt. Bobo and ask to be invited to his house, any more than they would write and ask Mr. Vanderbilt to invite them to his house. The right would be equal in either case. I would rather be asked to Capt. Bobo's house because I think he sets a better table than Mr. Vanderbilt does; but if they both didn't want me, I think I would rather ask Mr. Vanderbilt for an invitation. As politely and as fairly as I could, I tried to make everybody see this, and yet tried to give *FOREST AND STREAM* the news.

The News of One Year.

I gave *FOREST AND STREAM* the news in 1894. Now, one short year afterward, I want to give it the news again. Then people can draw their own conclusions about certain things, and can incidentally draw some conclusions about the game supply of America, and the scramble to get at the remnants of it.

Capt. Bobo told me that since the publication of the articles above mentioned he had letters from almost every country in Europe and from all over the United States—actually hundreds of letters and from all kinds of men, offering all sorts of things, wanting all sorts of things, inquiring all sorts of things. He told me that he had a great stock of these letters all left unanswered. Surprised and mortified at learning of so unexpected a result of my happy chronicle of last fall's sport, I begged to be allowed to answer these letters for him in *FOREST AND STREAM*, and so to make what reparation I could. He deepened my chagrin into painfulness with the sadness of his voice as he replied, "It is too late now."

Of the details of this, of the remedy which is proposed for immediate application by the men of the Delta I shall have more to say elsewhere. What I must say here is that Capt. Bobo, anxious to please his friends Mr. Divine and Mr. Foster and their friends, set out to locate the bears before pitching the camp. He went out into the country where we had had such sport last fall—the country where all his life he has had such abundant sport—and he tried to find the game which heretofore had always been so accessible. He found no bears; but he found over 100 campers, who in some way had gotten into the region. There were five parties from different parts of Illinois and two from Kentucky. They had actually cut trails into the cane and were camped all over the old Bobo bear grounds. A few of them had dogs. Not one of them had killed a bear, nor were they apt to kill one; but they had been shooting at everything that moved, from a squirrel to a deer, and they had tramped and burned the country off, and frightened the game entirely away. In one season it was ruined. Capt. Bobo pressed on down into another part of the Delta, trying to get below the camps of still-hunters and trying to locate the bears. He did locate them and killed two before the main party came in. But all through this hunt there was sadness in Bob Bobo's heart. To rob him of his sport of bear hunting is to rob him of his comfort and pleasure in life.

I am telling the news of 1895 when I say that in one year this country has been ruined over a large portion, and that in two years it will be ruined entirely unless swift measures are taken to prevent it—wiped out, depopulated, done for. The bears can not be killed in numbers in that country, but they can be disturbed and troubled until they cease to breed, as is always the case with big game when harassed.

When Bobo saw this state of things he consigned all newspapers to perdition, and when he saw me he said, "I wish I had killed you last fall instead of the bear." Then he invited me to sit down and talk it over.

This, frankly, is the statement which covers the situation in that part of the Delta. It is the news. I regret that I must write it so. Alas! that the influence of a great sporting journal should be in some respects what it is—not through its own fault, but because human nature is what it is. Next to the game markets a great sporting journal is the greatest of all factors in the destruction of game. I know that in my work—and I was born with an honest desire to see the game of this country preserved—I get the fewest of responses to the records of efforts at game protection. But if by innocent good fortune I speak of a good game country, as I always like to do, behold the results in Capt. Bobo's desk full of letters.

I do not blame a good fellow for wanting to spend his week or so of vacation in a place where he can get some shooting (or thinks he can), and I do not blame any fellow for wanting as good sport as he can get; and I am sure I would like to see both these fellows, and all the other fellows, have all sorts of fun in God's free, open world, away from the houses. But I do say to both these fellows, and all the other fellows, You see how it is. Here is the news. You can't be always running a little further and a little further away from your own homes to get at the good game countries. The game countries do not last, they soon will be gone. You must begin to improve your own game countries.

On with the Dance.

It may be seen that the sentiment of the country where our hunt took place quite forbids my naming the locality. But now on with the dance. I am going to tell my story now of the hunt, albeit somewhat sadly since the situation is so embarrassing a one, and all the more sadly because of the death (since the hunt) of Mr. Felix Payne, which event I have mentioned earlier in these columns.

Tom Divine told me where to go, and I went. I came at last to the railroad station, and there I chartered what in New York is called an Afro-American, and what in Mississippi is called a "nigger" (negro), and embarking in a rickety buggy preceded by a sort of horse, headed for the camp. The driver didn't know the road and was plenty scared, but we headed into the wilderness just the same, and when we couldn't find any trail we followed bayous, and at last, to make a long ride short, just before dark we crossed the river, and a blast of my horn brought out a roaring chorus from apparently a thousand dogs.

The camp I found to consist of two old buildings once used as a timber camp. And there was a rousing fire. And there was Bob Bobo himself, smiling; and there was Mr. Foster, as pleasant as if he had not just awakened from a profound slumber. And there was Noel Money leaning over the fence. And there were some gentlemen I knew and some I did not know. But I knew Jim, the colored cook who had presided over the camp at the mouth of the Mississippi last winter, and so I knew that all was well in the shanty where the cook stove was.

I soon found that Mr. Divine's statement of the number of bears killed, large as it was, was not large enough. The party had killed eight bears in six days! Two had been killed the day after Mr. Divine and Mr. Lockwood left. Capt. Bobo assured me that the bears were fat as hogs and really "thick as rabbits" on a fine piece of mast they had found, about six miles away. "You ought to have been here with us," he said. "The dogs are crippled up a good deal by this time—we've got eleven tied up now—bit up too bad to go, and there are about six or eight more that are nearly as bad off. You've missed a heap of fun by being so late."

I explained the reason of my delay, and then calmly told Capt. Bobo I had come to stay till February but what I killed a bear; which he said was much better than our four days' trip last year.

It may be urged by many that to kill so many bears in so short a time was indulging in too much killing, and that the meat must have been wasted. In regard to the latter point, I must say that the objection could not hold, for none of the meat was wasted. Almost as soon as I got into camp I asked Capt. Bobo for a piece of bear meat, which I wished to send out to the railroad by my driver, to be shipped North to my friends who might like a taste of bear. Much to Capt. Bobo's surprise, he was unable to find any bear left around the camp except one small one, which was inside one of the sleeping rooms. In accordance with the customs of the country, those of the party who had gone home, all the visitors and all the departing servants had helped themselves each in accordance with his own ideas. The dogs were fed very little meat, except at the skinning of the bear after the kill. But around the Bobo camps there are always a great many hanging who can use up a good deal of meat, and these, with the members of the party and their friends, could and actually did get away with a bear a day and more, to say nothing of the skins. It was a lavishly generous host and an abundance of supply which obtained here in this rich and generous land. It was sport on a great scale, though not sport to which actual waste of meat was attached.

The Record of the Week.

That night in camp we sat up late around the fire and discussed the events of the day—that is to say, some of us did. Mr. Foster had soon after my arrival put in practice his theory of a vacation, and had peacefully dropped off to sleep, with his boots on. At midnight we roused him up and told him he would sleep better with his boots off; whereupon he woke up fresh and bright, and told stories to the rest of us until daybreak. You could never tell what Mr. Foster's methods of taking rest might mean. As for Col. Dick Payne and Capt. Leavell, they both sat astride of a bench, facing each other, and fought the war all over again from start to finish, and then fell into a sociable game of poker, in which a white chip was won worth a plantation. These two gentlemen had never met before this hunt, but at once struck up a great friendship and were inseparable throughout the stay.

Inquiry as to the details of the hunting done in the past week showed that the sport had been almost too abundant and easy to be exciting. On Thursday, just a week and one day before my arrival, Capt. Bobo killed the first bear. On Thursday it rained and they did not hunt. On Friday Capt. Bobo killed another bear. On Saturday and Sunday they did not hunt. On Monday following Mr. Felix Payne killed one and on Tuesday Capt. Bobo killed another. On Tuesday a hunter belonging with another party from an adjoining timber camp killed one, and on that day Noel Money got his first shot. This was at a bear that had treed, and Money aimed to shoot it through the brain, but struck it a little too far forward, on the jaw, the bullet ranging down and not dropping the bear, which went higher up the tree, Money and others firing several shots at once, which tumbled him out dead. On Wednesday a very large bear was started, weighing at least 500 lbs., and was fired at by Bobo early in the chase. This bear went to the "Hurricane," a very bad piece of windfall and cane, and fought the dogs savagely, killing one fine dog and crippling five more. Pressing into the dense cover, Fincher Bobo found this bear lying down, as if hurt, and put a bullet through his head. No other bullet mark was found on this bear. On Thursday a bear was treed, and Mr. Foster was told to come up and kill it, Felix Payne sitting meantime on his horse watching the bear to keep it up the tree.

Here Mr. Foster's kindheartedness lost him his shot. Bill, one of the colored bear hunters of the party, was having trouble with his mule, which had slipped its bridle, and Mr. Foster stopped an instant to help him. While he was occupied there the bear slipped down the tree and made off again. It passed by Bobo and Money, who both made into the cane to head it. Bobo lost his hat a time or two, and when he stopped to get it the last time Money passed him and was first to shoot. He knocked the bear down, but it got up, and a moment later Bobo knocked it down with a second shot, and I understand one of the colored hunters also shot into it. It was a very big bear and would not quit easily, but went on eating dogs. Both Bobo and Money started in to kill it with their knives, when Bobo tripped and fell almost in the bear's mouth. Money stabbed the bear in the back with his knife (a handsome East Indian weapon of fine steel, inlaid with gold, which was given him by an East Indian dignitary whose life he once saved in a pig-sticking expedition or some close call of the kind, I believe). He plunged the narrow blade into the furry hide once or twice, though not at once dropping the bear. Bobo at the next instant was up and stabbed the animal with his huge bear knife, and at last the bear gave it up. So nearly as I could learn, this was the best fun of the whole trip. Ordinarily, the killing of a black bear is a very tame performance, and the chief sport consists in the riding and the music of the chase. Of these bears, two were big ones. The others were mostly about the average size. The one killed out of the tree was small. The number of hunters had been so large that it was sometimes pretty

NORTHERN IOWA.

VINTON, Ia., Jan. 14.—*Editor Forest and Stream:* I remember a few years ago reading in *FOREST AND STREAM* a series of articles written by Mr. Orin Belknap as to the early trapping days in northern Iowa and southern Minnesota. I was greatly interested and pleased, and I always think of Mr. Belknap when I am in that section of the State, and wonder if in his far away mountain home he forms a true picture of the country as it is now.

In 1891 I was in Emmet county. A few miles east of the West Branch of the Des Moines River it was all open country, with very few settlers. Large herds of cattle, some with several thousand head, were being summered there. The tall grass that once shaded the ground and held the moisture around the numerous sloughs has been tramped out, and what were once lakes in some cases are now sloughs, and many of the sloughs are now dried up for good. Swan Lake, once a fine body of water eight or ten miles long, as I was told, was then not much better than a frog pond. A mile or so north of this lake I put to flight a pair of sandhill cranes that were nesting there. But from every slough or water hole, with hardly an exception, there arose wild ducks, either mallards or teal. This was in July, and it did me lots of good to see the little black broods skulking away in the rushes. I rode along the south shore of Tuttle's Lake, which is the head of the East Branch of the Des Moines. It is a fine body of water, extending across the State line for several miles into Minnesota. I started up quite a number of ducks that were nesting in the grass. Small flocks were flying along the shore line. It was a bright, warm day; perhaps I didn't enjoy that ride. What would be old age without pleasant things to look back to?

I went up to Lake Okabena, thirty miles northwest of Spirit Lake, where, I believe, Mr. Belknap had a little experience with the Indians, but now on the north shore of West Okabena there nestles the busy town of Worthington. All along between Spirit Lake and Worthington there was hardly a slough close in by the track from which the train did not scare ducks.

In the fall of 1893 I was again at Worthington, and went down to Lake Ocheda and "shot at" some ducks. Over on the north bank was a tent occupied by some city sportsmen who had been there a few weeks, and twice a week sold their game in Worthington.

In 1894 I was again in eastern Emmet county. I went by the way of Forest City and a branch railroad running west into eastern Emmet county. Along this road I saw prairie chickens, northern hares, and seemingly from every slough wild ducks, as the train sped along. In a slough a mile or more north of Swan Lake a flock of eight wild geese were summering.

In the last three years Emmet county and the county east have been fast settling up, and those that love to be alone with wild life will soon have to go into the northern wilds of Minnesota. But what a country northern Iowa must have been in Mr. Belknap's day, with deer, elk and moose added to the wildfowl.

MOUNT TOM.

OLD PHOTOGRAPHS.

Number One.

THROUGH the twilight haze, gathering over a section of the old buffalo range, which is fast deepening into shadow to the eastward of the low sandhills in the background, long irregular lines of deeper tint than the somber brown face of the silent prairie crawl off snake-like into the gloom beyond; and we know them for the trails of the wandering buffalo, now fast passing forever.

A few belated prairie dogs, returning to their holes at the coming of night, pause for a moment at the doors of their subterranean retreats to glance curiously at the intruding hunter, who leans idly on the muzzle of his rifle watching their little movements; while from far out over the darkened plain a little burrowing owl comes, low flitting, ghost-like, through the gathering shadows, and is suddenly lost to the eye in the deeper gloom of the entrance to his underground home.

Not a breath of air disturbs the peace of the summer evening, and the drooping eyelids of the parting day close gently down over the lonely scene, indelibly painted upon memory's tablet by the last ray of the fading light.

Number Two.

A lonely mountain side far west of the Rockies. Time, December. A tenderfoot enthusiast pauses in his eager search for the cunning whitetails, and under the shelter of a drooping fir takes his stand where, charmed for the time into forgetfulness of the very existence of the *cervidae* by the spectacle of the first snowstorm he has ever seen in the Western mountains, watches for hours the wondrous beauty of this strange pantomime of Mother Nature as she gently sifts through the frozen fingers of the great tamaracks her wealth of crystals, which shall turn the mountain side in front and the great cañon yawning to the left into a very land of fairies; and as they eddy slowly downward through the silent air the deer sleep undisturbed in the thickets beyond, and only the gathering shadows of advancing night rouse him at last from his reverie. Small wonder if, for the time, his heart wavers in its allegiance to the goddess of the chase, and he loves dear Mother Nature with a devotion which brooks no rival!

Number Three.

An October sunset on the prairies of western Minnesota ere the coming of the white settler.

Away to the northward for miles in width stretches the level plain, bounded by low, gently rising hills, just tipped with the gilt of the sun's last rays.

Across the foreground a small rivulet furrows its way through the plain.

Looking across the little stream toward the sun-kissed hills, the hunter sees, standing grouped, a band of a hundred wapiti, just alarmed by his advance, and gazing intently backward across the 500 yds. of intervening space at the motionless figure holding in the hollow of the arm his only weapon, the almost useless shotgun, and watching the beautiful creatures he is powerless to harm.

But see! Directly to the eastward of the startled game, and a quarter of a mile distant from them, come two shadowy figures, recognized instantly as Sioux Indians, trying the hazardous experiment of an open stalk upon the wary creatures, while intent in their watch upon the pale-faced intruder.

Stooping low down, and one directly in the wake of the other, they are flitting silently across the intervening space, and as the distance rapidly lessens the hunter watches expectantly for the tiny puffing smoke wreaths which shall announce the success of the bold maneuver.

Look, look! A sudden commotion in the herd, an instant's uncertain huddling closer together, and with a swinging stride, which banishes instantly all hope of pursuit, the frightened creatures, still bunched together, speed northward across the wide plain and over the distant hills like a drifting cloud; while, borne on the wings of the dying zephyr, a long thin line of dust rising steadily from their spurning hoofs floats slowly away to the eastward and is lost in the advancing shadows.

Plain pictures these, and only in neutral tints, yet they are among my treasures of value.

I have pondered over their quiet beauty a thousand times, and to me they are beautiful still.

They are without value in Wall street, yet cannot be purchased with its money.

I am willing, however, to grant to each true brother and sister of our own great family a passing glimpse. No others can see them, try as they may.

My little son at my elbow (happily more like his own practical mother than the old visionary who holds the pen), curious to know what papa is writing to *FOREST AND STREAM* this time, insists that its readers cannot see these things while living in the big cities, so far away. I can only explain to the juvenile Thomas that I shall depend upon the intelligence and sympathy of the reader to enable him to see the wonderful things in the pictures as I point them out. The small skeptic shakes his head and looks incredulous.

ORIN BELKNAP.

A Bright Light in a Dark Place.

NEW YORK, Jan. 13.—*Editor Forest and Stream:* Came to me when I was in a strait and reviewing the past, with the future, so far as existence was concerned, in doubt, the gem number of *FOREST AND STREAM* for 1895—its issue of Dec. 28.

I was on a couch, uncertain whether my foe would be victor, if my visitation might compel, as a forlorn hope, the use of the surgeon's knife and resignation to be crippled for the rest of my span, or if a strong constitution and rest could win me the day, as I had phlebitis in dangerous form.

My mental faculties and critical perceptions were acute—keyed up by the crisis. I, so those who were the experts in my case said, had to be sentinel over myself to watch for symptoms which, once declared, would immediately necessitate heroic treatment. The intellectual strain was tense and I tried to relieve it by sending for all the daily newspapers and current periodical literature, whose pages I would cut and scan; and I had lapsed into dogged resolve to accept any fate in store for me when I received the Christmas number of your paper.

I need not deal circumstantially with its many excellencies, from the best written and best illustrated trout-*ing* article extant, "The Realization of a Dream," by Mr. H. N. Curtis, and the fascinating serial on "How Fur is Caught" by Mr. E. Hough—may he write forever on the subject—to the very "ads."

I have read that number of *FOREST AND STREAM* thrice from title page to end, and had planned to have that pleasure again, but an appreciative friend put the thumb and dog-eared copy in his pocket when he ended his visit. But I have just procured another copy and am going to record in memory what I believe toned, soothed, encouraged and vitalized me when I stood in dire need of such ministrations.

In gratitude therefore and in remembrance of a bright light in a gloomy and despondent visitation I tardily join the many who have recorded their appreciation of 1895's Christmas number of *FOREST AND STREAM*. AMATEUR.

Natural History.

Deer and Lilypads.

AFTER seeing half a dozen deer all the season through every day eating among the lilypads and not a lily touched, ought to qualify one to speak of the subject with something like authority. But these lilypads were of the yellow variety. Near Higgins Lake, in Michigan, there are numerous small, shallow lakes, and the surface of the water is almost covered with lilypads. Deer are plenty and they frequent these lakes constantly, yet they never eat the white lilypads which are so abundant there. At Otsego Lake, in northern Michigan, there grows in abundance a lily of the pink variety, and old resident settlers in that country tell me that the deer never touch the lilypads of that variety. So it seems to me that I have well established the fact that deer do not eat some lilypads.

Mr. Rossman, of Greenville, called at my office this afternoon. He is one of the best known deer hunters of Michigan, and has hunted deer every year since boyhood. He states that he does not know whether deer eat lilypads or not. He has seen deer feeding among the lilypads and shot hundreds of them while in the water feeding among the lilypads, but he never saw a lilypad in a deer's mouth or found one in the throat or in the stomach. He never saw one nip a lilypad, but has watched them feeding for hours, when the nose is plunged into the water up to the eyes and the deer evidently feeding, but on careful examination he never in a single case found a lilypad that had been picked by the deer.

JULIAN.

Golden Eagles.

CONNERSVILLE, Ind., Jan. 22.—On Jan. 8 H. Shipley, of Fayette county, killed two large eagles, which our taxidermist pronounces as the golden eagle. They measured 7 ft. 6 in. and 7 ft. 3 in. respectively from tip to tip of wings. The birds were killed with a .22 short Stevens rifle at the distance of 75 yds. One was killed dead, the other flew some quarter of a mile before it fell. Is not this remarkable shooting for that size gun and that size bird? Are they not rare birds for this locality? BASS.

[The shooting was extremely good. The birds are not common in Indiana or anywhere else in the East. They are most often found in a mountain country.]

hard to tell who was the lucky man. On the last day there were thirteen hunters out in the party.

This brought the proceedings up to the time I struck camp. At that time the party was temporarily smaller, Messrs. Divine, Lockwood, Dailey and Edwards having gone home with one or two of the servants. We still had eight men and seven servants in the camp. Capt. Bobo had sent out to the railroad for more dogs, and on the whole it looked as though the bear industry could be kept up for a little while longer if the luck held.

A Walled City.

The camp as it was arranged was well adapted to the requirements of a large party. There were two good-sized houses of one room each, built of upright boards and connected by a roof and back wall. The front side of the space between was left open, except for a low fence and gate, the latter intended as a barrier to the swarm of bear dogs which always was fighting for place beside the fire. The fire itself, always the center and chief comfort of any camp, was built in this space between the two buildings—a glorious big fire of oak and ash and hickory slabs, so comforting that it is no wonder it needed a walled city to keep the dogs away from it. Indeed, they could not be kept away, but eluded all attempt thereto and made a continuous ring of fur about the fire, lying in the hot ashes, crouching, standing or sitting as near as possible to the comfortable warmth, each dog's contiguity being determined by his ability to lick a series of other dogs.

The Life of the Bear Dog.

The life of the bear dog is one of war and tumult. His training is of the rudest, consisting mostly of a half-killing with a club when he is caught running anything but bear, and an entire killing when he is afraid to run that. In the bear chase it is his duty to fight the bear, and if he be not wary as well as bold he gets killed or crippled there. After the bear is dead he gets his reward—if he can lick all the other dogs which jump on to him as soon as he gets a mouthful of liver or other tidbit in his jaws. At the camp his wounds have small attention and he must fight in spite of wounds. He will not be fed too highly there, be sure, for cornmeal bread is thought enough for him to run on. For this also he must fight and for place at the fire he must fight, being aware the whiles that he escape a swift and nimble foot if he gets in the road of the human beings who engineer his destinies for him. There are few such caresses for the bear dog as there are for the bird dog. He knows no kindnesses and no comforts. He grows up rough, unkempt, shaggy, surly, suspicious and highly belligerent. He will fight anything on earth with the greatest of pleasure, from a buzz saw up, and if he gets a grueling you never will hear him complain. His life is short, but full of action, as that of the warrior should be, and while he lives he walks through his daily round of activity with a continual chip on his shoulder. The only thing he fears is man and for him he bears the odd foxhound reverence. Some of the best bear dogs in the pack would yell most dolefully if one but reached for a long cane and threatened with it. Others, however, for instance old Rock, had a cross of bull or other sterner breed in him and would resent condign punishment at once. Old Rock would not hasten when told to get away from the fire, and if one made advance to poke him in the ribs would stand with lowered head and bared teeth awaiting the onslaught very calmly. Rock usually slept pretty close to the fire. All around him and back of him raged the continuous conflict for precedence among the other dogs, but this disturbed him not, for he had fought himself up to his bad eminence, and the rest of the pack knew he was entitled to the hottest ashes in the place.

The pack presented the usual mixed appearance. There were a few straight foxhounds, or nearly so, and the rest were a varied lot, with some big terrier cross—apparently the Irish terrier—or of staghound or pointer; almost anything in the way of a dog would do, it seemed, and the Lady Clara Vere de Vere idea was evidently buried in the mist of antiquity which enveloped the history of the bear pack's pedigree. As I saw the Bobo pack now, it had not over a half dozen of the dogs which composed it one short year before. Raphael, our best strike dog then, or one of the best, was gone, killed by a bear on the field of honor. The little pointer-looking dog called New York was still alive, and so was a shaggy-headed little nondescript called Texas. Old Henry, the aristocrat of the pack, was also still living, as haughty and notional as ever, and still refusing to eat unless served in a clean dish by himself, nor sleeping anywhere in touch of another dog. Nearly all the pack of last year had gone the final road over which bear dogs go sooner or later, and usually sooner; but the building up of the pack had gone on, as it had for the past twenty years, and the survivors stood in the tracks of those who had fallen. A look at said survivors showed them willing to take all the risks of the field on which their ancestors had been slain. There was "war" written over each rough face—a very goodly thing to see when one is afoot for war himself, and looking for able allies.

Poor Place for Still-Hunting.

In spite of Capt. Bobo's best efforts to get away from the pestilence of still-hunters, we learned that there were no less than five big parties in camp on a space not more than four miles square, comprising in all about thirty-five or forty men. Not one of these men had killed a bear. A party of ten from Illinois had been there four weeks, and killed only four deer in that time. A worse place for deer hunting or any other kind of hunting than just the sort which the Bobo bear pack made possible it would be difficult to find. The still-hunters were pretty blue, and were pulling out and going home every day, none the better for the trip except for a trifle of experience and perhaps a little chills and fever—which latter are almost a certainty for a stranger in that country even as late as the end of November, as both Money and myself can testify.

Now I have told some of the pleasant as well as some of the awkward things about the hunting of the Delta region; from this time on I shall have only the pleasant things to speak about—all the more vivid and pleasant to me, as falling under my own observation after I joined the party.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

The *FOREST AND STREAM* is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Deer Horns and Velvet.

CHARLESTOWN, N. H., Jan. 17.—*Editor Forest and Stream:* In offering an additional suggestion to the discussion in your columns of the subject of "rubbing off the velvet," common among deer, I can but think of the old adage that "Fools rush in where angels fear to tread."

Although there has been nothing in the question to frighten the angels, and I do not admit that I am quite in the former category, I must confess that my knowledge of "venison on the hoof" has been confined to such glimpses of it as I have occasionally had when trout-fishing, and the nearest approach to the connection of a gun with a deer that I ever had is that when a boy, 60 years ago, I saw the gun with which the last deer in this region was shot!

Seriously, I wonder that none of your medical or surgical correspondents have ever suggested the true cause of this action on the part of the deer. We all know by experience probably, how a wound or sore itches when it is healing, and it seems a reasonable conclusion that the deer suffers in the same way, when the nerves and bloodvessels with which the growing antler is amply provided begin to dry up and wither. His horns itch, therefore he scratches them, as all other animals would do, without any particular intention of polishing them, or getting rid of the velvet, which comes off naturally in the operation. Is not this the simple solution of the whole problem?

VON W.

A One-Eared Rabbit.

WAYNESBURG, Greene County, Pa., Dec. 30.—*Editor Forest and Stream:* I send you by mail the skin of a rabbit killed near here some time ago. It is rather a strange freak, as it had but one ear, and that one situated on top of the head. You can see by examination that it was born with but one ear.

Rabbits were plenty here this season. Quail very scarce and grouse almost extinct in our country.

An Allegheny county sportsman's association has leased a number of farms in this county and released quite a number of quail on their preserve last spring. I think but for that we would not have had a bird in the county this fall.

Squirrels are fairly plentiful, but our forests are being destroyed as fast as the industrious portable saw mill can eat them up.

W. L. ALLISON.

[The specimen came to hand and is, as Mr. Allison states, a curious one-eared freak.]

An Expedition to Mashonaland.

STARTING in March next, Mr. D. G. Elliot, the eminent ornithologist, curator of the Department of Zoology of the Field Columbian Museum, Chicago, Ill., will leave for East Africa to lead an expedition from his museum for the purpose of collecting zoological specimens for that institution. The expedition is likely to devote itself chiefly to the collecting of the larger animals, and will probably be absent until next December. The present plans are to push directly to Mashonaland and pass westward through that country to the other side of the Zambesi River. Mr. Elliot's eminent fitness for the work he is about to undertake is well known to all who are familiar with his past career, and it can hardly be doubted that his expedition will accumulate a great mass of useful and valuable zoological material.

Peregrine Falcon in Massachusetts.

WORCESTER, Mass., Jan. 16.—It is with pleasure that I have to offer for record the capture of an adult male peregrine falcon or duck hawk (*Falco peregrinus*) at West Boylston, Mass., Nov. 12, 1895. The bird has been mounted, and is now in the possession of Mr. C. K. Reed, the local taxidermist. I have been unable to learn any circumstances attending its capture.

R. H. HOLMAN.

Ohio Mockingbird.

LAKEWOOD, O., Jan. 17.—I killed a fine male mockingbird which I saw feeding upon the berries of a red cedar that stands in my yard. It was not an escaped cage bird. This bird is only occasionally seen here in summer, and never before in winter. It breeds in this vicinity. I also saw to-day a small flock of crow blackbirds, those first harbingers of spring; but I fear they have come too soon.

A. HALL.

A Florida Opportunity.

OXFORD, Fla.—For some poor unfortunate brother who likes to shoot and who is a sufferer from pulmonary troubles, there is a bit of forest here called the Scrub, where at a small expense ten or fifteen thousand acres could be made into a splendid shooting preserve. It is very hilly for Florida and is covered with small oak bushes, spruce pines, etc. These oaks furnish vast quantities of mast which the deer, turkeys and an occasional bear are fond of feeding on.

I was out on one hunt when we took two deer, a turkey and a very large panther. As many as twenty-five deer have been killed on it during the winter. Besides these there are quail, foxes, wild hogs, squirrels, coons, possums and a half section deep clear lake with plenty of bass in it. Besides I expect soon to turn loose on it some pheasants.

Beside the lake is a small 200 acre hammock. The balance is scrub, two or three miles wide and eight to ten long; it is very thick good cover for all kinds of game and really fit for nothing but shooting ground, and could be bought for a few cents an acre. The distance is seven miles to railroad station and fifteen to Gulf coast.

J. PIERPONT MURDOCK.

In Bear-Trap Peril.

MAKING a reconnaissance survey in Phillips county, Ark., I had dismounted and crossed Yellowbanks Bayou on a fallen tree trunk. On jumping from its end into a pile of dead leaves I was startled by a sharp "click," and discovered that I had struck my foot on a 20lb. bear trap with teeth of a tenacious length, near enough to the place where the teeth are, to spring the trap, but fortunately without getting caught.

Its owner had illegally set his trap without a proper signal to passers-by, and for fear other trap owners are sometimes as heedless of the comfort of their fellow creatures, it may be well for wanderers in the forests not to jump into piles of leaves.

FIXTURES.

March 16 to 21, 1896.—Second annual Sportsmen's Exposition, under the auspices of the Sportsmen's Association, at Madison Square Garden, New York city. Frank W. Sanger, Manager.

SOME COMMON SENSE.

TORONTO, Can., Jan. 17.—*Editor Forest and Stream:* I have read with much pleasure the very interesting and instructive letters which have lately appeared in FOREST AND STREAM from your able correspondents on the important question of fish and game protection, and have arrived at the conclusion that the question is very imperfectly understood by the general public. The impression prevails that the game laws are for the sole benefit of wealthy sportsmen. This impression is not sustained by facts, as I shall endeavor to prove, and try to convince those opposed to efficient administration of such laws enacted in the interest of the public at large.

In the United States and Canada, unlike the European countries, the game and fish are not protected for the benefit of a special or privileged class. The poorest man here has equal rights with the richest to hunt or fish in the open season. This being an undisputed fact, it should be the duty of every man in the United States and Canada to assist the Governments of the respective countries in their efforts to prevent the destruction and extermination of these most valuable sources of food supply.

There is also another feature to be considered: supposing our Legislature had allowed the game and fish to be exterminated like the buffalo, before taking action, where would the people—either rich or poor—go for relaxation? Our game and fish supply is also a prolific source of profit to a number of people, viz.: proprietors of pleasure resorts, guides, etc.; and will so continue if these parties do not kill the goose that lays the golden egg.

The question for consideration is, how can the extermination of these sources of food supply be prevented? My answer is, by complying with the laws of nature and common sense. It is not in accordance with either to allow fish to be taken during the spawning season or to allow game birds to be shot en route to their breeding grounds. We would have grave doubts of a farmer's sanity who would kill his stock of poultry in the spring and expect to have a supply of chickens in the fall. Advocates of spring shooting lay themselves open to the charge of being both selfish and unwise.

Last, but not least, comes the question of hounding deer. From our experience in Ontario, if hounding is continued to the same extent as indulged in during the fifteen days of the open season of 1895, deer in northern Ontario will in a short time be like the wild turkeys in the southern part of the Province, things of the past. Imagine upward of 3,000 deer being slaughtered in fifteen days in about a dozen counties, and you will agree with me that it is time for the brake to be applied. Very few fawns were seen during the past season, and an immense number of barren does were killed. Does chased with hounds for two or three weeks at that season of the year cannot be expected to be prolific.

I have been amused at the many definitions of a sportsman in recent issues of FOREST AND STREAM. I have not seen one so appropriate as Dibdin's epitaph on a sportsman:

"His course was honor and correct his aim,
His bold pursuit was fair and manly game,
No sports he loved but those which could be shared,
Nought kept he which to friendship might be spared.
Let fame praise whom she will, we are free to let her,
Yet underneath this turf she'll find a better!
His placid kindness, felt where'er he went,
Arose from worth, health, exercise, content!
He 'looked before he leaped' with steady eye,
Never o'erlooking fallen adversity.
In short, as says the song, 'Like fruit that's mellow
Gently he fell, a downright honest fellow!'"

RANGER.

A HUNT IN THE SEMINOLE NATION.

OKLAHOMA CITY, O. T., Jan. 5.—"Ting-a-ling-ling. Hello? Yes, this is Reed & Harper's. Is this Reed? Yes. Well, will you join us in a trip to the Seminole Nation. Who is this talking? O. A. Mitcher? And say, Reed, we have everything ready, provisions for a week, 700 shells, tent and all. And start in two hours, so tell your wife and babies good-bye. All right, count me in. Ting-a-ling."

The above conversation was over the telephone on Dec. 25, and two hours later we loaded our traps and dogs on the Choctaw Railroad, with tickets for Shawnee. It was a party of four, Messrs. Mitcher, Cronk, Kenyon and myself. After a ride of two hours we reached the thriving little city of Shawnee and in a few minutes left overland with carriage and baggage wagon, reaching the town of Boom-De-Aye by dark. At Shawnee we struck Mr. E. E. Whittaker with his dogs on, bound for a trip after the Bob Whites; and upon an invitation for him to join us, hesitated up the outfit and climbed in. Upon his recommendation we employed a certain colored individual named Sambo, said to be an all-around good man and equal to a French cook. More of Sambo later on.

After a bad supper at Boom-De-Aye we retired to a worse bed, arose early to a worse breakfast and were soon on our way to camp, where we arrived about noon. Leaving Sambo to put things in shape, we hurriedly donned our regalia and started out for meat.

About 25yds. from camp our big pointer Pat froze, and we had a covey of quail, soon getting an even dozen, which Sambo said he would serve us for supper. We then started for deer, turkeys and bears. Separating, we worked up the draws and thickets. Soon two heavy reports were heard on the right nearly together; then one more, and a yell from Brother Cronk which could be heard a mile. Fearing that he had shot himself, we hastened to him, and found him dancing and waving his hat; so excited that he could not speak. He pointed to where lay a noble buck. Brother Cronk was the proudest man in the Seminole Nation. After spilling half a sack of tobacco he managed to fill his pipe, but could not steady his nerves to get a match to it. After firing up for him we hastily dressed the deer, and each taking a leg proceeded to carry him to

camp, a distance of two miles. We arrived about dark with our load; four as tired men could not be found in that "neck o' woods," and with appetites as large as hay stacks.

Sambo met us with a grin and we sat down to our first camp meal. Soon a blankety-blank-blank from Brother Whittaker, and looking up we found that our French cook had forgotten to remove the insides from the quails' gizzards, and as Whittaker had eaten three before making the discovery, he became very sick, and in fact we all complained of a sort of an ill feeling. And while Whittaker's supper was coming up we sat with short appetites and glared at the "French cook."

The next five days were devoted to the speckled beauties, which were quite plentiful, with an occasional shot at a prairie chicken. Our game consisted of quail, chicken, rabbit, possum, turkey, and Brother Cronk's big buck. As my business would not permit of my remaining longer, I reluctantly left camp, hoofing it over to the railroad station, reaching Oklahoma City when the New Year was less than two hours old.

FRED. H. REED.

DEER HUNTING METHODS AND ARMS.

SAN FRANCISCO, Jan. 16.—*Editor Forest and Stream:* From the time I killed my first deer in 1868 I have been interested in everything pertaining to the pursuit of this wily quarry. Two points I wish particularly to touch on in this communication: the methods of pursuing deer and the caliber of rifle appropriate for the sport. I am pleased to read in the last issue of FOREST AND STREAM a number of articles condemnatory of hounding deer into lakes and rivers and then butchering them in cold blood, or paddling along their mighty feeding grounds and discharging a handful of buckshot in the direction of all suspicious sounds. All this is far removed from ideal sportsmanship. It certainly affords a man of hunting mettle no satisfaction, for what is it that gives one his keenest pleasure in the pursuit of game? It is the measuring of his wits and skill against the crafty instincts and acquired cunning of his quarry. I look upon shooting a deer swimming in the water from a canoe very much as I would upon killing an animal fastened in a trap or inclosed in a corral. Though I have never tried it I should think "fire hunting" capable of affording satisfaction only to individuals of meager and lean natures.

Shooting deer in front of hounds on runways with a rifle is a totally different matter, and a practice I do not condemn. The deer is in his native element, and is in a position to use his natural means of escape. The hunter must act promptly and skillfully, and even then the chances are much in favor of the deer. Of course, pursuing deer when they can only flounder around in deep snow, without any chance of escape, goes logically in the same category as lake shooting—mere killing, not sport. This, barring runaway shooting, leaves only one sportsmanlike method of pursuing this game, viz., still-hunting, a method that will afford in a surpassing degree satisfaction, both physically and mentally, to the hunter. In this instance the deer knows every rock, bush and stump in his environment. He is ever on the alert to detect the least sign of danger. Eye, ear and nose are pressed into constant service by him when feeding or moving, and fortunate is he who can discover his horned majesty unobserved by the latter. It is wit against wit, cunning against cunning, and proud may the hunter feel who under such circumstances successfully stalks his game. No undue or unfair advantage has been taken. There was a "fair field and no favor." Single-handed and alone has the game been secured, and the hunter rightfully feels a degree of genuine satisfaction denied to the followers of less sportsmanlike methods.

As to the most satisfactory calibers of rifle for deer hunting I have a pronounced opinion. My earliest experience was with the old-fashioned muzzleloader of small caliber. I then tried a Henry rifle, next a '73 model Winchester, then a .45-60 W., and now I use exclusively a .45-90 W. I have killed deer with all of these, but would as soon think of riding in the old stage coach in preference to a Pullman. I would, of course, shoot a small caliber in case it were proven that with the metal jacketed bullet with a soft lead nose it will expand to two or three times the diameter of the bullet on striking a deer. This claim, however, I am not yet convinced of.

With the weapons now available to sportsmen generally, I lay it down as a postulate that the express system is far and away the preferable one. This consists essentially of a relatively light bullet with a very strong propulsive force behind it, giving thus a very flat trajectory and ample penetration. Given an expansive soft bullet of .40 or .45cal. that will mushroom on striking, a cartridge constructed on these lines is the most satisfactory combination yet devised. Of course it must be fired out of a rifle adapted to it. I have found the Winchester satisfactory, but there are others equally good. The sights, shape of butt-plate, drop of stock, etc., would of course vary according to the varying tastes of the shooter. Personally, I consider the curved butt-plate on the factory sporting rifles as an inexcusable abomination. A shotgun butt is to be preferred on every account. Sights constructed on the principle of the Lyman tang sight are a great step in advance of the old V, as not only a quicker but a more accurate sight can be thus taken. I also think a half magazine better than a full one, as the rifle balances much better, and holds enough cartridges for a careful shooter. Whence my advice to all sportsmen who can shoot and who contemplate a trip to a deer country is to take, say, a .45-90 and a .22-7-45, or .25-20 for small game. Thus equipped, it is a very inefficient or very unlucky sportsman who cannot make a good showing as the fruits of his trip.

Though a little aside from the object of this writing, I feel impelled to say a word about marksmanship as bearing on deer hunting. Probably not one man in a dozen who goes forth to slay deer is a good rifleman. Most know just enough to point the rifle toward the game, shut their eyes and pull the trigger.

These are not sportsmen in fact, though they may be in intention. The last time I was out one of the party, who considers himself a pretty good hunter, left camp with thirty-five cartridges and his .44-40 rifle. When he returned some hours later he had only empty shells and one deer. Now, if a man has a laudable ambition to be known as a deer hunter it is his duty, and ought to be a pleasure, to develop a good degree of accuracy in his marksmanship. This is possible to nine out of every ten men of good constitution and good habits. It can not be ac-

quired by taking a few practice shots once or twice a year, but is the reward of frequent practice; and here I must put in a plea for target practice as a means of improving one's marksmanship in the field. When I hear the remark, as I often have, "Oh, I can't do anything at target shooting, but I don't take a back seat in killing deer," I don't dispute that the speaker kills deer, but I do assert that he does so by an unnecessary repetition of shots. He is the one who loads himself down with several pounds of cartridges and develops proficiency in the use of the lever for cartridge pumping, a waste of energy that ought to be employed in cultivating that nice co-ordination of eye and finger which is acquired by the practiced targetshot. For more than twenty years I shot a rifle more or less at squirrels, deer, etc., and thought I was a pretty good shot; but a few years ago a friend induced me to join a target rifle club containing some of the best shots on the Pacific Coast. I soon learned that the art of rifle shooting is a great deal bigger and broader than I had imagined. One thing also very shortly impressed itself on my mind, viz., my hunting rifle began to develop an accuracy on game that I formerly never dreamt of acquiring.

The bearing of this digression on the proper caliber of rifle for deer shooting is this: You may have your .40 or .45 express accurately sighted and well fitted to you, but all this avails nothing unless you by practice and good judgment are fitted to use your weapon.

DR. L. O. RODGERS.

THE COURTENAY BUFFALO CASE.

FROM a transcript of testimony offered at the trial of James Courtenay before Commissioner John W. Meldrum for the Circuit Court of the United States of America for the Yellowstone National Park, we are enabled to give the following abstract, which is of considerable interest. The defendant was charged with violation of the Act of Congress entitled "An Act to Protect the Birds and Animals in the Yellowstone National Park, etc., approved May 7, 1894.

It will be remembered that Courtenay was arrested in Butte, Mont., after he had delivered to a taxidermist named Wittich four buffalo scalps. It was charged that these buffalo had been killed by the defendant in the Yellowstone National Park, but the case was not proved against him and he was acquitted. The trial was held Dec. 26 and 27, 1895.

The first witness for the prosecution was Capt. George S. Anderson, 6th Cavalry, U. S. A., the acting superintendent of the Yellowstone National Park. He testified that he was familiar with the territory embraced in the Yellowstone National Park and boundaries; that in October last he found in the western part of the Park, west of Summit Lake, the remains of two buffalo which had been killed within two months, the heads and hides of which had been taken away; that the place where these buffalo were found was about forty miles southeast of the town of Lake, Idaho. Capt. Anderson stated that the last remaining herd of buffalo in the country within the National Park, southern Wyoming and eastern Idaho, live almost entirely within the limits of the Park, its summer range being near its southwest corner and its winter range near its center. There are a few buffalo that range both winter and summer east of the Yellowstone River, and a small bunch near Heart Lake. He further stated that he had been studying the ranges and habits of these buffalo since the spring of 1891, and had been through these ranges every season since then, and that for the last two or three years no buffalo have ranged within or on the line of the northeast corner of the Park.

On cross-examination he testified that the western boundary of the Park was three miles west of the Wyoming line; that where trails crossed this boundary it is usually marked by stakes showing its location. He stated that in his opinion there were about fifty buffalo in the herd that range in the southwest corner of the Park, and probably not more than half a dozen in each of the others. Within the past year he had visited the range east of the Yellowstone once, that in the southwest corner once, that near Heart Lake once, and the one in the center of the Park several times. In October last he made nearly a complete detour of the Park, during which he made every effort to ascertain the location and condition of the few remaining buffalo. His investigations included the territory ten or twelve miles west of the western boundary of the Park. He testified that he believed that Island Park is from five to eight miles outside of the boundary of the Yellowstone Park.

On redirect examination Capt. Anderson testified that he saw the tracks of one or two buffalo made in the spring so close to the Park line that he could not say on which side of it they were; but that within the Park, for eight or ten miles from the line, there were abundant signs.

Lieut. Elmer Lindsley, Second Lieutenant 6th Cavalry, on duty in the Park under the command of the Superintendent, testified that he had been in the Park since the 30th of May, 1892, and during that time had traveled through it a great deal and was thoroughly familiar with portions of it. That he spent the month of October, 1895, scouting along the western boundary of the Park, between Falls River and Riverdale, and during this month saw two buffalo skeletons on the Madison Plateau, near Summit Lake. Of one of these the head only had been taken. A fire had been built close to the carcasses and a horse tied to a small bush 3yds. away. These buffalo appeared to have been killed last spring. Four or five miles southwest of Summit Lake and near the State line were found the remains of two other buffalo, the heads and part of the hides of which had been taken. What meat had been left by the bears and birds was only slightly decomposed, and the animals appeared to have been killed only about two weeks. Near them were found an empty carbine shell and a seamless sack containing half a bushel of oats. During this scouting trip Lieut. Lindsley struck the Park line about west of the Lower Geyser Basin, traveled as nearly due south as possible along the Park line to the edge of the Falls River Basin, and then scouted the country for about three miles west of that line pretty thoroughly. No buffalo were seen outside of the Park on the trip. An occasional old buffalo track was seen very close to the Park line, made when the ground was soft, probably last spring. The range of the buffalo, as personally known to Lieut. Lindsley, is in summer on the Madison Plateau about Summit Lake and on the slopes to the east and north of them. The country south of the continental divide and western edge of the Park is dry after

the snow water has gone, and only one or two small springs are to be found there. All the summer sign of buffalo seen was within the Park in the neighborhood of Summit Lake, Madison Lake, the head of Bechler and the Little Fire Hole River.

Louis Eschle, a plumber in Butte, testified that he was acquainted with the defendant and had had correspondence with him about selling buffalo scalps. He had been directed to bring this correspondence with him, but averred that before he received the subpoena he had destroyed the letters. The defendant had spoken to him and also written to him about buffalo heads. He had said that he had four which he wished to sell, and inquired whether they could be sold in Butte. In a letter received in October or November, Courtenay stated that he would be up in a week or two with the heads. It was evident that the prosecution wished to show that in one of these letters Courtenay had written to the witness saying that one of the Park scouts had resigned and that everything was clear for the hunter, but the witness denied recollecting anything of that sort in the letter. He also denied that he recalled any statement by the defendant that he had the buffalo corralled where he could get them and kill them in a few days. The buffalo scalps had been brought to Butte about a month before. They had been unloaded at witness's place of business and kept there for two days. On cross-examination witness said that when he saw the heads the skins were dry and he could not tell whether they had been taken from animals recently killed.

David Micklejohn, Deputy United States Marshal, testified that he arrested the defendant, who in conversation expressed no surprise at the arrest because the people in the Park were prejudiced against him and his friends, who live near Henry's Lake. The defendant stated that he had never ventured in the Park, and that he intended to do right and not break any law. Defendant stated that he killed buffalo in Idaho, and not in the Park. The heads were found in the possession of Wittich, the Butte taxidermist. The defendant acknowledged having turned them over to Wittich.

Jas. Courtenay, the defendant, testified that he had resided for five years at Lake, Idaho; that he had buffalo scalps in Butte in the month of November, which scalps he had killed in Idaho about Oct. 10, 1894. They were killed about twenty miles southeast of the Lake, and when he was alone. He did not know where the western boundary of the Park or the western boundary of the State of Wyoming was. To the best of his judgment these buffalo were killed fifteen miles from the Park line. This was at a place not far from Island Park, perhaps twenty-five miles west of the National Park. In the two letters which he had written to Eschle he had said nothing about the discharge of one of the scouts in the Park. From the time these buffalo were killed until he took them to Butte the heads were at the house of Silas McMinn, a neighbor. He had seen buffalo feeding in Idaho outside of the boundary of the Park. He mentioned about twelve head seen last spring about June 25. These were twelve miles from and a little east of south of Henry's Lake on Big Spring, one of the heads of Snake River. He saw signs of other buffalo a year ago last October. That he had never killed or been connected with the killing of any buffalo in the Park.

On cross-examination the defendant stated that he had killed these buffalo about twenty miles southeast of Henry's Lake, and gave the distance from Henry's Lake to the Park boundary as twenty-five miles. The buffalo were killed about fifteen miles west of the boundary and ten or twelve northeast of Island Park. He said that he had killed no buffalo in 1895; that he took the scalps to McMinn's because he lived alone and had no place to take them to.

Silas McMinn testified that he had resided for eight years at Lake, Idaho. He had supported himself by hunting and fishing until the last year, when he then kept a small store. He was familiar with the territory in Idaho adjacent to the Park, remembered James Courtenay having killed some buffalo in that region and knew very nearly where the buffalo were killed; thought that it was about fifteen or twenty miles from the Park boundary. He had seen buffalo ranging in Idaho outside of the Park frequently during the last seven years. Saw some last spring and signs of two other bunches, three in one bunch and seven in another. In October, 1894, Courtenay brought some green scalps to him. They were left at his place until May, 1895. He believed Big Spring to be twelve or fifteen miles west of the Park line; had seen buffalo range there and signs of others. That in the summer and fall of 1895 Courtenay was building a house, stable, corral and wood house west of Targee.

On cross-examination witness testified that Courtenay had been at home all the past summer, that he knew this was so because witness's wife baked his bread for Courtenay, and he got his milk at witness's house. He usually came after his bread every day. He was not related to defendant until after this case began, when Courtenay married his stepdaughter.

Al. Courtenay, brother of defendant, who resides at the Lake, knew of the defendant having killed some buffalo in 1894 and where they were killed, but believed that these buffalo were killed fifteen or twenty miles west of the western boundary of Wyoming. Had seen buffalo in Idaho outside of the Park last spring, when he and another man chased a band trying to catch a calf. He had seen buffalo at Big Spring, which he believed to be twenty miles from the Park, and also at Island Park. On cross-examination stated that he had seen buffalo in the vicinity of Big Spring last June, twelve or fifteen head. That he believed these buffalo killed by the defendant were killed ten or twelve miles from Island Park. He had no knowledge of it except what his brother told him.

John Golden, who has lived at Lake, Idaho, off and on for four or five years, knew of Courtenay's having killed buffalo about October, 1894, and saw the scalps last winter at McMinn's. Did not know that Courtenay had killed any buffalo since that time. Was at Courtenay's place last October for ten days and saw no green skins brought in. On cross-examination stated that in October, 1894, he stopped with McMinn at Henry's Lake, that he did not see Courtenay bring any buffalo heads there, but he saw the buffalo heads at McMinn's. He knows that Courtenay brought them in because he was at the house when he brought them in and saw him bring them in. Thus he flatly contradicted himself and could offer no explanation. Courtenay told the witness that these buffalo were killed on the head of Big Spring. He did not know just how far from the Park line, but thought fourteen or fifteen

miles. Knew of no law in Idaho against killing buffalo.

On the 27th of December Wm. Ahrens, an enlisted man residing at Fort Yellowstone, testified that last season, while scouting on the western border of the Park, he saw buffalo west of Summit Lake, at a point which Burges, the Park scout, stated was two or three miles outside the Park. These were seen in the early summer and appeared to have been there during the spring. Remains of a buffalo cow and calf were seen at a point so near the line that the scout could not state whether they were in or out of the Park. They seemed to have starved to death.

Silas McMinn, recalled, gave some testimony with regard to the boundary line between Wyoming and Montana and the Park line.

MR. CLARK'S CARIBOU.

MR. CLARK, the able and courteous paying teller of the Lincoln National Bank, of this city, a keen sportsman and a cool shot, has recently returned from a very enjoyable and successful trip in New Brunswick. Mr. C. has been through the various degrees of an amateur sportsman from his boyhood days with the woodchuck and bushy tails, grouse, quail and we believe turkey; and now aspires to the sublime degree of a Master Sportsman in the big game line. Last year he journeyed westward an- elking. He had had glowing promises of the sure capture of this noble animal in the region he proposed to visit. But alas! he found that the Indians had been let loose from their reservation and had scoured the country, butchering for their hides what game they could and firing the grass and brush, driving everything living away. His party found only a devastated land, with here and there half-burnt carcasses of the noble elk, killed for their hides alone. He returned agreeing most decidedly with General Sheridan as to the character and value of the noble red man—"the only good Indian is," etc.; you know the rest.

This year he went for caribou and was deservedly successful. The party secured five caribou and one 2-year-old moose, but it had no horns of any account. Two of the deer fell to Mr. Clark's gun. We had a good look at one finely-mounted caribou head that now adorns the walls of his dining room, and of which he is very proud, as this was his first caribou. The party secured several fine views with their camera of various camp scenes, the barrens as they are, the feeding grounds of the game, the road in, which is a veritable "rocky road to Dublin," and reminded us very strongly of the old road from Moose River to Arnold's below the Forge in the old Adirondacks, in the years 1848-50. Many of your old readers will remember that rough road where we used to tie and ride, as they called it.

At one time upon stealthily approaching an open spot Mr. Clark's party discovered a drove of some twenty-five or thirty caribou leisurely trotting along. While two of the men dropped each one of the young bucks, another secured as he thought two or three fine views of the drove before they were out of sight. Unlike the common deer, caribou will not take alarm at a noise only, but easily notice the movement of a body. The dropping of two of their number did not seem to startle them at all out of their gait. Alas! upon attempting to bring out the moving drove the negative proved a dead failure. The party came across several of the stamping or fighting places of the bucks, where the ground would be all cut up by the hoofs and struggles of the infuriated animals. During the rutting season the bucks are very bellicose and the weaker has to run or succumb to the stronger. One of the guides shot a buck that was very lean in flesh and the animal seemed weak. Upon removing the mask a deep suture was discovered almost entirely across the forehead; the skull had been badly fractured, so that one of the horns fell off upon removing the skin. The crack in the frontal bone had commenced to heal, but the jaw seemed to have been entirely or partially paralyzed, so that the poor thing could not take any nourishment. Could it have kept up its vitality, the broken skull would undoubtedly have healed up and have been as good as new. Some of these fights are very much in earnest and to the death, as the many pairs of locked horns found from time to time amply testify.

Mr. Clark and party will go again in the same direction next fall, but to a different part of the county, where he hopes to capture a big bull moose, the head of which he will place opposite his first caribou. Then for an elk. After that I presume he will not be satisfied until he visits Africa and bags an elephant, a lion or a hippopotamus.

JACOBSTAFF.

Three Shots, Three Ducks.

LICKING, Va., Dec. 15.—My father owns a millpond which covers an area of about fifty acres. Numerous ducks come to feed—mallards, bluewinged teal, shovelers, wood ducks, etc. One day I took my gun and started down to the pond to see if I could get a duck. I had a setter along to retrieve the game. On my way down there the setter started a wild turkey, but I did not get a shot at him.

As soon as I got to the pond up flew a flock of about eight black ducks. I turned loose on the flock, not aiming at any particular one, and a crippled one flew by and fell about 20yds. from me. I was just about to go and get the one I had killed when the flock came back over me and I dropped one more. I got these and tied a string around their necks, swung them over my shoulder and started down the pond.

I had not gone far before I saw a flock of five mallards about 50yds. from shore. Making the dog stay behind me I crept as near as I could get, picked out a fine drake, took good aim and pulled the trigger. At the crack of the gun the whole flock got up. How could I miss such a pretty shot? But as I was thinking of this I saw that one of them, instead of going with the flock, changed and went across the pond. He flew about 100yds. and fell. I went over there and picked him up. He was a beauty—a great mallard drake. With a light heart I went home. Out of three shots I had got three ducks—two of them flying.

My father also owns 100 acres of woodland right around our home. We do not allow anybody to shoot in them, and gray squirrels constantly come up in the yard.

Deer are getting abundant about here. Some time ago while I was out hunting wild turkeys an antlered deer jumped up right before me. I did not have any buckshot in my gun, or I could have killed him as dead as a ham-mer,

W. A. LEAKE.

AN ADIRONDACK TRAPPER.

MR. GEORGE L. BROWN, of the *Elizabethtown Post*, sends us the following interesting account of the life of Elijah Simonds, one of the last of the line of historic pioneers and trappers of the Adirondacks:

The Adirondack region is characterized by the numerous labyrinths of lakes and ponds that are scattered over it in every direction, divided from each other by mountainous ridges clothed to their summits (in many instances) with giant pine trees and the many varieties of hard woods peculiar to this latitude, originally not only giving beauty to the landscape, but affording food and shelter for every kind of Northern game. On the hillsides and extensive flat meadows that edge these lakes and ponds or form the margin of many of the numerous noble rivers in the hollows and ravines, the monster moose was found three-quarters of a century ago, his choice of quarters being regulated by the change of seasons. At that time the panther, the accepted monarch of the American wilderness, frequently intruded upon the homestead of the Adirondack settler. The howl of the wolf was then as common as the bark of the fox is to-day. Deer and bears were plenty. Otter "fished the streams" and beavers built their wonderful dams, thereby creating some of the best farming land that is tilled hereabouts to-day.

Thinking that perhaps a narrative of some of the achievements of one who hunted and trapped when the "good old days were in full bloom" might prove interesting, we have decided to chronicle some of the events in the life of a man who is the essence of modesty, but who is nevertheless as distinguished in his line as Napoleon Bonaparte was in his. The subject of our article is none other than our venerable and well-known townsman, Elijah Simonds. He was born on Simonds Hill in this town Feb. 10, 1821. His father, Erastus Simonds, was one of the early settlers of Elizabethtown, his trade being that of a carpenter and joiner. The elder Simonds was fond of fishing, liked to "still-hunt deer," and occasionally caught a bear, but was not given to spending much time in the woods. However, the father of the subject of our sketch had three brothers who were passionately fond of hunting, fishing and trapping. Hence the instinct that led Elijah Simonds as a boy of 6 years to go down to the water, set a "wood trap" of that day and catch a mink. The same instinct led him to try for a fox, and when only 8 years of age he was rewarded by catching his first "yellow skin." When 10 years old his neighbor, Willis Gates, lost a horse. There were wolves on Simonds Hill, and young Elijah discovered signs in the vicinity of the dead horse. Again he tried his hand, catching a wolf the first night. When 11 years old he caught his first bear, an exploit over which many full-grown men would hasten to brag. He continued to trap around Elizabethtown until he was 17 years old, and then went West, going by canal from Whitehall to Buffalo. He went from Buffalo by way of the Great Lakes to Spring Harbor, Mich. There he worked as a carpenter and also made traps. Again his inclination led him to try his hand at trapping, even in a country which was, comparatively speaking, unknown to him. His operations were carried on at the head of the Kalamazoo River, there being no inhabitants in that section at the time except Indians, and he met with fair success, capturing several otter, mink, etc. After a while he started back East, and on his way home was commissioned captain of a lumber raft.

Shortly after his return home from Michigan he caught his first and only silver gray fox. About 1840 the late Congressman Orlando Kellogg, of this village, sent word to Elijah that a black fox had been seen in the Bouquet Valley and advised him to give chase. Accordingly Elijah got up early one clear, cold autumn morning and started out after the black fox. He had gone only a few rods when he heard footsteps behind him. It was then about 4 o'clock in the morning. He stopped and found that it was his brother William, afterward owner and proprietor of the Mansion House, who was following him. They came down into "the valley" together. Separating near where Robert Wood now resides, William went on the river side of the road and Elijah went up on the hill. Just as the first gray dawn appeared he discovered what looked like two foxes digging at the base of an old stump. He made a noise, imitating the "squeak" of a mouse. Immediately one of the foxes and, strange as it may seem, it proved to be the very black fox he was after, came up within a few feet of him. He discharged his pistol, killing the fox instantly. The other fox, a large red one, hearing the noise and not knowing just where it originated, ran up to where the black fox lay dead. Elijah took advantage of the situation, loaded his pistol, putting down a ball without any patch, and shot the fox dead within 6 ft. of the first one.

About this time he decided to go to Salmon River and trap otter. He went there and caught eight of the "sleek fellows."

He next went to Long Lake, being accompanied by his brother William. There was at that time no road into that section.

He visited Saranac Lake and Tupper Lake for the first time in 1842, being accompanied by his brother William and our venerable neighbor and friend, A. McD. Finney, who will be 80 years old the 20th day of next month. They went fishing and were rewarded by catching a barrel of trout, four of which weighed 100 lbs.

Elijah's father died in 1842 and the next year he again decided to go away from home to trap. He wended his way to Blue Mountain Lake, the forests around which were then in their thrifty prime, not having been disturbed by the hand of the white man. Moose were then plenty in that region, and he often heard them tramping on the ridges above where he was attending to otter traps, etc. He also went to Little Tupper Lake, where he caught several otter.

He caught his first panther near Ampersand Pond in 1850. The second panther that fell a victim to his prowess was caught near Moose Pond, between North Elba and Preston Ponds. The last-named panther had "kits," one of which, a spotted little fellow, was sent to that greatest of modern naturalists, the late Spencer F. Baird, and the specimen is, if we are rightly informed, still on exhibition in the Smithsonian Institution at Washington.

Elijah visited Michigan, Minnesota, Wisconsin and Iowa in 1853, but shortly returned East and went to trapping in the Boreas region.

It was at this period of his career that Elijah shot and killed six deer without moving from his tracks, a feat sel-

dom if ever performed before or since. He hunted for the New York market several years. He once took 102 deer (saddles) to New York at one time, all having been killed by him.

He visited Michigan again in 1860. This time he trapped in Michigan waters for beaver, catching twenty-six. He visited Michigan a few years since, but found that the advance of civilization had been so rapid that wild game had disappeared almost entirely from the regions which had been his favorite trapping grounds nearly half a century before and therefore he came back East and decided to spend the evening of his life under the shadow of Mount Raven in Elizabethtown.

Elijah, now on the eve of celebrating his 75th birthday, is remarkably active for a man of his years, especially when we stop to consider the hardship and privation to which he has been subjected during his long hunting and trapping career. On Tuesday of this week he walked from his residence on the east side of Mount Raven to the office of the *Post*, a distance of four miles, and did not seem a bit the worse for wear. As of old he was neatly dressed, his white starched shirt and collar being noticeable, as few of the old time hunters don such habiliments even upon extraordinary occasions. His clean shaven face, high forehead and iron gray hair surmount a form which is slightly bent with advancing age, but the eye is still as bright and the propensity for enjoying a good joke is just as prominent as ever.

Venerable and much respected friend, the last survivor of a family who loved the woods dearly, the record of your life is the reflection of forms and conditions which have ceased, in great measure, to exist! It mirrors the image of an irrevocable past. Last Tuesday we felt the friendly pressure of that right hand and looked into those venerable but bright eyes, and decided that the man who had killed 3,000 deer, 3,000 foxes, 150 bears, 7 panthers and 12 wolves, and who had without any reasonable doubt whatever caught more mink and marten than any other man living, deserved to have some of his achievements chronicled. It was nothing for you in your palmy days to kill three bears in a day, to catch two foxes in one trap between sunset and sunrise, or to kill four partridges at a single shot, and yet you are the only man living who is known to have performed the last named feat.

MAINE GAME CONDITIONS.

BOSTON, Jan. 24.—Reports from the Maine big game are unusually good for the time of the year. At present there is very little snow in northern Maine, nor has there been since the close season begun. This is a condition particularly favorable for moose, deer and caribou. Not only does it allow these animals to move around freely and get at the best feeding grounds, but it also absolutely precludes crust hunting. I have heard from several of the best guides, and they express satisfaction that the chances are so good for the big game. Edgar Smith, of Round Mountain Lake fame, has been in Boston on a visit, and he says that it has so far been a particularly favorable close season for the big game, as well as the partridges. His idea is if the winter continues open the partridges will winter admirably. These birds are lost in great numbers when the snow is deep, especially from being "crusted under." Mr. Smith thinks that there are a great many more birds now in the woods for breeding stock than a year ago.

Another feature of much interest to the lovers of the gun is the fact that there is so little venison coming to Boston this winter. From the trade in the markets there goes up a wail of venison very scarce. Not only are the Maine deer not coming, but the usual "rafts" of Minnesota deer are not coming here this year. There is also a complaint that they are not to be had even in Chicago. A prominent marketman told me the other day that his partner was in Chicago with a view of buying venison to bring to this market, but that the scarcity was so great that the prices were beyond what this market would bear.

But occasionally there is a sight in the Boston markets that makes the hunter's blood boil with indignation. The head and skin of the neck of a big bull moose was carried from a Faneuil Hall Market stall yesterday, to be put into cold storage till it could be sold. The skin was fresh and could not have been taken off many days. It had come by some underground railroad out of Maine; for there are no moose in any other near State.

Fish and Game Commissioner Henry O. Stanley, of Maine, was in Boston yesterday. Right here it may be stated that he has been reappointed for three more years by the Governor of that State, in spite of a rather vigorous fight made by one or two other men who desired the office. But the endorsement by prominent sportsmen was too great, and the work he is doing too important, for him to be set aside at this time. A number of good letters were written to the Governor of Maine in his favor, by prominent Boston sportsmen. I know of three Boston merchants, interested in fishing and shooting in Maine, and owning camps and cottages there, who have worked earnestly for Mr. Stanley's reappointment. Commissioner Oaks, who is also Commissioner of Forestry, has been reappointed.

Commissioner Stanley, who is a fox hunter, as well as a lover of the rod and line, says that he has been into the woods on several occasions and that he is perfectly surprised at the number of partridges that are wintering over; there being almost no snow whatever to trouble them. He also has a good many reports from his wardens and men in other sections of the state, all indicating a great number of ruffed grouse that are sure to winter provided deep and dangerous snows do not come later in the season. The deer also are wintering in great numbers. Mr. Stanley calculates that the deer are now far more numerous than they were a year ago. They have not yarded at all, but are ranging around just as freely as in the early winter. This he regards in a very favorable light for hunting prospects next season. Concerning the moose he is not quite as hopeful, though he says that he has reports of a good many moose still alive, since the hunting season closed; largely cows, however. He says that caribou have not been as numerous at any time the past season as moose.

The Maine Fish and Game Commissioners have carefully prepared estimates which show that fully 4,000 deer have been killed in that State the past season by hunters, with over 200 moose, and not quite 200 caribou. What a sporting record! All this has also been without perceptible injury to the breeding stock. It is safe to conclude that their estimate is not too high, for there have

been transported over the Bangor & Aroostook Railroad alone, according to express Company's returns, over 1500 deer, 112 moose and 130 caribou. The commissioners and the railroad officials are daily in receipt of letters asking for information concerning the hunting and fishing in Maine. These letters are some of them from the South, some from the West, and some even from the countries of Europe, each indicating a desire to hunt big game in Maine. What the next season in that State will show remains to be seen. Thousands of hunters have been into that State the past season, the number promising to be greater next.

SPECIAL.

NEW ENGLANDERS DOWN SOUTH.

BOSTON.—Mr. Fred Rollins will leave for a two months' stay in Florida and will devote the time to the pleasures of rod and gun. J. K. Souther and S. A. Carleton are preparing to go to Altamonte Springs, Fla. Mr. Souther has been there for several years in succession, and delights in the excellent black bass fishing to be found. He gets a great many of them running to large size and fishes day after day, apparently never tiring of the sport.

Quail shooting in Georgia is the plan outlined by Mr. G. L. Bailey, and he will soon leave for a month's vacation in that State.

A party consisting of A. M. Tucker, John F. Hutchinson and Alfred Pierce, of Lexington; N. L. Chaffin, of Arlington; M. E. Tucker, of Lynn; Capt. Harrison Aldrich, of Somerville, and probably two or three others whose names are unknown to me, will leave soon for a week's trip to Salisbury, N. C. This is the tenth consecutive year that the party have made this trip, and as they have always had good shooting in the past their expectations for the coming event are running pretty high. Last year they had very cold weather during their stay in the South, but are hoping for better weather conditions this time. A comfortable hotel at Salisbury is their stopping place, and the plan is to drive off a few miles in the surrounding country for the shooting.

H. B. Stowell, of Boston, accompanied by a friend, will leave in a few days for California. They expect to be gone most of the winter and will visit principally the Southern Coast, going also to the island of Santa Catalina. Fishing and shooting will be the features of the trip, and they are looking for royal entertainment in that line.

Chas. Schworer, of Boston, and W. B. Farmer, of Arlington, returned about Jan. 1 from a two days' hunt in the vicinity of Ashby, where they killed eighteen birds. They found them very plenty indeed. William Leverett, of Dedham, has also had good luck with the birds in that region, coming back with an excellent score after a short hunt not very far from his home.

HACKLE.

HUNTING THE WILDCAT IN SOUTHERN CALIFORNIA.

We admit that the highest enjoyment the field can afford is reached in hunting the red fox of New England. There are no red foxes in Southern California, hence there is one defect and only one to make this paradise imperfect. If I had my Connecticut hounds as good as they were when I bade them a sad farewell eight years ago, I would feed them on porterhouse steak every day and let them sleep in the drawing room at night. How homesick I have been for the fox-hunting of other days and yet there was first-class sport at my very door, of which I have been as unconscious as I was of the gold of Leadville when I walked over its present site twenty-three years ago. Eight years is a long, long time to be deprived of the music, to have only in "memory bright" those perfect November mornings when Sport and Rex had reynard well warmed up by sunrise and 10 o'clock found him trying in vain to discover some material, stone wall, rail fence or traveled road, on which he could lightly tread and not leave the tell-tale scent.

But the longest night is ended by the dawn and those who have examined into the matter say "that it is a long lane which has no turn."

At last one beautiful morning in March who should ride into the yard but that litterateur, linguist and prince of good fellows Mr. Arturo Bandini, with his celebrated pack of foxhounds.

One melodious blast of his bugle and I had nearly upset the breakfast table, and as the dogs responded with their eager bay all the hunting blood of thirty years' standing began coursing through my veins like a mill-race. Quick work to saddle, a short gallop and we were in the cañon of the Arroyo Seco. It was the morning of a perfect day. Can I describe the beginning of such a day in Southern California? No more can I "paint the lily." Not only the sky, the air, the trees, the grass and flowers were full of harmony and color, but the very ground was in just that perfect condition to make the scent lie fresh and warm.

Pilot headed the pack, a black and tan with a fund of information in his line as complete and up to date as the standard dictionary in two volumes. There is not a wildcat or coyote in Los Angeles county who admires the sound of his mighty voice. Besides when the cat (*Lynx maculata*) takes refuge in a live oak, with great limbs low on the trunk, he has a habit of climbing the tree very annoying to its occupant. We had gone slowly down the bed of the cañon, perhaps a mile, when high up on the hillside a clear, prolonged, pure note rang out. That is Pilot. Yes, now look well to your saddle cinch, the curtain is about to rise for the opening scene. Yes, there sounds Chump and Ranger and Turk and Trilby and the rest. "Look!" shouted Mr. Bandini, "there he is, a great big red cat," and I saw him for an instant as he crawled across the face of an almost perpendicular ledge of rock and disappeared in the tall bushes.

Away go the dogs in a sweet confusion of sound echoing up and down the cañon and ringing out in the morning air like a chime of bells. You forget brush, holes and steep banks, and rushing your horse into some convenient cattle trail away you go.

Soon we come to a hilltop, and from this vantage ground we sit in our saddles maybe half an hour while the battle raged below us. Round and round they go, at each turn adding some new and rare notes to their choir. Ranger with his basso profundo, Trilby the prima donna soprano assoluto, and Turk the tenor.

We are on the hills of the San Rafael Ranch directly

west of Pasadena. Lift your eyes and look to the west. Green hills billowy in rank growth of grain, grass and flowers melt away into the verdant plain that stretches away to the surf of the Pacific thirty miles distant, and over the blue waters, Santa Catalina Island, the fisherman's earthly heaven. Turn to the east and you survey the famous valley of the San Gabriel, while your vision is at last limited by the great San Bernardino range, 11,725 ft. in the clouds, white with snow and profound in majestic solitude.

Where are the dogs now? We cannot hear them. No fault of theirs. Wait a few moments. There they come up the Main Cañon, Pilot singing his sturdy baritone to as fine an accompaniment as was ever played. Mr. Bandini said that the big cat was looking for a tree. He proved a true prophet, for soon the musical train swept into a side cañon, the melody was at an end, and only the ow! ow! of the excited dogs as they jumped at the body of a tall, smooth sycamore was left to indicate that the last act in the drama (it proved a tragedy) was ready for the audience.

The emotionless watch marked the chase at two hours and fifteen minutes, but had I written from unaided recollection I should have omitted the two hours.

The play demanded and received a hearty, soul-felt encore. The dogs drank from the brook, rolled in the sand and straightway set out, new worlds to conquer. Presently the leader gave the signal, the orchestra struck up and we were off again. This cat trusted to his superior craft, even refusing a tree of refuge at the last. Misguided lynx! his doom was sealed in his very confidence, for with his companion in defeat he too was finally strapped on behind our saddles, and we came riding into town at 1 o'clock with 75 lbs. of as good cat meat as ever was brought into camp. Our homesickness is better.

BENJ. M. PAGE.

CALIFORNIA.

CHICAGO AND THE WEST.

Around the Yellowstone.

CHICAGO, Ill., Jan. 18.—Mr. E. Hofer writes from Gardiner, Mont., on the Park line, that the winter is passing away without much snow. The Park buffalo are not much banded up. There have been four buffalo seen in the corral built for them on Hayden Valley, and it is hoped some more will go in and get acquainted. The Yellowstone River is full of ducks.

Mr. Hofer was to come East with a lot of animals from the Park for the National Zoo, but the weather grew cold for freight car shipping, and some of the animals were sent by express, so Mr. Hofer was not lucky or unlucky enough to make the long trip as planned.

He was Surprised.

The State game warden of Colorado is said to have been surprised last week when told by a Denver dealer that the latter had lately sold thirty-five tons of Colorado game. The warden just confiscated half a ton of illegal venison himself. Chicago gets it. What Chicago is afraid to keep in stock here goes East, to the delectable 365-days' market in New York City. And would you wonder men want new shooting grounds these days?

Chicago Bear Dead.

The most popular bear the Chicago parks ever had was Old Bob, the big grizzly whose death at the teeth and claws of another bear was chronicled in these columns some years ago. The bear which killed Old Bob was known as Jake, and he was always spoken of as "the murderer." He was an ill-natured cinnamon, and is said to have killed two men before coming to the pits at Lincoln Park. This week Jake died, for no known reason except such as may have been satisfactory to himself. Jake weighed 500 lbs. after death. Old Bob, his victim, was nearly twice as large as Jake.

Wisconsin Fish.

The daily dispatches give the following showing of the work of the Wisconsin Fish Commission:

"MADISON, Wis., Jan. 11.—Superintendent James Nevin, of the Wisconsin State fish hatcheries, has submitted his annual report to the State Fish Commission. It shows a largely increased distribution of fish during the year 1895 over previous years, about 2,000,000 more fish having been distributed in the State last year than in 1894. The total number distributed was 65,152,895, at a cost of about \$15,000. The fish distributed during the year were as follows:

Wall-eyed pike.....	23,000,000	Rainbow trout.....	1,470,000
Lake trout.....	22,000,000	Black bass.....	116,300
Whitefish.....	16,000,000	White bass, full grown..	2,345
Brook trout.....	2,556,000	Carp.....	8,250

"The Madison hatchery has now 3,221,000 eggs of the brook trout, and anticipates a successful hatch. At the new hatchery at Bayfield some 3,000,000 of lake trout eggs have been laid down, and there are 17,000,000 of whitefish eggs now in process of incubation at the Milwaukee hatchery. The State fish car has traveled over 23,000 miles distributing fish during the year."

Willing to Arbitrate.

The latest diplomatic advices in regard to the war situation between this country and England are at hand in the form of the opinion of a gentleman learned in international law whose home is in New York. He writes:

"In regard to Mr. Noel Money's English leather riding clothes I am disposed to think that your special message was too belligerent and likely to provoke an evasive reply. As Mr. Money had occupied the territory within the boundaries of those trousers and had exercised sovereignty over them without any dispute until the recent invasion, I think all the principles of the law of nations would maintain his claim. However, friendly arbitration might hasten a settlement, and to that end you and Mr. Divine might appoint a commission to survey and investigate the disputed territory and make due report later."

Rather than see these two countries bathed in gloom, I am entirely willing to arbitrate the matter as proposed, and hereby appoint myself one-half of the commission above mentioned and Mr. T. A. Divine the other half. When we meet Mr. Money we will sit on him, and if in our judgment he is occupying the mooted territory in contravention of the amity hitherto existent between these two powers, we will take forcible possession of the territory. It shall never be said of us that we were not willing to arbitrate.

Something about "Desperate Days."

Life is too brief and business too pressing for the most part to dispose one to pay any attention to comment on writing done in the course of newspaper business. Nothing is less conclusive or more disgusting than a newspaper controversy, for one side or the other is practically sure to try to be sarcastic or crushing, and sure to succeed in being unjust and illogical. I am so sure of this that I am reluctant to deviate from my usual custom so far as to notice recent comment of one or two anonymous parties on my statement of the Wisconsin deer situation printed in FOREST AND STREAM of Dec. 21 under the heading "Desperate Days in Wisconsin."

"In FOREST AND STREAM of Dec. 21 I have just read Mr. E. Hough's article headed "Desperate Days in Wisconsin," in which he says that never in the history of Wisconsin have there been so many hunters from Ohio and Indiana—pot-hunters, oh yes! from Ohio and Indiana—pot-hunters because they came from outside the State. And they hunted illegally, certainly, because they came a good way to hunt.

"Well now, I know of several cases of illegal hunting in Wisconsin; and it was not done by outsiders either," etc., etc.

The above statements do well as a sample. They are all right except in one fundamental point—they are not true. In this they differ from the statements which they criticize, which were true in all regards, and which gave the news of the situation exactly. This news I gave is taken from letters and local papers from Wisconsin. If there be heat or caustic comment in those, blame those at the origin, not this writer, who reprints them. I have not entered upon any crusade against the hunters from Ohio and Indiana, or any other State.

It is of course absurd to credit all the illegal killing of Wisconsin deer to the non-resident hunters, be they from Ohio, Indiana or any other State. This is so absurd that of course I never thought of making such a statement—nor had I until now thought any one absurd enough to suppose any such absurdity. I think reference to past columns of FOREST AND STREAM will clear me of any disposition to shield illegal shooting by Wisconsin men or any other men, resident or non-resident.

It is of course absurd to charge me with making out a list of accidents and attributing them to Ohio and Indiana hunters, or to any other non-resident hunters. I charged them to the crowded condition of the Wisconsin woods, and I told the truth about it.

In short, the whole criticism of my resumé of the crowded condition of the Wisconsin woods—this "scramble of all sorts of hunters," as I called it—is equally absurd with the above misstatements. If my unknown friends will allow me to be undignified with them for a moment, I would like to say that their toes must be very sore, or they would not have imagined them stepped upon. There has been no attempt to step on anyone's toes, and no attempt to show non-resident hunting wrong when carried on with respect for the laws of the State where the hunting is done. I regret if any gentlemen are sore-toed, but I am not responsible for it. They should read twice before they criticize once—a plan simple in its nature, but one which will often save a world of chagrin. In effect, these gentlemen accuse me of stepping on their toes. In reply, I must ask them to believe that the sensation is rightly to be traced to the subjective and not the objective sense of feeling; or, to be more plain, they thought they were hurt, but were not. In the dark they struck back. In the dark one may strike a friend. I have no enmity to these unknown gentlemen.

Here is where the Enmity is.

But I have enmity for any man or men—be they from Ohio, Indiana, Wisconsin or anywhere else—who unduly hasten the clearing out of such few spots as we have left supplied with game. How few these spots are and how soon they are cleared out, I am, perhaps, in a better position to say than my unknown critics who, perhaps, do not make a business of getting at such knowledge. But I shall waste no space on them, and shall make one of my critics talk for me. He says:

"Twenty-five or thirty years ago there were a good many deer in the western part of Ohio, and hunters came from outside of the State to hunt; and they were welcome, too, as long as they hunted in season; and if they killed a deer they took it outside of the State, too, for it certainly was their property if legally obtained. But alas! the deer are nearly all killed, and Ohio hunters will have to go to wilder places to hunt."

The history of the Ohio deer is the history of the Wisconsin deer. I imagine that both residents and non-residents will combine in the latter case as they did in the first, to exterminate the game. If you look on one picture you will see the other. I have merely sought to call attention to the painting of the latter picture. In my work, do I tread on the sore toes of the pure selfishness and suspiciousness of my unknown friends?

"American" Ways.

The record of extermination being what it is, the bulk of the shooting population of the United States to-day would have no shooting if they did not shoot as non-residents. No one, so far as I am aware, has attempted to pronounce such shooting wrong when done legally and decently. We are told that it is an "American" idea for the non-resident to shoot where he likes. True, it is American. The American idea has nearly stripped this country of game. There is a scramble for what little there is left. While I am able to write of these things I shall protest at that scramble when it becomes indecent and illegal. I am an American, and my family have been Americans, I may say, for hundreds of years, but not all things "American" seem right to me. I know too well the "American" hoggishness which has meant and is meaning the annihilation of the game real Americans ought to be proud to keep alive on this continent. Be it American or un-American, there is no escape from the inevitable conclusion that unrestricted non-resident shooting means a scramble for the game of the few good game countries, a scramble too often illegal and indecent, and a scramble whose end is one part more of the same old "American" record of extinction. You pay your money and you take your choice. You can be "American" and butcher the rest of the game, or you can restrict the killing of game, and so keep it longer—keep it forever if the restrictions are correct.

The Michigan License Law.

There is no doubt that the Michigan license act drove out many non-resident hunters into Wisconsin—so many that the complaint was general and just all over the State. I do not pretend to say whether the Michigan law is constitutional or not, whether it is American or not, nor do I care. What is plain is the fact that numbers of Michigan deer were saved which otherwise would not have been saved. If Wisconsin should pass a similar law it would be her privilege, and for one I should be glad to see that or any other kind of measure which would make it harder to kill a game bird or animal by resident or non-resident shooters.

Any antagonism to this sentiment is more theoretical than practical, though it might be popular. Any such objection presupposes either a wish that the game be exterminated, or a belief that under the present system it will not be exterminated. This is *reductio ad absurdum* sufficient for any well-posted and thinking man who is also a sincere man. He can admit this and still not declare the State license act the solution sought for. One need say no word as to that. He need only point to Ohio, to Illinois, to Indiana, to Iowa, to Minnesota, to Dakota, to Wisconsin. If commentators know what the game situation there has been and is to-day they will go a trifle slow, perhaps, with their generalizations and their abstract theories. For my part, I am tired of theories. I am in favor of anything that will save the game.

A Great Subject.

This subject is a great one, and it is its greatness and its closeness which dispose me to allow myself to be carried along so far with it—much further than a wish to "set myself right" with my unknown critics would take me. I do not care for that, for I have been right with the facts, and hence could not be set wrong in any question where it could make any difference to me. But I just wish in closing to take up one of the theories of one of my unknown critics, and show him what he means when he says what he does. Perhaps he is not willing to follow this to its logical conclusion. Perhaps he is afraid to face the unwelcome truth. A great many men are. But this is what he says:

"If a man is a citizen of the United States and wants to hunt in any State of the United States in season, and kills game, it is unquestionably his, and he should certainly be allowed to take it anywhere in the United States according to the Constitution. This State right business cost this Government millions of dollars about thirty years ago. So I think if a man hunts in season he should not be legally restrained from hunting in any State of the Union."

Our friend is very wise—much wiser perhaps than the Supreme Courts of Michigan, Illinois and Ohio, which have all taken opposite grounds to the above dictum. This hypothetical citizen may be a market-hunter, and he may rob the people of an alien State of thousands of dollars' worth of their goods. If a head of game once killed by him is his, and has about it no vested police regulations which the people of that State may enact for it, then of course our "citizen" may ship it and sell it. Of course, then, he conveys title with it, and it continues to be absolute property. If it is such, the dealer who buys it has the same rights as the shooter who killed it, and the State has no right to impose police regulations here any more than where it was killed. Hence, as property, that game can be sold the year round, free of any of these odious police regulations which our friend does not like. Hence we are to have open game markets, not in some cities, as we do now, but in all cities; not open for part of the year, as they are in Chicago, but open for all the year, as they are in New York. This is what my unknown critic and my wise man means—exactly and fairly and actually what he means—when he says a non-resident should hunt where he likes without restriction, and that the game he kills is "unquestionably his."

It Unquestionably Isn't.

It unquestionably isn't. FOREST AND STREAM says it isn't when it says "Stop the sale of game." That very sentiment is the highest statement possible of the police powers of the several States over their heritage of game. FOREST AND STREAM and every man connected with it, I am sure, would like to see every man, whether he hails from Ohio, Indiana or Wisconsin, have a good time where times are best; yet would none the less like to see any fair and impartial remedy suggested which would make such non-resident shooting legal and decent, and which would yet assure the States still having game that their property was not to be hurriedly and wantonly destroyed. Perhaps one help to the attainment of such an ambition may be a continuance in the habit of printing the truth where found in regard to what is going on in the game fields. I much regret if in the effort to do this in regard to the Wisconsin deer-hunting country there was offense given in any specific quarter, for such could not be the wish. I beg my unknown friends who have wrongly thought this to be in future more careful in how they read and more thoughtful in what they say.

Early Geese.

Jan. 24.—Wild geese were reported seen this week in the Kankakee marshes of Indiana. They are said to have come as far north as Cairo, Ill. I think it more likely that many of them have never been much further south than that, as the winter has thus far been mild for most of the time, with a week of quite warm and rainy weather.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

A Stray Shinplaster

Comes to us once in a while for a copy of "Game Laws in Brief;" but shinplasters nowadays are scarcer than Moose in New York; and 25 cents in postage stamps will do just as well.

NEW YORK GAME LAW.

Editor Forest and Stream.

All true sportsmen who read your paper—and I take it that there are but few who do not—will be interested in the report of the proceedings of the New York Association for the Protection of Fish and Game, the annual meeting of which was held recently at Syracuse; and while they will find in the proceedings much to commend and very little to condemn, they will, I think, find matter in some of the recommendations that could have been materially bettered.

The proposals to amend the game law so as to prohibit hounding and jacking, and to wipe out the infamous Section 249, will undoubtedly receive, as they should, the unqualified indorsement of every sportsman and friend of game protection.

The same may be said of the recommendations relative to spring shooting, the shortening of the snipe and shore bird season, and that relative to the pollution of streams. The correction of an obvious error in the game law, fixing the open season for meadow hens, and several other minor recommendations are all in the right line. I believe, however, that a majority of sportsmen would prefer to have the date of opening of the deer season fixed at Sept. 15 instead of Sept. 1, as recommended, even if the time for closing was extended to Nov. 10. While we must admit that under favorable conditions a large number of deer would be killed during the first ten days of November, we would still have the satisfaction of knowing that they were in a majority of instances killed by sportsmen and in a sportsmanlike manner.

I also beg to take exception to the proposed amendment to Section 74, fixing the date of opening of the woodcock and ruffed grouse season at Sept. 1. The open season for ruffed grouse, at all events, should not begin before Sept. 15, for the reason that more half-fledged grouse are killed during the last two weeks of August and the first two weeks of September than there are shot of full-fledged grouse during the balance of the season. I know of an instance in central New York where eight partly fledged grouse were killed about Sept. 1 from two adjoining trees in a space of less than ten minutes. These grouse were driven into the trees by a cur dog that happened to be following the hunter, and sat there until they were killed. What a glorious day's sport these grouse would have furnished some sportsman a month or two later, and he would, unwillingly perhaps, have left some for seed at that.

The recommendations relative to amending Sections 72 and 73 I believe to be wholly bad and a retrograde movement of the first order. The open season for quail as fixed by the present law is quite long enough when the condition of the quail supply is taken into consideration, and the prohibiting of quail shooting until 1898 in some of the counties is the only practical means of restoring the quail to localities where it has become almost extinct by unfavorable climatic conditions and too close shooting. It will not do to say that inasmuch as the season for other birds is longer the quail would be killed anyway, for this is true only in a limited sense. The sportsman will not kill them illegally on general principles, and in four cases out of five the pot-hunter will not for fear of the penalty, at least he will not hunt for them specially, even though he may kill a few occasionally when in pursuit of other game. That portion of the present game law should be left as it is, unless we amend so as to cut off the last two weeks of the season, when the quail often have quite enough to do looking out for number one, without being harried by hunters of the genus homo.

M. SCHENCK.

Troy, N. Y., Jan. 30.

MAINE ASSOCIATION.

At the annual meeting of the Maine Sportsmen's Fish and Game Association in Bangor, Secretary Farrington reported that the fishing interests of the State were in a prosperous condition, and that as a result of protection and of the activity of the Commission the outlook for the next season was most promising. He recommended that the Legislature should appropriate separate funds for game protection and fishculture, and urged that the close time on beavers should be extended.

The plan was discussed of exacting a license from sportsmen coming from outside of the State, but the proposition failed to receive the convention's approval.

Officers for 1896 and committees were appointed as follows: President, P. O. Vickery, Augusta; Vice-Presidents, A. M. Spear, Gardiner; C. A. Marston, Skowhegan; E. C. Burleigh, Augusta; W. P. Frye, Portland; A. R. Nickerson, Boothbay Harbor; J. H. Kimball, Bath; F. H. Appleton, Bangor; Secretary, E. C. Farrington, Augusta; Treasurer, W. S. Choate, Augusta; Superintendent, J. A. Fairbanks, Hallowell; Consulting Attorney, W. T. Haines, Waterville; Directors, P. O. Vickery, *ex-officio*; E. M. Hersey, Bangor; J. F. Hill, Augusta; J. F. Sprague, Monson; J. H. Kimball, Bath; G. H. Fisher, Winterport; E. C. Farrington, Augusta; G. G. Gifford, Auburn; L. T. Carleton, Winthrop.

Committee on Legislation: F. E. Timberlake, J. F. Hill, J. F. Sprague, L. T. Carleton, E. C. Farrington, A. M. Spear.

Committee on Hatcheries: George G. Gifford, Auburn; E. M. Blanding, Bangor; E. E. Hastings, Fryeburg.

Committee on Protection: L. T. Carleton, E. M. Hersey, J. F. Sprague, G. H. Fisher, O. A. Dennen, Jonathan Darling.

Committee on Exhibits in the State House: Messrs. S. L. Crosby, E. C. Farrington and C. T. Crosby.

Committee on Law Enforcement: Messrs. L. T. Carleton, E. M. Hersey, O. A. Dennen, Jonathan Darling.

Bull Moose do the Hunting.

OUR correspondent Prowler sends us this from the Frederickton, N. B., *Gleaner*, Jan. 8: Mr. Murray Glasier, of Lincoln, had a thrilling adventure Friday which he will remember for a long time. Several of his father's cattle had strayed away into the woods a day or two previous, and Murray was sent out yesterday to search for them. After traveling and hunting for an hour or more he espied what he took to be two cows browsing near a stream, and proceeded toward them. They turned out to be two large bull moose, and as soon as they noticed Mr. Glasier approaching they turned to attack him, bounding toward him with great speed. The young man saw the very dangerous predicament he was in and real-

ized there was no time to lose if he wished to save his life. He ran for and climbed up a tree 10yds. distant and just succeeded in reaching the lower limb when his infuriated assailants arrived at the bottom. They shook the tree furiously and seeing they could accomplish nothing this way they began a siege. They kept the boy treed until dark and he would not have escaped them had not his parents become alarmed and sent the hired man, Mr. Murdock, to search for him. When this gentleman discovered the difficulty he returned for reinforcements in the shape of men and firearms. They put the maddened animals to flight and rescued the boy from his perilous position. His nerves were badly unstrung from the effects of the scare and it is not likely he will go cow hunting again.

New York Game Seasons.

GLOVERSVILLE, Jan. 23.—*Editor Forest and Stream*: A meeting of representative sportsmen of Fulton and Hamilton counties was held at Gloversville on the evening of Jan. 21 which was largely attended and at which, after considerable discussion of the present game laws pertaining to this and Hamilton counties, it was decided to submit to the State Legislature the following changes, which, it was decided, would be of material benefit toward the protection of the game supply:

1. That the close season on woodcock and ruffed grouse (commonly called partridge) should be from Dec. 31 to Aug. 16.

2. That the close season on rabbits and hares should be from Jan. 31 to Nov. 1.

3. That the close season on deer should be from Oct. 31 to Sept. 10; and that the hounding season be from Sept. 10 to Oct. 10 inclusive; that jacking or floating be prohibited.

It was further decided to recommend to the Fish and Game Commission the advisability of appointing special protectors—as far as practicable—in each township, to co-operate with the regular game protectors of the counties.

It was also decided to ask the Legislature to designate some special day, to be known as fox day, upon which a request be made that every sportsman in the State turn out and help exterminate foxes.

It seemed to be the general impression that if the present law on deer was more vigorously enforced any change in the same would be unnecessary.

CAYADUTTA.

More Frost Pictures.

TWO MORE of Mr. A. B. Frost's artistic series of pictures of sport on land and water are now ready for distribution to the subscribers. Both treat of sport with the ducks, one being entitled "Ducks from a Blind," the other "Ducks from a Battery." They are treated in a most pleasing manner, and include all the features so dear to the duck shooter's heart—the expanse of water, the low-lying shore in the distance, the decoys reposing so realistically on the water's surface, and the gunners so alert to pit their skill with the gun against the swift wing and cunning mind of the birds. It is unfortunate that there are a few matters of detail which might not win the highest approval of those who insist on undeviating fidelity, as for instance in "Ducks from a Blind," the duck shooter in a boat is in cover all too short and thin to conceal himself or his boat, and he is wearing a highly colored coat, which could be instantly discovered by the ducks when many gun-shots away. However, overlooking such matters of detail, there is much in the spirit of the scenes and the artistic execution which will appeal to the memory and to the anticipation of every shooter who has reminiscence of good days afield or afloat and hopes for them again.

Adirondack Deer.

Editor Forest and Stream:

In your last issue I noticed an article regarding the deer of the Adirondacks by Mr. J. C. Allen, and while admitting his assertion to be true in some respects, my experience has led me to believe that hounding is one of the most destructive methods of hunting deer now in existence.

If deer are being killed off too rapidly (I for one certainly think so) hounding should be prohibited; then, should this not remedy the evil, stop "jacking" also. Laws like these theoretically would do good, but in practice would they not be like the laws that are to protect the Armenians? Good laws, but no enforcement.

While deer driven to the water often take to other ponds than those occupied by the owners of the dogs, are there no hunters watching those ponds? Most decidedly so. There are mighty few ponds in the Adirondacks, no matter how small, that are not being watched 'most all the time during dogging, and deer once started rarely escape; at least, that is what has come under my observation, and in pretty out-of-the-way localities, too.

S. P. M. T.

Balls in Choke-Bores.

NEW YORK CITY, Jan. 24.—*Editor Forest and Stream*: Please give me your judgment in regard to shooting ball cartridges in a 12-bore choked. I have before now cut my cartridges and made some good shots at long distances, but always thought I would injure my gun and stopped such work. If a ball cartridge can be used without injury to the choke it is a good thing, for one not knowing what game they will meet with can always carry some ball cartridges and feel that they have the proper load with them. I have seen these ball cartridges at Spalding's, and they claim they will not injure a choked gun.

HENRY C. WEST.

Minnesota Game and Fish Commission.

ST. PAUL, Minn., Jan. 19.—*Editor Forest and Stream*: The recent decision of our Supreme Court, making it illegal for any one person to hold two State offices at the same time, has caused the resignation of A. L. Ferris from our State Game and Fish Commission, Mr. Ferris being also a member of the Legislature.

As an official compliment to the voluntary protective movement Governor Clough has appointed Mr. C. S. Benson, St. Cloud, and first vice-president of this Association, to fill the vacancy for the unexpired term.

Mr. Benson is thoroughly well known as a game protectionist and an honorable gentleman throughout Minnesota and his appointment gives general satisfaction.

WM. L. TUCKER, Sec'y.

Special Fares to the Sportsmen's Exposition.

Editor Forest and Stream:

The past week has seen the efforts of the Sportsmen's Association crowned with success in the direction which, unquestionably, means much to the coming exposition. This has been the securing of a concession from the Trunk Line Association, embracing all of the prominent roads centering at New York, of a one and one-third fare rate, to be enjoyed by all accredited delegates to the sportsmen's convention to be held at Madison Square Garden during exposition week. By this provision accredited delegates will purchase their tickets from their homes to New York, and on having their credentials viséd here by the Trunk Line agent, and by the assistant secretary of the Sportsmen's Association, they will be sold a return ticket for one-third the regular fare, which will give them the round trip for one and one-third of the regular rate. The leading members of the Association, who are also exhibitors at the coming exposition, have heartily endorsed the project for a sportsmen's convention during exposition week, which in itself will be an educational feature of decided importance. Plans are on foot to make this convention one that will be memorable in the history of sport and sportsmen's displays. These plans will be announced a little later. Meantime leading exhibitors will see to it that among those who receive credentials as delegates to the convention will be representatives of some of the oldest and most prominent out-of-town houses in the retail sporting goods trade. An opportunity for exhibiting manufacturers to meet their customers personally, and to cement the tie of good fellowship by a little personal attention upon so memorable a visit as the coming journey to New York will prove to many of the delegates, will be improved to the utmost extent.

A Maryland Quail Country.

STOCKTON, Md., Jan. 23.—*Editor Forest and Stream*: We have plenty of quail here now, notwithstanding the severe shooting of this last fall. Our season is not out until Feb. 1, but I know of no one doing any shooting, as all our local population are at work on their oysters in the bay. I am breaking a young dog, but seldom kill a bird, and then only to encourage the dog. I find plenty of small coveys of from three to eight birds; they are very wild and make long flights to heavy cover, or feed out only at the edge of the closest thickets. I think what are here will be well able to avoid the shot of any ordinary shooter. With a favorable season we will have as many birds and as good shooting as we did in the fall just passed. Plenty of geese here now, but ducks and brant will not be back before the middle of February, and after them will come the early flight of jacksnipe.

O. D. FOULKS.

Cumberland Association.

CUMBERLAND, Md., Jan. 16.—At a meeting called by several of the sportsmen of this city last night there were present about twenty representatives, and the following organization was perfected: Mr. Harrison Swartzwelder was called to the chair and Zack Laney appointed secretary. The name was made "The Game Protective Association of Cumberland." The following gentlemen, F. G. Luman, T. H. Hobbs and J. A. McKee, were appointed to solicit subscriptions for the purpose of purchasing birds for propagating. Also committee consisting of Messrs. Swartzwelder, P. J. Smith and Zack Laney, were appointed to draft a law to be submitted to Senator Sloan for the better protection of game in Alleghany county.

New Hampshire Deer.

MANCHESTER, N. H., Jan. 13.—*Editor Forest and Stream*: Protection has done something for large game here. Two buck deer were seen within the limits of the city in one day last fall. Some three or four have been killed in Merrimac and Rockingham counties. They seem to be working down into this part of the State, where none have been seen for a great many years until lately. For the last three or four years some have been seen quite often. There ought to be protection in the southern part of New Hampshire for five or ten years. Long life to you!

J. HODGE.

A Mississippi Deer Chase.

A CORRESPONDENT writes us under recent date as follows: "Major Valentine Young, of Waverly, Miss., unintentionally jumped a deer with his pack of red fox dogs the other day and had quite a race after it. It finally ran off up the river, and two young men out in the bottom shot it, but it escaped across the river. It is against the law to shoot deer in this county for five years, but the above shows how well game laws are observed. Major Young has about three fox races a week, and some of them are extra good ones."

Shooting in China.

NEW YORK.—*Editor Forest and Stream*: My friend, C. J. Ashley, of Shanghai, China (on your subscription list), writes me under date of Dec. 23, just received: "Just back from our annual shooting trip. Had fairly good weather and fine sport. Fifteen days shooting, four guns. Bagged twenty-five deer, thirty geese, about sixty duck and teal, a few hares and enough pheasants to reach a total of 1,000 head." They go up country in a boat propelled by coolies.

J. K. DRAPER.

The Mill at Albany.

ALBANY, N. Y., Jan. 27.—[*Special Correspondence Forest and Stream*]: Assemblyman Alld's bill adds Chemung and Chenango to the counties in which rabbits may be hunted except from March 1 to Sept. 13. Senator Brum's bill adds Otsego county. Assemblyman Budd's bill makes it lawful to take frostfish and whitefish in Seneca Lake at any time with nets having meshes not less than 1½ in. bar. Senator Malby's bill includes bitches in the prohibition of dogs hounding deer.

MATHER.

Game Laws in Brief.

THE Game Laws in Brief, current edition, sold everywhere, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

Camp-Fire Flickerings.

"That reminds me."

"THAT reminds me" of a day my friend W. E. M. and myself went out to see if we could locate the feeding grounds of geese which were in the habit of flying to and from the lake here and some cornfields west of town every morning and evening. We drove out around the lake, taking my .38 Winchester along in case we might get a chance shot. We drove out about three miles and tied the horse to the fence while we strolled down along a line fence between two large fields where we had an idea the geese would be apt to pass over on their way to the feeding grounds.

While we were sitting there a young lad from a neighboring farmhouse came over to see us, and while we were talking to him, giving him a little "joshing" about how far the little rifle would shoot, we heard the musical honk of a flock coming up from the lake. Lying down behind the fence we watched the geese approaching in a long V-shaped line, quite high up, but apparently coming directly over us. They soon got sight of our rig, standing 20 or 30 rods away, and veered off so they would pass us about 60 rods to the right. As they got nearly even with us W. E. said, with a wink in the direction of the kid, "Well, Dean, guess you better take that big one and hit him in the eye so you won't tear him up too much."

"All right," said I, raising up and taking aim at the long narrow line of birds and I let it go, with about as much hope of getting one as I had of joining them in their flight.

As the little gun cracked, the fourth goose in the line stopped suddenly and came down "heels over head," striking the soft stubble with such force as nearly to bury itself in the ground. "That's the stuff," said W. E. as he started in a run after the goose, while I kept on "turning it loose" at the flock. I fired six or seven times at the flock, but failed to get another feather.

W. E. soon came up with the goose and as he laid it down remarked, "You didn't come within 2 in. of his eye. If you can't shoot better than that, I'll do the shooting myself after this." Sure enough, I had caught the goose just back of the head, cutting the top of his neck bones off and killing him instantly.

The eyes of that kid were a sight to behold. They stuck out like saucers and W. E.'s "joshing" about the poor shot seemed wonderfully out of place to him. He probably thought I was the greatest shot that ever took up a gun and W. E.'s talk probably helped the matter along. We started home well satisfied with our hour's hunt, and the kid went off to tell the folks about the wonderful shot he had seen. D. J. HOTCHKISS.

FOX LAKE, WIS.

Sea and River Fishing.

THE CASTALIA CLUB HOUSE.

MR. J. W. OSWOLD sends us this illustration of the Castalia Club House, the latest addition to the Castalia possessions. This club enjoys possession of one of the most wonderful fishing waters on the continent; it is remarkable for volume, purity and natural supply of food for the fish, and not least of all for the beauty of streams and their setting.

We are often asked for fishing club rules. Here are those by which the Castalians have agreed to be governed:

Rules and Regulations.

RULE 1. The fishing season in the waters of Cold Creek, owned or controlled by the club, shall commence on the 15th day of March and end with the 15th day of September.

RULE 2. Not more than 10 lbs. of trout shall be taken from said waters by any one person in any one day.

RULE 3. No trout less than 8 in. long shall be caught and taken away from said stream, except such as it may be impossible to remove from the hook without fatal injury, and all members or guests fishing in said waters shall take all possible care not to injure such undersized fish, that when accidentally caught they may be returned to the water alive.

RULE 4. No fishing shall be done in the waters of the club except with rod and line, and all angling shall be with artificial bait, no natural bait of any kind or description being allowed. The board of directors, however, may authorize the taking of fish with nets or otherwise in or out of season for the purpose of propagation, for the benefit of the club, but shall in such cases return to the stream as many of the fish so taken as possible.

RULE 5. Each member of the club shall be entitled to twenty-six days' fishing during each fishing season.

RULE 6. Each member of the club shall be entitled, during each fishing season, to extend the privileges of the club to five friends, not members of the club, providing such member shall accompany such friends in person, remaining with them during their stay, and shall charge his time with the number of days of fishing indulged in by said friends.

RULE 7. A register being furnished by the club, it shall be the duty of each and every member, upon visiting the stream, to register therein, and carefully fill out in detail the different columns of said register.

RULE 8. No member shall invite a friend to the club at the annual or semi-annual meeting.

RULE 9. No fishing is permitted on Sunday.

Adirondack Lakes Set Apart.

ALBANY, Jan. 28.—Attorney-General Hancock has written an opinion in which he holds that the State Fish, Game and Forest Commission has no right to set apart two lakes in the Adirondacks for the propagation of trout. He says that the Commission has not the power to designate any lake in the State without special legislative enactment.

THE MASSACHUSETTS ASSOCIATION.

BOSTON, Jan. 24.—*Editor Forest and Stream:* The annual dinner of the Massachusetts Fish and Game Protective Association at Young's Hotel last evening was a great success in every way. The walls of the dining hall were adorned with several specimens of Walter Brackett's high art in the way of salmon painting, a new creation, "A Leaping Grilse," being especially noticeable. His son Arthur also exhibited several of his game pictures, while scattered about the tables were fine exhibits of the taxidermist's art. The invited guests were: Gov. Frederick T. Greenhalge and Lieut.-Gov. Roger Wolcott; Hon. Winslow Warren, Collector of the Port; Judge Dunbar, of the Superior Court; Rev. E. A. Horton; A. W. Robinson, president of the Megantic Fish and Game Club; E. A. Brackett and E. D. Buffinton, Fish Commissioners of Massachusetts; Judge Shurtleff, Fish Commissioner of New Hampshire; H. O. Stanley, Fish Commissioner of Maine; J. W. Titcomb, president of the Vermont Fish and Game Association; H. W. Bailey, Fish Commissioner of Vermont. Other members of the Association, with their guests, were: A. S. Adams, Benjamin F. Stevens, Loring Crocker, George A. Sears, L. D. Chapman, M. K. Churchill, C. A. W. Bartlett, Robert Read, Col. H. T. Rockwell, E. E. Small, C. J. H. Woodbury, T. B. Doolittle, of Branford, Conn.; Hon. George W. Wiggin, Dr. J. T. Stetson, John N. Roberts, Ivers W. Adams, Edward Brooks, W. H. Childs, Robert S. Gray, Geo. H. Sprague, Heber Bishop, John M. Graham, Sidney Chase, C. G. Gibson, T. H. Cooney, S. W. Rich, J. Russell Reed, W. G. Hanson, Charles Stewart, Charles Messenger, Rollin Jones, A. D. Thayer, Charles J. McKenzie, Dr. M. G. Kendall, F. M. Childs, C. F. Monroe, J. P. Bradley, Warren Hapgood, W. B. Kehoe, J. S. Dunclee, C. M. Blake, W. B. Hastings, M. G. Benedict, W. A. McLeod, S. F. Johnson, H. W. Sanborn, Myron W. Whitney, J. C. Ryder, E. C. Norton, Charles Vose, L. C. Marshall, H. F. Collins, A. H. Wright, H. P. Plimpton, Joseph Noon, N. Arnold, E. F. Lewis, J. G. Wildman, Alexander Pope, S. A. Gould, E. P. Wilbur, E. H. Clark, Secretary Kimball, A. B. Holmes.

PRESIDENT CLARK'S ADDRESS.

BRETHREN of the Massachusetts Fish and Game Protective Association: I feel great pleasure and satisfaction in having the privilege of congratulating you on this brilliant gathering on the occasion of our twenty-second annual feast, and of extending to all our guests, in your name and on your behalf, our most cordial greeting and our warmest welcome.

It is indeed good for us once a year to gather from forest and stream, from

"the plashy brink
Of weedy lake, or marge of river wide,
Or where the rocking billows rise and sink
On the chafed ocean side,"

from all the haunts of fish and game endeared to us by a thousand recollections, to renew old friendships and form new ones, to revive old memories and to commemorate with thankful hearts, in speech and song, what to us stand for some of the most agreeable and profitable experiences of our lives. How many of those whose days we can all recall when whether life was worth living was not a debatable question, and how bright the halo which encircles them.

I have so recently reviewed the work of the Association for the past year that it is superfluous to dwell upon it on this occasion. It may be said briefly that information relating to fish and game has been disseminated broadcast throughout the State by our efficient secretary. No party has come to us with complaints of violations of law without receiving assurance that on the presentation of the proper evidence counsel would be furnished without expense to the party complaining.

Realizing that ignorance of the law excuses no man, large numbers of posters containing an abstract of the game laws, on cloth, have been sent out, several hundred of them in Italian as well as in English, and hundreds

THE CASTALIA CLUB HOUSE.

containing the Sunday laws. We attended the hearings at the State House before the Legislative Committee on fisheries and game, and presented the views of the Association on the various matters which engaged their attention. Several new associations have been formed, and we have been glad to furnish information as to methods and work. The formation of such associations is a most encouraging feature of the times.

Reference should be made to two cases in the courts of great interest to every sportsman throughout the country. Commonwealth of Massachusetts versus Follett was a complaint charging the defendant, who was at the time a fish and game commissioner, with having taken from Lee Brook, in Sheffield, sixty trout with a net; he admitted the fact, but sought to justify himself under the claim that he was engaged in the artificial propagation of

trout, that he owned the trout so taken, that they were taken from waters under his control; and further that after taking them he kept them until they were ready to be delivered of their spawn, that he then stripped the spawn from them and turned them back into the brook alive. He also claimed that all the trout so taken were turned by him from his own pond into Lee Brook, and he contended that, as the owner of these trout, he had a right to take them in the way he did for the use to which they were put. There were other trout in the brook, other than those which came from the defendant's hatching, to which the defendant made no claim. He was convicted at the Great Barrington District Court and fined \$150, from which he appealed to the Superior Court, where he was also convicted and the fine raised to \$300. He then appealed to the Supreme Court, which overruled his exceptions, thereby confirming the previous decisions, such fish not being of the class of animals which, without confining them in private waters, can become the absolute property of anybody.

The other case is that of the Commonwealth of Connecticut versus Geer. Geer was convicted in New London of having bought in the open markets there certain woodcock, grouse and quail, with unlawful intent to procure their transportation beyond the limits of that State, the birds being in course of shipment to New York under contract of sale. The exact question presented was, can a State, after permitting the killing of game birds, and after allowing them to be bought and sold in the markets of the State, impose the restriction that they shall not be transported beyond its limits? The Supreme Court of Errors, in Connecticut, was of the opinion that the State could do it. The case was taken to the U. S. Supreme Court and argued November 22, and its decision, not yet rendered, is awaited with interest. If I read aright the remarks of Chief Justice Field at a late public dinner, he stated that there had not been much advance in the law for the last hundred years, but the application of its principles to new questions constantly arising is certainly most interesting and instructive even to the minds of laymen.

As usual, we have not escaped criticism, which we should have welcomed had it been of a more consistent character. On the one hand, the Association has been charged with representing wealth amounting to \$16,000,000 and as giving magnificent banquets and employing roundabout methods for accomplishing its ends against the desires and interests of the people; and on the other, with a lack of interest in, and neglect of, its proper duties as enjoined by its charter. These criticisms ought to be made at greater intervals, and then their inconsistency would at least be less glaring. They are about as fair as it would be to condemn popular education and Harvard University because a train robber, caught recently in the West, was proficient in several languages.

I want to say a word in relation to those gentlemen who have recently resigned their membership with us to form another organization having for its object solely the enforcing of the game laws, and leaving out the social element. Of their action we can make no complaint, and our only regret is that we lose several members whom we esteem and who have been with us for many years. Let us be thankful and proud that such good men have graduated from this old Association, and let us also remember that some of the best enterprises and movements which have blessed the world have been started by conscientious men, who, dissatisfied with the existing state of affairs, have gone out to do good work in new organizations more congenial to them. If we are unable to recall any case in which our Association has refused to consider or adopt any proposed scheme having for its object the better carrying out of the purposes of our organization, or if we think that there is no better way to enforce the laws than by the machinery we have already in operation, still let us in charity rejoice to proceed in harmony and sympathy with all kindred associations, and if, embarking on a common sea, we seek divergent points, let us at least part with the friendly hail and the manly cheer. If the new club is as successful on the lines marked out for it as its originators believe, and as we hope, it will be, then we will rejoice, and if not, let us not by word, thought or deed prevent the return of our friends to their old home, but stand by ready to cordially welcome them back and give them the warmest seat by the old fireside.

Let us then resolve, on this our twenty-second Anniversary, to take up and do more faithfully than ever the work which is waiting to be done. We claim no perfection for what we have accomplished in the past. No individual or institution can do that, and when they do reach that state of complacency, they are dying at the top. I think we ought to feel as the man did who came to the end of a long life, and in reviewing it said that he was sure he had not been what he expected to be when he set out on his career; he was equally certain that he had not been what he might or ought to have been; but at the same time he thanked God that he was what he was. There will be need of this Association until the time comes when all men obey all laws as to fish and game, and until our legislators have absorbed all wisdom. When seventy-eight years from to-night, in 1974, some of the grandsons of men within the reach of my voice shall attend the 100th Anniversary of this Association, may they reap the benefit of what we have tried to do, and may our work last so long as a feather cuts the air or a fin cleaves the wave.

Lieut.-Gov. Wolcott responded for the commonwealth in a stirring speech, dwelling upon the delights to be found in true sport with the rod and gun. Hon. Winslow Warren, collector of the port, congratulated the Association upon the good work in which it was engaged. Judge Dunbar urged that there was no true sportsmanship until a man has reached the point where the rules of fair sport were strictly enforced; he is law-abiding himself, and is determined that others shall be. Rev. Dr. Horton spoke forcibly upon the pleasures of outdoor life, enforcing the idea that the man who is a good sportsman is a better citizen. Gov. Greenhalge, who arrived during Judge Dunbar's speech, was warmly greeted when introduced. He referred to the banquet from which he had just come the Fruit and Produce Exchange as a gathering where the means of making a living were paramount interests, and said that a fish and game organization was for the purpose of making life better worth living; that restrictions were necessary in the matter of the taking of fish and game no one would deny, and it was the duty of all well-meaning

citizens to do their utmost to foster a healthy public sentiment for the enactment and then the enforcement of proper laws to that end. Other speeches were made by Arthur W. Robinson, president of the Megantic Club, Judge Shurtleff, chairman of the New Hampshire Fish and Game Commission; Henry O. Stanley, of the Maine Commission, and others. Tom Henry's orchestra and Callender's minstrels furnished plenty of music. Myron W. Whitney sang "I'm a Roamer Bold" and a parody on the "Three Fishers," and Dr. Bishop led the choruses, in which it was judged the entire company joined. Taken altogether, it was an evening of rare enjoyment.

WILLIAM B. SMART.

Michigan Association.

THE Michigan Fish and Game Protective League held its annual meeting at Lansing on Wednesday, Jan. 22. Judge Vance, the president, was unable to be present, but sent a written address. Among other things, President Vance said "That, while the game laws were being enforced better than formerly, as well as meager funds at the disposal of the game warden would permit, they were yet being flagrantly violated in the northern portion of the State; partly because of the hostile sentiments among residents of that portion of the State who think they ought to be permitted to shoot deer at their pleasure, and also because prosecuting attorneys and justices of the peace refuse to aid in its enforcement." He advised that charges be preferred against some of these officials, with a view to having them removed from office.

President Vance urged that the next Legislature be asked to pass measures which the last Legislature failed to pass, and also to enact a law prohibiting the use of fish nets in Detroit, St. Clair and Sault Ste. Marie rivers, Lake St. Clair and the channels about the Les Cheneaux islands, which are the great runways for food and game fish on their journeys between the great lakes.

In accordance with President Vance's recommendations, committees were appointed to take charge of needed legislation, as follows:

On game laws: H. N. Botsford, Port Huron; Mart Norris, Grand Rapids; A. L. Lakey, Kalamazoo; P. T. Glassmire, Manistee; F. A. Russell, Hart.

On fish laws: A. R. Avery, Port Huron; W. S. Humphrey, Saginaw; J. H. Bissell, Detroit; H. A. Wyckoff, Pontiac; R. J. Crane, Detroit.

The following officers were elected for the ensuing year: President, S. W. Vance, Port Huron; Vice-Presidents: S. B. Daboll, St. Johns; Joseph Hills, Pontiac; Secretary, A. L. Lakey, Kalamazoo; Treasurer, E. Crofton Fox, Grand Rapids; Executive Committee, George A. Royce, Marquette; A. R. Avery, Port Huron; Jason E. Nichols, Lansing.

How shall they be lured?

Editor Forest and Stream:

There is a small pond in the Adirondacks, about five miles by road from Euba Mills, facing west, which fairly swarms with trout of the speckled and California varieties, the latter species having been placed there by the State Fish Commissioners about ten years ago. During the day there is no sign of any fish being in the pond, but during the rising and setting of the sun the jumping and splashing of fish are incessant, and I have seen scores of them out of the water at one moment, varying in weight, I should judge, from $\frac{1}{2}$ to 4 lbs. I have fished in this pond for the last five years, during June, July and August, many dozens of times, and my total catch for that long period amounts to less than forty fish of about $\frac{1}{2}$ lb. average weight, including one of 3 lbs. 8 oz., the largest I have caught there; all of which were killed after darkness had set in or before sunrise, and by using a light-colored fly, trailing it about 2 in. under water. At other times I have used grasshoppers, frogs, beetles, suckers and worms, but to no purpose. Others have fared no better than I, and I am satisfied that not 300 fish have been taken from this pond in five years. If any of your readers can suggest a more tempting bait, or can account for such poor results, after most patient and careful fishing in a small body of water that I am confident contains many thousands of fine fish, I will be greatly indebted to them.

J. E. FORBES.

201 WEST FIFTY-FIFTH STREET.

Wanted, a Screen for Fish Waters.

PATERSON, N. J., Jan. 24.—*Editor Forest and Stream:* The Board of Fish and Game Commissioners of New Jersey is anxious to put a stop to the annual loss of fish sustained on account of the canals in the State. One of the feeders of the Morris Canal is Greenwood Lake; the feeder of the Delaware and Raritan Canal is the Delaware River. Every year hundreds of thousands of game fish are lost on account of these canals, and the Commission would very much like to put a stop to this loss. The difficulty which presents itself is the construction of a proper screen which will not foul too readily and which will stand the pressure of the water without materially interfering with the flow. Do you or any of your readers know of any such contrivance in existence anywhere? Any information on this subject will be very gratefully received.

CHAS. A. SHRINER.

For Manitoba Fishermen.

PORT ARTHUR, Can.—*Editor Forest and Stream:* Mr. Margher, Crown Timber Agent, Rat Portage, some time ago was granted a permit by the Ontario Government to take with a net a limited number of speckled trout and black bass from Silver Lake, near Port Arthur, to distribute in some small lakes near Rat Portage (for the benefit of the Manitoba anglers). Mr. Margher was not successful with his catch of speckled trout, having only caught a few. He was then granted permission to take some speckled trout from the Nepigon River, which he did, taking them by train to Rat Portage. Mr. Margher was nite pleased with his success, not having lost a single fish, although the journey was near 400 miles.

J. E. N.

Florida Fishing.

MELBOURNE, Fla., Jan. 21.—Yesterday two ladies caught from a rowboat seventeen sea trout and two large channel bass. To-day they caught seven trout; and a gentleman caught ten trout and one large channel bass. They lost three very large bass on account of flaws in the minnows.

W. T. WELLS.

Pennsylvania Association.

THE officers of the Pennsylvania Fish Protective Association for the year are, as elected at the last meeting: President, H. O. Wilbur; Vice-Presidents (three to be elected), first, Edwin Hagert; second, Dr. Bushrod W. James; third, Howard A. Chase; Secretary, Marion G. Sellers; Corresponding Secretary, J. Penrose Collins; Treasurer, Wm. S. Hergesheimer; Executive Committee (nine to be elected), Henry C. Ford, George T. Stokes, Wm. H. Burkhardt, Dr. W. W. McClure, Wm. P. Thompson, Edw. A. Selliez, Thos. M. Longcope, Alfred Hand, S. E. Landis; Trustee (three years), Collins W. Walton.

Pennsylvania Pike-Perch.

PHILADELPHIA, Jan. 25.—The total distribution of pike-perch by the Pennsylvania State Fish Commission for 1895 was 72,345,000.

M. G. SELLERS.

This is not Mr. Gill's theory, but the teaching of his actual experience.

FIXTURES.

BENCH SHOWS.

Feb. 19 to 22.—Westminster Kennel Club's twentieth annual dog show, Madison Square Garden, New York. James Mortimer, Supt.
March 3 to 6.—City of the Straits Kennel Club. R. Humfrey Roberts, Sec'y, 6 Merrill Block, Detroit.
March 10 to 13.—Chicago.—Mascoutah Kennel Club's bench show John L. Lincoln, Sec'y.
March 17 to 20.—St. Louis Kennel Club's show, St. Louis. W. Hutchinson, Sec'y.
April 20 to 23.—New England Kennel Club's twelfth annual show. D. E. Loveland, Sec'y.
May 6 to 9.—Pacific Kennel Club's fifth annual show. H. W. Orear, Sec'y.

FIELD TRIALS.

Feb. 3.—West Point, Miss.—U. S. F. T. C. trials. W. B. Stafford, Sec'y.
Feb. 10.—West Point, Miss.—The Field Trial Champion Association's first trial. W. B. Stafford, Sec'y.
Sept. 2.—Morris, Man.—Manitoba Field Trials Club. John Wootton, Sec'y.
Oct. 28.—Greene county, Pa.—The Monongahela Valley Game and Fish Protective Association's second annual trials. S. B. Cummings, Sec'y, Pittsburg.

CROPPING.

TUCKAHOE, N. Y., Jan. 23.—*Editor Forest and Stream:* In your editorial warfare against cropping you disagree with Dr. Foote's latest resolution to abolish all and every mutilation, and thereby show how inconsistent your whole standpoint is. I admire Dr. Foote's nerve to do what was the only thing to do, since so far the A. K. C. is forced to waste its time on such questions as you and all neutral logical men contend it is the business of the A. K. C. to enforce—the law of the land. I contend that Mr. Haines and his society is big enough for that, or at least should be.

Now, when the original promoter of this whole question after the first defeat comes to the only defensible point, and conforms his resolutions entirely to the law as it stands, you immediately step back and call it faulty, and, how consistent! declare docking and rounding of ears justifiable. Do you think that it makes a difference to the dogs if you go all round an inch or two or if you cut twice lengthwise to crop? Pshaw! where is your horror of cruelty then?

The American foxhounds are not rounded. They hunt in a more severe country than their English cousins, and so your utility defense falls to nothing.

No! no! Dr. Foote's resolution does honor to him, as it covers just that which the law statutes mean, although I bet dollars against doughnuts that the delegates will do with such theoretical nonsense what should be done with it—kick it sky high.

G. MUSS-ARNOLT.

[We differ from Mr. Arnolt on every point which he has advanced. He can hardly be serious in maintaining that the A. K. C. is wasting its time in considering a matter which interests and is important to the whole dog world. Moreover, instead of endeavoring to enforce the law the A. K. C. is endeavoring to conform to it. As for ourselves, it is difficult to imagine on what grounds Mr. Arnolt can consider FOREST AND STREAM as being "neutral." He further charges us with inconsistency where there is none. In respect to Dr. Foote's resolution he claims that it conforms to the law of the land. It does so only in part; for the rest it exacts much more than the law or necessity or humanity requires. "Justifiable mutilations" are specifically justified under the New York laws—Dr. Foote's resolution justifies no mutilation. We objected to this resolution because it is too sweeping. A dog with a torn ear, a dog with a dew claw removed, etc., would under it be ineligible. Praise for it coming from a source which would be considered as being opposed to it might be justly viewed askance. There is

nothing to justify a mutilation made to gratify a whim, a fancy, a fashion. The law and common sense both provide that necessity or humanity justify some mutilations. In this, contrary to Mr. Arnolt's views, the law recognizes specifically justifiable mutilations. Thus we are not inconsistent in opposing mutilations which are a matter of fashion and defending mutilations which are a necessity, that is if we had done so. What we did really say, and this in reference to Dr. Foote's resolution, is as follows: "Rounding the ears of hounds can be defended on grounds of utility, as can also the docking of spaniels' tails," but whether successfully or not, remains to be determined.

One has but to compare this statement to Mr. Arnolt's version to perceive how mistakenly he has understood it. As the matter of docking had never been brought before the A. K. C., it was but fair to mention that the mutilation of spaniels' tails could be defended on material grounds; but is that declaring that docking is justifiable? If Mr. Arnolt will do us the justice to read what we really did say on the subject till such time as he clearly understands our plain statements, he will clearly perceive that he has a misapprehension on every point he touches upon.]

NEW ROCHELLE, N. Y., Jan. 22.—In answer to the attack upon me by the Bull-Terrier Club, I will not at this time question the propriety of a club a member the A. K. C. making public charges against a delegate with the evident intention of influencing the vote of the associate members, but seriously, what an acknowledgment on the part of the croppers that their practice is indefensible! With no arguments to maintain their position, they seek to do so by muzzling the opposition.

My resolution that dogs be shown in a "natural condition" was not intended to interfere with any justifiable mutilation or trimming (as in the case of French poodles), but simply to meet the principal objection of an anti-cropping rule—that it would be special legislation—and there will be no difficulty in amending my resolution so that it will only do away with unnecessary cruelty in all breeds.

The removal of dew claws and the docking of spaniels used in the field may be justifiable, but docking for fashion is not justifiable, and while it entails no cruelty of consequence, its continuance, saddled with cropping, is objectionable.

At the December meeting of the A. K. C. but one delegate defended cropping, seven others voted against the amendment for its abolishment because they considered such an amendment would be special legislation.

The abolishment of unjustifiable mutilation in all breeds is unquestionably within the province of A. K. C. legislation and in five years' time will do more to perfect the various types than has a century of mutilation.

In presenting the above I do not do so with any desire to continue as an A. K. C. delegate. I trust the vote of the Associate Members upon my name will express their sentiments upon the cropping question. The vote should be a guide to the new delegates when the question again comes up for action. As a breeder of black and tan terriers and fox-terriers, and an admirer of all terriers, I have been firm in my convictions and have believed that I have acted for the best interest of all breeds in which cropping is practiced. Upon my convictions I am ready to stand or fall, and trust no Associate Member has voted my name, regardless of friendly or other reasons, who does not approve of my action on the question of cropping.

H. T. FOOTE.

BROOKLYN, N. Y.—*Editor Forest and Stream:* I quote the following from the official communication of the secretary of the Bull-Terrier Club of America, which appeared in your last issue and which was also sent to me: "Resolved, That it is the sense of the executive committee of the Bull-Terrier Club of America that Dr. H. T. Foote and Mr. H. F. Schellhass, by their persistent and unreasoning assaults on the practice of cropping and on those who practice it, have constituted themselves enemies of the bull-terrier fanciers of America."

The above, originated, sanctioned and circulated by the officers of the Bull-Terrier Club of America, is such a palpable and gross misrepresentation of the facts, and so unqualifiedly false as far as myself is concerned, that I deem it a duty to myself and the reputable kennel world to expose and refute the same and to state facts as they exist, namely:

As a member of the A. K. C. Rules Committee, I was one of the five who unanimously voted to suggest the cropping rule. At the December A. K. C. meeting I made a few remarks in which I stated why I thought the kennel interests would be benefited by passing the rule. These remarks appeared in the official minutes.

A business appointment called me from the room a short time, and on my return I was surprised and disappointed to find a vote had already been reached and the opportunity to record mine lost. Had I voted on the question the result would have been but one vote short of a two-thirds majority in favor of the rule. The above constitutes my entire public record in the matter.

I have neither even been interviewed by any newspaper nor written either private letters or letters for publication on the subject. The public can judge for themselves of the extent of my "persistent and unreasoning assaults" in the matter. On the contrary, shortly after I voted with the rules committee, as above mentioned, a member of the Bull-Terrier Club saw fit to publish in the kennel press what I think any unbiased reader would consider a virulent attack and vilification of myself. Undismayed, I expressed my views at the following meeting, I am proud to say, as my conscience dictated. The result is the resolution herein referred to.

I quote further from the same resolution: "Be it further resolved, that a copy of these resolutions be sent to Dr. Foote, Mr. Schellhass and the American Kennel Club, also to the various press mediums for publication."

In plain, every delegate to the American Kennel Club is hereby warned that no matter how inactive a part he may take in the cropping question, if he shall dare to vote on the same at the coming A. K. C. meeting or express his conscientious views contrary to the wishes of the Bull-Terrier Club, he is liable to be formally advised that he is to be paraded and advertised by misrepresentation in the kennel press throughout the country.

From the above resolutions there is therefore only one inference I can draw, and I trust that no delegate to the American Kennel Club will allow himself to be intimidated and coerced into voting otherwise than his con-

science and judgment may dictate, be it either for or against the measure in question, or as for that, any other measure at any other time; for otherwise the very foundation of justice and the protection, sacred to us all, which we, the public, feel we have in the American Kennel Club would be undermined, and sooner or later the entire structure would surely fall, and the protection now possessed by us swept away. HERMANN F. SCHELLHASS.

Specialty Clubs.

PERHAPS of all the clubs the most recent and most criticised are those which are known as specialist dog clubs. To the general public, who may be unacquainted with such bodies, it may be well to state that these are clubs formed by individuals, sometimes even by a single individual, to look after any special variety or breed of the dog. This "looking after" is, unfortunately, in many cases, almost entirely confined to the supervision of personal interests; the club, or whoever runs it, taking care that not the dogs of the general public are benefited thereby, but his own dogs or those which belong to its members. Sometimes scales of points and descriptions of the animals are produced, the model from which they are taken being such as may be in the possession of the club, and not, as a rule, bearing the type and general character which the British public consider to be the correct article. The next thing is the appointment of judges. Now, with certain isolated exceptions, a specialist dog club will not employ a judge who is not one of its own members. It does not matter whether he can tell a good dog from a bad one or not; his knowledge is a secondary consideration, his payment of subscription the primary one. These clubs will on no account accept, in the usual fashion, any individual's knowledge unless he joins their ranks. And he may join them for a year or two, gaining experience during the time; then he resigns, and heigh presto! all becomes changed; he is struck off the list of judges, and in future is not considered knowledgeable enough to make the awards at any show. These are ordinary dog club methods; and thus reasons are not far to seek why such bodies have become unpopular, and are in a manner more injurious than useful. In writing in this strain, we are aware that some few clubs are not carried out on such terribly conservative and greedy lines, but there is no gainsaying the fact that many of them are. Why should half a dozen individuals, Tooley street tailor like, band themselves together and tell the whole world that they alone know anything at all about a certain variety of dog? and act accordingly. Unfortunately this state of things has been carried on until it may be said to have become chronic, and thus difficult to eradicate or to cure. Some of the less independent dog show managers look to these clubs to provide them judges and to increase their prize money; others, better conducted, will have as little to do with clubs as possible. Their dictation is annoying, and, as we have said, is more for the gratification of private ends than for the good of the public or of the canine race. Something ought to be done by the Kennel Club to put a check upon their proceedings, and we are not without hopes that action may be taken in the matter, especially as the president, Mr. S. E. Shirley, quite recently expressed himself very strongly on the matter, taking pretty much the same opinions so repeatedly expressed in the columns of the *Field*.

There is no doubt that some of the earlier dog clubs had considerable influence in leading the fashion in the way of popularizing certain varieties of the canine race, but without exception such were conducted on more liberal lines than is the case with those of later establishment. The Fox-Terrier Club, the Bulldog Club, the St. Bernard Club, the Dachshund Club and the Irish Terrier Club may be mentioned as among the most successful bodies of their class. By their means the varieties they have dealt with have become popular, but whether individual specimens are better now than was the case, say a dozen years ago, is a matter of opinion. Then, as it were on the other side, instances can be adduced where valuable breeds of dogs have actually degenerated under club influence; and, again, other varieties have progressed without club influence at all. Of the latter, bloodhounds and flat-coated retrievers are excellent examples; of the former, the case of the noble mastiff is particularly apparent. We are fully aware of the difficulty there may be in dealing with these specialist dog clubs, but it is a subject which the Kennel Club ought not to avoid. In many cases the presiding body over our canine affairs has set itself against the dictatorial system as to the appointment of judges, and we think the time has now arrived when it and others may go further, and refuse to accept cups and other donations unless such are for open competition, and not confined to certain members. Exceptions could, of course, be made in the case of valuable challenge cups—but the ordinary prizes ought to be open to all. Until this is done there is no likelihood of stopping this dictatorial policy, which it was generally thought reached a climax at the late Crystal Palace show, when a certain unimportant body seriously asked if their classes might be judged over again by a person of their own appointment, and this, too, when the original judge was considered to be one of the first authorities on this special variety in the land.

We are writing solely in the interests of the dog and of dog shows, and in the belief that unless something is speedily done with regard to the matter we have alluded to, our usual canine exhibitions will cease to exist, and in their place specialist gatherings run in the interests of clubs or cliques will become the order of the day. Allusion has not been made to the various petty quarrels and asperities which are continually arising among certain of these clubs; that they are constantly taking place the columns of papers which are devoted to matters concerning dog shows plainly indicate, and such personalities as result therefrom are, to say the least, exceedingly mischievous, and by no means likely to improve either the appearance or intelligence of the canine race.—*The Field (England)*.

There will be a meeting of the executive of the Canadian Kennel Club at the Queen's Hotel, Toronto, on Feb. 14, at 8 P. M. The business to be considered, besides matters of routine, is: Boyle vs. Trebilcock; field trial rules; incorporation; revision of constitution and by-laws; to receive and count ballots *re* cropping; and reception of new members.

The American Spaniel Club.

A MEETING of the executive committee of the American Spaniel Club was held at the residence of Dr. S. J. Bradbury, treasurer, on the 21st inst. Present—Messrs. E. M. Oldham, R. P. Keasbey, James Watson, S. J. Bradbury and Marcel A. Viti. Mr. Oldham in the chair. The minutes of the previous meeting were read and approved.

The secretary reported that the club's sweepstakes had closed as follows: Of twenty-one dogs nominated twelve had filled, making a total of \$78 received for entries. The Westminster Kennel Club and the Spaniel Club have each added \$25, making a grand total of \$128, to be allotted as follows: 40 per cent. to the first, 30 per cent. to the second, 20 per cent. to the third, and 10 per cent. to the fourth. For the novice sweepstakes thirteen entries had been received, which, with 50 per cent. added by the American Spaniel Club, made a total of \$39 to be competed for.

Messrs. R. P. Keasbey and James Watson were appointed a committee to audit the treasurer's books.

The secretary read a letter from Miss Anabel Green offering two challenge cups, as follows: (1) The Sunning Hill Brace Challenge Cup, for the best brace of American bred black field spaniel puppies, to be won five times before becoming the property of any one member. (2) The Sunning Hill Challenge Cup for the best Irish water spaniel, to be won five times. It was resolved that the cups be accepted and the thanks of the club extended to Miss Green for her generous donation. It was resolved that the following cups be offered at the Boston Show: The American Field Cup, the Sunning Brace Cup, the Bell Paintings and the Sunning Hill Irish Water Spaniel Cup.

It was resolved that the following cups be offered at Detroit, provided that the club's classification No. 1 was adopted and a judge be engaged: The A. S. C. Cocker Cup, Bell Cup and the Saybrook Trophy.

It was moved that the club's delegate to the American Kennel Club use his own discretion in voting on the cropping question.

The M. K. C. Premium List.

THE premium list of the Mascoutah Kennel Club can be obtained on application. The club's address is 1102 Madnack Building, Chicago.

The entry fee is \$3. Entries close on Feb. 24. The specialty clubs' trophies and prizes are numerous and valuable. The club offers kennel prizes of \$20, \$15 and \$10. In some challenge classes the prizes are \$15, in others \$10. Open classes vary from \$15, \$10, \$5 and \$3, and \$10, \$5 and \$3, to \$10 and \$5. In such breeds as have puppy and novice classes the prizes are: Puppies \$5 and \$3. Novice classes \$10, \$5 and \$3, and \$10 and \$5. The special prize list is a long one and will be augmented still more, as there are specialty clubs yet to hear from and many more private specials expected, all of which will be announced later.

Spratts Patent will bench and feed, and that skillful expert, Mr. E. M. Oldham, is engaged to superintend. The management desires photographs from exhibitors for use in press notices. To appreciate the full value of the premium list send in your address to the club and have one mailed to you. The list of judges is as follows:

Mastiffs, St. Bernards, pointers, spaniels, collies, poodles, bulldogs, bull-terriers, fox-terriers and Irish terriers, Mr. Chas. H. Mason, New York.

Newfoundlands, Russian wolfhounds, deerhounds, greyhounds, foxhounds, English, Irish and Gordon setters, Chesapeake Bay dogs, old English sheep dogs, Dalmatians, Scotch terriers, whippets, Bedlington, Dandie Dinmonts and Skye terriers, schipperkes and miscellaneous, Mr. John Davis, Monroe, Mich.

Great Danes and dachshunds, Mr. G. Muss-Arnolt, Tuckahoe, N. Y.

Bloodhounds, Boston terriers, beagles, black and tan, Yorkshire and toy terriers, pugs, King Charles, Blenheim, Prince Charles and ruby and Japanese spaniels, and Italian greyhounds, Mr. H. W. Lacy, Boston, Mass.

Parturition and Care of Puppies.

PARKERSBURG, W. Va.—*Editor Forest and Stream*: My pointer bitch Floss died in labor. She was due to whelp on Jan. 11. On the morning of the 13th she had one fine dog puppy. On the 14th one more; then I called a veterinarian, and he treated her during the day without any good results. In the evening he operated on her. At midnight she was so much worse and seemed in so much agony we thought best to give her chloroform.

She was in good condition and had the best of care; was very heavy with litter. The first puppy removed by the surgeon was tail first. The water had run off and left it dry and hard. I am trying to raise the dog puppy on a bottle, and have some hopes of doing so. He is now 6 days old and doing well.

I thought possible some of your contributors may have had experience in this line and could give some information that would be of help in raising my puppy and also give some information as how to proceed with a bitch during pregnancy and labor, and inform me as to the cause of the trouble. Is it a common thing to have such trouble? I never knew one to die or have such difficulty.

I feed the puppy milk, one spoon lime water to six of milk, in a bottle with common nipple, and he feeds and sleeps and is really no trouble. He seems to be doing well. This may bring out some valuable correspondence on the subject.

C. L. SLAXTON.

Gordon Setter Club.

NEW YORK, Jan. 25.—*Editor Forest and Stream*: In addition to the \$320 cash prizes (same as to other setters) offered by the Westminster Kennel Club to Gordons at the coming New York show, the Gordon Setter Club offers \$40 in cash prizes to dogs and bitches in open classes, belonging to members whose dues are paid up before close of entries on Feb. 4 next; also the *American Field* silver vase (cost over \$100).

The annual meeting of the Gordon Setter Club of America will be held at Madison Square Garden on Thursday evening (the second night of the show), Feb. 20, at 7:30 o'clock, for the election of officers and the transaction of such other business as may then come up. Members are requested to send in their annual dues (\$5) and the names of those to be proposed for membership to L. A. Van Zandt, secretary-treasurer, 938 Prospect avenue, New York city.

W. K. C. Show.

MR. JAMES MORTIMER, superintendent of the New York show, desires that attention be called to the fact that entries positively close on Feb. 4. The following additional specials are offered:

The Boston Terrier Club offers the following special prizes: The club's breeders' trophy, value \$100, for the best dog or bitch bred by the exhibitor; the club's challenge trophy, value \$100, for the best dog or bitch owned by the exhibitor six months prior to the close of entries; entries to be made with the secretary of the Boston Terrier Club on or before Feb. 4, accompanied by an entry fee of \$3. The owner of the best dog to receive 50 per cent. of the stake, the second best 30 per cent. and the third best 20 per cent.

The winners of the trophies will receive a silver medal in commemoration of the award.

Each trophy must be won five times before becoming the absolute property of the winner. Trophies to be competed for annually at the Westminster Kennel Club and the New England Kennel Club shows.

The American Scottish Terrier Club offers two silver challenge cups, one for the best American-bred dog puppy, and one for the best American-bred bitch puppy.

Dwight Baldwin, Esq., offers a silver bowl, value \$50, to be known as the Boston Terrier Puppy Bowl, open to club members only, for the best Boston terrier between the ages of 6 and 16 months registered in the A. K. C. Stud Book. To be won five times.

George N. Phelps, Esq., offers a silver vase, value \$50, for the best Boston terrier brood bitch shown with two or more of her produce, which must be entered in their regular classes, but need not be the property of the same exhibitor. To be won five times. Donor not to compete.

Kindly note that the special prize offered by Dr. C. A. Lougest for the best bloodhound sired by Alchymist, Belhus, Berry's Bradshaw, applies to dogs born after 1893.

The Westminster Kennel Club will give a special prize of \$20 for the best exhibit of four spaniels over 28lbs., entered and owned by one exhibitor, and the special already announced in the premium list shall be for the best exhibit of four cocker spaniels, entered and owned by one exhibitor.

Class 106, for spaniel puppies under 12 months, is for any variety except toy spaniels.

The Westminster Kennel Club will also give a special prize of \$20 for the best exhibit of four Boston terriers, entered and owned by one exhibitor.

Class 238, ruby spaniels, will be divided by sex.

U. S. F. T. C.

Editor Forest and Stream:

For the benefit of sportsmen attending the field trials of the United States Field Trial Club at West Point, Miss., commencing on Feb. 3 next, and the Championship Field Trial, commencing on Feb. 10 at the same point, the Mobile & Ohio Railroad, running from St. Louis to Mobile, Ala., and on whose line the town of West Point is situated, have generously made a low rate as follows: At all junction points on their line and also all important towns, a one-fare round-trip ticket will be sold on Feb. 1, 2 and 3, good returning till Feb. 29; and to those sportsmen who can only attend the Championship trial, a one-fare round-trip ticket will be sold on Feb. 8, 9, and 10, good returning till Feb. 29; and also for the benefit of those sportsmen attending the trials who desire to secure some of the very fine quail shooting along the line of the Mobile & Ohio Railway, a round-trip ticket will be sold from West Point, Miss., to points within fifty miles of that place, good for twenty days. Such tickets will be sold only to persons holding return parts of tickets reading to West Point. Dogs are to be carried free in baggage cars. The prospects are that this will be the most successful trial the Club has ever held. The quality of the dogs entered in the several stakes is of the highest order. Quail are plentiful and the country open, so that ample opportunity is offered to see the dogs in their work. The Holt House will be headquarters, a reduced rate being given to sportsmen. Good saddle horses will be obtainable.

W. B. STAFFORD, Sec'y-Treas.

Metropolitan Kennel Club.

THE executive committee of the Metropolitan Kennel Club held a meeting at Rockwell's, New York, on Jan. 23. Present: Messrs. H. T. Foote, A. L. Lankota, A. C. Wilmerding, G. W. H. Ritchie and E. M. Oldham. Dr. H. T. Foote, president, in the chair.

After the minutes of the last meeting had been read and approved, it was resolved that the president, Dr. H. T. Foote, and the secretary, Mr. E. M. Oldham, compose a committee to select suitable rooms adjacent to Madison Square Garden for the accommodation of the club and its friends during the dog show week and to arrange for such entertainment as they may deem necessary.

It was resolved that the club should at once make application to the American Kennel Club for membership. Mr. J. H. Mathews was unanimously elected vice-president of the club.

The annual meeting will be held on Wednesday evening, Feb. 19, at Madison Square Garden.

Irish Setter Club Meeting.

NEW YORK, Jan. 24.—A meeting of the executive committee of the Irish Setter Club of America was held on Wednesday, Jan. 22, at 54 Stone street, New York.

Present: James B. Blossom, B. L. Clements and G. H. Thomson, and by proxy, Dr. G. G. Davis, W. L. Washington, F. L. Cheyney and Ray Tompkins.

George H. Thomson was elected delegate to the A. K. C.

It was decided to offer the following specials at the W. K. C. show in February, 1898: \$5 for the best dog, \$5 for the best bitch, \$5 for the second best dog and \$5 for the second best bitch; to be competed for in open class by members of the club whose dues are paid by the time of closing of entries, Feb. 4, 1896; and \$5 for the Irish setter having the best field trial record made in 1895.

It was also decided to hold the annual meeting at Madison Square Garden on Thursday, Feb. 20, at 1 P. M.

There being no further business, the meeting adjourned.

GEO. H. THOMSON, Sec'y I. S. C.

POINTS AND FLUSHES.

The lovers of the dogs may be breezy in their expressions of opinion among themselves once in a hundred years or thereabouts, but be this as it may they are disposed to make common cause against an invader. A correspondent who objects to the kennel department being called the "dark and bloody ground" writes us as follows: "I heard recently of a dog which found fifteen bevs in three hours and pointed single birds like a hen picking up corn. If your friend Hough had only been along he would have deadened all the timber along Coonewah Creek and made the men who killed those geese in North Dakota feel as though they had fooled their time away. Still a field trial dog would not do to shoot over, and a thirst for gore such as Mr. Hough's will never be appeased shooting over meat dogs. It appears to me that a man who has lost bears, and even has the temerity to go and hunt for them, should not be allowed to allude to the kennel department as the 'dark and bloody ground'. A friend of mine who lives near where Mr. Hough killed his bear, tells of a hunter from Chicago who was with Bobo, and who killed a bear and tied it to his dugout (or rather his dugout he tied to the dead bear, as he took the tired bear to be) and then went to investigate a noise in the cane which sounded as though made by a bevy of bears. Failing to find anything, he returned for his bear, and was surprised to find both bear and dugout gone. Following the trail that seemed to have been made by his dugout being dragged off, he finally lost the trail at the foot of a very tall gum tree. Happening to look up, he espied about half his dugout sticking out of a hole in the tree 70ft. from the ground. It was some trouble to climb the tree and pull the boat and bear out of the hole, but he eventually retrieved both without danger or mutilation. I looked as though I doubted this tale, but I was convinced of its truth when the narrator offered to show me the tree."

The American Kennel Club meeting is fixed for Thursday, the second day of the New York show, an unfortunate date in so far as several clubs will hold their meetings at the same time, and thus will not have an opportunity to instruct their delegates in matters of importance in respect to the A. K. C. If it is possible to postpone the A. K. C. meeting till a day later, it would be an advantage to all concerned.

Under date of Jan. 24, the Muckcross Kennels, Springfield, Vt., write us that they have started a beagle kennel, all hunting stock and from the best lines of blood obtainable. Three of their bitches are in whelp to noted dogs. The kennel will be represented by both beagles and setters at the New York show.

Mr. J. Otis Fellows, of Hornellsville, N. Y., known to the fanciers by the endearing title "Uncle Dick," has begun suit against the express company for the loss of an Irish setter which was smothered in its crate *en route* to the Newburgh show. As the matter contains a principle of interest to all fanciers, and as Uncle Dick has all the pluck necessary to grapple with a big corporation, but not its resources, Mr. W. J. Higginson, Rochester, N. Y., has suggested that the brethren chip in to help Uncle Dick carry on the good fight, and as evidence of good faith he donates \$5. Let the brethren hear and heed.

From Mr. W. B. Meares, Jr., we have received some sketches, abounding in pleasant humor, from the deft brush of Mrs. Meares, who, with Mr. Meares, followed and enjoyed the competition in the field trials at Newton. One portrays a misguided setter in hot pursuit of a rabbit in moments too precious to be wasted if prizes and honors are to be won. Another shows a dog ranging close to the line of the horizon and his handler is watching him with anxious expression. The third is entitled "Point, Judge," the dog pointing a bevy the wrong way for accuracy.

Mr. W. B. Meares, Jr., Hillsboro, N. C., has sold his setter dog Joyful to Mr. J. Otto Donner, of New York. Joyful favorably distinguished himself in the recent field trials at Newton, N. C.

Mr. L. W. Blankenbaker, of Louisville, is at Cherry Creek, Pontotoc county, Miss., where he has a number of dogs in training. He intends to start Lad's Lady in the trials if nothing unfavorable intervenes.

Mr. John Armstrong, we learn, is making satisfactory progress in the schooling of Mr. Gould's pointers at Pheba, Miss.

Quite a number of Pittsburg gentlemen are intending to visit the field trials at West Point. The Champion stake seems to have excited a field trial interest in a measure equal to that manifested a few years ago.

Nine couples of basket beagles arrived on the steamer Martello on Jan. 23, consigned to Mr. A. Delancy Kane. These are intended particularly for sport afoot with the tiny hounds. Mr. Kane rides quite regularly with the Quaker Ridge Kennels in their runs.

The constitution and by-laws of the Metropolitan Kennel Club can be obtained of the secretary, Mr. E. M. Oldham, care of Spratts Patent.

At the curling bonspiel which was concluded in Duluth last week, that sterling sportsman, Mr. Thos. Johnson, was a member of the rink which captured for the third time the Hall diamond medals, which are now the rink's property. Manitoba sent eight rinks of four men each, which were pitted against eight selected rinks made up of picked men of all American rinks, and Manitoba was victorious.

Owing to delicate health Mr. Whyte Bedford has disposed of nearly all his kennel of setters, and is considering whether to quit field trial interests entirely or not. He may remain at West Point after the trials and enjoy the shooting which there obtains and also at the same time enjoy the curative benefits of West Point's artesian water. All good dogmen like pure water and abundance of it.

We are informed that Capt. Joseph H. Dew intends to be present at the forthcoming field trials at West Point,

PALMYRA.

Miss., and that a number of Nashville gentlemen will accompany him, among whom will be Mr. J. D. B. De Bow, assistant general counsel for the Nashville, Chattanooga & St. Louis Railroad. Mr. De Bow has an excellent puppy or two, and contemplates joining in field trial competition next season. Capt. Dew was a pioneer in field trial interests and in the improvement of the setter and pointer. His dogs and their doings hold an enviable place in the records.

In our advertising columns, J. F. Curly, Fitchburg, Mass., offers pointers; West Philadelphia Kennels, Philadelphia, offer bulldogs and terriers; J. A. Durrell, Pleasant Ridge, O., offers pointers; Seaforth Kennels, East Orange, N. J., announce the St. Bernards Melrose King and Sir Hugh in the stud.

National Beagle Club of America.

NEW YORK, Jan. 27.—A quarterly meeting of the National Beagle Club of America will be held at the rooms of the American Kennel Club, 55 Liberty street, Feb. 3, at 3:30 P. M. GEO. W. ROGERS, Sec'y.

Yachting.

RUMORS of all sorts are flying about as to Mr. Iselin's visit to Europe. One is to the effect that he carries with him the finding of the special committee and will present it to the Royal Y. S. Another states that the main object of his trip abroad is to meet Lord Dunraven on the field of Honour. A meeting of these two noted yachtsmen on the sands of Boulogne, armed with cutlasses, boarding pikes or other appropriately nautical weapons, would give renewed interest to international yachting, which is just now in a bad way.

ONE of the leading representatives of that sort of sensational and claptrap journalism which bribes draftsmen and workmen, hires spies, sends divers under water and balloons in the air, concocts fake designs and sends eavesdroppers to the yacht clubs, has met with a severe rebuke from the special committee. Unfortunately a mere rebuke, however severe and public, has no effect whatever upon this class of offenders, and if the New York Y. C. is honest in its expressions of indignation and desirous of putting an end to such occurrences, it will take some active measures to discover the means by which the report was obtained and to punish both the paper and its tools.

WHILE we have no sympathy whatever with the dishonesty which has made public the evidence, neither have we any with the foolish and unnecessary secrecy with which the New York Y. C. has enveloped the whole matter of the foul and of Lord Dunraven's charges. The special committee, in its statement published elsewhere, gives for the first time its reasons for secrecy, as follows: "That the report and evidence being published together, all the facts and conclusions might come simultaneously before the public, whose opinion could then be formed upon the whole case without the inevitable prejudgment for or against either party consequent upon a partial hearing from day to day."

We confess that such a simple and childlike statement as this has lowered materially our opinion of the special committee. It apparently never occurred to them that this great case, in which two nations were interested, would be taken up by the newspapers to the exclusion of everything else, and that one of two things must happen: either the truth would be obtained by some fraudulent means, or the papers would print lies. The result has been a combination of these two undesirable contingencies; unable to obtain any reliable or definite information during the sessions of the committee, the mind readers of some of the larger papers have filled columns each day with the pleasing pictures of their fancy, and it is on these stories that the public has already made an "inevitable prejudgment." Further than this, the continued and apparently needless concealment of the report has placed so high a premium upon journalistic dishonesty as to defeat its own end.

We are surprised that the gentlemen of the committee did not appreciate at the very outset the fact that both the press and the public demanded news of some kind and were certain to get it; and also that the only way in which the average man could form an opinion was through the reading of the evidence from day to day in the daily papers. From what we hear of the extent of the testimony, when it is made public some time in the future there will be so much of it that no paper will be able to publish more than a *resumé*, more or less garbled and incomplete. Those who are specially interested and are able to obtain a copy of the report, may get at the truth by taking a day to read the whole evidence, but to the general public of both countries the matter is largely at an end now.

Whatever danger existed of incomplete and misleading reports being published, had the hearings been open to the press, was not to be considered alongside of the harm actually done by the futile attempts at concealment.

THE case of the testimony as to the foul in the second race is similar to that of the Dunraven charges; the examination of the witnesses should have been public and the proceedings reported from day to day. The report of the regatta committee gives none of the evidence taken by them, important as it was.

Idlewild—Constellation.

An important case was decided in New York last week, the suit of Charles Cooper Clark, owner of the schooner yacht Idlewild, against Bayard Thayer, owner of the schooner yacht Constellation. The suit grew out of a collision between the two yachts as they were running into Newport on Aug. 4, 1892, at the end of the squadron run from

New London. Idlewild was not racing, but was making for the harbor, as the big racing schooners Constellation, Merlin, Lasca and others were near the finish line of the run, off the Dumplings. All were before the wind with spinakers and all racing kites set. Idlewild had no spinaker set, and kept away as far as she could without jibing, though finally compelled to jibe. Constellation ran up on her and their spars came in collision, the main boom of Idlewild being unshipped. Mr. Clark was standing forward of the mainmast, and as the end of the boom flew forward it struck him in the head, inflicting serious injury.

Mr. Clark claimed \$25,000 personal damages, \$1,250 for damages to the yacht, and \$1,500 for the loss of her for two months during repairs.

Concerning Mr. Clark's personal injuries, evidence was introduced to show that he had also been injured in a railway collision and a runaway accident, and that such injury as he suffered from was due in part to these. It was also shown that the damage to the yacht was comparatively trifling.

The main point of the case was whether, under the rules of the road at sea, Constellation, as the overtaking vessel, was obliged to keep clear; or whether, under the racing rules of the New York Y. C., to which both yachts belong, Idlewild, not being in the race, was obliged to keep out of the way of the racing yachts. The judge's charge favored the latter view, but the jury gave a verdict of \$5,000 for Mr. Clark. Messrs. Charles Francis Adams 2d and Sigmund Butler, both expert yachtsmen, were associated with Peter B. Olney in the defense.

The Bulb-Fin Palmyra.

LOOKING at what was understood to be the original aim of its founders, the 34ft. racing length special class of the Larchmont Y. C. can hardly be called a success; though some of the boats built last year are better than others and more nearly in accordance with the letter of the requirements, in all the faster ones speed has been purchased at the cost of other important qualities. About Larchmont, the home of the class, only the centerboard type has been tried, with the single exception of Vorant II., a moderate keel cutter, the fin type being entirely passed by. The yacht whose lines are here shown, through the courtesy of her owner and her designer, was built for another locality and has never met the main class; but she is a successful study in the fin keel type under the special Larchmont rules. These, as is well known, limit the l.w.l. to 28 to 30ft., the deck length to 35ft., the racing length to 34ft., and call for not less than certain limits of headroom and floor space, the idea being to produce a yacht with some internal accommodation such as is not possessed by the racing fin-keel. One important detail of the rules is the practical limitation of the midship section coefficient to a minimum of 35 per cent.

Palmyra was designed by Mr. George B. Wilbur, the well-known amateur, of Taunton, Mass., and was built for Mr. William F. Palmer, of the same place, formerly owner of the fin-keel Paralos, also designed by Mr. Wilbur. By a judicious combination of dimensions with a powerful but easy form and a long shoal fin of cast iron, a yacht has been produced which fulfills in a marked degree the requirements as to floor space, headroom etc., complying not merely with the letter, but with the spirit of the rules, and in addition has proved a fast boat in her home waters, Narragansett Bay, where a number of good 30-footers are found during the racing season. The construction and use of the yacht are both such as pertain to cruising and general sailing rather than extreme racing; but she has during the season started four times and won three firsts, being once disabled; and has shown satisfactory evidence of good speed in addition to her accommodation and light draft. The designed dimensions and calculations are as follows; but in both racing and cruising the yacht carried 1,500lbs. of water in her tanks and 1,250lbs. of fittings, which brought her to a lwl. of just 30ft:

Length, stemhead to taffrail.....	42ft. 6in.
l.w.l.....	28ft.
Beam, extreme.....	10ft. 6in.
l.w.l.....	10ft. 1in.
Draft, hull.....	2ft.
extreme.....	4ft. 9in.
Freeboard, bow.....	4ft. 9in.
least.....	2ft. 9in.
stern.....	3ft. 2in.
Displacement, hull, long tons.....	6.14
fin and bulb.....	3.10
Headroom, cabin.....	6ft. 2in.
forecastle, over.....	5ft.
Midship section, coefficient.....	36%

Palmyra was built by E. H. Brown, of the Taunton shipyard, being launched on July 17, 1895. The construction is most careful and thorough, being superintended by her owner, who has built and owned a number of yachts. The fastenings are brass screws throughout. She is handsomely finished in mahogany on deck and below, the cabin house and carlins being of mahogany, the roof of the house of Oregon cedar, and the interior of mahogany and butternut in the cabin and the latter wood alone forward.

The forecabin extends across the boat for a length of 6ft. and is fitted with a sink piped to the sea and plumbed to tanks of 180 gallons capacity, an ice box extending from ceiling to deck of 350lbs. capacity, and a china locker is built in compartments for a full dinner service. The cabin has four berths and four transoms, the berth boards of the after berths being removable, making each of these berths as wide as an ordinary bed. The headroom, 6ft. 2in. under carline, and the raised house make a light, roomy and airy cabin, and the

arrangement and fittings are all planned with a view to regular cruising service.

From a long experience with different types, having built and owned five 30ft. l.w.l. yachts, Mr. Palmer is convinced that the broad and shoal fin-keel is the ideal type for a cruiser, combining as it does the greatest amount of living room with a small displacement, fine lines, a form capable of being easily driven with a small sail area and at the same time of great sail-carrying power. As the drawings show, with all the fullness of sections and waterlines the lines are very easy and fair in spite of the contraction before alluded to. The rig is shown in the smaller cuts.

YAMPA'S VOYAGE.—I.

New York to Gibraltar, 1895.

ON the morning of Jan. 10, 1895, the seagoing tug Tarus left the harbor of Boston with the schooner yacht Yampa in tow, bound for New York. Yampa had on all her seagoing togs, and was armed and equipped for distant service, "bound foreign."

After rounding Cape Cod, and while still on the Shoals, we ran into a heavy snow squall from the S.W. and put into Vineyard Haven for the night.

Under way at daylight next morning, still blowing half a gale from the S.W., found quite a jump of a sea on in Vineyard Sound, and occasionally we would stick our jibboom into it. Everything went along nicely until we were abreast of Faulkner's Island, when the gale increased and another blinding snowstorm set in. The skipper of the tug decided to run into Morris Cove and make a harbor for the night. While rounding up to let go the hook Yampa's jibboom got afoul of the cabin house of a coal barge, and gently shifted the cabin top over the side.

Luckily no one was injured, and it was so nicely done that not even a rope yarn on Yampa parted.

Jan. 12.—Left Morris Cove at 6 A. M.; the wind had moderated, and the sea was smooth as a mill pond. We had an uneventful trip to the foot of Twenty-sixth street, East River, New York, where we arrived about 3 P. M. Moored ship between the piers of Twenty-eighth and Twenty-sixth streets, then sent out stern lines and hauled her stern into the Twenty-sixth street dock, rigged out a gang plank, and then the ship was open for inspection to the numerous friends of her owner, Richard S. Palmer, New York Y. C. Yampa certainly did look rather small when compared with the school-ship St. Mary and the old line of battle ship New Hampshire, now used as headquarters for the First Naval Battalion; but after once having been aboard and explored the accommodation and room below, she gave one an idea of a much larger boat than she really is. Being built of steel, and as there are no large knees and frames to cover up with joiner work, she has great spaced below. The following are her dimensions:

Length over all, 135ft.; l.w.l., 110ft.; extreme beam, 27ft.; depth of hold, 13ft. 3in.; draft, 14ft. She was designed by A. Cary Smith and built by the Harlan & Hollingsworth Co., Wilmington, Del., in 1887, and beyond doubt is the finest schooner in the world.

When I mentioned to my friends that my cousin and I were going to make the trip across, the comments were numerous and rather funny. They were about evenly divided and can be classed in just two sets: those who thought we were fools, and the others who thought we were lucky to have such a chance. Needless to mention that we both agreed with the latter.

Yampa was in the finest trim for a "dipsy" voyage. All sails, standing and running rigging were brand new and of the very best. Mainsail, foresail and forestaysail were made of No. 0 duck, jib of No. 1, and topsails and flying jib of No. 2. Besides the above sails we carried a square-sail on the fore. It was rigged to hoist on a wire pennant that ran from the hounds to the deck, and was set up with a turnbuckle. It was a very handy rig, and the yard could be cockbilled and used as a spinaker boom in a

BODY PLAN.

PALMYRA.

very short time. Our squaresail was made in two sections: the upper of No. 1 duck, 20ft. in hoist, and permanently attached to the yard. The sail was bent to the yard on hoops, and when not in use was tightly brailed up and furled. It hung parallel with the foremast, and was securely lashed to keep it from swinging about. The bonnet, or lower section of squaresail, was of much lighter canvas and 34ft. in length, which gave the whole sail a hoist of 54ft. when set. Six brailing lines were rove off every time the sail was set, two on the upper section and four on the bonnet. Each brail and outhaul worked independently, and as there was a tack in the center of the foot of the sail the weather side of the squaresail could be set at any time. We also had main and foretrysails, and numerous kites, such as jibtopsails, maintopmaststaysails, etc.

Open house was kept on Yampa until midnight of Jan. 16, at which time all hands were ordered to report on board and stand by for an early start next morning. It was a most unpleasant night to start out on a yachting trip—raining hard and as cold as charity. After bidding farewell to all my relatives, friends, etc., and wading through the numerous ponds that are always to be found in East Twenty-sixth street on a rainy day, I must confess that I felt rather blue. However, one look at the sign ("Charities and Correction") over the pier seemed to inspire me with new life. Had quite a time rousing the watchman of the dock, as it was 1 A. M., but at last succeeded, and went aboard Yampa and reported for duty. The rest of the boys were all on board, and were going down as far as the Hook next morning to give us a good send off. Our crew consisted of nineteen men all told, to say nothing of the dog (Dapper, a fox-terrier): Capt. Edward Sherlock, First Mate John Burt and Second Mate Wm. Carrol, two cooks, two stewards and twelve men before the mast. They were all deep-sea men, and as good a crew as ever trod a vessel's deck.

Jan. 17.—Turned out at 7 A. M.; beautiful morning, but cold. Wind W. and very puffy. All hands were hard at work stowing away things and making the decks look shipshape. While we were eating breakfast about 8:30 A. M. the tug came alongside and passed us a line; we got in our stern lines and started heaving up anchors. By 9 A. M. we had both anchors catted and were moving down the East River.

It was horribly cold on the trip down the Bay, and the snow-covered hills of Staten Island did not tend to cheer us up. At 12:30 we had a light lunch and the boys drank numerous toasts to T. and me and wished us all kinds of good luck, etc. Off Scotland Lightship at 1:15 P. M. the tug dropped us and came alongside and took off Mr. Palmer and the rest of the party. Being still on crutches from a fall in riding Mr. Palmer could not make the passage, but was to join us by steamer at Gibraltar. We then manned the side and gave them three cheers, which they returned with a will, the tug assisting with numerous blasts from her whistle.

Then it was "all hands make sail," which was done in a very short time. In hoisting the mainsail and foresail large lumps of ice (which had frozen in the numerous bights of the sails) fell to the deck. I thought T.'s remark at that time—"It's— poor weather to go yachting in"—came very near being correct.

Started under full sail except flying jib, with a fine old westerly breeze and smooth sea. The tug followed us until 2 P. M., when we commenced to walk away from her. She whistled us a sweet farewell and we answered the salute by firing a gun. The last we saw of the tug she was making tracks for New York, and the next land we expected to see was St. Michaels, Azores.

At 3 P. M. the wind hauled to N.W., and we downed foresail and forestaysail and set whole squaresail. Quite a good sea on now and Yampa riding like a duck and logging 11 knots. At 4 P. M. wind increased some; found that jib was simply slatting about and doing no work, so we downed it.

On deck all afternoon trying to get acclimatized, but found it rather cold work. Took a trick at the wheel and managed to warm up. When dinner was ready at 6 P. M. found I was hungry as a wolf. T. was rather squeamish and did not eat very much. Sea picking up all

the time. On deck until 9 P. M. Wind N.W., blowing steadily. Yampa under whole mainsail and squaresail and doing 10 knots. Read until 10:30, then turned in.

Jan. 18.—Wind continued steady, and at 3 A. M. we ran into the Gulf Stream; found quite a sea on and all over the shop. Steward called us at 8 A. M. and brought some tea biscuits, which we stowed away before turning out.

On deck in a very short time, and found the weather very much warmer. Wind still N.W., and Yampa under mainsail and squaresail. Fine, clear day, and very few of the clouds that are usually seen hanging over the Stream. We are now running dead squared and the sea is cut up so that it gives her a very peculiar motion. Spent all morning reeving off life lines and putting on chafing gear.

The amount of chafing that occurs on a sailing vessel at sea would surprise one who has never seen it. Every place that a rope touches it chafes, and to quote our second mate, "A packet like this will do more chafing in two days off shore than she would in five years knocking along the beach." From what I have seen I think he is right. Drew a bucket of water about noon and found its temperature was 70°. So much warmer this afternoon that we have been knocking about without overcoats.

Took a short trick at wheel and found it rather hard work. At 6 P. M. wind backed round to west again, and we downed squaresail and set foresail, forestaysail and jib.

Breezed up all the evening, but we hung on to everything, and drove her through it until 11 P. M., then turned out all hands, double reefed mainsail and put single reef in foresail. Midnight—wind increasing and sea picking up all the time.

Jan. 19.—Kept her going all night under the same sail. On deck at 8 A. M. Blowing half a gale from the west and a howling old sea on. Going like a race horse. T. was too sick this A. M. to turn out for breakfast, and resolved to remain in his bunk and await developments. Oilskins and boots were the uniform for the day, as it rains occasionally and we are driving her. Gale increased during the morning and sea getting worse all the time. Took in double reefed mainsail at 11 A. M., and set maintrysail, which eased her up a good bit. At 11:30 set the upper part of squaresail and hoisted the yard about half-way up the foremast. We are now doing 12½ knots. Had a large and elegant appetite for luncheon and as T. was still too sick to turn out I ate both rations. We battened her down about noon, as sea was getting worse all the time. At 2 P. M. wind shifted to N.W. and blew harder than ever. Brailed up squaresail and jibed over. Took a green sea over the weather quarter that stove in the port quarter of our lifeboat.

The lifeboat was stowed on the starboard quarter of Yampa and made a very handy deck locker. Wind continued very squally all afternoon and it rained occasionally. At 6:10 P. M. we had logged just 500 miles from Scotland Lightship. Had to dine alone this evening as T. was still confined to his bunk. At 8 P. M. a flying fish (who evidently mistook our port light for the rising sun) flew aboard. He struck the maintrysail and fell on deck. One of the crew caught him and we examined him by the light of the binnacle. Gale increased about 11 P. M. and we took bonnet off forestaysail and put another reef in foresail. Yampa now under maintrysail, double reefed foresail, reefed forestaysail and jib. Several seas boarded us during the night, but did no damage.

Jan. 20.—Wind hauled more to the north during the early morning. When I got on deck at 8 A. M. wind was N.N.W. and blowing a gale. Mate wanted to heave to, but the skipper would not have it. "Keep her running and we will run out of it in a day or so"—were the orders. Kept her running all the morning with wind off the port quarter. The sea was now mountains high and one of the finest sights I have ever seen. When we were down in the hollow it looked as if the next sea was coming aboard and would sweep the deck. We did ship one or two over the weather quarter, one of which soaked me to the skin. Had to go below and make a complete shift.

At 11 A. M. we put out an oil bag from the weather cat-head and it acted like a charm—in fact seemed to take all the top from the seas and they were feathery white. On looking astern when on the top of a sea our track marked by the oil looked like a beaten trail through some dense woods. At noon sighted a bark bound west, hove to on the starboard tack, under lower topsails and forestaysail. She seemed to be making very poor weather of it and I could not help thinking of that old proverb, "It's an ill wind," etc., as at that time we were logging from 13½ to 14 knots an hour.

During the afternoon we had some heavy rain squalls, but not enough to make any perceptible difference in the size of the sea. Crew had been hard at work all day renewing chafing gear. The sea for the last two days had been enough to chafe out anything. T. spent all day in his bunk reading, and now feels much better. Have had to use the companionway of the galley as an entrance and exit to the cabin ever since we battened her down. Gale moderated a little about 8 P. M., but was still rather squally. Sea also smoothing some, and we took in oil bag. Had been running all day under maintrysail, double reefed foresail, reefed forestaysail and jib. At midnight wind had become steady, so shook out one reef in foresail. Sea smoothing a bit.

Jan. 21.—Carried the same sail all early morning. On turning out at 8 A. M. found that sea had smoothed some. T. turned out for breakfast as fresh as a 2-year-old. It was a beautiful day, and as warm as toast. Sat around on deck in the sun all morning, and felt sorry for all the poor devils that were freezing in New York. Dapper (the fox-terrier) also made his appearance on deck this A. M. and looked very fit for a dog that had eaten nothing for two days. Tried to tempt him with all kinds of biscuits and at last he succumbed to some gingersnaps, which seemed to brace him right up.

At noon the skipper, T. and I took altitude of sun, and on working it out found we had run down to 33° N. Found it rather hard work at first to keep my feet and take a sight. Finally I got a brace in the lee rigging and succeeded. At 12:30 the lookout reported, "Sail ho!" dead ahead. All hands and the cook tumbled on deck to see the show. After a few minutes we made her out to be a tramp steamer bound to the westward, with mainsail, foresail and jib set.

We got our ensign out and, as mainsail was not set, we lashed it to one of the topping lifts. Also got our number, K. D. W. S., and sent it up to the maintop. The tramp passed about a quarter of a mile to leeward of us and hoisted English colors. Shortly afterward she sent up answering pennant. She was a small vessel, light and rolling like a log. The small rags of sails she was carrying did not appear to be doing her much good, for she seemed to roll as much to windward as to leeward. Wind lightened up some at 1:30 P. M. and we shook out the reef in foresail. Sea still pretty bad, but has lost all its angry look. Carried same sail until the second dog watch and then put single reef in foresail again. At 7 P. M. we had logged just 1,000 miles from Scotland Lightship. Wind steady and sea still very high. On deck until 10 P. M.

Jan. 22.—Wind shifted to N.W. about 3 A. M. and let up a bit. Sea smoothing all the time. At daylight shook out reef in foresail and put bonnet on forestaysail. On deck at 8 A. M., beautiful morning and as balmy as June. Sea smooth enough for us to take off all battens and give the cabins a chance to air. At 9:30 A. M. set foretopsail. Yampa now under maintrysail, foresail and topsail, forestaysail and jib, and doing about 10 knots.

Crew spent all morning making chafing gear and overhauling running rigging, etc. At noon took sight for latitude. 12:30 downed maintrysail and set double reefed mainsail. Spent all afternoon on deck reading, etc. Wind continued the same until 5 P. M., when it hauled more to the westward. Clewed up foretopsail and downed forestaysail and set the upper part of squaresail.

PALMYRA.

During the evening it clouded over and we had numerous rain squalls. None were very heavy. On deck until 10 P. M.; rain had knocked down the sea somewhat. Wind still west.

W. IRVINE ZEREGA.

[TO BE CONTINUED.]

The Special Committee's Report.

Com. Brown has called a special meeting of the New York Y. C. for Jan. 31, at which the report of the committee appointed to investigate Lord Dunraven's charges against Mr. Iselin will probably be made public. A special meeting of the committee was held on Jan. 21, and the following announcement was made public:

New York, Jan. 21.—The evidence given before the special committee appointed by the New York Yacht Club to take action upon the statement made by Lord Dunraven covering the America Cup races having been surreptitiously obtained, and having been published by the *New York Herald*, contrary to the purposes of the committee and in advance of its report, the committee thinks it due to itself and the public to make the following statement:

In view of the feeling which had been excited and the international interest involved in a thorough investigation, the committee, with considerable reluctance and at no small personal sacrifice, undertook the duties assigned to it.

It sat with closed doors, and made every effort to keep the evidence private, in order that, the report and evidence being published together, all the facts and conclusions might come simultaneously before the public, whose opinion could then be formed on the whole case without the inevitable prejudgment for or against either party consequent on a partial hearing from day to day.

That this purpose has been defeated the public knows—and how! Important papers have been prematurely made public against the will and well-understood efforts of the persons in charge of them who were responsible for the proper discharge of an extremely delicate duty.

In what way a copy of the evidence was obtained the committee does not know; but, in its judgment, the publication under the well-known circumstances is a disgrace to the journal that made it, and the committee believes that this view can scarcely fail to be that of every respectable member of the community, conscious of the existence of an evil of which this is one of the worst instances.

Grilse and Sylph.

Editor *Forest and Stream*:

The *FOREST AND STREAM* in a recent issue reprints an article from the *Boston Globe*, which, speaking of Mr. Hickins's boat Sylph, calls her a 20-footer and easily the best boat in the bay in her class, and says that Grilse had to lower her colors on several occasions.

Now Sylph measured just under 15ft. waterline at the first races and later with a heavier mast just over 15ft. She was built especially to get round last year's measurement, while Grilse was not, and though really decidedly larger than the figures show, got a very large allowance from Grilse. The record of races where either started is given below. Sylph does not belong to the Beverly Y. C. and could not enter the championship races, but twice sailed the course and was timed by request.

June 17.—Open. Sylph dismasted just before start. Grilse won.

July 4.—Championship. Howling gale and blinding rain N.E. Sylph on hand to sail over course, but made no attempt to start. Grilse won in very fast time.

July 13.—Open race. Hard blow, squall, etc. Sylph not on hand. Grilse won easily.

Aug. 3.—Championship. Sylph sailed course in 1.57.31. Grilse in 1.53.4, which lead is more than the allowance.

Aug. 17.—Open. Fluky, boats separated. Actual time, Grilse 1.22.47; Sylph 1.23.37. Corrected: Sylph 1.07.49, Grilse 1.03.59.

Aug.—Sippican Y. C. Open to entire fleet. Grilse beat Sylph some minutes and took the cup from entire fleet.

Aug 31.—Open.

	Actual.	Corrected.
Grilse.....	1 53 46	1 37 11
Sylph.....	1 55 53	1 36 42
Sept. 2.—Open race.		
Grilse.....	2 52 56	2 36 21
Sylph.....	3 02 12	2 43 11
Sept. 14.—Championship. Grilse wins. Sylph sailed course and was beaten about 10 minutes.		X. Y. Z.

YACHTING NEWS NOTES.

William Judson Averill, until recently in charge of the yacht and boat department of the New York store of A. G. Spalding & Bro., died on Jan. 21 of consumption, at the age of 23 years. Mr. Averill was the youngest of four brothers, well known among the younger yachtsmen and canoeists of New York and Brooklyn, one of whom, H. R. Averill, died under very sad circumstances about two years ago. The other two are now in business in Yokohama, where they take an active part in yachting. Mr. Averill was an ardent lover of yachting, and for some years has been connected with the boat business about New York. He was a good Corinthian sailor, and from his readiness to work his passage at tiller and sheet, as well as his personal qualities, was always welcome aboard racing yachts. Within a very few years the family has been completely broken up through the deaths in succession of the father, mother and second son, and Mr. Averill has never recovered from the final shock caused by his brother's death. Last winter he visited Bermuda and returned somewhat improved in health, but during the summer he was taken seriously ill, and while on board Mr. Hoyt's Norota on the New York cruise was compelled to give up all work. Consumption developed rapidly, and he grew steadily weaker to the end. His last actual work was in connection with Ethelwynn, and his energy and perseverance, though ill at the time, contributed materially to the rapid and perfect construction of the yacht, the details of centerboard, spars, sails, fittings, etc., being prepared in advance, while the hull was building. No one connected with her was more deeply interested in her success or took more pride in her, and yet he never saw her. His thorough integrity and honesty of purpose, his earnestness in everything which he undertook, and his plain and unaffected manners endeared him to all who came in contact with him socially, in business or in yachting.

Mr. W. D. Hodge, of Sandquay, Dartmouth, who died yesterday from congestion of the lungs, was widely known all along the South coast. Mr. Hodge was the builder of small half-racing craft, notably the Picaroon, Corrinette, Semibreve and Halo. Some of his best efforts in the 1-rating class were the Nanette and Scourge, while Scaramouch, Jack-o'-Lantern and many others were built at his yard. With Capt. Bayly, of Exmouth, he jointly owned many racing craft, and few will feel his loss more than Capt. Bayly. He was an esteemed member of the committees of Dart Boat Sailing and Minima Yacht Clubs. Mr. Hodge, who was 48 years of age and only ill ten days, was a staunch Wesleyan, and had held nearly all the offices open to laymen. Much sympathy is expressed with his widow, son and daughters.—*Western Morning News*, Jan. 14.

"Steam Vessels and Marine Engines" is the title of a handsome quarto volume by G. Foster Howell, of the *American Ship Builder*, and published by that paper. Mr. Howell has collected a large number of illustrations of both sail and steam vessels, yachts, steamers, tugs, etc., with engines and boilers, the whole making a valuable and interesting book of reference in modern practice, as well as a history of marine engineering. All types are illustrated and fully described, from the original Savannah and the packet ships to the St. Paul and Lucania.

The yacht brokerage business established two years since by Ashton Lemoine will in the future be conducted under the name of Tams & Lemoine, Mr. J. Frederick Tams having joined Mr. Lemoine on the first of the year. Both of these gentlemen are very well known to yachtsmen, and Mr. Tams in particular has been prominent in the New York and Seawanbaka clubs, and in New York yachting, for more years perhaps than he would care to have us state. In addition to his thorough familiarity with sailing craft and yacht racing, he has had charge of the construction of two of the finest of American steam yachts, Mr. Vanderbilt's Alva and Mr. Morgan's Corsair. The firm will carry on a general business as yacht and ship brokers, marine constructors and insurers, and they are prepared to furnish plans, place contracts and superintend all classes of marine work. Their office is at 44 Pine street, New York, and their London agents are Messrs. Berryman & Turnbull.

The 1896 catalogue of the Spalding-St. Lawrence Boat Co. is similar in size and style to that of last year, but of improved appearance, and the list of boats, canoes and yachts has been materially enlarged and improved. The success of La Gloria, Scarecrow and Ethelwynn has led the company to devote special attention to this class of small yachts, and to seek for every improvement in model, construction and rig. They have added this season a new design by W. P. Stephens, in two sizes, 19ft. and 14ft. 6in. l.w.l., to be canvassed, if desired for racing, to the 30ft. and 15ft. racing length classes. In construction all of these boats have been strengthened and lightened, and the double-skin method has been worked out to a high degree of perfection.

Northern Division, Douglas H. McDougal, Toronto, Canada.
Annual dues, \$1; initiation fee, \$1.
Annual meet, Aug. 14-23, Grindstone Island, St. Lawrence River.

WESTERN CANOE ASSOCIATION, 1895-96.

Commodore, C. F. Pennewell, Detroit, Mich.
Vice-Commodore, Nat. H. Cook, Chicago, Ill.
Rear-Commodore, E. H. Holmes, Milwaukee, Wis.
Sec'y-Treas., W. D. Stearns, Detroit, Mich.
Executive Committee: R. M. Lamp, Madison, Wis.; C. J. Steadman, Cincinnati, O.; F. W. Dickens, Milwaukee, Wis.

Changes of A. C. A. Racing Rules.

The following recommendations to the regatta committee of amendments and changes to the racing regulations were made by the executive committee meeting Nov. 11, 1895:

By Mr. O'Brien, seconded by Mr. Scott, that Rule 1 be amended by the addition after paragraph 5 of a paragraph, "Canoes for four men crews shall not exceed 20ft. in length, with minimum beam of 30in."

By Mr. Scott, seconded by Mr. McKendrick, that the regatta committee shall place a limit of not less than 30in. beam and 55lbs. weight to canoes in event 16, tandem paddling.

By Mr. Butler, seconded by Mr. Schuyler, to amend Rule 1, paragraph 2, by omitting the words "must not drop more than 18in. below the garboard."

By Mr. Butler, seconded by Mr. McKendrick, in Rule 1, paragraph 5, to strike out down to "no standing sail shall be used."

By Mr. Butler, seconded by Mr. Quick, to add in Rule 5, paragraph 2, after the word "men," "provided ten or more finish; if less than ten finish a prize shall only be given to each two or fraction of two finishing."

By Mr. Scott, and seconded by Mr. Schuyler, to change Rule 5, paragraph 2, by striking out the words after the word "with" to the word "thereon," and substituting therefor the words "paddling, sailing or record." The letters A. C. A. and the year expressed in four figures.

By Mr. Quick, seconded by Mr. McKendrick, an amendment that in place of flags, shields or some more lasting memento be substituted.

By Mr. Sparrow, seconded by Mr. Backus, the prizes shall be allotted before the races are run.

By Mr. Butler, seconded by Mr. Quick, to change Rule 5, paragraph 6, by striking out the words "rig or."

By Mr. Butler, seconded by Mr. Quick, in Rule 5, paragraph 6, to substitute the word "trial" for "unlimited."

The above recommendations by vote were approved.

I approve of the above changes.

W. C. WITHEBEE,
Chairman Regatta Committee.

Mr. Butler, seconded by Mr. Backus, moved that it is the sense of this meeting that after paragraph 1, Rule 1, of rules and regulations shall be added: "Sail area shall be limited to 130sq. ft." Carried.

Mr. Butler moved, seconded by Mr. Smythe, that it is the sense of this meeting in Rule 1, lines 7 and 8, beginning with the word "except," to strike out all the remainder of the paragraph. Carried.

I approve of the above changes.

W. C. WITHEBEE,
Chairman Regatta Committee.

The Canoeists' Club of New York.

A NUMBER of the members of the Canoeists' Club of New York and their friends had their customary yearly dinner at Browne's chop house on Jan. 25. The proposed camp on Lake Hopatcong on Decoration Day was discussed and much enthusiasm was shown. Members of the various committees of the Atlantic Division made remarks incidental to the occasion and the evening was enlivened by the old favorites: Australia, Allouette and "Roll a man down." Among those present were Messrs. Vaux, Smythe, Ward, Moore, Nadal, W. M. and I. Brownell, Burtis and Hand, of the N. Y. C. C.; R. J. Wilkin, of the B. C. C.; W. E. Barlow and N. S. Hyatt, of Sing Sing; P. B. Rossire, Thomas Hale, Jr., and Leo Shire, of the Yonkers C. C.; L. B. Cawley, of Bound Brook; R. H. Peebles, W. T. Berry, J. P. O'Shea and W. L. Dudley, of the Knickerbocker C. C.; J. V. Dorland, of the Arlington C. C. Mr. Hand was elected President of the Canoeists' Club for the ensuing year and Mr. Hale Secretary-Treasurer. Another dinner is to be held late in February. The committee in charge were Messrs. Dorland, Hale and W. M. Brownell.

[The notices of this dinner were sent out too late last week for publication in the *FOREST AND STREAM*.]

A. C. A. Membership.

APPLICATIONS for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the *FOREST AND STREAM*.

California Riflemen.

COLUMBIA PISTOL AND RIFLE CLUB.

SAN FRANCISCO, Cal., Jan. 12.—There was a good turn-out of the members of the Columbia Pistol and Rifle Club to-day; the firing points at Shell Mound range were patronized very freely, although the weather conditions were decidedly unfavorable to good scores. A heavy haze hung over the Berkeley shore, while the north wind blew the smoke right back into the shooter's face.

The new target invented by F. O. Young was the center of attraction. This target has been adopted by the club and will be used by the members in their competitions. In describing the target the *San Francisco Call* says:

"It is strictly an American target, and those who did not have a chance to use it during the experimental period were anxious to see what they could do upon it with rifle and pistol, for it is adapted equally to both.

"The Columbia target is a decided departure from all other targets in several particulars. In the first place the count is reversed, starting from the unit in the center, whereas in other ring targets an arbitrary number is placed in the center of the bullseye. In order to get the inch as the unit of value, the $\frac{1}{16}$ in. lines have been adopted. This makes the diameter of the inner circle, or center ring, 1in. This gives two values to the figures: the diameter value in inches and the distance from the center in half inches. On being shown by the marker a 1, 2, 3 or 4, the marksman knows that his bullet has struck within a 1, 2, 3 or 4in. circle. He also knows the distance of each bullet from the center in half inches. These circles are carried as high as 26, the outer circle being 26in. in diameter, or 13in. from the center. Thus the total of a string of shots is the approximate string measure in half inches. The total divided by the number of shots shows the average size of the circle in inches. A score of 10-shots, total 45, shows that the marksman has an average of a 4.5in. circle.

"To express Creedmoor points on the Columbia target the rule is very simple. Between 1 and 8 Columbia is 5 Creedmoor. Between 8 and 26 Columbia is 4 Creedmoor, and outside is a 3 Creedmoor, at 200yds. The same size target can be used at shorter ranges. At

100yds. the 4 Columbia is the 5 Creedmoor. At 50yds. the 2 is the 5, at 25yds. the 1 is the 5 Creedmoor. This does away with the necessity of reducing targets for shorter ranges. A 12in. black disk or bullseye is used, but its use is principally for the convenience of the eye, and not an object upon which to base computation.

"To be thoroughly American, another innovation was made. When shooting on the point target and a center or 25 was made, the marker waved a red flag. No red flag waves in front of the Columbia target when a center is announced. It is the stars and stripes."

To return to to-day's scores: The club has decided to offer cash prizes for the first and last center shots made on the pistol and rifle targets. Dr. Rodgers made the first center early in the morning, F. O. Young making the last center in the afternoon; this was on the rifle target. On the pistol target Young made the first center, C. M. Daiss making the last.

The new targets were voted a thorough success, the shooters being satisfied that they obtained full value for every shot. The scores made to-day were as below:

Unfred diamond medal and cash, 3 shots, all comers: F. O. Young 12, D. W. McLaughlin 15, Dr. Rodgers 15, W. Glindermann 18, A. R. Darrell 19, A. H. Pape 24, J. Gorman 32, E. Jacobsen 34, A. H. Gehret 81.

Champion class, 10 shots: D. W. McLaughlin 56, A. H. Pape 79, Dr. Rodgers 84, P. Bohr 96.

First class, 10 shots: H. R. Crane 80, A. B. Darrell 88, A. Gehret 106, G. Schultz 109, J. E. Klein 139, F. Baumgartner 134.

Second class, 10 shots: A. H. Kennedy 94, O. A. Bremer 108, J. E. Gorman 112, E. Jacobsen 119, G. M. Barley 125, G. Manuel 128, M. J. White 160, A. H. Hesse 70, F. Dennis 167, W. F. Unfred 144.

Pistol: All comers' medal and cash prizes, 3 shots: G. M. Daiss 9, A. H. Pape 9, J. E. Gorman 10, F. O. Young 10, Dr. L. O. Rodgers 11, E. Jacobsen 13.

Champion class, 10 shots: A. H. Pape 43, F. O. Young 45, Ed. Hovey 49, C. M. Daiss 59, J. E. Gorman 61.

First class, 10 shots: M. J. White 49, Dr. L. O. Rogers 50, D. W. McLaughlin 59, F. Baumgartner 74, F. Dennis 84.

Second class, 10 shots: E. Jacobsen 75, G. M. Barley 85, A. Fetz 94, W. Glindermann 98, A. H. Hesse 106, L. Zimmermann 109, W. F. Unfred 110, A. H. Kennedy 119, W. E. Lawrence 142.

SAN FRANCISCO SCHUETZEN VEREIN.

Jan. 12.—The San Francisco Schuetzen Verein held its opening meet of the season to-day, the occasion being the monthly medal shoot of the club. The following scores were made:

Champion class medal, W. Glindermann, 434; first class, F. P. Schuster, 410; third class, J. Thode, 395; fourth class, H. Burfeind, 399.

First best shot, W. Glindermann, 25; last best shot, J. Thode, 25.

GERMANIA SCHUETZEN VEREIN.

Jan. 12.—The first monthly shoot of the Germania Schuetzen Verein was held to-day, the following scores being made:

Champion class, Dr. L. O. Rodgers, 444; first class, G. Alpers, 416, second class, H. Heilburg, 421; fourth class, W. Garmes, 344.

First best shot, F. P. Schuster, 25; last best shot, A. Mocker, 25.

NORDDEUTSCHER SCHUETZEN VEREIN.

Jan. 12.—The members of the Norddeutscher Schuetzen Verein held their first monthly bullseye shoot for the season of 1896 to-day. Following are the scores:

B. Glindermann 233, H. Heilburg 240½, A. Mocker 261, J. Peters 364, E. Thode 406, G. Alpers 469, H. Huber 761, J. Gefken 909, H. Stelling 909½, D. Vondermehren 1,083, F. Schuster 1,084, A. F. Meyer 1,087.

ROEEL.

Rifle Match at Paterson.

PATERSON, N. J., Jan. 18.—J. Johnson and B. Maskell shot a match here recently under the following conditions: 100yds., 20-ring target, ¾in. rings, 25 shots, Johnson conceding Maskell 15 shots. Both men shot poorly, especially Maskell. The scores were:

J. Johnson..... 8 10 10—28
B. Maskell..... 8 7 8—23

18 20 17 16 15 17 15 14 18 18 19 15 19 20 17 19 16 13 16 14 18 16 17 19—418
J. Johnson..... 8 10 10—28
B. Maskell..... 8 7 8—23

10 14 18 16 10 13 16 18 13 11 20 18 11 14 16 17 15 18 15 20 16 13 18 15 18—383
DUTCHER.

The De Lisle Rifles.

DETROIT, Mich., Jan. 16.—Following are the scores made by the De Lisle Rifles at their indoor range, 473 Mount Elliott avenue, this evening:

Conditions: off-hand, Winchester rifles, open sights, standard American target reduced, 3 shots per man:

R De Lisle.....	10 10 10—30	L De Lisle.....	8 10 10—28
W Threiner.....	10 10 10—30	M Metliher.....	8 7 8—23

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Jan. 23-24.—UTICA, N. Y.—Mid-winter tournament on the grounds of the Oneida County Sportsmen's Association; live birds and targets. J. W. Fulford, Manager.

Jan. 29.—YARDEVILLE, N. J.—Live-bird sweepstake at Fair Grounds; 25 birds, \$25, birds included.

Jan. 30.—ELIZABETH, N. J.—100-target handicap race, \$5 entrance, targets extra. Nat Astfalk, Manager.

Feb. 1.—HOLMESBURG, Pa.—Third team race between All-Philadelphia and the Delaware State League, 26 men to a team.

Feb. 12.—BALTIMORE, Md.—Baltimore Shooting Association Handicap; 25 birds, \$25; no one allowed back of 30yds. Stanley Baker, Sec'y.

Feb. 22.—ROCHESTER, N. Y.—Return match at targets between teams of the Rochester Rod and Gun Club and the Audubon Gun Club of Buffalo.

Feb. 22.—MARION, N. J.—All-day shoot of the Endeavor Gun Club; targets.

Feb. 22.—MAPLEWOOD, N. J.—All-day shoot of the Maplewood Gun Club; morning—live birds; afternoon—targets.

Feb. 25-26.—ELIZABETH, N. J.—Sixth bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds.

Feb. 26-28.—DAVENPORT, Ia.—Forrester Gun Club, live birds and targets, open to all comers. J. F. Kroy, Sec'y.

March 24-26.—NEW YORK.—Interstate Association's Fourth Annual Grand American Handicap, at live birds at Elkwood Park; \$1,000 guaranteed in the main event, all surplus added.

April 14-16.—CHARLESTON, S. C.—Tournament of the Interstate Association, under the auspices of the Palmetto Gun Club.

April 14-17.—ATCHISON, Kansas.—Thirteenth annual open to all, and second annual manufacturer's amateur tournament; \$1000 added money and manufacturers' prizes. Lou Erhardt, Sec'y.

April 20-24.—HOUSTON, Texas.—Twentieth annual tournament of the Texas State Sportsmen's and Game Protective Association. J. Emmett Harvey, Mgr.

April 22-24.—WELLINGTON, Mass.—Tournament of the Boston Shooting Association; targets. O. R. Dickey, Manager.

April 29-30.—BIRMINGHAM, Ala.—Interstate Association's tournament, under the auspices of the Birmingham Rod and Gun Club.

April 30-May 2.—NEWBURGH, N. Y.—Annual spring tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

May 5-8.—ALGONA, Ia.—Annual tournament of the Algona Gun Club, May 5-8.—NEW YORK.—Tournament of the American E. C. Powder Company; \$2,000 added money.

May 12-15.—MEMPHIS, Tenn.—Tournament of the Memphis Gun Club, \$2,000 added money.

May 12-14.—DAYTON, O.—Annual tournament of the Ohio Trap Shooters' League. Ed. Taylor, Sec'y.

May 19-22.—CINCINNATI, O.—Tournament of the Hazard Powder Co. B. S. Waddell, Agent.

May 20-24.—KANSAS CITY, Mo.—Nineteenth annual convention and tournament of the Missouri State Fish and Game Protective Association. J. H. Durkee, Sec'y.

May 22-24.—MISSOULA, Mont.—Annual tournament of the Montana State Sportsmen's Association, under the auspices of the Missoula Rod and Gun Club. Will Cave, Sec'y.

May 26-28.—FRANKFORT, Kan.—Annual tournament of the Kansas State Sportsmen's Association.

May 28-29.—INDIANAPOLIS, Ind.—Tournament of the Limited Gun Club; nobody barred; targets. Royal Robinson, Sec'y.

May 30.—CANAJOHARIE, N. Y.—Tournament of the Canajoharie Rod and Gun Club; targets. Chas. Weeks, Sec'y.

May 30-June 1.—MILWAUKEE, Wis.—Eleventh annual tournament of the South Side Gun Club.

June 1-5.—CHICAGO, Ill.—Twenty-second annual tournament of the Illinois State Sportsmen's Association. H. B. Meyers, Sec'y.

June 3-4.—NATCHEZ, Miss.—Interstate Association's tournament, under the auspices of the Gaillard Sporting Club.

June 8-13.—BUFFALO, N. Y.—Thirty-eighth annual tournament of the New York State Association for the Protection of Fish and Game, under the auspices of the Audubon Gun Club. E. W. Smith, Sec'y.

June 9-11.—DAVENPORT, Ia.—Annual tournament of the Iowa State Sportsmen's Association. R. B. Cook, Sec'y.

June 10-11.—FAROO, N. D.—Second annual tournament of the North Dakota State Sportsmen's Association; targets; \$500 added money. W. W. Smith, Sec'y.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlin Cartridge and Target Company. Targets thrown free; \$770 in cash also added to the purses.

June 23-26.—PITTSBURG, Pa.—Tournament of the Pittsburgh Gun Club; targets; \$500 added money.

July 22-23.—PORTLAND, Me.—Interstate Association's tournament, under the auspices of the Portland Gun Club.

July 30, 31.—GOSHEN, Ind.—Midsummer tournament of the Goshen Gun Club.

Aug. 4-6.—CHICAGO, Ill.—Tournament of the Du Pont Smokeless Powder Company. E. S. Rice, Mgr.

Oct. 7-9.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 313 Broadway, New York.

A dispatch dated Jan. 20, to the San Antonio, Texas, *Daily News*, from Austin, Texas, the home of Wallace Miller, says: "A hunting party composed of Capt. Harry Owens, Geo. Mendell, Gus Southernwood, Pat Lochridge, John Neff, Monroe Miller and Wallace Miller, of this city; O. R. Dickey, of Boston, and Tom Keller, of New York, returned last night from a week's deer hunt on the Frio River, thirty miles from Cotulla. The party had fairly good luck and killed altogether ten deer, seventeen turkeys and one large wildcat. Mr. Lochridge killed three of the deer, Capt. Owens two, and Messrs. Mendell, Monroe, Miller, Dickey, Southernwood and Wallace Miller one each. Mr. Neff killed the cat, while all the hunters had a hand in bagging the turkeys. They report a great time and are figuring on returning to the Frio at an early date to enjoy another hunt."

The most recent big match in the amateur circles of New York city, the four-handed match which was shot on the grounds of the Westminster Kennel Club on Jan. 23, was remarkable for the closeness of the finish rather than for the scores made, the latter being all below the average that might be expected from such shooters as Knapp, Work, Murphy and Yale Dolan. At one time, the end of the 55th round, when Work and Murphy were 5 ahead, it looked as if that team was about to run away with the match; then came a great brace on the part of Knapp and Dolan, which, coupled with a slight falling off on the part of Work and Murphy, tied the score at the end of the 74th round. The 100th round closed with Murphy going to the score and having to kill to win.

The Altoona, Pa., Rod and Gun Club held its annual meeting on Saturday night, Jan. 18, and elected the following list of officers for 1896: President, G. T. Bell (re-elected for a fourth term); Vice-President, J. R. Eustace; Secretary, W. S. Bookwalter; Treasurer, R. N. Fay; Captain, J. F. Killits; Directors, Ed. Kottman, T. J. House, Michael Bastian, W. W. Wilson, J. F. Killits and W. E. Bell. The subject of holding its annual tournament next June was broached at the meeting and Messrs. Killits, Kottman and Bookwalter were appointed as the tournament committee to make all the necessary arrangements.

The programme for the E. C. tournament in May is now well under way and will be in the hands of the printer before long. Of course the main features will be the championship events, which will be run on the lines suggested by FOREST AND STREAM last fall, with probably a few slight deviations from the plan then outlined. The choice of grounds on which to hold the championship is still under advisement, but it is more than likely that Willard Park, Paterson, N. J., will be decided upon, if the use of the grounds for such a purpose will not interfere with the baseball season of the Paterson Baseball Club.

Note the change in the announcement of the Cleveland tournament. The change is both novel and startling: "June 17-19.—Cleveland, O.—Third annual tournament of the Chamberlin Cartridge and Target Company. Targets thrown free of charge; \$770 in cash added to the purses." "Targets thrown free of charge" means (if 40,000 targets are thrown at the tournament) practically the same thing as \$1,200 added money. In addition to the above, \$770 in cash will be added to the purses. Paul North is nothing if not original. The "man from Ohio" has a great head!

The Boiling Springs-Eudeavor team shoot on Saturday afternoon, Jan. 25, resulted in a good race, the Boiling Springs men winning by 7 breaks. The afternoon was delightful for target shooting; the consequence was there was a good turnout of shooters, particularly on the part of the home club—Boiling Springs. The most notable guests of the club were swarms of real Jersey mosquitoes that did their song and dance act in warm, sheltered nooks in the club's grounds, just as if it was summer, and not a bit as if zero weather had only been gone a week or so.

The Interstate Association announces that it has completed its Southern circuit by arranging to give a tournament at Natchez, Miss., as announced in a letter from Manager Shaner to us, given elsewhere. The Rose system will be given a trial at the Charleston tournament, the purses on one day being divided on that system; as a good means for testing the present system in company with the Rose system, the purses on the remaining day of the shoot will be divided the old way—40, 30, 20 and 10 per cent.

The Elliott-Morley match will probably take place the latter part of next week. Elliott is back again from San Antonio and expects to be in form by that date. The conditions are: \$100 a side, 100 live birds per man, 30yds. rise, 50yds. boundary. Elliott will shoot a Winchester, Morley using his double gun. This will be one of the most interesting matches of the season. Both men will surely try hard to win. Morley says Elliott will have to kill over 90 to win.

Don't forget that all entries for the Dexter Park handicap on Feb. 6 must reach H. S. Lippack, the proprietor of Dexter Park, Jamaica avenue, Brooklyn, N. Y., accompanied by a forfeit of \$5, not later than Feb. 4. The conditions of the shoot are: 25 live birds, \$10 entrance, birds extra, handicaps from 26 to 31yds., 50yds. boundary; if 10 entries, \$15 added to the purse; if 15 entries, \$25; if 20 entries or more, \$40; class shooting, 4 moneys, A. S. A. rules to govern.

The annual report of the secretary of the New Jersey Trap-Shooters League, together with an account of the proceedings at the annual meeting, appears elsewhere in these columns. The League has done a great deal in past seasons for the benefit of trap-shooting in New Jersey, and much of that good may be directly traced to the efforts of the secretary, W. R. Hobart, of the South Side Gun Club, Newark, N. J., in behalf of the League.

J. P. Knapp has added another cup to his already long list of trophies won by him at the traps. On Saturday, Jan. 25, he went down to Eddington, Pa., the home of the Philadelphia Gun Club, and carried off the cup in the 50 live-bird event by killing 45 in the sweep and 9 in the shoot-off with Macalester, who had tied him with a like score of 45.

There is gloom in the Pittsburg, Pa., Gun Club. Old Hoss, one of its old stand-bys, and one of the most popular men ever seen at a tournament, threatens to give up shooting altogether because he could not break more than 75 out of 100 targets at unknown angles the other day. We don't think the boys need fear that Old Hoss will leave the field yet; he'll be on deck at Elkwood Park and will shoot for the \$1,000 guaranteed in the Grand American Handicap.

E. S. Rice, general agent for the Du Pont Smokeless Powder Company, located in Chicago, Ill., writes us under date of Jan. 23, that the Du Pont Company will hold a target tournament in Chicago on August 4, 5 and 6. He gives us no details, but we suppose that this tournament will be on the same lines as all the big tournaments of the present day.

The Hazard "Blue Ribbon" Powder Company is distributing among the gun clubs of New York, New Jersey, Pennsylvania and the New England States individual score cards for the use of club members at their club shoots or tournaments. John L. Leguin, secretary of the company, writes us: "If we overlook any clubs, it will not be done intentionally, but because we have not their names on our list."

The Montana State Sportsmen's Association claims May 22-24 as the dates for its tournament at Missoula, Mont. The shoot will be under the auspices of the Missoula Rod and Gun Club.

The Troy, N. Y., Gun Club has elected the following officers for 1896: President, Dr. R. S. Dinsmore; Secretary, John S. Norman; Treasurer, C. V. Shirley.

EDWARD BANKS.

Grand American Handicap.

We have received notice from Manager Shaner, of the Interstate Association, that the Association will make a radical departure from its usual methods of dividing the purse in the Grand American Handicap, which event will be decided at Elkwood Park during the last week in March. The proposed change has been under advisement for some time and has taken shape as follows:

One thousand dollars is guaranteed in this event, to be divided among the three high guns as usual, in the proportion of 50, 30 and 20 per cent. It requires forty entries to clear the management of any loss in this guarantee; forty entries at \$25 a head means \$1,000 in the purse. Hitherto it has been the custom to divide all the surplus among the three high guns in the same proportion, but this year the Association has determined to divide the surplus over the guarantee of \$1,000 among some of the other shooters on the following plan:

If there are over 40 but not more than 50 entries, all surplus will be divided 50, 30 and 20 per cent. to the 3 next highest guns; if over 50 but not more than 60 entries, the surplus will be divided 30, 25, 20, 15 and 10 per cent. to the 5 next highest guns; if over 60 and not more than 70 entries, the surplus will be divided 25, 20, 15, 12½, 12½, 10 and 5 per cent. to the 7 next highest guns; if over 70 and not more than 80 entries, surplus to be divided 12, 12, 10, 10, 8, 8, 5 and 5 per cent. to the 11 next highest guns. Practically the above plan may be defined thus: If 40 entries or less, \$1,000 to the 3 high guns; 41 to 50, 6 moneys, high guns, the 3 high guns of course dividing \$1,000; 51 to 60, 8 moneys; 61 to 70, 10 moneys; 71 to 100, 14 moneys. In all these cases the 3 highest guns divide \$1,000—50, 30 and 20 per cent. It must be remembered also that this is not class shooting, but is "high guns" all the time.

In formulating this plan the Association had in its mind the idea of popularizing the greatest trap-shooting event of the year in live-bird circles, by giving others besides the three high guns a share in the purse. The idea is a good one, it seems to us, and should have the desired effect of inducing additional entries sufficient to approach the highest notch named—100 entries. There is no doubt that the high-gun plan of past grand American handicaps has had the effect of bringing the event into prominence, the possibility of winning \$500 by taking first place in the handicap being a great inducement when the outlay is only a little more than \$30. We think, however, that when a shooter figures that he may pull out more than even, supposing that he does drop a bird or perhaps two, he is more apt to enter an affair of this kind than he would if he felt that he had to be one of the three favored ones to get anything at all. Like all other new moves of a similar character, the actual result can only be determined by trial, but it looks very much like a go.

Trap Around Buffalo.

ROCHESTER DEFEATS THE AUDUBONS.

BUFFALO, N. Y., Jan. 16.—The Rochester (N. Y.) Rod and Gun Club brought a team of 21 men to shoot to-day against a team of a similar number selected from the Audubon Gun Club. Rochester won by 31 breaks, the scores showing 404—373 in favor of that team. The full scores were as follows:

DE WITT.	

EMOND MAKES A BIG SCORE.

Jan. 15.—The second of the series of three 100-bird races arranged between Jake Koch and W. Emond was brought off to-day at Audubon Park. To-day's race was one of the best ever seen in this city, and a large crowd was out to witness it. Emond shot wonderfully well, actually killing 99 out of his 100, eight of them dropping outside the boundary; he shot a very careful race, being particularly careful about drivers; this made him a trifle slow on some birds, as his lost birds, with the exception of two, were all drivers; one of these two was a left-quarterer that went away apparently untouched; the other was an incomer that fell dead just behind the score. Koch also shot a great race, having slightly the worst of it in the matter of luck; his gun broke down during the race and he was obliged to shoot another while it was being fixed up.

After tying at the end of the 50th round on 46 all, Koch made a bad break, losing his 51st, 53d, 54th and 55th, thus giving Emond an advantage which he never lost, ultimately winning by three birds. At the end of the 75th round the score stood: Koch 65, Emond 69, the latter being still 4 ahead. High runs were: Emond 20, 19, 11 and 11; Koch 27, 18, 13 and 12. Score:

Jan. 18.—The members of the Audubon Gun Club held a shoot this afternoon, the main event being the badge contest, No. 1 in the table below. Bennett won the Class A badge, E. H. Rounds the Class B badge, and Miller the badge in Class C.

Events:	1	2	3	Events:	1	2	3

After the above target sweeps had been shot, a sweep at 5 live birds, \$3 entrance, 2 moneys, was gotten up. It resulted as follows: E. C. Burkhardt and B. F. Smith 5, L. W. Bennett 4, Dr. Woodbury and Reed 3, Dr. Sauer, H. Williams, G. McArthur and J. P. Fisher 2.

B. F. SMITH.

Philadelphia Gun Club.

The Philadelphia Gun Club, with grounds at Eddington, Pa., completed a two-day's shoot at live birds on Saturday afternoon last, Jan. 25. On the first day, Jan. 24, the weather was anything but pleasant, but on Saturday it was all that could be asked with the exception, perhaps, of a lack of wind to help the birds. On the previous day a strong northeasterly gale helped to make the birds very hard, its effect being only slightly reduced by a heavy downpour of rain that lasted all day.

The first day's programme consisted of three events: 10 birds, \$10 entrance; 25 birds, \$25 entrance, and a \$5 miss-and-out. In the first event George Work carried off first money alone on 10 straight. Four men tied for second and third money; Lent winning second on the shoot-off, miss-and-out, by killing 4 straight. Macalester and Dolan divided third.

The 25-bird sweep was productive of some very fine shooting, Fred Hoey, from the 30yds. mark, taking first alone with a clean score of 25 kills. Macalester and Davis tied for second and third money on 24 out of 25, Macalester losing his 23d bird, and Davis actually running straight up to the very last round when he lost his bird dead out of bounds. Work and Dale tied for fourth place on 23 out of 25. Davis's run of one-barrel kills in his score of 24 is something remarkable, his second barrel only being called into service six times, five of the six with effect.

Work and Davis won the miss-and-out on scores of 11 straight, Davis again using his first barrel with telling effect. During the day he scored 45 out of 48 shot at. Fred Hoey shot in great form, making a run of 35 straight before he dropped his bird in the miss-and-out.

The attendance was hardly as big as had been expected; perhaps the bad weather had a great deal to do with it. The most notable absentee was J. P. Knapp, who was present on the second day and shot as usual well up to the front. The scores in to-day's events were:

No. 1.	Ties.	No. 2.
Geo Work (30).....2222122222—10		201210121222222222222212—22
C Macalester (30).....2112121212—9	1120—3	122212211222122122122021—24
W W Lent (28).....222202222—9	8222—4	00020w—1
J H Davis (29).....2120122121—9	110—2	1111112111122211212111—24
H Yale Dolan (30).....2222021221—9	2120—3	22202222•2302202220w—15
M B Henry (29).....100212222—8	..	1120•10101211210100w—12
B M Vaughan (27).....112120210—8	..	0•00111110w—4
S Price (27).....1210212100—7	..	
E Dale (28).....22112•0110—7	..	211•121211210121212111—22
Fred Hoey (30).....222220020—6	..	22222222222222222222—25
C Vortex (26).....210110000—4	..	
T E Russell (28).....	22220•12222222222222220001—20	

In a \$5 miss-and-out Work and Davis killed 11 straight and divided. The other scores were: Hoey 10, Lent 8, Dolan 4, Macalester 1, Dale 0.

Second Day.

The main event on Saturday, Jan. 25, was a 50-bird sweep, \$50 entrance, 30yds. rise all, 50yds. boundary. The trophy was a cup presented by the Philadelphia Gun Club, which, with 40 per cent. of the purse (less 10 per cent. for the club), went to the winner.

This affair had only six entries, the quality of the shooters presumably scaring out several who might have entered had the event been just half as long. As it was, it resolved itself into a New York vs. Philadelphia match—six-handed at that—three men to a side. On the New York side was a strong trio—Knapp, Work and Hoey; Philadelphia had as her representatives Charles Macalester, Junius Davis and B. Parker.

Hoey and Davis, both of whom had made excellent scores on the previous day, failed to hold up their ends on this occasion, both of them retiring before the 50th round was called. While Knapp was the favorite, naturally so from his recent form, Macalester and Work are always dangerous and were looked upon as certain to give the ultimate winner, if Knapp should bring off the good thing, a hard rub for the prize. As matters turned out, Knapp and Macalester had to shoot off a tie for the cup, both scoring 45 out of 50. On the shoot-off Knapp won by killing 9 out of 10 to Macalester's 8. The latter has thus been unfortunate enough to lose a chance of two big trophies recently, the Larchmont cup being one, after tying for each cup and having to shoot off for the trophies. Parker gave Work a tight race up to the 45th round; he then lost his 45th bird and followed up this misfortune by losing his 49th dead out of bounds. Work took third money on 43 out of his 50. The scores made were as follows:

J P Knapp	22•222222222222222222222222—23
	•222222222222222222222222—23—45
Chas Macalester	020212121121121122121210—22
	20211221221012222222222222—45
Geo Work	2222222222222222222222222220—20
	212022222222222222222222121—23—43
B Parker	2122•22210222022222222222—21
	202210021111212221101222—20—41
J H Davis	201210212210122112220212—21
	21•12201102112122222w—16—37
Fred Hoey	2222222222222222222222220012—19
	222222222222222222220w—13—32

The tie for the cup and first and second money were shot off at 10 birds, as below, Knapp winning the cup. Work took third money.

In a 15-bird sweep three men killed 14, tying for the money. On the shoot-off, miss-and-out, Work and Macalester divided on the first round. Scores:

	Tie for cup.	No. 2, 15 birds.
Knapp	2222222222—9	
Macalester	2220222212—8	11222122•112121—14

Hoey		22222122222222—14

South Side Club, of Milwaukee.

MILWAUKEE, Wis., Jan. 21.—Below are the scores made by our club at its first shoot for the season of 1896. The day was dark and windy, which accounts for some of the scores not being up to standard. The live birds were a fast lot, and being heavily feathered at this time of the year, they took a lot of stopping. Scores:

No. 1, 20 buerocks per man: H. F. Seefeld 12, Wash. Okershauser 16, Emil Yahr 14, J. F. Burnham 17, Rock 14, John Meunier 16, St. Meunier 18, H. F. Bosworth 16, F. C. G. Brand 14, J. Weidner 13, Lewis 19.

No. 2, match, 25 live birds per man: J. P. Carmichael.....111111101101100110001—18
F O G Brand.....101011111000010101101—16

No. 3.	No. 4.	No. 5.	No. 6.	No. 7.
Carmichael	01111—4	011111111—9
Bosworth	1111—5
Lewis	1110—3	1111—5	010—1
Yahr	1111—5	1111—5	101—2
Burnham	0111—4	111—3
Brand	1101—4	111—3	010010101—5

No. 8. This was a match at 20 buerocks per man, the teams being: Yahr and Seefeld vs. Burnham and Lewis. The scores were: Seefeld 18, Yahr 16—total, 34; Lewis 17, Burnham 13—total, 30.

ADOLPH GROPPER, Sec'y.

Dedham Sportsmen's Club.

DEDHAM, Mass., Jan. 18.—A shoot was held to-day by members of the Dedham Sportsmen's Club on its grounds at Islington. Some excellent scores were made, Smith making 9 clean scores and breaking 126 out of 100 shot at, an average of almost 97 per cent. W. W. Bennett won the shoot for the gold medal by breaking 19 out of 20. Following are the scores:

BURPEE'S SEEDS, Philadelphia

A postal card addressed as above will bring you BURPEE'S FARM ANNUAL for 1896, if you intend to purchase seeds, otherwise the price is ten cents (less than cost). It is a bright BOOK of 184 pages, with hundreds of illustrations and colored plates painted from nature. It tells all about the BEST SEEDS that grow!

THE LAYMAN PNEUMATIC SPORTING BOAT.

It is the safest, lightest and most compact portable boat on the market. Weighs 15 lbs., is easily inflated and can be carried in a hand bag when collapsed. It is made of the best rubber duck cloth, in four separate compartments, has loops for erecting a blind, absolutely safe in any waters. Splendidly adapted for hunting and fishing. Being paddled by the feet, the hands are left free to handle either rod or gun. A success in every way. It is also made with full length wading pants. For circular and further particulars apply to the sole manufacturers.

So simple in text that you may know the law at a glance.
So beautiful in illustration that you will preserve it for its pictures.

Game Laws in Brief

UNITED STATES AND CANADA.

Gives the sections relative to game and fish seasons, limit of size or number, non-residents, transportation, etc. All in brief, but full enough for the practical guidance of sportsmen and anglers. Carefully compiled, and shorn of verbiage, by CHAS. B. REYNOLDS of *Forest and Stream*. The *Brief* is a standard work of reference. Handsomely illustrated with twenty-five half-tone engravings from *Forest and Stream*.

Price 25 Cents. We send it postpaid. All Sportsmen's Goods dealers sell it.

FOREST AND STREAM PUBLISHING CO.,

318 Broadway, New York.

FOREST AND STREAM'S OUTDOOR SCENES.

FROM ORIGINALS IN WATER COLORS AND OIL, PAINTED EXPRESSLY FOR THE FOREST AND STREAM.

AS PREMIUMS.

We have prepared as premiums a set of four beautiful and artistic reproductions of original paintings of realistic outdoor scenes. The art work is the best obtainable in New York; the pictures are rich in effect and are intended for framing. They are done in 12 colors. The yacht race is from an oil painting; the others from water colors. The scenes are shown in the small cuts herewith. The plates are 14 3/4 x 19 in. The pictures are sent both to new subscribers and to old subscribers upon renewal, on the following terms:

Forest and Stream one year and the four pictures, \$5.
Forest and Stream 6 months and any two pictures, \$3.

If subscribing for 6 mos. designate by title the two pictures desired. Single pictures will be sold separately, price \$1.50 each, or the set, \$5. Remit by express or

postal money order, payable to Forest and Stream Publishing Co., 318 Broadway, New York.

The pictures are sent by mail, postpaid, wrapped in tube.

Copies of them may be seen at this office, and inspection is invited.

HE'S GOT THEM.

JACKSNIPES COMING IN.

BASS FISHING AT BLOCK ISLAND.

VIGILANT AND VALKYRIE.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.
SIX MONTHS, \$2.

NEW YORK, SATURDAY, FEBRUARY 8, 1896

VOL. XLVI.—No. 6.
No. 318 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page v.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream one year and the set of four pictures, \$5.
Forest and Stream 6 months and any two of the pictures, \$3.
Price of the pictures alone, \$1.50 each; \$5 for the set.

Remit by express money order or postal money order.
Make orders payable to

FOREST AND STREAM PUB. CO., New York.

THE LORD AND THE DEED.

THE FOREST AND STREAM is, we believe, the only paper in the world which has been consistent in its estimate of Lord Dunraven since his peculiar and we hope exceptional character first began to disclose itself in the beginning of his brief and not over-brilliant yachting career. What he is to-day he was a year ago, when he forced the Squadron to indorse his third challenge for the America's Cup; three years ago, when he was haggling and dickering with the Cup committee of the year for the match of 1893; and seven years ago when he wasted a season in a like fruitless negotiation. As for the American papers, it is barely one short twelvemonth since they were praising as broad, generous sportsmanship the same selfishness, obstinacy and obtuseness which they are roundly condemning to-day. The only difference is that while then these lordly qualities were being employed in the ignoble task of inducing the Royal Yacht Squadron to stultify itself and eat its own words for the benefit of the New York Yacht Club, now they are employed in seeking some excuse, however paltry, for a second ignominious defeat. As long as Lord Dunraven was willing to condone the illegal alteration of trust conditions, to use the powerful influence he once possessed against the interests alike of fair play and of British yachting, and to subordinate all matters of principle to his own selfish interests, he was, to American critics, brave, generous, noble and an ideal sportsman. To us his treatment of American yachtsmen last summer and fall appears very little worse than his treatment of his fellow yachtsmen a few months previously; the sole consideration in each case has been himself alone.

We have before pointed out the exact nature of what may deservedly be termed the "deal" by which the last match, to say nothing of that of 1893, was arranged between Lord Dunraven and the New York Y. C. At the time that Wyndham Thomas Wyndham Quin, Earl of Dunraven and Mount Earl, abandoned in a pique a political career and for the first time interested himself in yacht racing, the whole yachting world was agitated over the recent illegal and unfair alteration of the terms of trust of the America's Cup; this alteration being condemned alike by British yachtsmen and by many American yachtsmen both within and without the New York Y. C. All international racing had ceased with the declaration of the Royal Yacht Squadron and other British clubs that they would never again challenge under conditions which they believed to be entirely illegal. Before the end of his first season as a yacht owner, Lord Dunraven had set his eyes upon the America's Cup, and to all appearances determined to win a name among British yachtsmen by possessing it at whatever possible cost. As the situation then was, no British yachtsman with any respect for himself or his compatriots could even look toward the Cup with an idea of challenging. Not only was the New York Y. C. as yet unprepared to grant such perfectly fair terms as it has since twice given to Lord Dunraven, but it absolutely refused to entertain any overtures for a match save upon the basis of a full and complete recognition by the challenger of the right

of the club to do what it pleased with the America's Cup, and of the legality and fairness of what it had recently done. To the credit of British yachtsmen be it said, there was but one man in the United Kingdom, the Earl of Dunraven, who was so completely blind to the right and justice of the case as to agree to anything and everything that the New York Y. C. demanded, provided that the club in turn would give him a series of three out of five races on the open sea. Willing as he was from the first to barter principle for a mere temporary personal advantage, it was four years from the date of his first challenge before a match was finally made on terms that no one has ever been able to understand clearly; and the Valkyrie II.-Vigilant races of 1893 were sailed.

The only good that came of this match was the clearing up of a number of misunderstandings and contradictions for which Lord Dunraven was largely responsible, and the emphasizing more clearly of the exact issues and the mortifying position which any British club must assume in order to be allowed to race for the Cup. This, however, was of no importance to Lord Dunraven, but his misdirected efforts were renewed with such success that the proud and haughty Royal Yacht Squadron was brought to a most complete and ignoble surrender.

While as Americans, and with no special reverence for a yachting organization which does so much to retard and so little to advance the sport as the Squadron, we should perhaps rejoice at this; yet looking as we do at the fraudulent deed of 1887 as a national disgrace, we still view with regret that indorsement and acceptance of it, through various shifts and subterfuges on both sides, to which the Royal Yacht Squadron was forced through the personal efforts of Lord Dunraven.

We need not recall in detail the various incidents of his long struggle for the Cup—how in 1889 he professed a most disinterested desire to race Valkyrie I. against American yachts for a nominal prize or no prize at all, and yet refused to cross and race for the 70ft. cup specially offered by Gen. Paine; or how, in the following year, he refused the challenge made through Mr. Stephen Peabody for a series of international races with Titania, Katrina and Shamrock, of Valkyrie's class; or of his flat and positive statement that he would never challenge for the Cup under the terms of the new deed; the only conclusion that can be drawn from his words and actions through a period of seven years is that he cared for the possession of the America's Cup and nothing else, and on no matter what ignoble terms.

Whatever sympathy we may feel for Mr. Iselin in the very unpleasant position in which he has been placed for the past three months does not extend to the New York Y. C. No one knew better than the men who made the new deed of gift, and who have since been mainly in control of all negotiations for Cup matches, that the better class of British yachtsmen—such men as Sutton and Henn and of the older generation that raced such yachts as Kreimhilda, Egeria, Miranda, Formosa, Vanduara, Iona, Bloodhound and Cetonia—would never again challenge for the Cup; and no one was quicker to recognize the true character of the vain and ambitious tyro who could so easily be bought to do their bidding. The deal was a fair and open one (of its kind); Lord Dunraven was to secure the recognition of the new deed from the Squadron, and in return he was to have the number of races, fair courses and other conditions which had thus far been denied to Sir Richard Sutton, Lieut. Henn and the Clyde syndicate.

On its part, the New York Y. C. has carried out its agreement to the letter. In spite of all talk about the collision in the second race and the crowding of the steamers, the matches of 1893 and 1895 will go down into yachting history as among the fairest ever sailed between two nations. In spite of this, for the unfortunate sequel the New York Y. C. has no one to blame but itself; had its actions from the first been fair, open and straightforward, it would never have been under the necessity of seeking the aid of one who was willing to betray his own friends to advance his private ends; nor would it have suffered the annoyance which this selfish, erratic and whimsical lord has inflicted on it since the early autumn.

And now a final word as to the New York Y. C.; taking matters by and large, it has even in spite of this last trouble been peculiarly fortunate in the last few years. The worst mistake in the club's history was made on that night in the fall of 1887 when its evil advisers led

it to disdain the challenge of Mr. Charles Sweet and to make sure of the undisturbed possession of the Cup by such a change of terms as should make a fair contest impossible. That two matches have been sailed since then is due solely to the assistance of Lord Dunraven, purchased in the manner we have stated. Through his aid the club has been able to face down and to force an unwilling but absolute retraction from the Royal Yacht Squadron, thus shutting off to a great extent all future objections against the legality of the new deed. The club is fortunate to-day in that it has triumphed over the proudest yachting organization in the world; and has finally asserted its right to do wrong and to perpetuate an unjust and illegal act. In one sense the club is fortunate because it has at length had its own way in spite of all opposition; and though it has had to make certain concessions to the cause of fair play, it has been able to restore the America's Cup to international competition. Such a triumph as this, however, in a bad cause, is in itself a disgrace; nor is the wrong of 1887 likely to be forgotten; long after Lord Dunraven has passed out of yachting and after the true circumstances of the foul and of his charges are accepted by yachtsmen, it will be remembered, to the discredit of the New York Y. C.

There never was a better time to end the whole nauseous episode of the new deed than with the disappearance from yachting of the only man who has raced under it; and with the many unpleasant experiences of the past ten years to warn it the New York Y. C. will be wise if it avails itself freely, and when under no possible pressure of compulsion, of the opportunity to rectify the mistake of 1887. The men who made it have long known, and admitted by their many efforts to misinterpret it, how bad the new deed is; the members of the club now know it, and the yachting world has always known it. While new challenges may come in time, we are just as firmly of the belief that there can never be a permanent resumption of fair international racing under it as we were three years since, when the final agreement on the Valkyrie II.-Vigilant matches was hailed by the club as the end of all controversy over the deed of gift. What we said then has twice come to pass—the two matches that have been sailed have each been followed by quarrels and ill-feeling.

There is no step that would do so much good for the New York Y. C. and for American yachting to-day as the reconsideration of the action of 1887 and the restoration of the original deed of gift under which the trust was created, with its "mutual agreement" clause in the foremost place; and, if deemed necessary, supplemented by such additional conditions as, without conflicting with the obvious intentions of the original donors, shall secure for all future races such generally fair conditions as have twice been given to the most unworthy of all Cup challengers.

NEW YORK FISH COMMISSION.

We give elsewhere generous extracts from the first report submitted to the New York Legislature by the Fisheries, Game and Forest Commission. The document has added importance and demands more than the ordinary attention given to papers of its class, because it may fairly be accepted as furnishing a gauge of the new board, and as an indication of what we are to expect from it. Considered in this light the report is satisfactory and promising. It is written with intelligence, common sense and an evident grasp of the situation. It shows—and shows very clearly—that the Commissioners have set about their task in a businesslike way, and it contains the promise that they so intend to administer the affairs of their office.

SNAP SHOTS.

Didymus calls attention again to the Florida quail killing tourists who emulate the big scores of the butchers before them. Happily there is now a legal limit of quail killing; the law prescribes that no one shooter may take more than fifty birds in a day. That ought to satisfy any but the insensate destroyers, male and female, who have been wont to brag of their hundreds. We trust that there may be found at Tampa and other centers of quail killing activity people who will have the law of these score shooters.

Convicts and non-residents are joined together in a class by themselves in an excise measure now before the New York Legislature. And a very proper classification it is, if we are to accept all that the advocates of non-resident game laws tell us.

The Sportsman Tourist.

UNCLE LISHA'S OUTING.—XI.

The Canada Boat Departs.

In prompt fulfillment of the night's prophecies, the morning dawning dully through a thick veil of clouds brought a drizzle of rain. This fell with such a drowsy patter on the canvas roof that the inmates of the camp felt little inclination to bestir themselves till impelled to do so by hunger.

Then Sam and Antoine crept out and after inspecting the lowering sky set about building a fire and making other preparations for breakfast, though Uncle Lisha advised a cold bite in the shelter of the tent.

"No, sah," Antoine objected as he moved around the fire, quite regardless of the slow drizzle of rain except when the drip of an overhanging bough aroused a spiteful sputter of the pan wherein two split ducks were frying. "We'll a'n't goin' for discourage de inside of us wid col' victual w'en de rine comin' on de aoutside. Ah tol' you, if mans wan' have hees heart warm he'll gat for had hees stommack warm. Ah'll can' faght wort' four cen' fore Ah'll gat good breakfis' wen Ah'll was in Papineau war."

"Ner arter, nuther, I guess," Uncle Lisha commented, but Antoine took no notice of this imputation of a lack of valor.

"But w'en Ah gat good big hot breakfis' behin' mah gaun, den Ah tol' you, dey gat for ta' careful if dey a'n't wan' me for hurt it."

"Sho, Ann Twine! I cal'late," said Uncle Lisha in sentences interrupted by the labor of drawing on his boots, "at it's a dum foolish business—ugh! I got tu grease these 'ere boots—a fillin' up wi' good victuals—m-m-mugh! They're stiffer'n sap troughs—afore a feller goes aout a-fightin' an' run the resk on't bein' wasted s'posin' he gits killed. Then again, s'posin' a feller hed tu run, he'd stan' a better chance if he was light-loaded. There! you be on, an' ye don't come off ag'in till you're 'iled, if I haffer rub ye with a fat duck!"

"Ah, Onc' Lasha, you a'n't know not'ing 'baout war," cried Antoine, lifting the potato kettle off the fire and emptying the water from it. "Fetch de dauk in de coop, Sam. We'll can't sit aour table in de rine," and he swung the kettle over Uncle Lisha's imperiled legs to a place inside the tent and Sam bestowed the sizzling frying pan beside it.

Peering under his glasses, Uncle Lisha forked a potato on to his plate as he snorted contemptuously, "Honh! do know nothin' 'baout wars! Why, you poor ig'n'ant infant, I was a sojerin' wi'in a mild o' here afore you was borned. Yes, sir, the Hawley place hain't a mild f'm here, where we was posted, a-waitin' for the British, an' abaout a mild funder is Fort Casin, where they come an' fit an' got licked tew. I'm a-goin' tu take Jozeff over there an' show it tu him some day. An' wa'n't I tu Plattsburgh? Sho, Ann Twine, your leetle Poppynew muss wa'n't the jab of a paigin'awl tu what we hed them times. Lord, if you c'd ha' seen them ships arter they fit. The mas's an' sails an' riggin' all tore tu rags an' kin'lin' wood, an' the decks kivered wi' blood wus 'n a slotter haouse. An' the poor wounded critters, aour'n an' their'n. It wa'n't no putty sight tu look at. It made me praoud 'nough tu bust tu see the stars an' stripes a-flyin' over all them ships, but when I see them 'ere poor Britishers waounded an' dyin' fur from hum an' their women folks, it took all the spite agin 'em clean aouten on me."

"You tink prob'ly dey heat too much breakfis', a'n't it, Onc' Lasha? So he can' run."

"I do know haow 'twas wi' them, but we hedn't hed none tew much, I c'n tell ye," Uncle Lisha answered as he sawed laboriously on the thigh of a duck with a dull knife, and was reminded to remark, "I tell ye what it is, boys, it was a terrible good idee they useter hev when I was young, o' cuttin' up the meat victuals intu maouth-fuls fore it was put ontu the table, an' then let ev'b'dy fork for hisself aouten one dish. It saved lots o' time an' rastlin' wi' tough meat when folks was in a hurry tu git aout tu the work."

"Ah'll a'n't want for chaup more as de meat for mahse'f, bah gosh," Antoine declared.

"The' useter be some tol'able lively hustlin' tusslin' for ch'ice pieces," the old man continued, reminiscently. "Father useter tell of a neighbor o' his'n 'at said haow he'd broke his child'en's temper wi' maple sugar. One mornin' father happened in of an arrant, when they was eatin' the' breakfas', all a-fishin' the fried meat aouten one dish, an' the ol' man hed got him the best and biggest maouthful in the hul lot ontu his fork, when one o' the boys up an' flipped it off an' hed his fork into 't an' into his own maouth with 't quicker'n scat. Father 'lowed the maple sugar hed worked fast rate. Wal, I b'lieve I've hed enough for oncte. Ann Twine, be you a-goin' tu eat all day?"

"Ah'll was been lis'lin' to you, Onc' Lasha," Antoine answered, settling himself to his work. "Naow Ah'll was goin' for heat. Dat was de bes' ting we can do w'en it was rine, 'cep' go feeshin'."

"An' I cal'late tu stick right by ye, Anntwine," said Joseph from behind a duck's wing that he was gnawing, holding it with both hands. "I hain't the kind er man tu desert a friend in no sech scrape, don't seem 's'ough I was, not as I feel naow."

Uncle Lisha filled his pipe and went out to enjoy it by the fireside under shelter of his blue umbrella, and Sam, after providing a present supply of firewood with a few axestrokes, wandered out to the bluff overlooking the creek.

Through the windows of the woods, mullioned with gray trunks and curtained with gay branches, there could be gained narrow glimpses of the nearer marsh, tinted with many blended colors and dotted with green islands of button bush; then the broad channel, leaden gray under the sunless sky and drizzling rain, the dull expanse broken here and there by ducks reveling apart or in companies, enjoying the weather that set all the rest of the world a-moping.

Beyond was the further border of marsh and then the sheer wall of forest, making the horizon against the low sky that enveloped far mountains and nearer hills in common obscurity.

The yellow poplars and the scarlet pepperidges shone through the veil of rain as if yesterday's sunshine was still held in them to brighten to-day's somber monotony of gray.

Like outlooks on the lakeward side revealed only the dull expanse of gray water receding into the gray mist toward unseen shores, except where Garden Island loomed, blurred and undefined, between shrouded water and low sky, with one yellow-leaved birch flaring like a beacon half quenched on the western point, and off the eastern point a black rock, like a fast-anchored buoy.

Further away, Long Point lay like a fallen cloud afloat on the water, moored to the stable earth by nearer drawing shores of rock and sandy beach and the willow-clad bar of Little Otter.

Here and there were dots and lines of swimming water-fowl on the unreflecting surface of the bay, and occasionally a flying flock faring out to safety of wide waters or in to the abundance of the marshes, dissolving in the mist or materializing out of it as they went or came.

A scattered company of crows straggled in slow flight athwart the screen of rain and mist; a kingfisher hung in stationary poise against it, then plunged like a plummet into the water and far out on the shallows; a heron stood waiting in statuesque patience for breakfast to swim to him.

Far or near there was no visible sign of human life, nor amid the continuous purr of the rain, the contented gabble of the ducks, the whistle of passing wings; the raucous call of some stray or laggard and the metallic clatter of the kingfisher, was there any sound of it except from the quarter where the Canadian boat was taking in its cargo.

Thence through the heavy vaporous atmosphere came the lumbering of laden wagons, the rumble of their discharging freight and then the brisk rattle of departing empty wagons, all mingled with the shouts of teamsters and the vociferous jabber of captain and crew.

For one who had no apparent reason for being interested in fruit trade, Sam was uncommonly well pleased that the rainy day was not hindering it, and having assured himself of the fact he returned to camp.

Uncle Lisha still sat by the fire, the staff of his umbrella resting across his shoulder while he diligently greased his boots with the tallow in the bottom of the lantern, the accumulated drip of many candles, Joseph and Antoine looking on with interest from the tent door.

"You don't want tu burn your boots, Uncle Lisher," said Sam, standing by the fire and letting the water from his hat brim drip into it. "There's more profit tu you in hev'n' other folks burn up their'n. I do b'lieve I smell burnt luther."

I guess they hain't gittin' tew hot," said Uncle Lisha, running his finger over the soles. "Makes me think o' the feller 'at went tu a neighbor's a-visitin' wi' a pair o' bran' new boots on, which for all he spread 'em aout on the stove ha'th, an' stuck 'em top o' chairs, the' wouldn't nob'dy notice 'em, an' so when he see they wa'n't a-goin' tu say nothin' about 'em, he up an' says, says he 'Ye needn't think strange if ye smell new luther.' Wal, Sam-will, what ye diskivered?"

"Nothin' but water an' ma'sh an' woods, lookin' lunsomer'n they did a hundred year ago, fer there hain't even an Injin in sight. I heard the Frenchman lwudln' his boat though."

"Wal," sighed Antoine, "Ah wish Ah'll was be apples, me, so he was bought me an' took it to Canada. But so as Ah can' do dat, Ah guess Ah'll do nex' bes' an' go feesh some bull pawt. You'll goin' long to me, Zhoeff? We go on de scaow, an' took some funs."

Joseph looked out upon the dismal drizzle with a rueful countenance and answered, "Wal, I don't sca'cely seem tu feel like goin' not ezactly. It's kinder unconfortable an' sorter exposin' a-fishin' in the rain an' I'm mortal afeared o' ketchin' a eel. I like tu eat 'em, but I swan I don't luffer ketch 'em."

"O, come Zhoeff," Antoine urged in a persuasive tone. "If you a'n't want for ketch it, Ah'll ketch it, an' you can ketch de udder leetly feller. Come, Zhoeff."

"Well, I ruther guess I won't, I'm b'legged tu ye," and Joseph settled himself more comfortably in his seat. "I don't 'pear tu hanker much fer fishin' tu-day. Mebby Uncle Lisher'll go, er Sam-will, mebby."

But Sam shook his head in decided negative, and Uncle Lisha audibly declined, "Good airth an' seas! You don't ketch me goin' fishin' fer sech fish in sech weather, I hain't a loon er a shell duck."

"Den, bah gosh, all Ah'll ketch Ah'll heat all," Antoine declared and went out to grub for worms in the adjacent pasture. After a while he returned from a successful quest, and getting a hook and line from among his stores he cut a cedar pole and set forth. Presently his camp mates heard the creak and splash of his departing oars, then a hollow clank as they were dropped in board and the rattle of the chain being wound about the nearest fishing stake, and then they imagined that they heard the whistle of his line and the spring of his heavy sinker as he made the first vigorous cast. Two hours later he appeared, dripping but happy, bringing a number of dressed bull pouts which, fried to a turn, he did not devour alone as he had threatened, but shared with his companions.

The afternoon was spent in the tent. Uncle Lisha discoursed of the past and Antoine of various men in Canada who were always the heroes of his tales, while in the breaks of conversation Sam several times went out for the ostensible purpose of a general inspection of the weather, though the examination was mostly confined to the direction of Lewis Creek.

Late in the afternoon the wind freshened from the northeast, the tossed branches dropped sudden showers upon the canvas with a startling, ripping sound, and amid the sullen murmur of the wind-swept woods and the louder patter of the driven rain could be heard the regular wash of the rising waves and the shrill whistle of frequent flocks sdudding in from the lake.

Then Sam saw the Canada boat gliding down the unseen channel, the great square sail stalking between the trees like a gigantic ghost, till at last it walked forth upon the vexed lake amid the taller phantoms of mist and vanished in the thronging host.

Sam re-entered the tent with a satisfied visage and remarked:

"Wal, that 'ere Frenchman's got started fer Canerdy with his apples."

"An' like 'nough a blackbary," Uncle Lisha added, with a significant twinkle in his eye.

ROWLAND E. ROBINSON.

FITCHBURG, MASS.—*Editor Forest and Stream:* Our paper grows better and better every year. It has got so now that we must have it. I inclose a little "game hunting incident." Wish you all a prosperous and happy New Year.

IRVING O. CONVERSE.

WITH A SURVEYING PARTY IN THE INDIAN TERRITORY.

BY FRANK WINCHESTER, ONE OF ITS GUESTS.

Part III.

THE day following our introduction to "possum and sweet 'taters" was, in the morning, one of the most unpleasant days we experienced during this trip. We were greeted by a cold, high wind from the northwest accompanied by a heavy rainfall, confining the members of the party to their tents, where we whiled away the forenoon in various occupations. The Judge, Cap, John, the assistant engineer and I engaged in the old but ever good game of "seven-up" or "old sledge," the stake being that the side losing a jack from capture by opponents must lay pipes down and quit smoking until the other side lost when that side ceased smoking. I do not recall more fun connected with any game than we had during that dismal forenoon; and from our tent the contagion spread to the other tents, as we could hear the peals of laughter accompanying the commands, "Lay down your brier-roots and enjoy our smoke."

After dinner King and I tried to make up a hunting party, but the Judge and Cap declining, he and I accompanied by Carlo the spaniel started out, clad in "slickers" and long-legged rubber boots, as he said, "Just to take a tramp to keep our bones from getting stiff," and went down through the park land, across a burned part of the bottom land, to the heavy timber along and adjacent to the river. As we entered the tall grass in the timber I was surprised at the harmony between our "slickers"—as yellow oilskin waterproof coats are called in the West—and the wet leaves and grass at that season of the year, as they shone with their raindrops, and I called King's attention to it, but his short reply was, "Yes, I knowed it; no trouble to get up to game if we work right."

We had walked but a short distance, with King leading armed with his rifle, I with my 10-gauge, when he stepped into a game path, and pointing to a fresh deer track, said, "Your gun no good for deer, I will go and kill it." But I was determined, if an opportunity presented, to make that despiser of the 10-gauge change his contempt to admiration, so I withdrew my No. 1 turkey shot cartridges and loaded the gun with brass shells, whose load was 5drs. Hazard powder and 1½oz. 000 shot, and kept close to him.

We had gone not over an eighth of a mile when King pointed to a large fallen tree top, and by a shake of his head gave me to understand that we would find our game in it. When about 50yds. from the top he stopped, and taking a quick aim fired his Winchester. As he fired I stepped up by his side, just in time to see a deer spring toward his path, and with a quick shot I sent it rolling into the path, with both forelegs broken close to the shoulder, and in a moment King had cut his throat, when I saw that it was a buck with a proud head of eight points to each horn. As I saw my trophy I shouted, "How's that for a scatter gun?" and turned just in time to see King cutting the throat of another deer lying in among the branches of the fallen tree top. Turning slowly toward me, he replied, "I got one deer, you got one," and he then dragged his, a small doe, to the side of my very large buck, and looking at them, said, "Scatter gun good gun, when good man shoot him quick," which admission was to me the highest compliment for my 10-gauge and my skill in handling it.

When I proposed to return to camp for horses to take the game into camp, King said, "No, hang them up; more fun for scatter gun before we go back." Bending over two young trees and fastening a deer to the top of each, after the deer was disemboweled, each tree rose high enough to carry our game out of the reach of all forest prowlers of the "varmint kind," as he said, and he then led through the grass to the bank of the river, which we reached at a point where it made an abrupt bend from a course nearly north and south to one east and west; or, to make my meaning plain to all, the river, which had been flowing nearly directly south, changed its course to flow in an easterly direction, and at the bend a "towhead"—as a small island covered by grass and short willows is termed—was nearly connected to our bank by a sand bar, making a protected pond of shallow water from the bank to the towhead, and it was covered with countless numbers of wild ducks when we looked through the grass along the bank. A shot from King's rifle at the ducks on the water, and with both barrels of the shotgun on the wing, dropped seven dead ducks, which Carlo soon brought to us as we reached the lower end of the towhead, where they were fastened with a pointed stick in the throat for decoys at a short distance from the shore of the island, and as we secreted ourselves in the grass, King said, "If you shoot as good at duck as at deer we get some duck," pointing to the flocks coming toward us. Never at any other time of my life have I seen ducks so plentiful and so fearless, as they would swoop down over the dead ones used for decoys, paying no attention whatever to Carlo retrieving dead ones, and never did I have such luck in duck shooting as I had that afternoon.

When I had fired all my No. 4 shot away and said so, King said, "Got enough; help dog get dead ones," and we soon had them piled upon the bank. And what a glorious pile they made, all large ducks, mostly mallards and redheads, with a few widgeons, canvasbacks and bald-pates, a grand total number which I will not give or sportsmen might term that afternoon's work pot-hunting; but after King had arranged two packs by tying the necks together, we each had a good load to carry to camp.

As we were crossing the sand bar to the bank King pointed to another sand bar about a half mile up the river covered with wild geese, and upon which we could see flock after flock alight, and said, "We'll go fix it so you and Judge get plenty goose shooting." Marching along the bank until we were opposite the island, we dropped our packs and guns and waded over to the sand bar, where he spread his slicker out on the sand and said, "Put yours down too; goose get used to him; you and Judge get under slickers and shoot lots of geese." Placing my slicker a short distance from his we waded back to the bank and watched the wary geese circling over the sand bar for a few moments and then we proceeded to camp. The rain having stopped about the time my duck shooting ceased, we did not miss the slickers on our march. We reached camp about 4 o'clock, when King and one of the teamsters took a team and went down and

brought our deer to camp, while I related the incidents of the afternoon's hunt to the Judge and Cap, who were both greatly surprised at King's appreciation of the shotgun, and Cap and Judge both declared their intention of having fun with King about my beating him.

When seated around the fire after supper, the Judge, pointing to the strings of ducks hanging near us, said, "King, only scatter guns kill ducks like that," and Cap followed by saying, "King, Son's scatter gun beat your Winchester this afternoon; don't you want to trade with him?" at the same time pointing to our deer, and a good laugh was the response from all the party, in which King joined, and then said, pointing at the deer, "Scatter gun good gun when Son shoot him; shoot bang-quick—no time take aim; King too old to learn," and then, as he pointed at the ducks, he said, "Water deeper, shoot one duck, catch all rest without shooting," and then explained that if the water had been 4 or 5 ft. deep where the ducks were sitting, he would have killed one with his rifle, skinned it, and arranging it upon his head so that he could see, he would have waded out and secured all the ducks he wanted by catching their feet and drowning them.

As not one of us had ever heard of such a plan before, we could not deny the success of it, but the Judge said, "Son's beating you this afternoon evens up the Red Rock bass fishing and shows you how we will all beat you fishing if we ever get another chance," but the reply was, "Come good day we go seven miles to Walnut Creek, where plenty of big bass, and I beat you all again." And then and there it was arranged that the first day King called a "good day" we would have another fishing contest.

[TO BE CONTINUED.]

GONE TO SEE HIS GIRL AT NEW CASTLE.

It was on a Saturday afternoon when I and my boy (who is always my companion on hunting trips) got out of a train at a little railroad junction in western Pennsylvania. Here four railroads crossed each other to cross purposes, for no two of the roads would connect with any one of the others. You could not come by any one of them and get away from that junction (that had four little frame houses on the side of a hill) by any of the other roads for at least two hours, and in my case it was worse. My train would not be along for four hours; so there we were, a man and a young boy, two beagle hounds and two guns, with four hours of time to put in and nothing to do.

The country round about was rolling, with a good sized stream winding its way through the valley, here and there a cornfield, or a bit of swampy ground, then a dense copse of hazel bushes and white birch trees. Just the country for rabbits.

There was a half-grown youngster of about eighteen summers in charge of the station and its three clicking telegraph instruments. Of him I requested permission to leave my baggage in the station house, asking him to keep a friendly eye upon it till our return.

"Where be ye goin'?" he said, all curiosity. I told him that from the look of the country around I thought a short distance down the creek rabbits might be scared up, and if there were my two beagles would soon have them running.

The youth's manner changed at once. He was sure we would get some rabbits 'cause he'd seen lots on 'em all fall, but no one round here had any dawgs to hunt 'em with.

Yes, he'd watch our baggage; so we got our guns out of their cases, put a few shells in our pockets, unloosed the two beagles and started, the youth eyeing us wistfully down the railroad track. We had gone perhaps half a mile when the dogs started a rabbit, and away they went yelping with their short sharp bark, which is always sweet music to a sportsman.

I had forgotten about the station boy, although his earnest and intense interest in the subject of the rabbit hunt had impressed and pleased me; but all at once as we rounded a wooded hill we saw him running at full speed to join us. When he came up he asked if we had any objections to his going with us, as he was "tarnally fond of a rabbit hunt."

I told him he was the roughly welcome to join us and we would soon have some fun, as the hounds had a rabbit on the run.

He started to say something, stopped short, rubbed his hand over his brow and then without a word he turned and fled back as if bereft of wit and sense.

We watched him until he was out of sight, wondering what could have gotten into him to make him act so strangely, but could not think of any reason for his curious behavior.

We got a couple of rabbits and returned to the station just as it was beginning to get dark; and our erratic young man accounted for his sudden bolt by explaining that it was Saturday night, and that in the excitement of the rabbit hunt he had forgotten that there was always an extra workmen's train on Saturday night, which came along about 6 o'clock, and which he had had orders to hold on this night until the regular passenger train (which was late) should pass. After reaching us he remembered his duty and speeded back with all his might, fortunately just in time to turn the red semaphore and switch the workmen's train on a siding, when the express rolled by.

It may be imagined what our feelings were when we found how nearly we had been the innocent cause of a railroad wreck, with the probable loss of a number of lives; for from the winding nature of the track, had the workmen's train not been held up, nothing would have prevented a "head on" collision.

For a while the youth wouldn't talk much. He was badly scared, as he well might be, but the story of the rabbit hunt gradually won him round and he invited us into the little telegraph office, where we talked a while and listened to the clicking of the three telegraph instruments. He explained that one of the instruments was repeating messages for the movement of the trains, and a message just then going over the wires was to the operator at the next station to hold the down train (the one we were going on) until the up train arrived.

I asked him if he was an expert operator. He laughed and said, "I guess not, I've only been learnin' three months and I get no pay, and you don't suppose that if I was a good hand at the key that I would work for nothing, do ye? If the talk comes slow and the day

is clear I can make out pretty fairly, but if it's wet or damp and the fellow that's callin' me is in a hurry, then I can't take it at all."

"But you're not the station master," I said.

"Oh no," he replied. "He's Sam Aldrich, an' he's gone to see his girl down to New Castle, and he won't be back till Monday mornin' on the regular passenger train."

"Good heavens!" I thought. "Here is a callow youth, wholly irresponsible, who cannot take messages on a bad day, left in charge of a junction station where four roads cross (of all places one that should be in charge of an expert operator), and that from Saturday afternoon until Monday morning."

Visions of dire disaster flashed across my mind. Rear end collisions, upturned passenger coaches and locomotives, the ring of the axe upon the panels of the car to liberate the passengers, the crashing of glass, the fire from the deadly stove, the "agonizing shouts of the wounded," the weary wait for a doctor, the special train bringing assistance and the newspaper reporters—all passed before me as rapidly as thought can be born and leave its impressions.

My own train was nearly due and soon there came clicking over the wires the message that after leaving this station it was to pass on to the station next beyond and there pass No. 4. At least so the boy said the wires said. Now the conditions were bad, he said, and he was not exactly sure of the dispatch, so he had it repeated, with the same result; and almost at once, it seemed, the flashing headlight of our train burst into view and pulled up at the station.

The boy gave the conductor and the engineer the message, they signed for it, and we entered the train. She started off with ringing bell and escaping steam, and you may be sure I was ill at ease until, on rounding a curve at the next station, I saw the headlight of the down train waiting for us upon a siding, and then I leaned back and indulged in the "what-might-have-beens," all because "Sam Aldrich had gone to see his girl down to New Castle."

THOMAS MARTINDALE.

PHILADELPHIA.

THE WILD MAN OF CHILHOWEE.

CHATTANOOGA, Tenn., Jan. 26.—*Editor Forest and Stream:* In your numbers of Dec. 14 and Jan. 4 you give descriptions of the "Lost Man in New Brunswick," and ask correspondents if they can throw additional light on the questions, who is he, and where did he come from. Apropos of the question asked, I can give you a description of his first cousin. The subject of my sketch is known as "The Wild Man of Chilhowee Mountain." To come to the real facts with as little circumlocution as possible, the man was found by a party of hunters several years ago. The four hunters were camped at the base of Chilhowee Mountain, on a deer hunting expedition.

The Chilhowee Mountain is a rough and very wild and brushy knob or single pinnacle that raises its head far above the other peaks of the Cumberland range of mountains. It stands somewhat aloof from the main mountain range and therefore has a name of its own. It is situated some miles west of Cleveland, Tenn., and ninety miles northwest of Chattanooga. This part of the Cumberland range is extremely difficult of access, as there are practically no roads into the wilderness. Nature seems especially to have ordained that this brushy, repulsive region should be the home of animals alone. It is entirely uninhabited by man, excepting it be an occasional "wildcat distiller."

One afternoon in November one of the party of hunters was returning to camp. He was riding and was following a cattle trail that meandered about the base of the old Chilhowee. It was growing dusk and the somber shadows were fast fading into gloom. The wind was whispering to the overhanging cliffs, and the tall trees were nodding their silent good night to their nearest neighbors. The birds were settling themselves for the night, and the hoot owl was making the gorges reverberate with his demoniacal laughter.

Thus engrossed in his own thoughts, and somewhat depressed by his weird surroundings, our lone horseman wended his way along the mountain path. At a sharp angle in the path his horse shied, and giving a peculiar snort, turned so quickly and abruptly as almost to unseat the rider. The man sprang to the ground, and quickly tethering his horse, advanced along the path with rifle cocked and ready to meet whatever foe or game was there. He expected to find a bear, as he hardly thought his horse would act so strangely over a deer or domestic animal. After advancing a few steps he came face to face with the object he was seeking, and to use his own expression, "his hair all turned the wrong way."

There, half crouching like a wild animal, in the path was a human being; but that was all. Our friend spoke to the naked, starved-looking creature, but receiving only a snarl in return, very wisely concluded to let him religiously alone.

Returning quickly to his horse he mounted, and making a wide circuit so as to avoid the unexpected acquaintance, made his way back to camp. After reporting the find to the others of the company, the question now arose what to do.

All were of the opinion that if the man turned out to be a "wildcatter" it would be decidedly unhealthy for this outfit even to attempt to form his acquaintance. Because the ragged denizen of the forest was sure to have confederates and they taking the party for revenue officers would ambush the outfit. The entire party being native East Tennesseans and Georgians did not require any great amount of explanation to understand what would be their fate if they aroused the illicit distillers. A few words will explain to others who are not familiar with this class. There would have been a few rifle shots ringing out from among the rocks and brush and one by one the hunters would have been picked off, until none would have been left to tell the tale. Then a searching party would have come out to the old Chilhowee. The woods would have been searched, it is true, by relatives and friends; but the camp and all vestige of their whereabouts would have disappeared and the searching party would have gone home without success. As I said before, there is no one within fifty miles of the Chilhowee of whom to ask the question, "Have you seen them?"

John, who had found the wild man the evening before, said that he was sure the man was a maniac, as he had an unnatural gleam in his eyes, so after due deliberation the whole party agreed to go and investigate. Mounting and taking a rope, some food and extra clothing, they started. They were at the location described by John in the course

of an hour. Here all dismounted and keeping close together, in case of an attack, began the investigation. After following the cattle trail for a quarter of a mile, they discovered a very dim trail leading up the mountain. Here they halted and held another consultation. They were sure that they had stumbled on to a den of illicit distillers, and as they were not officers they did not care for the empty glory of an uneven fight with those fellows on their own ground. John, braver than the others, declared that if they would not go with him he would go by himself. Ashamed to desert a comrade in the hour of danger, they told him to lead and they would go with him. Up the mountain they climbed, keeping a sharp lookout and anxiously awaiting the result. They had climbed probably 300 yds. upward when the trail ended at the mouth of a shallow cave or stone house, and there they found the object of their search. As they approached the old man sprang forward with a tremendous club, swinging it over his head. All hands leveled their rifles at him and tried to intimidate him, but he only laughed and snarled and chattered to himself in some unintelligible jargon. Realizing that he was crazy, the men lowered rifles and offered him food. He finally became composed enough to accept some of the food. He was almost starved and ate ravenously. He was the most pitiable object the men had ever beheld. Almost as naked as Adam, and covered with dirt, sores and vermin. He could only talk in broken, unconnected and totally unintelligible sentences; could not tell who he was, where he had come from, nor how long he had lived on the mountain side. His beard was long, filthy, coarse and matted with gum, blood and other foreign substances. His hair was half-way to his waist and hung in tangled twists or ropes done up in the same substances that had stuck to his beard. His fingernails were several inches long and curved like the talons of the eagle, excepting when broken off, as some of them were. The toe-nails were thick and unsightly, being broken off at various lengths from $\frac{3}{4}$ to $1\frac{1}{2}$ in. The teeth were all gone excepting a tusk on each side, like a wild boar. Great Jupiter! Did anyone ever see such a specimen of the human race before?

The men who found him report that the man and his lair had a stench clinging to them that was almost unbearable. Scattered about in his den and on the ground outside were the bones and hoofs of calves and pigs, showing that the old man lived upon the young of the animals that were out on the range. He had no gun, axe, nor even a knife, and no matches; so he must have killed his prey with a club or stone; and carrying the carcass to his den, torn it to pieces by main strength. In summer and fall he lived on the mast and mountain berries, as the stains on his hands and beard indicated.

Well, while the old fellow was gorging himself, dog fashion, the men were plotting how to capture him without hurting him. He was down on his knees with his pile of food in front of him, shoveling good things into his mouth with both hands. But he watched his new friends with an eagle's eye, and every time one of them moved he would grab his club. The muscles in his bare arms and legs were significant evidence that he was a powerful man; and the fact that he was crazy and not responsible for his actions made him all the more dangerous. Nothing but feelings of kindness and humanity prompted our four hunters to attempt his capture. They wanted to carry the old man to Cleveland, and from there send him to the insane asylum at Knoxville, where he would have care and kind treatment for the rest of his life. The old man of course did not understand, and it was evident that he had no intention of being captured. All four of the hunters were young and athletic men. John, a blacksmith by trade, stood 6 ft. in his stockings, weighed nearly 200 lbs., and was a match for almost any man. Two of the party were strong young farmers, and the fourth man was a city man, but somewhat of an athlete, and a fair match for any of the others. After summing up the strength of the four, they concluded that with their combined efforts the old man could be overpowered without serious injury to any one. So, removing the rifles to a safe distance up on the mountain side, they set about their unthankful task.

While the city man was trying to attract the old man's attention with new supplies of food, the other three pounced upon him. Then the city man took a hand by grabbing hold of the old man's club.

From the start the four realized that they had an herculean task. With a scream resembling the cries of Pluto's archangels the old man rose to his feet, and then the battle began. John had thrown his powerful arms around the old man, endeavoring to pinion his arms to his body; the two farmers each had hold of an arm, and the city man had a death grip on the club, which the old man retained with a tenacity equaled only by death. For a moment it seemed as if they had him. If they had only had a fifth man to pass the rope around his body and secure his arms they would have had him sure enough. But alas! there were only four of them, and each one had "bit off just about as much as he could chew," to use a common expression.

The battle continued with unabated fury for several minutes, until finally John's strength gave out, and the old man broke the cordon around his arms and body. John then grabbed the club with the city man, as he knew some one would die if the old man got possession of that implement of destruction. All at once the old man turned the club loose and began to scratch with his terrible claws. John said he was half a mind to fello the old fellow to the ground, as he was about to ruin one of the farmers, but his big heart would not allow him to strike. So throwing the club as far into the bushes as he could send it, he and the city man waded in again. They grabbed the arm that was doing such terrible execution, and the fight continued.

Finally after much exertion John succeeded in tripping the old man off his feet and all went down in a heap. They thought now they had him sure; but in some way one or two turned loose their grip in falling and the old man shook off the others and rose to his feet with a large stone in his vise like hand. He seemed to have a special grudge at John. Entirely ignoring the others, he sprang at John and striking him a heavy blow felled him to the earth. Then dropping the stone he gave vent to an unearthly yell and bounded down the mountain side. Our hunters picked John up and found that he was not seriously hurt, as the old man had struck him in the chest, merely knocking the breath out of him for a moment or two. The others had various and sundry bruises and one

of the farmers was badly scratched about the face. They left the remainder of the food and the clothing in the old man's den and sorrowfully took themselves back to camp. The next day they packed their tents and luggage on the horses and started out the way they had come in—that is on foot, leading the horses, as there were no wagon roads.

They went to Cleveland and showing their battered forms to the officers of the law reported their experiences. Then the officers collected a large body of humane men, who were willing to go out after a forlorn human being, and under the guidance of one of our hunters went back to the scene of conflict. After much tracking and beating of brush, the party finally bayed the old man in his lair and surrounding him with a large force captured him. He was brought to Cleveland, and after being washed and shorn of his matted hair and beard was sent to the insane asylum, where I dare say he now reposes in comfort, unless death has relieved him of all earthly cares.

Such are the experiences of sportsmen. What do you suppose some of them will find next? A. B. WINGFIELD.

SNOWSHOES.

SEEING Mr. Hough's references to snowshoes in his excellent article on trapping, I thought it might interest some of your readers to know something about their manufacture, as when a child I used to watch the squaws who were making them for my father, and later I had hundreds of pairs made for myself, I have had good opportunities to learn how they are made.

The best bows are made from coarse-grained white ash, although sometimes brown ash and even yellow birch are used. These bows are made from green wood and shaped in any desired form by bending them round a small round stick placed on the side of the knee. For nice shoes they should always be hollowed on the outside of the heads and tails with a crooked knife, so that the strings may be protected from wear where they pass through the bows. Fifty years ago nearly all our snowshoes were made with a very large square-ended toe. These required more skill to use, as they tripped easily, and many white men used to fasten several ounces of lead on the tails to counterbalance the weight of the toes, though an expert always preferred them without. The toe and heel bars were made of seasoned wood, usually hornbeam or rock maple. In those days the heels were fastened with wooden pegs, later with common cut nails heated in the fire so they could be clinched, and later still by copper rivets with washers.

Common sole shoes for lumbermen were then, as now, rough, coarse affairs. They were filled with moose, cow or horse hide, cut very coarsely, and not stretched before filling, and consequently when wet sagged badly. They were intended more to stand and chop in than for steady travel, and were sold as cheaply as \$1.50 to \$2.50 per pair. Snowshoes made for trappers, scalers and explorers were an entirely different article, and their making required a great deal of skill, and only a very few women in the tribe could make a really first-class shoe, and they would never make but a few pairs in a season as well as they could for any reasonable pay, as drawing the filling so tightly soon made their fingers sore, so that they preferred to do inferior work for less pay. The best shoes were filled with either fall-killed caribou, deer or nice calf.

It is a widespread but entirely erroneous belief that no filling can equal caribou. Fall-killed caribou makes an excellent filling, but having traveled thousands of miles on all kinds, and in all kinds of traveling, I believe that those filled with deer killed in August, September or October, or those made from a calf six or eight weeks old, are just as good. When the hair of either caribou or deer grows long, it is at the expense of the thickness and strength of the hide. The hide of a winter or spring killed animal is not only thinner, but is not so tough. I once traveled in company with a hunter whose shoes were filled with the skin of a caribou which he had shot in February, and he had seen the shoes filled with it; but in March, when I was with him, his shoes were all in ravelings as soon as it grew warm, while a pair of calf-filled, which I had worn a great deal more than his had been worn, were in perfect condition. This was all owing to his caribou having been killed after the hide had become thin.

In filling with either, the hair is first removed and then the hide is cut in square or oblong pieces, then the corners are rounded, and the pieces are cut into strings with a knife by going round the piece till all is cut. The work of removing the hair and cutting the strings used to be done almost entirely by the men when the shoes were made by married women. Great care and skill were required to cut the strings of an exact width, as thin parts had to be cut wider than thick, so that when stretched all the strings would be of the same size. Thin parts of the skin or thinner separate skins were used for heads and tails, as they were filled with much finer filling.

As fast as cut, the string was wound tightly in balls. Afterward these balls were made into skeins and stretched. This, when they camped in the woods, was done by cutting the tops off from two small trees which grew within 2ft. of each other. The tops were bent together and the skein was slipped over them; the natural spring of the trees drew the skein very tightly, and then a stick was passed through the skein and it was twisted very hard many times. When not near woods, the squaws put one foot in one end of the skein and passed a short stick through the upper end, and then twisted with the stick till all the stretch was taken out. The string was then wound into balls. In filling, the ball which was being filled from was always kept in water. On this account shoes were never filled in warm weather, as the warmth caused the tightly wound hide to heat and rot.

In filling, the heads and tails were filled first. These were often filled in fancy figures. Where the string passed through the bows, it was protected by a tag of dressed leather which it passed round, and which kept it from being cut by crust. The middles or bodies of nice shoes were filled with coarser string than the heads, drawn as tightly as the person filling had power. I have seen it drawn so tight as to bend the bows in. The middles were usually filled close out to the bows in plain filling, but some fancy shoes had a row of round twisted strings an inch long going round the middle at right angles to the bow and the fine filling inside, and I have seen shoes which had two and even three such rows, one inside of the other, separated from each other by work so

that all the real filling there was was a quite small pad for the foot to rest on. This kind of filling was not common, as it was expensive and would not stretch more than the plainly filled. I have seen such fancy filled shoes sell at \$10 a pair.

The only instruments used in filling were the snowshoe needle, which was 4 or 5 in. long and $\frac{1}{2}$ to $\frac{3}{4}$ in. wide, tapering toward each end, with a square hole in the center, through which the string to be used passed, and a punch made of hard wood with one end blunt when the hand pressed it, the other end sharp and hardened in the fire. Sometimes the horn of a spike-horn buck was used with leather fastened on the base to prevent wearing the hand. Snowshoe needles were at first made of bone or hard wood, later they were made of iron. The skin of the neck of a deer was not used in filling, unless for the standards on each side the foot hole, as it was too thick and spongy.

Indians protected the shoes which they used themselves from wear by winding the bows with coarse string of either raw or dressed skin. They also worked dressed leather under where the foot came, and sometimes wove in strings of dressed leather where the wear from the heel came. They also used to turn their shoes over, wearing them on both sides. Protected in these ways shoes would last much longer.

In later years most shoes were made with round pointed toes, to suit the demands of trade. Also some with toes as wide and round as a section of barrel hoop. These were called Esquimaux shoes. I have never known an Indian (the Penobscots and Passamaquoddy) to make any of the narrow shoes turned up at the toes, so common in Canada. Most of the shoes sold for caribou hide are not filled with caribou, as I have seen plenty of so-called caribou shoes for sale in years gone by when there was not a caribou in the State. Shoes filled on honor with either fall-killed caribou, deer or calf, will when worn on dry snow usually sag so as to show the print of the foot, but when wet they tighten, so when one strikes a pair of wet shoes together, after they have been taken off, they will hum as if one struck a tightly stretched line. Many shoes look as if tightly filled when they are not. This is done by filling loosely and placing them near an open fire when drying; the heat contracts the string and they seem tighter than the really honestly filled, but as soon as wet they show what they are. An expert can tell what they are by trying to move the filling on the bow back and forth with the thumb and forefinger. If they are honestly filled the string round the bows can be moved. If tightened by fire the filling adheres to the bows as if glued. To any one buying nice snowshoes I would give the old Indian's advice, "She very honest man, best way you watch him." M. H.

WITH THE BOBO BEAR PACK.—II.

At the Home of the Black Bear.

THE soil of the Mississippi Delta is for the most part exceedingly rich, else it could not produce the extremely abundant and heavy growth of vegetation that it carries. The region on which we were hunting was covered with a solid mass of cane which stood about 15 to 25ft. high and was thick as the hair on a dog's back. All through the growth of cane stood great forest trees—ash, oak, hickory, gum and other trees which reach giant size. Across the brakes ran an occasional cypress swamp, at the head of which the growth merged into shorter and less bulky trees, often those of the persimmon, the holly or other trees, which were sometimes covered densely with the wild grapevines. It appears, however, that all the soil is not uniformly rich, or rather that parts of it are more so than others. Some of the ridges are especially strong and rich of soil, and here the heavy blue cane grows most densely and impenetrably—so much so that if I should say how solid a front it offers to the hunter I should hardly be believed. On these richest and heaviest ridges the natural food of the bears was most abundant, and the hunter craft of Bobo had found out the very place where the bear was feeding—a series of blue cane ridges about eight miles from our camp. Here the party had been able so far to get a start in less than half an hour after turning the dogs loose each day. On two separate days, as I have above remarked, they got two starts and killed two bears before going back to camp.

It was therefore with feelings of practical certainty that we all started out on the first hunt after my arrival in camp, which fell on a Friday morning. We numbered about a dozen hunters in all. Col. Dick Payne and Boney Leavell stayed in camp and fought the war over again some more, but this on Capt. Leavell's part was an act of generosity to myself. I had no horse, of course, and he insisted on my riding his hunting mare Gladys. This I did reluctantly, as it unhorsed him for the day. But when I forgot that part of it I was very glad, for a better mount for the work in hand no one ever had, and I soon saw that staying with the pack was much simplified by the sagacity of Gladys, who had evidently been on many a bear hunt before and knew what was expected of her.

We got a late start on this morning, but no one minded that, for it seemed sure that we could kill a bear in a few hours and get back to camp before dark all right. But for some reason the luck took its first turn against the party and we met with only disappointment. We had out only about half the pack, the rest being crippled or lost, but among our dogs we had some good bear dogs as any of the pack. We cast off on a heavy ridge and some of the young dogs soon opened, but for over an hour we had no token of serious business from any of the old reliables. At length we heard old Ronce running alone, but we could not be sure what was his course, and none of the rest went to him, as the pack was as usual split up into several eager sections, all hustling for themselves. In fox hunting it may be possible to keep the pack in part at least well together, but in bear hunting this is impossible. The dogs are of different nose and speed, and training and experience, and if considerable time passes before a bear trail is struck they scatter out and break away in spite of the efforts of all hands to confine them to bears and bears only. Had Ronce struck his trail near by a good number of the other dogs, they would all have gone to him, and we should have had our run in less than three-quarters of an hour after we got on our grounds. As it was, we went working back and forth across the ridges till late in the afternoon. It was feared the bear ha-

moved out of the country on account of being hunted so steadily, and perhaps this was so. But finally, as we were riding down one of the long sloughs which made up out of the head of a big cypress swamp, the dogs struck a hot trail and went off roaring most delightfully, more than half the pack, with a lot of the reliable bear dogs among them. We could then hear the wild answers of one dog after another, from all over the country, as they hurried in to join the pack. The savage chorus grew and grew and then faded away as the chase swept on. Bobo's face brightened, and he went off after the pack in happy frame of mind. In a moment the hunting party was split into half a dozen groups, each riding as seemed best to him. I found myself in company of Mr. Felix Payne, Mr. Foster, Mr. Dunn and one or two of the negroes. Then we lost each other somehow and somewhere, and I was for a time alone with Mr. Payne, a very good bear hunter, and one pretty safe to be near when the bear was killed. We kept on riding across the ridges, and at length started down a long slough, paralleling the course of the pack, which could barely hear at times by the intentest listening.

A Wild, Mysterious Region.

"They are going to the Hurricane, sure!" said Mr. Payne, and then we settled down into hard riding for a while, trying to head the pack. Noel Money had at this time joined us, coming across a heavy cane ridge to get into our slough.

I should explain that the "Hurricane" is a strip of country about eighteen miles long and perhaps a mile or more wide, which marks the course of an ancient cyclone across that region. I presume there does not exist on earth a worse bit of country of its size. The giant trees—many of them 5, 6 or 8ft. in diameter at the stump—lie heaped and crossed in a Titanic windfall whose like few men have ever seen. Over all this the heavy cane has grown, and as fire has once passed over a portion of that country, a dense crop of blackberry, bittersweet and other thorny vines has sprung up over all, binding the cane fast in a network fearsome to face. Into this cover no horseman on earth can ride, not even Bobo, and the foot traveler is but little better off, for he cannot get over a mile in half a day, and could not follow a straight course even to save his life. Woe to the man who ever should be lost there, for no mortal could be of service to him. He might know his way to camp, but unless fortune brought him soon at the edge of the matted windfall he could never get out alive; and no matter how loud and long he blew his horn, he might as well blow it in his grave, for no earthly ear would hear it if he were half a mile from the edge. There was something frightful and uncanny to us all about this weird strip of solitude. One bear had gone into this Hurricane—as they all tried to do—and was killed not over 200yds. from the edge. It took over an hour to get him out, and when the rest of the party came up they thought the kill had been made at least half a mile away, for they could barely hear the horns which were blown to call in the chase. There was some strange quality in the acoustics of the Hurricane which made it impossible to hear anything more than 200 or 300yds. at the furthest. The loudest horn at that distance sounded faint, and even the whole pack running would then sound as if it were nearly a mile away. If ever the chase got into this mysterious, demonish stretch of ghostland it was all up for the day unless the dogs bayed the game close to the edge or drove it out again—which latter was not apt to happen, for the locality was the high fastness of no one knows what amount or kind of game. Certainly the Hurricane was a protector of game, and it was no doubt the home of many wolves, panthers and wildcats. The bears may winter there, but they do not like that country and do their feeding elsewhere, heading for the place of safety when started from the fat cane ridges where they are reveling in hickory nuts, acorns and persimmons.

No wonder then that we rode hard to head the pack when the chase lined out for the haunted Hurricane. Mr. Payne, Mr. Money and myself and one colored boy broke through a mass of cane and found ourselves at the edge of a vast cypress swamp, which served as moat to the fastness beyond. This a man or a horse could not cross, so we stopped. Far on ahead we heard faint and phantom-like baying, as of the pack of the Wild Huntsman baying in the clouds.

Disappointment.

"It's all up," said Mr. Payne. "They've headed us and gone on in." Mr. Payne thought the dogs were running a wolf, something which was not likely they would do; but we could hear but very faintly, and could not distinguish any voices of the bear dogs. Mr. Payne therefore thought it best to try to call back the pack out of the Hurricane, and we all blew for a long time. This, we learned afterward, was a mistake.

Our detachment had waited for half an hour or more, and we began to find a wandering dog or two coming in now and then to us before we started out of the Hurricane to find the rest of the party. We met Bobo not far up the slough, and learned the unfortunate news that the bear had gone by him with a good lot of the bear dogs an hour before, and that our blowing had simply called off part of the pack. Bobo had thought that the bear was killed when he heard us blowing, or he could have followed on and headed the bear himself and killed it. This was very awkward, as it was now late. We tried to mend matters by riding down another slough along the side of the Hurricane, but though we once in a while heard a faint note or two we could not locate the pack. At dark Bobo, Payne, Money and myself were still waiting at the side of the Hurricane, into which our pack had passed and been swallowed up completely. The others of the party had gone to camp, and at length we also rode home, despondent, with seventeen dogs out of the twenty-three starters missing. The day had been most disastrous, and it seemed as though our hunting had come to an end, and that the Bobo bear pack had run its last chase. On the way home through the woods Bobo sang very loud and continuously—a sure sign that he was in a deuce of a temper over things.

So we got no bear that first day, though we had something of a run. For my part, I think they get bears entirely too easily down there, and believe it would be better fun if it were not so easy, as well as a great deal better for the bear supply, which surely cannot last forever. As I was only having the sort of fun I am somewhat used to, through hunting in countries where game is not so abundant, I had no complaint to make; but the others, who had been killing a bear or so every day, protested loudly against this unkindness of fate.

Accident of the Field.

During the day Mr. Money met with one of the accidents of the field which may happen at any time in the riding necessitated on the bear chase. A dry stalk of cane flew back and struck him full on the ball of the eye with much force. He said that at the instant he was sure the eyeball was broken quite open, and put up his hand expecting to feel it on his face. He said nothing, but a few moments afterward I saw him unsteady in his saddle and fairly faint with the excruciating pain. I found by rolling back the lid that there was a deep red, bloodshot spot on the eyeball where the cane had struck, and it was an awful eye the plucky fellow had. But I could assure him the eyeball was not ruined, which seemed to please him a lot. I had no notion he would see much with either eye for several days, but to the surprise of all he got over it so quickly that he could ride the next day, though his eye was inflamed for a long time.

A Pointing Bear Dog.

One odd thing I noticed that day, and one which perhaps has rarely been recorded on a bear hunt before. We had one little nondescript dog in the pack which was called "New York," which looked a great deal like a pointer, and which, no doubt, had pointer blood. While we were riding along a path some of the dogs began to sniff about and scatter into the cane. I distinctly saw this dog come up, sniff at the edge of the cane, where a tree had fallen, and then for an instant stretch out into an unmistakable point, as a bird dog would on birds. A moment later all the pack were off together on a trail which we took to be that of the bear we afterward lost. I have heard of dogs pointing deer, but never before saw one point bears. I feel quite sure there was no mistake about this, and that the dog actually pointed the trail.

By the time we got into camp that night we found that nine of the dogs had come in. One by one they came straggling in throughout the night, until by morning there were only a few missing. By noon only two were out, but one of these was Scott, which Capt. Bobo considered his best bear dog. What became of Scott we never knew, nor did we ever find Fly, another fine bear dog, which with four others had gone one day before into this same Hurricane and never been heard from again. The colored boys shook their heads mysteriously, and Col. Bob Edwards's Sam plainly allowed "Dat Harricane sho' mus' be harnted by somethin' er other."

The Dogs of Chase and Dogs of War.

On Saturday we all lay in camp except Capt. Bobo and Fincher, his son, who put in the day riding far over to the east, trying to find some of the lost dogs. Capt. Bobo told one of his servants, Bill, to ride over toward the Hurricane and blow there for the dogs, which we were all satisfied by this time had been either baying or fighting until late in the night. Bill was very philosophical about starting out, but developed a bad case of stomach trouble which kept him in camp until nearly noon, by which time six more dogs had come in by themselves, without his help. This I should call good generalship on Bill's part. The rest of us had a good time resting about the camp. Col. Dick Payne and Capt. Boney Leavell had the war fought from the first Manassas up to Shiloh by the time Jim, the cook, showed his calmly smiling face at the shanty door and beat his lardcan gong for lunch. It was always a hardship for these two veterans to break away from the war to stop and eat, and it required persuasion to get them from astride the bench which made their meeting ground. Moreover, there was danger for them in leaving their rear unprotected. All their war maps were drawn in the ashes around the fire, and it was very trying for them to come back from lunch—even such a lunch as Jim and his assistant could get up—and find the battlefield of Shiloh or Manassas knocked into a cocked hat by the swipe of a bear dog's hind leg. This always necessitated the beginning of the war all over again.

Ghosts, Spirits and Conjuring.

Mr. Foster, I found, could sleep as well as ever, and that is saying a great deal. He averaged about twenty hours a day, but when awake was cheerful and amusing as ever. He showed us how to carry a shirt, cavalryman fashion, folding it so it would all go into one sleeve and be snug and tight. Then he started in on Col. Bob Edwards's boy, Sam, and kept that poor fellow guessing for the rest of the trip. Sam is one of those who believe in ghosts and "speh'its," and he and Mr. Foster had great times discussing these matters. Mr. Foster professing a similar belief. Sam told of a spirit cat which had tried to rub against his legs one night as he was going home from church.

"I done tried to stomp it, but it wasn't thah," said Sam. "Then I pulled my pistol an' tried to shoot it, but the bullet done pass right th'oo it an' ain't hurt it none. Then I starts an' runs. The fellah I wuz with he hollahs out, 'Whah yo' at, Sam?' 'Ovah hyah by Col. Wah'nah's place,' says I. Bimeby he hollahs out again, 'Whah yo' is now, Sam?' 'Ovah hyah by Col. Johnson's plantation,' I says. Then he hollahs out again after awhile, 'Yo' Sam, whah yo' at now, Sam?' Den I says, 'Ovah hyah at Cunnel Edwards's place.' Praise Gord, dat wuz about four miles. So I lone run in de house and git in de bed an' covah up mer head. I sho' was scared. I looken fo' dat cat to come into my room any minnit all dat night. I allus 'lowed dat cat vuz a speh'it. I ain't nevah seen ve'ly many speh'its, but done see lots of folks what has!"

To all of which Mr. Foster listened with the greatest gravity and sympathy. But his masterpiece of work was with old Ben, who was fond of calling himself "a ole spei'unced bah' huntah." By dint of inquiry among the others, Mr. Foster got a knowledge of the names of some of Ben's best dogs, which once made up a pack which has now been dead for twenty years or more, but about which Saul was always talking. Getting him to one side one day, Mr. Foster carelessly began to tell Ben about his old pack, describing the color and peculiarity of several dogs as well as if he had known them himself, though he had never seen or heard of Ben or his dogs before this trip. Ben looked at him sharply for a while and then moved away and would not come near him again all day. He would go off by himself and sit on a log and hang his head in thought. At last he came up to Mr. Foster with a question, "Wha' kine er dog you sayin' my ole Ring dog is wah?"

"Oh, old Ring," said Mr. Foster, who had been posted well on Ring in advance. "Why, don't you rememb

Ring? He wouldn't ever let anybody tie a rope around his neck."

"Dat him—dat him sho'!" exclaimed Ben; but suddenly recollecting that Mr. Foster had no earthly right to know anything about old Ring, his face dropped and again he moved away. He told the other servants that Mr. Foster was a "conjurer," and the next day Ben left the camp, never having anything to do with Mr. Foster afterward.

The Negro as Bear Hunter.

Most of the negroes of that region we found simple, ignorant and not of courageous disposition. For instance, Hopson, the driver who brought me into camp from the railroad, was scared about to death at the thought of going back through the woods alone with a big piece of fresh meat in his wagon. He was sure that the bears would catch and eat him, and Capt. Leavell added to his disquietude by gravely assuring him that a panther would be sure to follow him and jump on to him in the darkest place on the road, as panthers preferred to eat black men above all other delicacies. Mr. Foster's friend Sam, who had such an experience with the spirit cat, recounted how once he and several other negro boys were out hunting coons one night, when they heard a panther scream near by. From all that could be learned the whole party ran home, about five miles, without stopping to take breath. Sam declared he could hear "dat critter comin' right clost up on top his heels, a-grittin' his teeth every jump he make." Sam was a very frank and fearless sort of coward. On the other hand, nearly all the servants about the camp, including all of Capt. Bobo's, were old and excellent bear hunters, as good as any white man could be, and these had no fear whatever of the wild creatures with which much experience had made them familiar. Bill, Tom, Pete and big Sam were Capt. Bobo's right-hand assistants all the time in his bear hunts, and owned some of the best dogs in the pack. Every one of them knew each dog in the pack, and could describe intelligibly to the others the performances of "that ring tail fise dog," "that stag-terrier," "that crooked tail dog," "that little foxhound with the bad ear," "that brindle dog of so-and-so's," etc., etc. Moreover, every one of these men knew where every one of the dogs came from and whom it belonged to, and what it was worth in the chase; and still more remarkable to the stranger, each of them, in common with the gentlemen who directed the hunt, could always tell the voice of each dog heard in the distance, and tell what that particular dog was up to at that particular time. It is a wild, free life these bear hunting negroes have led down in the Delta—better than they could have in any other country—and exciting enough are some of the experiences they have had out with the Bobo pack. More than once Capt. Bobo has taken a notion he wanted to take a bear home alive, and this he has done, roping and leading him behind a wagon, albeit with his reluctant consent thereto. Once Bobo caught and tied a live wild panther, and trussing his feet together took it into camp slung on a pole carried by two men over their shoulders. All of these exploits were seen and shared in very often by these trusty colored hunters, so that it is natural to find them well posted on the habits of their game. Thus Bill told me how a bear carries off a fat hog. "He just grabs the hog by the neck," he said, "and straddles over him, with the hog between his fore legs, an' he shore make that ar hog walk fast." Sometimes a bear will bite a big piece out of a hog and leave him alive. A panther is usually supposed to sling its quarry over its shoulder, as the lion and tiger are said to do, but these hunters all said that when a panther kills a deer it does not carry it in that way, but drags it by the neck. Two panthers will often operate together in this way, one taking hold on each side of the deer's neck, and they will go through the thickest cane at a great pace in that way.

The Biggest Coward on Earth.

There is no doubt that we were in a country and among men where the hunting of the black bear is about as old and oft-told a story as anywhere on this continent, yet I could not learn of any great danger ever attaching to this sort of hunting. I heard of the killing of many hundreds of these bears, possibly of actually thousands, but I could not learn of any bear that ever showed any fight, except one she bear which Bobo once said came at him with her ears back. The black bear will fight dogs, but these seem to prevent all thought of fighting man, from whom the bear always endeavors to escape as fast as possible. The unanimous verdict of all these many bear hunters was that the black bear is the biggest coward on earth for his size, unless it be the alligator.

This cowardliness robs the sport of hunting these bears of much of its zest, and really I do not think the rifle is the proper weapon to use in their pursuit, as Bobo often proves by going in and killing one with the knife. Noel Money told us that in India they were accustomed to use some heavy seize dogs in hunting bears, which nailed the bear always by the head. The bear was then always killed with the knife. He thought that by using some of these heavy dogs, slipping them only when the game was at bay, the black bear of the canebrakes could be killed in a similar way. I should be disposed to think that a short spear would be a very practical weapon for killing the bear, at least in some chases where the dogs had the bear well stood up. The only trouble in its use would be in the habit of the bear of moving on with the pack as soon as the hunter appears in sight. The custom is to shoot the bear as quickly as possible in order to save the dogs, which rush in as soon as they see a man come on the scene. With these light dogs, such as make up most of the pack now, the use of knife or spear would no doubt mean the loss of a great many more dogs, though it might afford more fun; and as so many dogs are killed as it is, it is not likely that the bear hunters of the Delta will change from their present customs. None the less, they all have a great contempt for the bear, and can not understand why some people will believe the stories they read in the papers about desperate fights in which the black bear figures so largely. Capt. Boney Leavell, like all his friends, had been a bear hunter all his life, as had been his father before him. He has to-day on his plantation an old white-haired negro servant, who is known to everybody as Uncle Joe (about whom we shall hear more later on). Uncle Joe is one of the old-time darkies, and has never changed his ways, and has a life lived on the Leavell plantation, with no wish leave for other scenes. Uncle Joe was the favor servant of "Ole Marse Leavell," as he is now of "Ma

Boney," and can tell many a tale of bear hunting with both of them. He has killed a great many bears himself, and understands the sport thoroughly. It was one of the treats of the trip to see Uncle Joe quietly smiling while Capt. Leavell told of a certain bear hunt in which they both figured not so very long ago. It seems they got up with this bear when they had no weapon between them but one knife, which belonged to Joe, and which he prized very highly. Capt. Leavell bears a lasting reminder of the war in an injured member of his body, having lost a foot and ankle from a gunshot wound received in one of the closing battles of the war; he could not, therefore, get about very well with his wooden limb and the cane, and when it is added that the only weapon he could find was a stout club, it may be surmised that he and Joe were not very well equipped for a bear fight. None the less, they sailed in with club and knife and had a very interesting time of it for awhile. Capt. Leavell would smash the bear over the head and knock it down, and Joe would try to do business with his knife. The main concern of the bear was to get away, and this at last it did, unfortunately, just at the time that Joe had struck it with the knife, so that in its flight it carried that weapon with it. "Hit him! Marse Boney, hit him!" called out Joe. "He's got my knife! Hit him!" Capt. Leavell, much convulsed with laughter at Joe's concern over his knife, did his best to get the bear, but could not do so, and Joe ran after it and grabbed it by the long hair of the back, and so at length by perseverance stopped it long enough to recover his much valued knife and finish up the bear.

The Bear Pack in Camp.

With many bear stories and the discussing of much bear lore we put in most of the time on Saturday while we were resting. We were visited that day by Mr. L. N. Kimerer, an owner of some timber lands adjoining us on the north, who rode down with a Mr. Ristenberger, of Indiana, who was visiting at his camp for a time. Like everybody else, these gentlemen were anxious to kill a bear, and were disappointed that no chase was on for the day.

On Saturday night we had a hard rain, which persisted over Sunday, so that everything was very wet and disagreeable about camp. The dogs, which were now much disabled by continuous fighting, lay around in different stages of discomfort. Some of the dogs were now beginning to grow very thin and sorry-looking from their wounds, especially those which had been bitten through the back by the bears. It seems that a dog bitten in the small of the back is unable to lie down, or to get up if he does lie down. We saw several of them which stood around with heads drooping and ears depressed, the picture of misery, actually asleep, for a moment or so at a time at least, standing up. They would waver and stagger as the drowsy influence overcame them; then there would be a swaying of the body and a sharp cry of pain as the wrenched back felt the sore muscles used, and then the poor creature would move slowly away a yard or so and go through it all over again—almost dead from lack of sleep. It was sad to see the consequences upon the dogs of the sport which had so little danger to the human participants.

In wet weather the dogs are more uncomfortable, and fight each other more cheerfully; so we had something at least to do in trying to preserve the peace and dignity of the camp. One black foxhound created considerable amusement in the evening, after most of the party had gone to bed, by sneaking into the sleeping room and stealing a whole cheese and the biggest part of a cake which the cook had placed on the refreshment table in the main room. He was driven out before the loss was known, but came back again persistently, and no one could tell what he was after, unless it was a glass of whisky, which was all he had left on the table.

The Party Diminishing.

The rain rather put a wet blanket on the party and on Monday morning some of the gentlemen were obliged to return home, among these Mr. Felix Payne, Capt. Leavell and Mr. Dunn. When Felix Payne rode away that morning we all bade him good-bye with regret, though his absence was to be but for a few days, as he said he only wished to be gone long enough to arrange some business matters. But alas! that was the last time most of our party ever saw Felix Payne. His untimely illness and death, which I have earlier chronicled, took place all too soon after his departure.

It was still raining on Monday, or at least enough to stop hunting, so the party did not go out at all, this making three days since the dogs had been out. On Tuesday morning the weather broke bright and fair, and the only thing to mar the prospective pleasure of the day was the fact that Mr. Foster and Col. Dick Payne were obliged to end their stay and return home. We put them across the river to their wagon in the early morning and said good-bye to them with reluctance, one may be sure, for two such gentlemen leave a vacancy not to be filled when they leave a camp. Neither of these gentlemen had his shot at a bear, which was a matter of regret to all the others of the party, though all knew that the luck of the chase was very fickle and sometimes refused to select the fittest for its favors. But both our friends went away declaring themselves delighted with the experience in camp. With them went the head cook Jim and also Sam, the colored boy, who lived out near the railroad. This subtraction from the ranks left the party small, though warlike. Mr. Foster quit-claimed to me a little rat-tailed roan swamp pony which he had been riding and which he said had belonged to some darky who lived somewhere or other, and would some day or other appear on the scene and collect the rent on said pony. This left me in a very good frame of mind, for I did not like to ride a horse belonging to a friend who would thereby be set afoot.

On Tuesday we went afield again, and this time we got something in regard to which we must defer reference till the next issue of FOREST AND STREAM. E. HOUGH.

909 SECURITY BUILDING, Chicago, Ill.

Game Laws in Brief.

THE *Game Laws in Brief*, current edition, sold everywhere, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

Natural History.

A TAME RUFFED GROUSE.

BEEDES, N. Y., Jan. 28.—In your paper of May 11, 1895, is an article on "A Grouse in a House," and if you will allow me space I would like to speak of a grouse here called very tame by many persons who have seen him.

Within 250ft. of the house I live in, and not over 100ft. from a barn occupied every day, on the property of the Adirondack Mountain Reserve, is a log on which a ruffed grouse has drummed for the last eight years. I desire to have the opinion of some of the readers of FOREST AND STREAM on the age of the grouse, or rather, how long any have been known to live if left to die a natural death. It is possible—and seems quite probable to me—that the log I speak of has been used by one and the same bird for the time above stated. I have had rare opportunities to observe this bird's habits, and have seen and heard him do the drumming act hundreds of times. He is so tame that one may stand within 50ft. of the log, in plain sight, and it will not disturb him at all. A person can walk quite close to this bird before he will leave his log, and he has been photographed several times. I have seen him drum in every month of the year except July and August. In the spring he is more active than at any other time, and when the moon was full and giving clear light I have known him to keep up his drumming until midnight, after having been at it all day. I have brushed the snow from a spot on his log in January, February and March, and he would find it bare and use it.

Some people claim—even those who are deemed good authority on the habits of our Northern and Eastern birds have written—that a grouse walks or struts when he drums and beats his wings against the log or sides of his body. The bird I speak of was never known to do this. In drumming he stands erect—so straight that his tail feathers touch the log—and does not move his feet. His feathers are thrown out or ruffled, especially about the neck and breast, before a sound is heard. Then the wings, thrown slightly forward and up, move slowly at first, are raised higher and more to the front as the beats increase in force and velocity, and his wing motions end in very rapid rolling beats. So far as I could ever see, the wings do not touch each other, or anything else but air, and the sound produced, in my opinion, is concussion. At each stroke of the wings a vacuum is made, and the air rushing in makes the noise heard. A peculiar thing about this drumming is that it sounds as loud to one when quite a long distance from the bird as it does when no more than 20ft. away.

I have also watched this bird during the mating season—when he was conducting his courtship—with a hen grouse near at hand. On such occasions the female seems indifferent to the charms of the male; but he, on the other hand, is most earnest and persevering in his devotions, and appears smitten beyond cure. To win in this contest the male uses no words or force, but depends wholly on his looks—his form and show of plumage.

At one time, in May, I watched a pair of these birds for an hour and a half, and during all that time the grit and patience shown by the male bird were something remarkable. This was near the drumming log above referred to, and it was without doubt the "tame grouse" I was watching. The female was in a tree about 15ft. from the ground and spent the time in oiling and dressing her feathers. Apparently she did not regard the close attention her faithful admirer was giving just below, under the tree she was in. From her actions one could not judge that she knew a male bird was within a mile of her. I sat on the ground, with both birds within 30ft. of me, and had a plain view of all that took place. The male bird stood perfectly still during the whole time—ninety minutes—with his eyes looking toward the object of his affections. He stood erect, with his tail feathers spread wide, his wings out from his body a little, and drooping so that the outer plumes touched the earth, and his neck and body feathers all ruffled out. He did not take one step, nor move his head or body at all, except to shake himself twice, as he was getting wet. A shower of rain came up and I left the scene. Evidently the male did not like to have his plumage get wet, as it would detract from his good looks. He shook the raindrops off his head and back twice, and these were the only signs of life he showed during the period I watched him. When I left him he stood there motionless, with the rain pelting down on his gay attire. Whether he won his suit I never knew, though it is fair to presume that such fortitude in love would meet with success in the end.

I would like to hear from some of your readers who are familiar with the habits of the grouse, and to know if their observations compare with mine on the age and tameness of the bird, and on the question of how he drums and acts when choosing a mate.

W. SCOTT BROWN.

Another Captive Grouse.

LOCKPORT, N. Y., Jan. 30.—A Mr. Miles, of the town of Wilson, this county, has a grouse in his barn that came in with the hens last October, and is now so tame that it feeds regularly with the fowls; while it will not allow one to handle it, you can walk around it the same as you would the hens. I understand that the party expects to cross it with a bantam in the spring. I hardly think he will succeed in that, but will watch the outcome, and if it is a success will report through these columns.

J. L. DAVISON.

A Caged Grouse.

GLOVERSVILLE, N. Y., Dec. 7.—*Editor Forest and Stream:* As there has been considerable discussion in the FOREST AND STREAM of late in regard to the peculiarities of the ruffed grouse, and as it is generally believed that they do not thrive well in captivity, I will endeavor to disprove that theory by noting a circumstance which came under my own observation.

William McLaughlin, a farmer living about two miles north of this city, has a cock grouse which came into his possession under rather peculiar circumstances. About sunset, one cold October day in 1890, as Mr. McLaughlin was going toward his barn, his attention was attracted by the flight of a bird through the stable door, and on closing the door he discovered a "partridge." After capturing the bird he placed it in a large cage, where it has

remained most of the time since. It is quite tame, feeding from one's hand even though he be a stranger, and will eat almost anything given it, including all kinds of grain, as well as cooked potatoes and crumbs from the table. It is a most voracious feeder, and is very fond of the berries from the mountain ash; Mr. McLaughlin has several ash trees in his yard. It has never been sick a day since its captivity, and is the family pet. J. E. G.

A Nuthatch's Device.

PROVIDENCE, R. I., Jan. 26.—*Editor Forest and Stream:* While out walking this afternoon I found five pigeon woodpeckers in some oak trees; also saw a number of crows flying over. Among the bushes in an old fence corner tree song sparrows were busy turning over dead leaves looking for food. I know that the sparrows pass the winter with us, and think that the woodpeckers do also, as I have seen one or two for the past three winters. Once, while passing through the grove across the street from my house, the note of a nuthatch caught my ear. Looking up, I saw that he had an acorn or nut in his beak. He flew to the dead limb of an oak, on which was a decayed knot. In this he dropped his prize and hammered at it vigorously, occasionally getting a morsel which he ate with relish. Upon my throwing a stick he flew to a limb a few feet higher up, keeping one eye on me and the other on his supper, all the while protesting by a series of "hanks." He then flew to another tree and seemed in no haste to return to the nut, so I went into the house and left him. The next morning I climbed up and sawed the limb off to find what kind of a nut he had, but it was gone. The knot was hollow and of an inverted cone shape, thus making an excellent place in which a bird might hold a nut to crack. It may have been instinct or luck that prompted this nuthatch to use a knot hole for his vise, but it looks like brains.

NUTHATCH.

A Feathered Progidy.

LOCKPORT, N. Y., Jan. 30.—*Editor Forest and Stream:* Yesterday I received the following letter: FLUSHING, Mich., Jan. 28.—J. L. Davison, Esq.: Dear Sir—I have just purchased an American bald eagle which I will dispose of at a reasonable figure. I thought you might want it yourself. If not will you kindly help me sell it? It weighs about 35lbs. and measures 17ft. from tip to tip, and is a very fine specimen according to the cyclopedia. Now, Mr. Davison, I thought the bird was probably worth \$25. Please give me your views at once and oblige

J. W. DYSINGER.

I wrote Mr. Dysinger at once that if he had a bird that weighed 35lbs. and measured 17ft. from tip to tip it was not "an American bald eagle," and asked him to weigh and measure the bird correctly and write to the United States Museum, Washington, D. C.; the American Museum of Natural History, New York, N. Y., and Zoölogical Society, Philadelphia, Pa. On April 7, 1890, I had given to me a bald eagle in good condition that weighed only 10lbs. and measured 8lin. from tip to tip of wings. If Mr. Dysinger has an eagle that weighs about 35lbs. it is worth all he thought it was, \$25, even if it does not measure more than one-half of what he reports it to be.

J. L. DAVISON.

[Perhaps an immature roc.]

Fox and Eagle.

A SETTLER near the town of Estevan, situated a short distance north of the international boundary line, and a few miles east of the western boundary line of North Dakota, while driving across the prairie recently remarked a fox some distance away crouching ever and anon in the tall grass and acting generally in a very unusual manner.

Assuming that he was stalking a mouse or other small rodent he gave him his attention, but soon the true cause of his movements became apparent as a large brown bird (presumably an eagle) was seen to drop on him like a flash. A fierce combat ensued (the bird underneath), as the fur and feathers scattered on the snow amply testified.

He hastened thither with his team, and as he drew near his dog charged on the combatants, when they promptly separated, the bird alighting on a knoll a short distance away, the fox meanwhile making a lively dash for freedom. Soon, however, hostilities were resumed by the bird, and this time with fatal consequences to the victim; for as the man again approached the scene the bird, as in the former instance, flew away; the fox, however, alas! for reynard, was prone in death's embrace on the prairie.

Deer Horns.

OROVILLE, Okanogan County, Wash., Jan. 18.—*Editor Forest and Stream:* On the 6th of this month Ed. Lathrop, of this place, killed a big blacktail buck that had shed his horns. This is the earliest I have ever known a deer to lose its horns. Sometimes they carry them till March 1.

The snow is about 1ft. deep and crusted, which will be bad for deer unless it snows more soon. At present coyotes have the advantage. A few days ago while at Oroville I noticed quite a number of mallards in the Okanogan River.

LEW WILMOT.

PORTLAND, Ind., Dec. 26.—*Editor Forest and Stream:* If our friends in discussing the question of deer shedding the velvet will make a note of the fact that the horning of bushes continues from midsummer on through the rutting season, and is not only more general late in the fall, but in a majority of instances is attended with pawing the earth at the base of the bush, they may come to other

conclusions than those mentioned. At the proper season, no doubt, a buck could get rid of much of the velvet by horning a bush, but I can't see how he could possibly determine when he had his horns polished uniformly. I have seen willows and other small bushes stripped of their bark while in the sap, and some had even been twisted entirely off, while large bushes showed where the points of the horns had ripped bark and wood into shreds. The buck was evidently prompted by some other motive than that of getting rid of the velvet.

My humble opinion is, that as soon as his horns are fully grown and can be relied on for the purpose of defense and offense he begins to get saucy, and, as is the custom of his kind, leaves his mark on the bushes. As the season advances he horns more frequently, and paws the earth in defiance of his rivals.

Game Bag and Gun.

FIXTURES.

March 16 to 21, 1896.—Second annual Sportsmen's Exposition, under the auspices of the Sportsmen's Association, at Madison Square Garden, New York city. Frank W. Sanger, Manager.

THE CALIFORNIA VALLEY QUAIL.

COMING from the East to spend the winter are many tourists, health and pleasure seekers, to escape the rigors of an Eastern climate. Many are lovers of rod and gun, and would pass many an agreeable hour if they were possessed of the knowledge. Having come here a couple of years ago, and being fond of the field, I have become pretty well acquainted with the home and haunts of the game of southern California.

The California Valley quail is a pretty bird, handsomer, I think, than the Eastern bird. Its color is a slate blue on back and wings, merging into brown and light on his breast, the only point in which he resembles the Eastern bird in color. A white line about an inch and a half long runs up along the side of the head above the eye, and he is possessed of a stately topknot that rises gracefully from the crest of the head, which makes him as graceful a member as any of his family.

He is a plentiful bird in southern California, being found in all of the valleys that afford any undergrowth for protection; loving the valleys that border on the larger range of mountains, and not being so plentiful nearer the coast. His habitat extends to an elevation of about 3,500ft., rarely higher. Above this dwells his harder brother, the famed mountain quail of California.

We shall take a hunt for him this fine December day—my friend who has just arrived from the East and I. We start from home in the morning with a horse and buggy for a three or four mile drive, out past many orange groves, the golden fruit and blossoms hanging side by side on the same tree and perfuming the air for acres around; on, past finely cultivated vineyards and orchards, the trees and vines set in one straight, unbroken line that stretches far away in the distance. What a different recollection the visitor has of his last quail hunt back East, with the bitter cold, snow and slush under foot and dark skies overhead, the fingers so cold and numb that they could scarcely pull the trigger when you heard the welcome whir and saw the dark object disappear in the distance.

The country and scenery begin to change rapidly as we approach the mountains; the orchards become scarcer and scarcer and are scattered around in a more broken manner, some situated on the rolling land at the base of the mountains, and in every gulch and gully where a few acres of ground can be cleared and cultivated. They also partake of the character of the scenery, being unkept and weedy, spindling and crooked, as if any regularity of form and line were out of place. There are deep gullies and cañons cut out of the mountains by ages of water that has rushed down the mountain side; and beds of dry runs covered with greasewood, the characteristic undergrowth of southern California; these never have any water running in them except for a few weeks of each year.

Lying to the right of us is one of these large marshes, being several miles long and averaging about a quarter of a mile wide, and pretty well stocked with the feathered tribe, so we will journey thither. Leaving the horse and buggy we will take our guns and dogs and journey the rest of the way afoot. As we approach the marsh we pause on the edge before we enter, and as we make preparations to start out again our attention is arrested by a peculiar cry. It is four syllables, *kuk-kuk-kuk-ka*, with a prolonging of the last syllable that gradually dies away in the distance, and is taken up again and again and repeated at regular intervals as if coming from one throat. It is the cry of the valley quail. When they are frightened or have been scared they have another cry, a short *chip, chip, chip*; it is generally their warning note, and is heard just before they flush. And now for your plan of action. If you have never hunted these quail before it is likely that you will return with a light bag, and in your heart disgust toward the quail. That is why a good many Eastern hunters come here with the best of guns and return with all manner of utterances against the quail, claiming that they will not lie to a dog; that there is no gameness about them, and that there is no pleasure in hunting them.

March on boldly to that covered knoll from which you heard the sounds proceed; work and work quickly. You should get on the mountain side of them and try and keep them down toward the valley; if you do not you will have difficult shooting; if they reach the mountains and get into the thick underbrush you will have hard work to get them, but will have torn clothes and disappointment staring you in the face. When they rise shoot at them, hit or miss—it matters not if you expend a few shot into space; you will be repaid for it after a while. After they have been flushed the first time they will not fly very far, but before you come up to them their swift legs will have carried them some distance.

After you have flushed them three or four times and spent several loads in vain effort to overtake them, you will have them scattered well, and your heart should rest content, as you will enjoy some excellent shooting, and your dog, which in the meanwhile should have been kept in the background, will work as well as he ever did. From behind sagewood, clump and stone within a radius

of a quarter of a mile, the whirl, whirl of feathered wings and the gleam of dark disappearing bodies will greet the sight of the busy shooter, and many a tuft of feathers will greet the eye—a poor consolation for 3drs. of smokeless and 1½oz. of No. 8 shot.

Many use No. 10 shot and claim that it gives best satisfaction in shooting and I think that it does to a certain extent; but although you will have more birds wounded you will not have so many killed, and a valley quail with his wing broken will often lead a dog a weary chase through the greasewood before he is bagged.

I prefer a cylinder bored gun in hunting, as most of the shots are got at 20 to 25yds., and have never been able to withstand the excitement of the moment long enough to let the bird get a better distance for a choke gun. But as you journey homeward you will think that the quail is the game bird the broad land through, and that his qualities are the same. whether hunted in the cold of the East, that has nourished a more vigorous constitution, or bred by the mild winds of the Pacific.

PASADENA, California.

MOOSE HUNTING WAYS AND WEAPONS.

WASHINGTON, D. C., Jan. 16.—*Editor Forest and Stream:* In your issue of Aug. 10, 1895, a correspondent—Tiam—gave an interesting account of a hunting trip, on which he killed two moose. With the issue of the following week began a series of criticisms upon his action which were to me, and some of my friends who know a little about hunting, very amusing. His conduct was described by one writer as “flagrantly unsportsmanlike” and “wantonly and unfeelingly cruel,” because (1) “the second moose was not needed for food,” and (2) “there could be no possibility of a reasonably certain shot at 200yds. which would kill. * * * A distance at which he could have no certainty of killing it, even if it stood immovably quiet. * * * The moose shot at was out of the range established by humane reasoning or the conventions of sportsmanship.” Another critic thought that whether he had or had not killed a moose was irrelevant as affecting his ability to discuss Tiam’s conduct; that the latter should have considered the rights of the people in all *ferce nature*, and that two moose were more than his share; also, that he should not have shot at the moose running at 200yds., as “the range was uncertain, since with all his skill the moose was wounded and lost.”

Answering this last remark first, I beg to say that the moose was lost only because of Tiam’s ignorance of hunting. Every hunter knows that it is only in exceptional instances that game animals when shot drop in their tracks. A moose hit as the one mentioned would, if undisturbed, go a few hundred yards and lie down, where it could be finished and secured easily after an hour or two. Tiam knew no better than to follow the wounded animal at once, and so lost it, of course. The value of any observation depends upon the ability and qualifications of the observer, and the man who knows something about moose hunting should be better able to discuss it than one who is ignorant of the matter.

As to the point that the moose was not needed for food, I say that few, if any, moose are killed by sportsmen because so needed. I have been compelled to shoot muskrats for food, but none of the many moose I have killed was shot because I needed the meat. A sportsman kills his game as the culminating act in his sport. The pleasure does not lie in the killing—the taking the life of beast or fowl—as such, but in that as marking the success of his efforts as a hunter. The moose hunter matches his brains and acquired skill against the instinct and natural gifts of the animal; kills the latter to prove that he has beaten, taking the head and horns as a trophy, and making sure that the meat is not wasted. The pleasure is in the hunting, not the mere killing.

As to Tiam’s invading the rights of the public and taking more than his share, I venture to remark that one man’s share of the existing moose cannot be ascertained by dividing the number of moose by the population of the country. The law in his country contemplates the moose hunters as forming a very limited class numerically, and so provides that each hunter may kill two moose in a season. There is no reason why both should not be killed in one day if the opportunity offers and the hunter chooses to make use of it. I have done it a number of times.

The only remaining point made by the critics—in Corea they have a proverb, “Good critic, bad worker”—is that 200yds. is too long range. This is simply ridiculous. A man who cannot kill a moose standing still at 200yds. would better stick to fishing or criticism and let guns alone.

I wrote a long letter on all the foregoing matter in October last, intending to send it to you, but put it aside and it lay unused. In your issue of this week comes Mr. Irland and discourses with some vigor upon “A Rifle for Moose.” I read his article this evening, and that incited me to write you a new and different letter.

The aim of mankind everywhere nowadays seems to be to get the most for the least; to secure the greatest result with the least labor, or, I may say, with the least of one’s own labor. Hunters or would-be hunters are no exception to the rule apparently, from the tone of modern literature on the subject. To a real hunter, of course, the difficulties of the chase only add to the pleasure; but the would-be’s great idea is to get a “hunting rifle”—one, I suppose, that, like the cheetah or hunting leopard, can kill his game for him. Now all the calibers and powder charges you can give a man who doesn’t know how to find his game or get within range of it, and to shoot after he does get, or is taken by some one who knows how within shooting distance, will not enable him to kill it. A good hunter can find moose and get within range of them, and when there does not need a cannon to kill one.

I have hunted for years with a ’73 model .44-40 Winchester having a 20in. round barrel and just 17in. between the sights, and have killed a good many moose with it. The first shot with this gun at a moose was at 210 measured yards, made just as the animal, a big bull, turned to run, showing its side. The ball hit a rib, cut the aorta and lodged under the skin on the other side. The moose ran 100yds. The next shot was at a bull running at its best, and went clear through without hitting a rib. The distance was a little over 220 measured yards; the moose ran about 30yds. and dropped dead. Both these shots were made while still-hunting late in October, when I had been twelve days in the woods, without rain

or snow, the leaves dry and noisy, and on a day without a breath of wind.

The next year I killed several moose, the largest I shot from a canoe and so could not measure the distance, but it was certainly over 200yds. I knocked the moose down, but while my Indian was rejoicing at the shot it got up and went off. We landed, ran over a knoll and headed it off on a bog, where I finished it. I shot two moose once that were going along on a bog some distance back from the opposite shore of a pond on which I was camped. I could not measure accurately the distance across the pond, but it was much more than the land distance and that was 90yds.

These moose were all killed before I wrote you the letter on “The Hunting Rifle,” printed in your paper of Feb. 9, 1888—a letter I wish some of your correspondents would look up and read. I still have the same little gun and the same ideas as then: that the man should do the hunting, not the gun, and that there is no use in carrying a cannon into the woods when a gun will do. It would not occur to me to carry a .50-110 or even a .45-90 for hunting. I might use such a gun at a 500 or 600yds. target match. The advantage of the light gun is in its all-round qualities; it will kill a moose, deer or bear, and yet is not too heavy to use for grouse, squirrels, ducks, etc. I killed my last moose with a .40-65 Winchester, which I took on my hunt because it had been presented to me by an old hunting friend who was anxious for me to use it and report on its merits. I think I shall have to write you an account of that hunt when I get leisure. I killed the moose on a very cold day, with hard and extremely noisy crusted snow, such as would have made getting a shot at a common deer problematical, yet I got within 70yds. of these moose through a dense mass of standing and fallen spruce and flat-leaf cedar, and killed the bull as he got to his feet. This gun is an inch or so longer than the other, but the latter would have done just as well. I killed a number of grouse on the same trip; shooting their heads off, as I may remark, for Dick’s edification.

My views as to the subject discussed by your correspondents may be put thus:

If the law allows a man to kill two moose and he chooses to do it, there is no reason why he should not, and both in one day if he prefers and can, so long as he does not waste them.

If a man has a gun that will kill a moose at 200yds. and thinks he can hit it, standing or running, there is no reason why he should not fire at it. The question of range depends entirely on the gun and the man’s ability to use it. I would not hesitate to shoot at a moose, if I had the opportunity and wished to, at a good deal more than 200yds., and would shoot off-hand, as I always do.

Jan. 23.—Since writing the above, two more correspondents write in your paper for this week, one asking how a 12-bore shotgun would do for moose; the other whether calling is a legitimate way of hunting moose. The 12-bore will kill a moose all right, of course; the Canadian and northern Indians and half-breeds until within a few years used the Hudson’s Bay Company’s smooth-bores, but I would stick to the medium caliber moderate charge rifle.

I killed a very good bull some years ago with a Winchester shotgun, my rifle being at the moment three-quarters of a mile off on a portage where I had left it with my first load. The gun was a 12-bore, cartridges loaded with 3½drs. of powder and 12 buckshot. I got a chance at the side of the neck at 50yds., fired once only and the moose fell dead after running 100 or perhaps 150yds. There was no particular pleasure in that performance; there was no hunting, as the moose came along within range at his own motion and no skill was required; for any one tall enough to stand on his tip-toes and look over the corner of the tent, as I did, and know what the foot square black patch through the thick spruce brush was, could have killed it. I shot it because I wanted it for the National Museum, to which I gave it, and it is mounted there.

In calling, the moose does not come within range casually and unexpectedly, as the one just mentioned did, but in response to the efforts of the caller to bring him there. The sportman seldom does the calling, so that the bulk of the credit lies with the guide; for any one should be able to do the shooting, which is generally at very moderate range, except in occasional instances, when it is very dark or the shooting has to be done by sound—locating the moose by the noise he makes—which requires experience and judgment; for none of all the creatures of the woods that I know can sneak about as silently as the moose does when he wishes to, despite his great antlers and huge bulk.

I never had but one moose called to me, and that, a bull whose horns spread 5ft., I killed with a single shot from my .44-40. It was the first week in October, 1884, about 9 P. M. I was in a canoe shoved up among the bog willows and brush as far as it would go toward the timber; the water was backed up by a splash dam, so that there was no bank, and the overhanging spruce and balsam made the darkness absolute. We had heard the bull a mile off on the side of a ridge, and I had let my Indian call it, once only, with his hands. We had no horn, for I never hunt calling. The bull came within twenty steps for some distance in the water, which was a foot deep some yards in the brush. “Splash!” as he stepped, “Woh!” A pause—“splash!” Another step—“woh!” We could see nothing before us but an impenetrable black wall. There was no way to shoot but by the sound, but it was so close something must be done at once, for we could not move the canoe. I rose to my feet, having already estimated the probable depth of the water ahead of us and the height a moose would be above it, fired one shot, and that was enough. The moose went about half a mile. I have killed other moose in the dark when I could make out nothing but an indistinct mass a little blacker than its surroundings, or could see absolutely nothing; yet every now and then some one writes that a moose cannot be located by sound. Any man who has ever watched a deer lick knows what little sound will enable him to locate a deer.

Opinions depend upon the point of view. Personally I have never cared to call moose. It is a sort of hunting where the credit is all due the guide or caller, all that the sportsman has to do being to hit a creature so big he could not well miss it.

Of all legitimate methods I prefer still-hunting. In that one matches his ability to catch against the animal’s ability to elude, and there is plenty for both to do. The pleasure of a hunting trip should extend over every hour of every day. The mere being in the woods is a deligh

and chapters are needed to cover the varying pleasures of the camp life; the enjoyment of land, water, mountain, lake, forest and barren; of scenery, of rainy days, of successful and of unsuccessful ones, and of toilsome tramps and wearisome paddling. I like hunting that requires ability and work; there are kinds of shooting that almost any sort of human being can do; but there is charm only in that which takes skill enough to reflect credit on the successful hunter. So I sum up my views as to your last two correspondents thus: Do not go after moose with a shotgun. Do not call moose if you can get a chance to still-hunt.

As to Mr. Irland, who thinks a man almost insane who goes after moose with less than an ounce ball and 100grs. of powder, I say for his information that my two guns are .44-40 and .40-65 Winchesters; the latter used only on one trip, the other hunted with for many years. I have never had to make a journey for any moose after shooting it with either of these guns. The one killed with the .40-65 did not go five steps. Of the considerable number killed with the .44-40, one went half a mile; one, shot also in pitch darkness, went a quarter of a mile; no other one went over 300yds., most of them very much less. My conscience is clear on the letting moose get away point. The only moose I have let get away are the many I have refrained from shooting at. So many men nowadays, who know little or nothing about hunting and shooting, want to kill game that they can only do it by having a good guide to do the hunting, and by using—and that is what many of them clamor for—a gun so big as to make a shot almost anywhere—“on the tail, on the wing,” etc., as the old ducky said in the story—fatal.

My advice to would-be moose killers is, learn to hunt and learn to shoot; you will soon see that you do not need a heavy gun nor pack load of ammunition. Enjoy the hunting, of which the killing is a small part.

CECIL CLAY.

FREDERICTON, N. B.—*Editor Forest and Stream:* In your issue of Jan. 11 I noticed a letter from A. H. on rifles for big game, and he closes his letter by asking advice on the matter.

Now if I may be permitted to offer a word or two, I would say, get the biggest bore and all the powder you can, and you won’t be sorry.

Mr. Irland, in last week’s paper, has named about the right cartridge for moose; let A. H. study that up and bear in mind that Mr. Irland knows what he is talking about.

I have a .40-82-260. I put three bullets into a bull moose this fall with it and lost him after all, and one more in another moose and lost him. I am quite sure I would have got both of them with a larger gun.

Now some, no doubt, will say that I did not hold on the right spot of the moose. I will just say to such that in hunting moose in the thick brush of a New Brunswick forest you cannot always pick out the particular spot on a moose’s hide you would like to perforate.

Our record this fall was a bad one: four wounded moose lost on one hunt and two brought to bag, or a total of two killed and four lost—three of them with horns. I am like Mr. Irland, I feel badly about it. I never had it happen before, always heretofore having had the luck to bring to bay every animal I hit. The first rifle I had was a .32 Remington, the next a .38 Remington, the next a .40-60 Winchester, and last a .40-82 Winchester; and now I am in the market for something about .45 or .50-cal. and anywhere from 100 to 125grs. of powder and solid ball.

Don’t take an Express rifle in the brush; it is not good for that work. If you want more testimony, here it is:

Yesterday I had a long talk with old Joe Mitchell, our best Indian guide. I shot my first caribou some years ago under Joe’s direction, and we are old chums. He has been away with parties since Sept. 18, and has had his share of luck as usual. He is home for the winter now, and we were comparing our experiences this fall.

When I told him of my bad luck with the big moose, he said, “Your gun is too small. I always knew that. No good, no good. I have the gun now for moose.” And he proudly showed me his new .50-110 Winchester. “That’s the gun for moose,” said Joe. “He no run far with that in him; make big hole, bleed fast; get him sure.”

When I first hunted with Joe he had a .38-40 old silver-mounted Winchester. Next he got a .44-40, and now the .50-110. So you can see what he thinks about it.

Let A. H. consider this when he speaks of weight. A .38-56 Winchester weighs 10½lbs.; a .40-82, 9½lbs.; a .45-90, 9lbs., and a .50 still less. Now, what do you gain by taking the smaller cartridge? Nothing; and you cannot get a lighter one unless you take one of the new model .38-55, and that, in my opinion, would be a mistake. The .38-55 cartridge only holds 48grs. any way; the name sounds big, but the stuff is not there.

As Mr. Irland says, the number of men who have a chance to look at a moose through the sight of a rifle is small, and when they do see him they want a gun that will bring him down, and the quicker the better.

I noticed that the FOREST AND STREAM man who was hunting with Jock Darling had trouble with his gun rusting. Perhaps a wrinkle I got from Henry Braithwaite would not come amiss.

Get a good piece of calfskin and have a cover made to fit loosely over the gun, and only cover it back to the cone of the stock. Keep the cover well greased, and no matter how it rains or snows your gun will come out ready for business.

You can load the gun and stalk your game and still leave the cover on till the last minute before firing, which is an advantage, as in the woods you are apt to get snow in the muzzle if you are not careful. A canvas cover, as supplied by the gun stores, is of no use in wet weather, or in snow in winter; it freezes and then it takes too long to get the gun out. The kind I refer to can be pulled off in a second, and leaves the stock to carry the gun by. I have never had the slightest trouble since I have used this kind of cover; and when I am in the woods I carry the gun in every kind of weather. Otherwise it is impossible to keep a repeating rifle in working order in the winter traveling through the bushes loaded with snow; the only way to do is to have a cover which is waterproof and can be removed quickly.

BLUE NOSE.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

ON HUNTING ISLAND.

COL. T. G. WHITE contributes to the *Charleston News and Courier* this account of a recent hunt on Hunting Island, near Beaufort, S. C.: Decidedly the best and most elaborately appointed hunt of the season is that of the hunters on Hunting Island this week, from which the hunters have just returned, bringing with them nine splendid deer as the result of their week's sport.

Last Monday morning Matthew O. D. White, John Wallace, Major W. H. Lockwood, Capt. H. D. Elliott, D. Mabie, J. Barrien Walker, C. E. Danner, H. T. Danner, W. P. Sanders, W. H. Burn, Dr. C. G. Richardson and Dr. Berryhill, surgeon at the naval station, set out in the steamer Lorena, Capt. Vaden, for a week's outing.

The party landed at Frapp's Inlet and reached their selected spot for encampment on Monday afternoon. They carried with them six commodious wall tents and a bountiful supply of bedding and other necessities. The cry of hounds was a magnificent one of fifteen dogs, headed by Matthew White's famous hound Christian, and other dogs of great scent from the packs of J. B. Walker, John Wallace, and W. F. Sanders and others.

With the experience of old Confederate veterans like W. H. Burn, formerly of the Brooks Guard, and Capt. H. D. Elliott, and Dr. Berryhill, an old officer of the United States army, the tents were soon pitched, and the evening consumed in trying the ducks. At an early hour the next morning the series of chases commenced and between Tuesday and Friday night Mr. Walker had killed two superb bucks, Mr. Mabie had secured one, John Wallace had killed two, Dr. Richardson downed one, Matt White shot one, and W. H. Burn scored one, and the ninth deer one of the colored drivers, Joe Roberts, brought down on the drive.

Altogether the hunt is pronounced one of the most successful and enjoyable undertaken in many years. Dr. Berryhill, an old army officer and an old hunter, with experiences in hunts in the Adirondacks and in Alaska and the far West, says it is the most delightful and interesting outing he has ever experienced and he had never been on one where so many deer were killed in the same time.

The weather was unfavorable, wet and rainy for two days during the week, and five of the deer were killed yesterday, the last day of the hunt.

Mr. Walker had the misfortune to smash his elegant Parker gun stock upon the second buck he shot; it being wounded by his first barrel and crippled by his second, when apprehending its escape he belabored the deer with the butt of his weapon.

The negro drivers and cooks who accompanied the party were veterans in the chase. Sam Jenkins, Dennis Freeman, Joe Roberts, Joe Danner, Aleck Key, Willie Freeman and John Freeman, names well recognized by our old-time hunters, contributed to the entertainment of the party by their unique experiences related in their native gullah.

Dr. Berryhill, beside being a most charming and accomplished gentleman, is a thorough musician, and with his banjo entertained the party around the camp-fires.

The nine huge carcasses, mostly of huge bucks with spreading antlers, as they were loaded in a cart to be butchered, were a sight that commanded general admiration. At this season the bucks are in what is known as the "blue skin," and as they dash through the covert look blue; while in the months of July and August, the best season by the bye for fat bucks, they are in the "red skin" and the color of autumn leaves.

The hunters say that the islands are filled with deer, owing to the close watch that was put upon them against marauders by the Beaufort Hunting Club, who have secured them as a hunting ground. T. G. W.

NON-RESIDENTS AND LAWLESS CITIZENS.

Editor Forest and Stream:

In former communications I have contended that deer were in more danger of extermination from violations of the law by resident hunters than from the influx of non-residents. What I said was largely in self-defense, and applied to the States of Michigan and Wisconsin, where I have spent many happy days wandering in the evergreen forests.

I want to be understood as finding no fault with any one except those who accuse me, with other unfortunate non-residents, of doing things we were not guilty of. I have found among the forest residents of those States whole-souled hospitality and a friendship that is reliable. But there are "game hogs" in and out of the hunting territory, and they grunt in a mischievous way sometimes. I inclose herewith a letter from a gentleman I met last fall in northern Wisconsin. He speaks the sentiment of the average settler or citizen of the northern portion of the State. You have permission to publish what he has to say touching game and fish protection.

G. W. CUNNINGHAM.

The letter to Mr. Cunningham reads:

I would not favor a non-resident license law, nor any law that would hinder in any way a sportsman from hunting in Wisconsin in season, no matter in what part of the Union his home might be.

My opinion is that the game supply is decreasing. This is my observation in an experience of six years past in the woods and in a deer country. In giving my reasons for so thinking I shall answer your third question, which was: "Are the deer in more danger from native hunters who hunt out of season than from hunters of other States during the open season?"

In the first place, the law of our State is not enforced. The only time of the year that deer are not slaughtered is when they are too poor to be eaten. There are towns which I could name where venison has been peddled on the street from house to house for the last three months. This is done mostly by the Indians. A great many deer, too, are killed in June and July and during the greater part of August by shining. A bullseye lantern is used for this, being suspended from the boat. The method is a favorite one for many, for it is so easy, and if they understand it at all they are sure to get deer. Being in one of our little towns last July and seeing a man I knew to be an old shiner, I asked him if there were many deer being killed around there. "Well," said he, "until about two weeks ago there were a good many, but the shiners overdid the matter and shined the lakes to death. I and one of our neighbors got a team yesterday and hauled my

boat to a lake which is three miles from town, where we thought we would be sure to find a place where the deer had not been bothered. By the time it was dark enough to shine there were so many lights on the lake that we left and came home. It is not safe to be out nights on the water. A man is liable to get shot."

I have told this to show how extensively shining is carried on. This is done altogether by white men, but not altogether by natives, for I have known men from other States who tried their hand at shining too.

Whenever we get deep snow, deep enough to make it hard for the deer to travel, white men and Indians both run them down on snowshoes. When you were here you saw how men of our own State run deer with dogs in such a free and high-handed way that you would hardly imagine that there was a law against it. It would be a wonder if deer should hold their own against all this. If we would or could enforce the laws we have now and let every one hunt in season who wishes to, I am sure that there would be plenty of deer for a great many years to come.

There is only one provision I would be in favor of adding to our game laws, and that is to prohibit the sale of game of all kinds.

The snow here is about 16 in. deep, and the ice on the lake is about as thick as the snow is deep. Our boys go to school every day with their dog team. They have made the four miles in twenty-eight minutes.

To illustrate how the game laws are enforced in northern Wisconsin, I went down to M. last Friday, and on one lake in sight of the town from the car window I counted six little houses built on the ice to spear from, yet our law forbids fish spearing at any time.

THE ADIRONDACK DEER SUPPLY.

SCHROON LAKE, Adirondacks.—*Editor Forest and Stream:* To allay any suspicion on the part of my readers, I will state that I am not a guide and that I do not make my livelihood by hunting deer.

In the articles which appear from time to time in the sporting journals of the day, there appears to be a strange lack of familiarity with the conditions of deer hunting in the Adirondacks on the part of the writers.

Hounding of deer is spoken of as a "slaughter of innocents." One dead deer to sixteen good starts is considered the fair ratio for computing your chances on a day's hunt. Two starts is considered a good day's work for the starters on their part, which gives you a deer for eight days' hunting of say six men and three dogs. This is what is called "slaughter."

I hunted twenty-four days during the hunting season of last fall; there was a party of seven of us; we killed eight deer, and considered ourselves in luck. But on comparison, you see, it is an average of one deer to a man for twenty-one days' hunting. Twenty-one days uses up pretty nearly all of a year's hunting season, and after a man has hunted twenty days without success and on the twenty-first day brings down his first deer of the season, he does not feel like a "slaughterer of innocents" in the sense in which that term would be used when applied to a participator in the Armenian atrocities. P. S. R.

Editor Forest and Stream:

So much has been said of late as to the scarcity of deer in the Adirondacks, I would like to express an opinion through the columns of your valuable paper relative to the same. I own property in Hamilton county, N. Y., on the shore of Lake Piseco, and besides rent a large tract, which is probably as good feeding ground for deer as any in the Empire State. Indeed, I think figures will bear me out in saying that more deer have been killed in Hamilton county than any county in the Adirondacks for the past three years. Now as to the scarcity of deer, this cry of no deer, or a great reduction in their number, in my opinion is all bosh. You will remember, Mr. Editor, that the Morgan Lumber Company and other similar concerns have hundreds of men operating in the West Canada section, and that the timber is being cut off down to sticks of no more than 5 in. in diameter. That a new railway has been built through the Adirondacks, which, prior to its building, was among the most favored retreats of the deer family; and the deer of that section have not been killed off, but have retreated to the more remote forest far away from the howling mob, which, before the railroad was built, was not enabled to infest their feeding grounds, and again the hotels and boarding-houses had more city people last year than ever before. That every white-coated dude who visits the mountains in the summer brings with him a gun or revolver and a package of cigarettes [the latter is sufficient to drive all the deer into Vermont], and from the time they arrive until they leave there is a constant fusillade which renders forest and field dangerous to animal life.

Those who know the nature of the deer well know that they seek secluded spots, and the native hunter can to-day take you to yards where deer are as plentiful as they were ten years ago; but they have moved back into the denser wilderness, and when men, sportsmen, will cease their eternal howl about hounding and night hunting, and spend more time making an effort to preserve our forests, shutting out lumber monopolies and securing to the deer a suitable dwelling place, unmolested for six months in the year at least, they will see for themselves that deer are more numerous in Hamilton County than sheep.

Now, to prove my statements: in the rear of my summer residence on Piseco is a "fly," or a low marshy bog; not more than fifty rods from the house this opening is surrounded by timber, and has a stream of pure water running through it—an ideal place for deer. My man, who has charge of the place during the winter months, probably does not discharge a gun twice a year outside of the hunting season; the place is quiet and up to the time the summer boarders commence to come in I am sure it is safe to say that in that immediate vicinity there are not less than twenty deer.

Mr. Charles Baldwin and wife, of Brooklyn, came to "Spring Knoll Lodge" the early part of June last year, and remained a month; during that time they both saw no less than ten deer feeding in the open fields and in the edge of the timber; and they were not the same deer seen at different times. Below "Spring Knoll Lodge" it was a morning custom of a family of three deer to cross the open fields and go down to the lake shore to drink for about six weeks; but after the city people came and

the never-ceasing target practice commenced, and parties out upon the lake shouting, and camp-fires built through the woods, the deer moved, nor did they return till after the closed season.

There are just as many deer to-day in the Adirondacks as there were five years ago, and during the closed season just as easy to get at; but when the rabble commences next season, they will go back to the more inaccessible parts of the forest, and by virtue of a few disappointed city pot-hunters going home empty handed there will be a cry of no deer. But through the open season look into the larder of the native sportsman; there you will find venison and, if you are willing to make the effort and pay for it, he will show you deer to your astonishment. Timothy Crowley, a Piseco guide, and myself surprised four, in one bunch, one night last summer in a locality where other guides said there were no deer. It is a mistake to attribute the apparent scarcity to hounding or night hunting.

In my opinion, if the timber be preserved and the land sharks kept out, the Adirondacks would always afford ample material for the sportsman's rod and gun.

WILLIAM H. HACKER, M. D.

PROVIDENCE, R. I.

AN ADIRONDACK ELEGY.

PORT RICHMOND, Jan. 24.—*Editor Forest and Stream:* I inclose to you a poem composed by Patrick Sheehy, a guide and hunter of repute who lived for many years near Schroon Lake, in the Adirondack Mountains.

The poem commemorates the death of Old Golden, a buck deer of fabulous size and strength which for many years eluded the hunters and their dogs, and was at last granted immunity from harm out of respect for his great size, endurance and beauty.

As related in the poem, the deer was finally killed by a party of visiting sportsmen, to the consternation and sorrow of the local hunters, to whom the name of Old Golden was a loved one.

The stories of the many chases after this famous deer have become legends in the vicinity of Schroon Lake, and are related by Samuel Sanders and Edward Jenks, who as young men had the honor of hunting the deer.

The poem was recited to me by Patrick Sheehy, Jr., himself a famous guide and hunter, and who, at my request, presented me with a copy.

The poem has evident merit and shows that the muse had not been wooed in vain by this old hunter-poet.

EDWARD SIDNEY RAWSON.

IN MEMORIAM.

"BRAVE GOLDEN" OF THE ADIRONDACKS.

On the Adirondack Mountains, where bracing breezes blow,
And purling streams dance merrily to valleys down below,
There buck and doe are daily known to ramble side by side,
And often cross the hunter's path, which fills his heart with pride.

Both grandeur and rare beauty in summer can be seen
All through those lofty mountain peaks, when clad in fragrant green;
In lonely glens are verdant glades, where footmen seldom stray;
It's there wild game do congregate, to romp, to sport, to play.

There was one deer among them bred, "Brave Golden" called by name;
Both far and near his fame had spread to be the king of game;
His spreading antlers and noble form were grand for to behold;
Each hunter's eye compared his size to a bullock two years old.

This matchless deer, while young in years, selected, out his range
Betwixt Mount Pharaoh and Schroon Lake; for this was nothing strange.

He was protector of his herd when stormy winter came,
Full twenty summers brave and bold he bore his honored name.

Brave Golden's keen, discerning eye knew well each road and run,
To him it was no great surprise to hear the hunter's gun;
He seldom looked for refuge to river, pond or lake;
For he was well shod and mounted a bold defense to make.

The sportsmen all around Schroon Lake they would not shoot the king,
Though on his trail the hounds all day would make the valleys ring.
When night came on he took his stand to hold them all at bay,
With steel-like feet and spikes of horn they dare not come to play.

At the foot of Blue Beard Mountain, where fountains spring so free,
There grows the pine, the beech, the birch and noble maple tree,
In a low, rich, verdant valley, well shaded from the gale;
This was the place to meet the king, the hero of our tale.

Many a well determined shot from strangers passed him by;
Many a bound and hungry dog their rage he did defy.
Our noble king had left his friends, through which he met his fate,
The way he was foully dealt with is sad for to relate.

A party of young gentlemen came north to kill some deer;
They did not know Brave Golden was well known to hunters here;
They struck his track with well-bred dogs and boasted of the same,
Lo! soon the king through grove and glen proved both grit and game.

For three long days they chased him o'er hills and mountains high,
Till hounds and men surrounded him, each moment pressing nigh;
He seemed to plead for mercy. Alas! it was in vain;
He was shot and shed his life's blood on the bosom of Champlain.

We miss Brave Golden from his herd, we miss him from his home,
We miss him from each grove and glen through which the king did roam;
Our hounds will never strike his track to make the valley ring;
The stranger's cruel, deadly shot laid low our noble king.

A matchless deer has left thy park, fair Diana of the chase,
For which sad notes will soar aloft from the harp of old Orpheus;
That gifted muse called Melpomene in doleful notes will sing
Brave Golden's mournful funeral dirge while we this tribute bring.

In memory of Brave Golden we pen this last farewell
From men of game all 'round Schroon Lake, who knew his fame right well,
The hunter's pride, the noble guide, so faithful to his flock,
Both one and all we mourn his fall this day upon Watch Rock.

Rabbit Hunters in Trouble.

SATURDAY afternoon Henry Mettske, of Second street, and William Eisman, of Quail street, were returning from Kyrons on a locomotive, when they were arrested by Officer Mason, of the Central-Hudson road, and arraigned before Justice Dayton, charged with jumping on trains, and each sentenced to ten days in jail. When arrested they had in their possession a bag containing three rabbits and a ferret. When released they will be arraigned on the charge of violation of the game laws.—*Albany Argus.*

CHICAGO AND THE WEST.

A Minnesota Decision.

CHICAGO, Ill., Feb. 1.—There is at hand information from St. Paul, Minn., in the shape of a decision of the Supreme Court of that State, handed down Jan. 28, which at first sight appears to record a serious blow to the game law of the State of Minnesota. Closer scrutiny than a first glance will show it to be not so serious as one might suppose. It is a blow at the law, but not a blow which will damage the situation of protection in Minnesota very much or very long, unpleasant as the latter reflection may be to the dealers who just now are so jubilant. In brief, the Supreme Court of Minnesota confirms the Minnesota statutes on game only so far as Minnesota game is concerned, but says the law is not valid so far as it forbids importing game from other States. This again would seem to be contrary to the decisions of Illinois, Ohio and Michigan, which take opposite ground; but a close study of the Minnesota decision will show that the opinion of the court is rendered on a technicality, namely, that the title of the law does not cover all that the law itself covers. Even in the wording of the opinion, which is written by Justice Start, there may be seen a very plain and friendly tip that there should be another law enacted at the next session of the Legislature, governing explicitly the shipment of game into the State. The law is held unconstitutional, but only technically unconstitutional. It is too early for the game dealers to begin to crow. The proceedings in this case are as below:

One Edwin O. Keith had in possession a prairie chicken which he admitted to have imported from Dakota. He had himself arrested, and then asked for a writ of *habeas corpus*, which was denied. He appealed to the Supreme Court and was ordered released.

The syllabus, handed down by Chief Justice Start, is as follows:

State of Minnesota, *ex rel.*; Edwin O. Keith, appellant, *vs.* Charles E. Chapel, Sheriff, respondent.

Syllabus—Section 2171, General Statutes, 1894, making it a misdemeanor for any person to have in his possession within this State any game or fish which has been captured in or shipped out of any other State or county in violation of the laws thereof, is unconstitutional, because its subject matter is not expressed in the title of the act whereof it is a part, as required by Article 4, Section 27, of the State Constitution.

Order reversed.

—START, C. J.

In the opinion accompanying, the chief justice relates the facts of Keith's arrest and imprisonment and the denial of the writ by the lower court, and adds that the only question before the court is the validity of the statute referred to, which is as follows:

"No person at any time shall have in possession or under control any bird, animal or fish which has been caught, taken or killed at a time, in a manner or for a purpose forbidden by the laws of the State, Territory or county where the same was caught, taken or killed, or which was shipped out of said State, Territory or county in violation of the laws thereof."

It is claimed by the relator, the opinion continues, that this statute does not comply with the provision of the constitution that "no law shall have more than one subject, which shall be expressed in its title."

"This constitutional provision must be liberally construed," says the opinion.

"In *Stuart vs. Kensella*, 14 Minn., 524, the insertion in a law of matters which may not be verbally indicated by the title, if suggested by it, or concluded with, or proper to the more full accomplishment of the object so indicated, is held to be in accordance with its spirit; but a more liberal construction cannot be given without letting in the evils which the provision was intended to exclude.

"This rule has been repeatedly approved by this court. The question is therefore: 'Do the provisions of the statute in question tend in any reasonable manner to the accomplishment of the purposes of "an act for the preservation, propagation and protection of the game and fish of the State of Minnesota?"' If so, it is germane to the title and is valid, for the necessity or propriety of such a regulation is a question within the exclusive jurisdiction of the Legislature."

"Do the provisions of the statute tend in any degree to preserve the game and fish of this State? Does the statute on its face indicate any such purpose? We answer these questions in the negative. Its object, unequivocally expressed, is to protect the game and fish of other States by refusing to the violators of the laws of those States a cover and market for game secured by such violation."

"This statute relates exclusively to foreign game, while the subject with which its title deals is the protection of the game of Minnesota. No lawyer or layman can place the statute and its title side by side without being at once struck by the radical discrepancy between them."

"It is, however, claimed by counsel for respondent that the provisions of the statute prevent evasions of our game laws and facilitate the detection and punishment of persons violating such laws, and, therefore, the statute tends in a greater or less degree to protect the game of Minnesota."

"If the premise of the argument is correct, the conclusion is also. The statute is not limited to the closed season in this State. If it were and the prohibition applied to all foreign game, then the tendency would be to prevent evasions of our laws and protect Minnesota game; but by excluding foreign game during our open season, when it is perfectly lawful to take, have and possess Minnesota game, only increases the demand for the latter and tends to its extinction rather than its preservation. * * * Such being the case, the subject of the statute is not expressed in its title within the rule we have stated."

"Order reversed and violator discharged."

Executive Agent Fullerton, of the Fish and Game Commission, does not believe the above decision would prevent the Commission from seizing the game shipped illegally from other States, though it would prevent the prosecution of the offenders. The reason assigned for this is that if those who ship the game attempt to recover, they will have no standing in court, because they cannot go in with clean hands. To say that game illegally killed could not be seized outside the State would be like saying that the authorities could not seize a stolen horse which had been brought to this State from some other.

Still Another Minnesota Case.

There is yet another Minnesota case which has been argued and submitted before the Supreme Court, on which a decision may be handed down any day now, and which will be an interesting thing to watch when the returns are all in. This is the case of the State of Minnesota, *ex rel.*, Wm. Corcoran *vs.* Chas. E. Chapel. Corcoran was arrested in Ramsey county, Minn., for shipping part of a deer "other than the head and horns" "to a commission merchant," the latter being the well-known dealer, R. E. Cobb, of St. Paul. Corcoran also asked *habeas corpus* and was denied, and appealed. It is not certain what will be the result on this case. The statute was well meant by the sportsmen, who wished to break up the traffic in venison. Corcoran's attorney, however, argues that such a law is class legislation and unconstitutional. It is a law at least frank and plain in its purposes, and let us hope it will stand.

Interstate Commerce Law Amendments.

In view of the above interesting news from Minnesota it is especially apropos to refer to the question of interstate commerce law amendments. As was duly chron-

icled in *FOREST AND STREAM* last week, an amendment has been proposed from Utah, which it was hoped could be passed by Congress. The attempt there was in effect simply that of regulating this same question of shipping game, but the bill as framed was asked to apply to only three States. It is not at first plain how the interstate act can apply to three States and not to all the States alike, and it would at first thought seem that this too might be called class legislation and so might be refused by Congress. In this connection comes up the bill to which I have made earlier reference as drafted by Mr. F. S. Baird, of Chicago, for the National Association here, the text of which I offer below, as just completed by Mr. Baird. Senator Shelby M. Cullom, of Illinois, has promised to introduce this bill in the Senate of the United States, and Mr. White, of Chicago, member of the House, has promised his hearty assistance in the House, as have all the upper Illinois members yet approached. Is it too much to hope that we shall at length have a law which will effectually and permanently stop the conflicts of the State courts and give the sportsmen, in the powerful and respected federal courts, the opportunity they have long needed to stop the wrongful and shameful traffic in the game of such States as remain fortunate enough to have a little left?

The provisions of the bill drafted by Mr. Baird appear to be simple and effective. If Congress will give us that law we promise to make an entirely different showing in protection in this Western country. The text reads:

A bill for an act to amend an act entitled An Act to Regulate Commerce.

SECTION 1. To regulate interstate traffic in wild game. Be it enacted by the Senate and House of Representatives of the United States assembled in Congress, that it shall be unlawful for any railroad company, or express company, or other common carrier, or its officers, agents or servants, to receive for shipment, or transport, or for any person or corporation to ship or offer to any common carrier for shipment, from any place within any of the States or Territories of the United States or District of Columbia to any place without any of the States or Territories of the United States or District of Columbia, or to any foreign country, for sale, for market or for storage, any moose, elk, deer, buffalo or bison, caribou, antelope, mountain sheep or mountain goats, or any parts of the same, or any wild turkey, prairie chicken or pinnated grouse, sage hen, Mongolian or ringneck pheasant or partridge, quail, wild goose, duck, brant, swan, woodcock, snipe, rail, plover, or any other waterfowl.

Second—Provided that nothing herein contained shall prohibit the shipment of any wild game animals or birds or parts of the same that may be expressly authorized or permitted, by the laws of the State in and from which the shipment is made, if the same is conspicuously labeled "wild game," on which label shall be stated the kind and quantity of said wild game animals or birds or parts of the same, and the date and the place of shipment, and the name or names and address of both the consignor and the consignee, and a copy of which label shall be kept on file by the common carrier at the place from where said wild game animals or birds or parts of the same are shipped.

SEC. 2. Any person or corporation guilty of violating the provision of this section shall upon conviction be punished as provided in Section 10 of this act, and the powers and duties of the Interstate Commerce Commission shall apply to this section the same as they now apply to each and all other sections of this act.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

BALL IN CHOKE BORE.

FRIDAY, Jan. 31.—*Editor Forest and Stream:* Dear Sir—In your last issue I notice a request for information as to the effect of shooting solid ball through a choke bore, and having done so repeatedly possibly my experience may be of use.

My gun is a 12-bore, 7½lbs., 30in. barrels, right cylinder and left modified choke—at least that is what I ordered when I sent it back to the factory for a boring.

The balls I use run twelve to the pound and pass through the right barrel without difficulty when pushed with the wiping rod, but in the left they begin to stick about half way down and jam so tight in the muzzle as to require half a dozen smash blows of the rod to force them through. When they come out they have a zone of about a fifth of an inch in width where they have been compressed by the barrel.

Nevertheless they do not seem to break the barrel and I have fired a number through the choke, though I must confess I prefer to use the right and always do except when I need another shot immediately.

I load with 3½drs. of powder, a thick pink edge wad, and then a pure lead ball, which I grease with tallow after placing in the shell. I use no wad over the ball, but crimp down on it bare, as this mode has the advantage that one can always feel the ball with one's finger when loading the gun, and thus not use small shot by mistake when it is so dark that one could not possibly read the markings.

I have used this cartridge on moose when calling at night and can recommend it for that purpose, as under those circumstances one is so near the game that the additional accuracy of a rifle is of no importance and the making of a big hole is. I have killed two moose this way, and one of them threw its head back and wilted immediately and the other jumped but twice.

HORACE BARNARD, JR.

The Florida Quail Supply.

Editor Forest and Stream:

One of your contributors says: "Quail are quite scarce here in Florida this season. Some attribute it to a wet spring and others to some disease."

We can assure him that the disease is in the game exterminators, and that the only cure for such disease is a sensible law applied in heavy and disagreeable doses.

Here is an extract from the correspondence of the *Florida Citizen*, from Tampa Bay, which proves that civilized ideas in regard to shooting do not count in that wild region: "TAMPA BAY HOTEL, Jan. 13.—Dr. and Mrs. Karsner, of Germantown, Pa., are among the arrivals at the hotel to-day. Dr. Karsner has been a regular visitor ever since the erection of the hotel, and for four successive seasons has held the game record, until last season, when he made the second best day's record with eighty-four quail killed, G. W. Bugner, of Philadelphia, winning the honors of the season with ninety-one quail killed in one day's shooting. The Doctor is here with the intention of making a new record. The hotel guide went out to-day for a couple of hours to work the dogs, and returned with twenty-seven quail."

These men are adopting a singular method if their object is to convince the world that they are sportsmen, for only idiots will see it in that light. A real sportsman will get far more enjoyment out of ten or twenty birds a day than a selfish, small-souled record smasher will in slaughtering 50 or 100. How long will the supply of quail hold out if such stupid work is allowed to go on?

A few years ago Thomasville, Ga., was one of the best

stocked quail regions in the South and "game hogs" reveled in it for awhile, but some of the wiser ones woke up to the fact that killing 100 birds a day was not only making hard work of what ought to be a pleasure, but that their chance for future sport was being damaged, so it was agreed among them that only a reasonable number should be killed in a day; but I think the place is already pretty well cleaned out.

Tampa is now an attractive place for sportsmen, but how long will it remain so? It would be very much to the interest of hotel keepers as well as sportsmen if a check could be put on these senseless exterminators, but it will probably go on till those who wish to gratify their tastes in that line will have to leave for other parts.

St. Augustine is probably more thoroughly cleared of quail than any place in Florida, and for this there are two reasons: In the first place, not the slightest regard is paid to the game laws, and by the time an honorable sportsman will shoot a quail—Nov. 1—there is scarcely one for him to shoot within five miles of the place. Secondly, there are scores of men who think it easier to spend a loafer's life in the woods, picking up an occasional dime, than doing any kind of work.

Tallahassee keeps her legal eye wide open, and anyone who ventures to bag a feather before Nov. 1 will pay the penalty. If their game wardens are ever pining for lack of business they can find all they want to attend to by riding through the woods around St. Augustine any Sunday during October, or even September.

DIDYMUS.

Pot-Hunting Deer.

AND now, Mr. Editor, I would like very much to know what is meant by pot-hunting as applied to deer. I feel that I am entitled to some information on this subject. If I go out into the forest with my rifle and by being sly see a deer lying down and kill it before it either hears, smells or sees me, am I a pot-hunter? If I wander around until wearied and take a position on a stump, log or hill, and standing motionless get a shot at a deer that, unconscious of my presence, comes my way, am I a pot-hunter? If, as is generally the case, a deer bounds from its bed and dashes off through the forest, and I turn, cock my rifle, catch a bead on him and drop him, am I a pot-hunter? In fine, has the term pot-hunter reference to the manner of hunting deer or to the hunter's place of residence?

G. W. CUNNINGHAM.

Ball and Shotgun.

SALEM, Mass., Jan. 23.—While working in the gun factory during the last war I procured a pair of barrels and made as good a double gun as could be made. It carried a ball the size of the old Springfield rifle. I tried to make it do good shooting, using fine, soft leather patches, and in fact all kinds of patches, but all to no purpose; the balls went where they would. At last an old backwoodsman came along and told me to trundle the ball into the gun and place a wad over it and try it that way, which I did, and found to my surprise that I could place a ball just where I chose to every time up to about 100yds.

A better gun for both shot and ball could not be found. I have the gun yet. There was only one objection to it; I found it rather heavy. Although the barrels were reduced in length, it insisted on weighing 9lbs.

The common shotgun cannot be depended upon for shooting with a ball, especially any gun having a bore as large as 12-gauge, for the reason that the ball is too heavy for the light, thin barrels; a 16 or 20-gauge would be far better.

I find a .40-65 Winchester with Lyman sights all any one can possibly desire. I find no trouble in placing balls in the space of my hand on a deer at 110 paces, and I secure partridges by removing their heads, which I find far better than killing them with shot.

If there is a call for information on the art of boring guns I might give some points that may not be generally known, which would enable any one to bore a gun so it would shoot just as was desired.

BREWIN.

Companion for a Southern Trip.

NEW YORK, Jan. 30.—*Editor Forest and Stream:* I expect to make a horseback trip from Chattanooga, Tenn., to New York city, leaving April 30, going first to Mammoth Cave, Ky., then to Chattanooga by train; the route for horseback takes in the following towns: Cleveland, Tenn.; Paint Rock, N. C.; Asheville, N. C.; Bakersville, N. C.; Roanoke, Va.; Natural Bridge, Va.; Luray, Va.; Harper's Ferry, Md.; Gettysburg, Pa.; Harrisburg, Pa.; Philadelphia, Pa.; Trenton, N. J. I should like to have a companion, and if you can help me in obtaining one would greatly appreciate it. If you hear of anyone who would like to go would be pleased to confer with him and furnish any information needed.

WENDEL ANDREAS.

New York Association.

THE 1896 officers and committees of the New York State Association for the Protection of Fish and Game are:

President, Frank J. Amsden, Rochester, N. Y.

Vice-President, Robert B. Lawrence, New York City.

Secretary, John B. Sage, Buffalo, N. Y.

Treasurer, A. C. Cornwall, Alexandria Bay.

Legislation and Law Committee: Cornelius W. Smith, Syracuse, Chairman; E. R. Brown, Watertown; Chas. B. Lapham, Canandaigua; Howard H. Widener, Rochester; Z. L. Parker, Bath.

Auditing Committee: W. S. Gavitt, Lyons; H. S. Woodworth, Rochester; Wm. H. Case, Lockport; Thos. C. Welch, Buffalo.

Eheu.

SHASTA MOUNTAINS, Cal., Jan. 20.—*Editor Forest and Stream:* I perceive thy correspondents, and even thou, ye editor, persevere in preserving that word *eheu*. If you intend to promulgate it further, either as a thing unique, antique or curious, I will quote ye from the journal of Lord Byron, written in 1813: "Give me a republic or a despotism of one, rather than the mixed government of one, two, three. A republic! look in the history of the earth—Rome, Greece, Venice, France, Holland, America, our short (sheu!) Commonwealth, and compare it with what they did under masters."

Eheu! indeed. If it was worth preserving Byron would have rhymed to it. He found stronger materials without "making fritters of the King's English." When I have anything to say that I cannot express — me if I will resort to *eheu!*

R.

Camp-Fire Flickerings.

"That reminds me."

A GREAT SHOT.

It was on a California ranch in early spring time. John, the cook, aged about 17 years, had offered to slay several thousand of the myriads of blackbirds which were swarming around the ranch, if Brown, the boss, would furnish powder and shot. The birds were so numerous that the wheat had to be covered as soon as possible after sowing; if this was not done the ground would be cleaned as free of the seed in a very short time as if it had never been seeded. Under these conditions Brown was not slow in furnishing the necessary ammunition.

The next morning, after the breakfast dishes were cleared up, John made his appearance in the field, armed with the old muzzle-loading double-barrel shotgun. After stowing away a liberal amount of ammunition in the old gun, he took deliberate aim at a place where the blackbirds seemed to be most numerous on the newly seeded ground. With a tremendous report the old gun belched forth its deadly charge. When John had recovered from the recoil of the gun and the smoke had cleared up, he was surprised and delighted at the havoc he had caused in the swarm of birds. Perhaps forty or fifty lay dead on the ground and others dropped every few yards as the birds flew toward a clump of trees about 150 yds. distant.

Loading the barrel which had been discharged, John proceeded toward the trees, intent on securing another shot, but as he drew nearer he was surprised to see the birds still dropping to the ground. When within about 30 yds. of the trees he stopped, undecided as to whether he had better fire again or not, for it seemed as though he must have wounded all of the birds, so continuously were they falling. As the birds did not seem to be alarmed by his presence, he concluded to count the dead ones and find out how many he had killed with one load. Cautiously making his way under the trees he commenced counting and the birds kept falling. After counting about 200 dead birds, and seeing that they were still falling, he commenced to feel a little suspicious and noticed that the birds were acting in a very unusual manner up in the tree.

"Ha! ha! ha!" yelled Brown, who had been taking it all in at a short distance unseen by John. Laughing until he could scarcely walk, Brown approached and John, who was sure something was wrong, demanded an explanation. "Well," said Brown, "I had just sown about a peck of poisoned wheat when you came out and the poison commenced taking effect just after you fired." The boys all call him "Blackbird John." JOHN C. BRIGGS.

Sea and River Fishing.

SHAD, SNIPE AND HYACINTHS.

SHAD fishing has already begun in the Neuse and New rivers, and stake nets are out, though the fish do not run lively as yet. In a week or so fishing will begin on Albemarle Sound, where the business is the heaviest. Dr. W. R. Capehart, who is one of the leading candidates for U. S. Fish Commissioner, to fill the place of Col. Macdonald, deceased, is one of several operators of steam fisheries and large seines. The length of his big seine, with its rigging, is 6,700 yds. In it he has taken the immense number of 200,000 herring, 4,800 shad, and 37,000 lbs. of rock (striped bass) at one haul. The net reaches 1,900 yds. out from the beach. He has 50 to 100 men salting in barrels and packing in ice for Northern markets. Herrings are chiefly salted; the others shipped fresh.

Colored men are doing some profitable hand-line fishing now. They use bitter-heads, or roach, for bait, and fish in deep water, where black bass, locally known as Welshmen, and pickerel (or jack) collect in schools. Last week three men caught \$40 worth in one day, and they didn't get big pay either. Anderson Slade took in \$18.75, Bob Crawford \$10.35, and Buff Wilson \$10. They sold to the shippers. Some striped bass are caught occasionally in the same way now.

As the season advances angling improves, and by the end of February a great variety of salt and fresh water fish are shown. The salt-water fish come from below, around Beaufort and Morehead. Between Feb. 24 and 29 the ninth annual New Berne Fish and Oyster Fair will be held here. On these occasions the display of wild game is something delectable to sportsmen, while as many as eighty varieties of fish have been on view at once, besides nineteen kinds of oysters, not to mention other species of shellfish, terrapin and crustaceans.

I have just come in from a two hours' row on the Neuse and Trent rivers with a couple of ladies. As I grow older I become fonder of their society, though I have to pull harder. We visited Moore & Brady's oyster cannery (a Baltimore concern), the fish market slip, the new iron drawbridge of the A. & N. C. Railroad over the Trent, and made a reconnaissance of Lawson's Creek, which worms through a two-mile snipe marsh just beyond the city limits. The water was almost a dead calm, with the temperature near 60°. (The average noon temperature so far for the month of January has been about 59°, with only four gray days.) On Saturday a party of us went yachting, with a nice ladies' breeze from the southward and westward, and the air grateful and balmy. Most of the party were from the North, and this midwinter experience was new to them. Indeed, January is the favorite month for yachting at New Berne, the weather being usually calm, whereas in summer the wind is apt to be too fresh for sailing.

Now, lest those who read my frequent notes in FOREST AND STREAM should think me unduly enamored of this New Berne climate, I think I can explain its immunity from storms and its habitually docile moods in blustering seasons by saying that the town seems to lie in an atmospheric eddy. When storms which form in the tropics pass up the Atlantic coast we are just on the edge of the whirl, and when they come down from the northward and eastward we feel only its minimum force. I have ample data to clinch this theory. Why it is so I prefer the meteorologists should demonstrate. Weather forecasts, however correct for any given region at large, do not

apply here. Winter here is short at the longest. I think we have a typical winter this year, though February and the complications of Venus and Mars may change the expression. We have now violets, hyacinths, Japan quince, fuchsia, orange-jasmine and some other flowers blooming in southern exposures; the maple buds are red on the trees, and peas and potatoes are going into the ground. Next month we shall have radishes and asparagus, weather favoring.

Eight swans were brought into market this morning and some fine bunches of quail. Only a few brant have come up from below. Wild geese are for the most part lean and tough. Last week R. F. Stillely shot the largest wildcat on local record just across the Neuse River, opposite town. Sportsmen can get game by going where it is, but it will occupy two days or three, out and back; shelter and comfort guaranteed. E. P. Jepson and wife (with R. G. Dun & Co.) and G. W. Smythe and wife, all of East Orange; J. M. Hewlett and wife, of Hempstead, L. I., and E. H. Goodnough and wife, of New York, are among the latest arrivals. Shooting is open here until March, though it should end by the middle of February. Jacksnipe are here. They come with the shad.

CHARLES T. HALLOCK.

NEW BERNE, N. C., Jan. 27.

CHICAGO AND THE WEST.

Juggling for Cats.

Mr. Jos. Irwin, the well-known sportsman of Little Rock, Ark., calls to attention a newspaper clipping recounting the doings of his old father, an old-time fisher known all over the State of Missouri as "Uncle Joe." Mr. Irwin, Sr., still lives and is a famous angler still. Speaking of one of his trips when he went "juggling" for catfish in the Big Muddy he says:

"I made one phenomenal catch on a trip made during the sixties, and on my arrival at home had the fish hauled through the streets on a dray and weighed and viewed by more than 500 people there who are alive and remember the fact. On that trip there were twenty in the party. I caught forty fine fellows that weighed nearly 1,600 lbs., but had an experience with one that was as exciting as it was unusual and it afforded no end of sport for all of the party. The fish was the largest one I ever caught and weighed 159 lbs. He took the hook shortly after we got out into the stream from Leavenworth and he took that jug under water for more than 100 yds. Then he came up, but went under again and continued that performance for more than five miles, giving us a chase that was grand and exciting even for one who had followed the jugs for years, as I had. At length he was tired out, and by shoving and crowding him about we managed to run him out on the sand bar and land him and capture the monster."

The Longest Fight with a Fish.

But I have a fish story which will cause envy in the bosom of Uncle Joe and other anglers, who must admit that the record is broken in one way. A muscallonge brought to boat only after sixteen hours of fighting—that certainly is something of a story. This comes to me from O. W. Sayner, of Plum Lake, Wis., who says the fish was caught by John Coleman, of Chicago, who was at Plum Lake on a visit with his brother Chas. Coleman, of Rockford, Ill., and Mr. E. C. Glover, of 167 Dearborn street, Chicago. Mr. Sayner describes the occurrence which I offer in his own words:

"Mr. Coleman took along his light steel rod, also a minnow bucket containing a few large minnows (some about 1 ft. long). He had a good large snell hook on his line, to which he attached one of the minnows and let it follow the boat on about 30 ft. of line. He had proceeded up the lake about a mile, with his rod resting in one of these patent pole holders, when slap! the tip end of the rod struck the water. Mr. Coleman took in his oars and took the rod in his hands, and just as he did so the fish gave a lunge clear from the water, and this was the beginning of the longest fight, I think, between man and fish on record.

"He played the fish fifteen or twenty minutes and got it near the boat, when he happened to think that he had no gaff hook or gun of any kind in the boat, and the fish was too large to think of lifting him over the side of the boat, especially with no oarsman to manage the boat. At last he decided to run him ashore. There was an island about a quarter of a mile away, with a sloping beach, so he made for the island. To have his rod handy he just put it under him and sat upon it so he could row. He never thought about his patent pole holder. He had to bend to the oars, in fact, he kept pulling harder and harder until he pulled a stroke that just raised him from the seat a trifle. Just at this instant the muskee gave a jerk, and away went rod, reel, line and all!

"Mr. Coleman had a good laugh and came to the house. He said he had out about 50 ft. of line when the rod jumped overboard, so I advised him to take some drag hooks I had made a few days before and try and pick up the line. He thought the water was too deep, and there was no telling where the fish had the pole by that time, judging from the way it left the boat.

"When the others came back that evening they talked the matter over, with the result that by 7 o'clock next morning they were ready to start to drag for the line. The second time they let down the hooks they caught the line in 50 ft. of water. The fish came to the surface before the rod, but by a little fine work they succeeded in getting hold of the line, and after pulling in nearly 100 ft. of line and letting the fish have it, up came the rod. As luck would have it, when he put the line on his reel he had tied the end fast to the reel. They had to fight the fish all over again, for through the night he had got all rested up, and being on the hook so long he had got good and mad. He fought worse than the day before, and pulled so hard that Charles Coleman could not make much headway rowing the boat. They fought till 9:30 A. M., during which time they towed him a mile and a half, when they got him near enough to shoot. He weighed 15½ lbs."

E. HOUGH.

909 SECURITY BUILDING, Chicago.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at latest by Mon day and as much earlier as practicable.

Those Kansas Fishermen at Saynor's.

LEAVENWORTH, Kan., Jan. 31.—In the interest of justice, honor, patriotism and comity, we demand a hearing in the columns of the FOREST AND STREAM. We have been maligned, vilified, humiliated and degraded. We were pained beyond expression and wounded most fatally, in your issue of Dec. 28, by a most diabolical and outrageous libel upon some of the very best citizens of Kansas, the acknowledged *crème* of its metropolis. This occurred in a letter from the ever versatile E. Hough, who retailed the garrulous gossip of one Joe, the guide, as follows:

"He told me of a party of gentlemen fishermen from Kansas who put up at Saynor's place the summer previous. They sold their fish and marketed over 1,000 lbs. (so Saynor told me also), but they kicked because they did not pay expenses! There was an amateur photographer in that same Kansas party who sold Saynor pictures of his house at \$1 a picture. It would seem that the Kansans put up rather a hard game for Mr. Saynor to lay up money on."

Now the nude facts are, that the fishing party referred to was composed of some of the brainiest, wealthiest and most reputable residents of Leavenworth. They had theretofore made several trips to the resort and intend to make more. They did not "sell" a single fish (and they resent the very scaly insinuation), but packed all of them in ice and shipped them to the National Hotel at Leavenworth, where the muscallonge were served at a magnificent dinner given by the gentlemen on their return to a distinguished party, embracing the best people of both sexes hereabouts. The club always winds up each fishing excursion with a banquet of a similar character.

As to the "amateur photographer" mentioned, he was Mr. Horace Stevenson, the leading photographic artist of Leavenworth—a professional—who was taken along professionally, not as a fisherman, and paid for his time and services. If, as alleged, he did any work for Mr. Saynor, it was a strictly business transaction between them, and the Leavenworth fishermen knew nothing of the dicker. They had no interest in Mr. Stevenson's professional contracts or engagements.

T. W. SCARD,
Fish Warden of Kansas and the First President of the Club.

Pickerel Fishing on Overflowed Land.

BOSTON, Mass.—The Parker River, in Byfield, is considered by the local fishermen a good river for pickerel in the summer time, but they have just begun to find it good for winter fishing. On a short distance of river are several dams, and these dams overflow considerable stretches of meadow lands, more especially in the winter. The other day Mr. Claude Tarbox and Representative C. O. Bailey started out with the idea of trying the river once more for pickerel. It is not particularly easy to locate the real river current when the meadows are overflowed and all is covered with snow and ice. But they cut the holes and put in their lines as near to the deep part, for the river, as they could hit. But the fish did not bite well. In one case they had cut a hole that happened to be over the meadow, and the water was not more than a couple of feet deep. Just for an experiment Tarbox put a line with a baited hook into this hole. Hardly had the hook had time to sink when it was savagely seized by a big fish. He was safely brought out on to the ice—a magnificent specimen weighing over 2 lbs. Here was a hint, and when others were caught from the same hole the men began to cut holes on the overflowed meadows and put in their lines. The music had begun, and for several hours it was about all the boys wanted to do to tend the flags. They caught big pickerel in a foot of water. Hereafter they will fish the overflowed meadows when the conditions are favorable. SPECIAL.

Florida Fishing and Shooting.

GULF HAMMOCK HOUSE, Levy County, Fla.—Your favored request to hand. Sportsmen are having great sport with rod and gun. Mr. J. H. Price and wife, from England, have been here since the 16th of November. He says this is the best place he ever struck for all-round sport. Mr. Price is well known as a thorough sportsman in many countries. Mr. W. Singleton, from Philadelphia, has been here eight days, and his average is over 100 fish per day—viz., black bass, sea trout, sheepshead, channel bass, etc., etc. There are others camping out three miles below the house, who are having fine sport. One gentleman caught ninety-six sea trout in about two hours (darky baiting and taking off fish).

My hunter brought in five turkeys yesterday; weight, from 10 to 15 lbs. each. Turkeys are plentiful this year. Last April and May were very dry months, which was very favorable for their young.

Two gentlemen are going down the river to try the tarpon. I will report their luck. It's not often I can leave the house, but stole away on Monday evening for about two hours and caught eleven black bass running from 2 to 8 lbs. They are taking the Spinner in good form and are very lively.

Darky just in with three fine turkeys; can't take them; have them spoiling now. CAPT. C. B. WINGATE.

Canal from Eel Bay to Lake of the Islands.

PHILADELPHIA, Jan. 31.—Editor *Forest and Stream*: I have sent to the Committee on Fish and Game of the New York Senate a communication requesting a small appropriation for the purpose of making survey of a canal from Eel Bay to the Lake of the Islands, Thousand Islands, St. Lawrence River. A glance at the map of the locality, aided by a knowledge of the situation, will show the great advantage of the canal, both as a means of communication with the lake from the upper end, together with the improvement of the fishing in the lake by reason of the current that will be thrown into it. In the event of the Canadian authorities withdrawing the privilege of free fishing among their islands, whatever leads to improve our side of the river will be decidedly advantageous. One familiar with the river I think will appreciate the situation. I have no interest in the matter other than that I am a summer resident on the river, and I think it will be a good thing and will benefit us all.

R. M. HARTLEY.

Drought and Trout Streams.

ITHACA, N. Y.—Trout anglers fear that the long-continued dry weather of last summer and fall proved disastrous to the brook trout supply of this part of the State. Many of the small trout streams of this locality dried up completely, and one farmer, a Mr. Schutt, up Slaterville way, affirms that he saw chickens picking the little fingerling trout from the water impoverished rivulets. Other reports confirm Mr. Schutt's opinion that the summer and fall of '95 was a dreadfully fatal one to the brook trout supply of Tompkins county. W. H. Willson, the veteran angler of this city, is discouraged at the prospect, but avers that when the moon gets gay and the bluebird pipes his lay once more, the planting of young fry will promptly begin.

Cayuga county hailed the first robin of the year Jan. 23. M. CHILL.

Fishculture.

THE NEW YORK COMMISSION.

Extracts from the report of the New York Fisheries, Game and Forest Commission, made to the Legislature Jan. 30, 1896.

Special Protection of Stocked Waters.

The Commissioners desire to call attention to the fact that under the old game law, Sec. 273, Chapter 31, of the General Laws, 1892, power was conferred upon boards of supervisors "to pass at their annual session such laws and ordinances as shall afford additional protection to and further restrictions for the protection of birds, fish, shell-fish and wild animals, except wild deer, and to prohibit the taking and killing of the same." This law was repealed by the game law now in force, Chapter 974, Laws of 1895, Sec. 302, except as to Suffolk county, and all protective laws must come from the Legislature. The Commissioners have occasion, not infrequently, to stock new waters with plantings of trial fish, to restock old, worn-out waters with the fish that once abounded therein, and to introduce new species into the lakes, ponds and streams of the State; and to obtain the best results, the fish so planted should remain unmolested until they establish or re-establish themselves. Special laws to cover such cases seem only to make the general game law burdensome and conflicting.

Following the precedent established by sister States, we would recommend that power be conferred upon the Fisheries, Game and Forest Commissioners to close streams or other bodies of water in the State for a term of years, not to exceed five, when in their judgment it is necessary to resort to such procedure to enable fish planted by the Commission to obtain suitable size, before fishing of any kind is permitted. The waters to be closed by a printed notice signed by the Commissioners and erected on the banks of stream, pond or lake, and by a similar notice published in the papers of the county in which the water is situated.

Consideration of Proposed Laws.

The Commissioners would also recommend that all bills relating to the fisheries, game and forest interests of the State should be referred to them for their consideration by the legislative committees having them in charge before action is taken upon them. The Commission is in session practically throughout the year, and through its agents and employees distributed over the State is in a position to know of and advise intelligently regarding needed legislation in its department. This course would tend to do away with conflicting legislation, make the laws more simple and less confusing, and the State would be protected from the harmful influence of ill-advised fish and game laws.

Pollution of Streams.

All just fish and game laws, broadly stated, are enacted to protect the fish and game of the State during the breeding seasons and to allow for recuperation afterward, and without such laws, rigidly enforced, artificial propagation, which is simply aiding and improving upon nature, would be practically useless to maintain the supply of food which comes under the head of fish and wild game.

Of necessity there are auxiliary laws to support the laws governing the breeding seasons, and one which demands attention at this time is that which relates to the pollution of streams. The present law on this subject is almost inoperative, because of the provision that dyestuff, sawdust, etc., shall not be allowed to run into any waters "in quantities destructive to the fish life," and it is a difficult matter to prove just where the dividing line between life and death may be. Seven years ago a select committee of the Senate of the Dominion Parliament conducted an inquiry into the expediency for preventing sawdust and other refuse being cast into Canadian waters, and in summing up the situation, after obtaining testimony on the subject from engineers, fishculturists and scientists in the Dominion and a number of the States, the following language was used:

"Settling here and there in its course down the stream, the sawdust forms a compact mass of pollution all along the bottom and the margins of the rivers and inlets, filling up the crevices on the gravel beds, and among stones, where aquatic life is invariably produced and fed. It becomes a fixed, imperishable foreign matter, and adheres to the beds of streams and other waters, and forms a long, continuous mantle of death and constitutes an endless graveyard to the innumerable colonies of insect life which inhabit this well-adapted abode for their existence. These, then, are only some of the pestilential effects produced by sawdust and mill rubbish in the waters of the country on fish life, and independent of its evil influences, from a sanitary point of view, on human life, and its damaging effects by seriously impeding navigation on many waters. Then why should the few, for self-aggrandizement only, be permitted to continue this wicked, devastating work for depleting the waters of their legitimate supplies of food, originally supplied by an all-wise Providence for the use of mankind? And why should the many suffer for the few who still pursue and unscrupulously advocate a continuance of this insidious and direful proceeed for entailing ruin upon the fisheries of our country?"

It is claimed by some that sawdust and refuse from mills and factories will not injure adult fish. Be that as it may, if the young fish and the food for both young and adult fish are destroyed there will be no adult fish.

To extract briefly from a report prepared for the Vienna

Exposition on the decrease of food fishes: "The basis on which a rational system of pisciculture is founded is very simple. Preserve the natural conditions of those places where the fish spawn, conditions which favor the spawning process and tend to preserve the spawn and protect the first development of the eggs; thus everything which diminishes the supply of fresh water; everything which changes the quality of the water or the character of the bottom; everything which hinders the growth of aquatic plants; in fact, everything which at its source can destroy the health of fish of a whole basin. * * * Leave a free passage for the fish to pass to the places which are favorable for spawning. * * * Protect the young generation so that it can arrive at the age of maturity and contribute its share toward the increase of its species."

We know personally of two instances where mill refuse has been diverted from a stream in this State with but little cost to the mill owners. In one case the poisonous chemicals of a pulp and paper mill have been conducted to vats on the shore, and later the contents of the vats have been marketed. In the other case the sawdust of a large mill plant has been conducted by a series of boxes and belts, requiring no hand labor, to a central storage pit and used for fuel. Under the circumstances we think we are warranted in recommending that the law be changed to forbid the pollution of our streams and waters without conditions of any sort.

Fishways.

It will be observed that one of the rules upon which a rational system of fishculture is founded is that fish shall have a free passage to the places which are favorable for spawning. This means that fishways must be built over natural and artificial obstructions in our streams containing food fishes if the supply is to be kept up. We have a law that provides that in the future no dams shall be built in any stream over six miles long unless at the same time a fishway is built in the dam, but concerning the dams already built the law is silent.

The United States Supreme Court has given a decision as to the rights of proprietors to erect and maintain dams on any stream. This is the language in part of the decision: "Ownership of the banks and bed of the stream gives to the proprietor the exclusive right of fishing opposite his land, as well as the right to use the water to create power to operate mills; but neither the one nor the other right, nor both combined, confer any right to erect obstructions in the river to prevent the free passage of fish up and down the river at their accustomed seasons, as such obstruction would impair and ultimately destroy all such rights owned by other proprietors, both above and below the obstruction on the said stream."

"Fish rights below a dam constructed without passageways for the fish are liable to be injured by such a structure as well as those owned above the dam, as the migratory fish, if they cannot ascend to the headwaters of the stream at their accustomed seasons, will soon cease to frequent the streams at all, or in greatly reduced numbers."

Hudson Salmon.

Through the contributions of young salmon planted in the Hudson River by the United States Fish Commission, it has been demonstrated that the waters of the stream are suitable for this grand fish. Planted in the headwater trout streams, the smolts have, in season, descended to the sea, and at the proper time returned as adult fish to the river and attempted to ascend to the streams of their babyhood to reproduce their kind. Dams, and falls without passageways, and fyke nets in which they are taken contrary to law, have thus far conspired to prevent the Hudson from becoming a self-sustaining salmon stream.

The river Tay, in Scotland, commands for its salmon fishing (and it is a smaller river than the Mohawk in this State) an annual rental of \$200,000, and the expenditure of a sum less than a quarter of that amount would open the Hudson to salmon from mouth to source, and to shad up to the point, at least, where they were known before the building of the Erie Canal.

Streams other than the Hudson are in need of fishways to provide the best results in furnishing the people with an abundance of suitable and cheap food fish.

Fingerlings Instead of Fry.

It will be the policy of the Commission, so far as its means and facilities will permit, to change radically the manner of rearing and planting young fish. Heretofore it has been the practice largely to plant the fry of the fall spawning fishes soon after the yolk sac was absorbed. At this period of their existence the young fish are helpless and an easy prey to their enemies. Fry of trout are of necessity planted in the spring, at a time when they are just beginning to feed, and the waters are apt to be high and roily, and the natural food produced in the streams is not fully hatched out, as it will be later, when the sun has warmed the air and water and developed the larvæ of all insect life.

Fingerling trout planted in the fall are stronger, larger and more active fish, and find an abundance of food hatched out for them; the waters having been tempered by the summer's sun and subsided from the spring freshets, the trout have a better start in every way to fight the battle which they must fight in wild waters. Improved methods demand that the young fish be retained in rearing boxes or ponds and fed until they reach the age of from 4 to 12 months before they are planted in wild waters. This will require additional rearing boxes and ponds, and a greater expenditure for food and labor, but the advantages and benefits to be derived from this method of planting fish, in a great measure able to care for themselves, has been demonstrated, and will well repay the outlay. It will be some time before all the young of the fall spawning fishes can be reared to fingerlings before they are planted, but so far as practicable this will be the method pursued.

Game Fishes and Food Fishes.

Occasionally it has been charged by those ignorant of the subject that this Commission is largely if not chiefly engaged in propagating game fishes for the few at the expense of the many. The absurdity of this charge is demonstrated by an examination of the tables of fish reared and planted by the Commissioners. In the abstract, all fishes are food fishes, but there is no fixed standard by which to determine which fishes are the so-called game fishes. For the purpose of showing how idle this charge is, we will divide the fish into commercial and hook-and-line fish. During the year ending Sept. 30, 1895, the State has

planted 196,247,840 fish of various kinds and ages. Calling the brook trout, brown trout, rainbow trout, landlocked salmon, sea salmon, masalonge and black bass hook-and-line or "game fishes," there have been planted of these species 8,627,908. Of whitefish, pike-perch, tomcod, smelts, ciscoes, shad, bullheads, frostfish, etc., or of the commercial or "food fishes," there have been planted 187,619,934. In other words, for every single "game" or hook and line fish planted in the State, the Commissioners have planted twenty-one and a fraction of "food" or commercial fishes. It must be taken into account that the so-called game fishes are the highest order of food fishes, and that the love of angling is on the increase among the people as a healthy relaxation from the counting house, the pulpit, the workshop, the forge and the factory, and the whole people must be considered in the matter of propagating and planting fish in the waters of the State. The angler and the commercial fisherman both have rights which we are bound to respect, but our efforts are directed entirely to the propagation of food fishes, by whatever special names their adherents may choose to call them.

Diminished Sources of Supply.

Almost since the date of the creation of the New York Fish Commission in 1868 it has been dependent in great degree upon the waters of the great lakes for a supply of lake trout and other fish eggs. In recent years the supply of eggs from this source has been growing gradually less, and it is a matter of serious consideration where we shall look for a supply of eggs of the food or commercial fishes. With our increasing population and the growing interest taken in hook-and-line fishes, it is also a serious matter to obtain a sufficient quantity of the eggs of such fishes to supply the demand for young fish for distribution in State waters. The demand each year is several times greater than the supply.

We would recommend as a public necessity that two bodies of water in the Adirondack region, to be selected by the Commission, be set aside by law, to be controlled by the Commission and used as stock waters to supply eggs of lake trout and other fish for public waters of the State. For this purpose the waters would be thoroughly stocked with the species of fish most in demand and maintained as natural stock ponds. It would not be necessary to erect hatcheries on the shores of these stock waters or disfigure them in any way, as the eggs would be taken at the spawning season and conveyed to State hatcheries for development.

Food Fish Output.

It is the desire of the Commission to greatly increase the output of commercial or so-called food fishes. Last year the Commission planted 41,205,000 pike perch fry (also called wall-eyed pike), one of the best of table fishes, and a hook-and-line fish as well; 24,080,000 whitefish and 18,000,000 ciscoes. These are the very choicest of food fishes, but the annual output should be doubled or trebled, and we would recommend a special appropriation of \$25,000 to be used for the purchase of suitable lands (and water if necessary), and to erect buildings in such place or places as may be selected by the Commission for the propagation of pike perch, whitefish, ciscoes, black bass, etc.

Black Bass Hatching.

The initial experiments conducted last year in hatching black bass artificially convinced the Commissioners that it may be quite possible to hatch black bass in large quantities and thus supply the demand for this excellent fish, which each year is far in excess of the number to be obtained by the Commission.

We feel that we must utter a word of caution to those who apply for fish, particularly for the different species of trout other than lake trout, and for black bass. The annual applications call for more of these fish than it is possible to supply under the most favorable conditions. Applications are made for 25,000 trout when the water named may not support more than 5,000. The question of food for the fish seems not to be considered, and really it is of vital importance. Without food in abundance fish will not thrive any more than farm stock. Last year the applications for black bass amounted in the aggregate to several millions, while the State by strenuous effort was able to obtain less than 20,000, and some of them had to be purchased. One application called for 1,000,000 black bass for Lake Ontario when we were looking to this lake to furnish a small number of black bass for other waters. During thirteen years of the life of the New York Fish Commission a total of 8,048 small-mouthed and 4,821 large-mouthed bass were distributed, or a grand total of 12,864; and from this it will be seen how idle it is to ask for black bass in million lots.

A dozen adult black bass thoroughly protected will do wonders in the way of stocking a pond.

Food for Fish.

A trout stream can be more certainly stocked by planting 5,000 fry annually in the headwater rivulets of the stream than by turning in 25,000 in one year and leaving it to fate. If there is no food for the fish in the stream planted, it is simply a waste of fish to plant them. We have just received a letter on the subject, from which we make an extract.

A good trout stream in this State seemed to lack fish food, and it was suggested to a resident at its headwaters to plant shrimps for food. He not only planted the shrimps—obtained from the Caledonia Station—but procured a lot of trout eggs from the United States Fish Commission and hatched and planted them. A small pond was built on a tributary stream, and in it the fry were placed and reared until they were fingerlings, when they were allowed to run down into the main stream. The letter says: "Our river holds out wonderfully well and the trout are fat, showing plenty of food. I think the shrimps I put in account for the condition of the trout. I do not know anything about the shrimps in the river, but do know that since they were planted the trout have grown noticeably fatter. I do know, however, that the shrimps that I put in the little pond multiplied wonderfully. For once when I drew it down the bottom was fairly alive with them, and I have no doubt but there are millions upon millions in the river. I think that the question of food supply for the fish in our streams and ponds is of the utmost importance, and I also know that the fry we hatched and fed in our pond for weeks after the sac was absorbed were worth very much more for stocking. In fact, planting fry as soon as the sac is

absorbed is largely a waste of effort, judging from my own experience."

Fish and Game Laws.

The language of the various sections of the game law relating to the use of nets in different waters is loosely worded. In one section the size of the mesh is described by length of bar, in another as "suitable meshes," and in others the size of the mesh is not mentioned. We would recommend that the size of the mesh be explicitly stated where nets are permitted to take commercial fishes, and so far as possible the netting laws be made uniform in their application.

The present law provides an open season for catching black bass beginning on May 30 and ending Jan. 1. The continuance of this open season is a menace to the future of this species of the fish in the waters of the State.

Black bass spawn all through the month of June, and to open the season during the breeding time is most ill advised, and no amount of artificial stocking within the means of the Commission will make up for the waste of killing spawning bass. It is difficult for the State to obtain any large number of black bass at this time, even by purchase, and every section that is visited to obtain bass for transplanting protests most vigorously. The black bass is the one fish of all hook-and-line fishes that guards its spawning bed during the development of the ova, and watches over the brood of young fish after they are hatched, so they really require more consideration as to length of close season than any other fish in the State. When cold weather approaches, black bass gather on deep shoals and lie partly dormant, as a rule, until warm weather returns. Within recent years this habit of the black bass has led to their destruction in some waters, as their winter habitat has been sought out by unthinking men and the bass have been pulled from their winter quarters in a scandalous manner. We would suggest that the open season for black bass fishing begin on July 1 and close on Oct. 15.

The "landlocked salmon" of the game law is no other than the sea salmon with a fresh-water habitat. And yet the law presents the inconsistency of limiting the legal length at which the anadromous fish may be killed to 18 in., while the fish with a local home may be legally slaughtered when, in its babyhood, it reaches the length of 6 in. Landlocked salmon run from the lakes into tributary streams to spawn, and the young remain in the streams for two years before going down to the waters of the lakes, and during the two years in the streams grow to exceed 6 in. in length, and it is almost a criminal waste of raw material to permit a 6 in. baby salmon weighing 2 oz. to be killed, when if allowed a chance for its life it will grow into a magnificent fish of 25 to 30 lbs. in weight. We would suggest that the legal limit of length at which salmon and landlocked salmon may be killed should be made identical, 18 in.

Section 143 of the game law provides that "eel pots of a form and character such as may be prescribed by the rules of the Commissioners of Fisheries may be used in any waters not inhabited by trout, lake trout, salmon trout, or landlocked salmon." Eels are notorious spawn eaters, and as such seriously interfere with the propagation of better food fishes by natural processes, and if the Commissioners had power to set eel baskets in waters containing *salmonidae* for the purpose of taking eels that come on to the spawning beds to eat the spawn of trout, it would aid materially in minimizing the devastation from this cause.

Carp.

The Commissioners feel that they must in the future discourage the planting of German carp in any of the waters of the State that may contain other fish. It is no more desirable as a food fish than the common sucker, and instead of being a strict vegetarian, as was heralded when introduced from Europe, it has been convicted of eating spawn and the fry of better fish.

Beaver.

There is a colony of beaver near the Adirondack hatchery, probably the only one in this State, and if this rare animal, supposed to have become extinct in New York, is to be preserved, there is urgent necessity for the enactment of a law to protect them at all seasons. During the past year a beaver of this colony was killed and then it was found that there was no law for their protection.

By every means in our power we would encourage the formation of fish and game protective associations in every county and town in the State. Already many societies of this kind have been organized, and they are not only public educators of the objects and aims of fish and game laws, and supporters of this Commission in its work, but they do much to enforce the laws and stand as a menace to law breakers in the communities where they exist. The observance of fish and game laws is largely a matter of education; the first lessons were most difficult to learn, but great strides have been made in this direction during the past ten years, and the fish and game associations should have full credit for their share in it.

Adirondack Deer.

At the close of the deer shooting season in 1895 this Commission made a systematic investigation to determine the number of deer killed in the counties including the Forest Preserve. It was the first attempt to make a careful and thorough canvass of deer killed in this State. For this purpose the Adirondack region was divided into 161 districts, and 249 separate reports were received. A recapitulation shows that a total of 4,900 deer were killed—2,207 being bucks and 2,693 being does. As to the manner of killing, 1,293 were killed by night hunting, 2,694 by bounding and 973 by still-hunting. In view of this enormous slaughter—for we are convinced that the returns are accurate as far as can be obtained—we would recommend that further and more stringent laws be enacted to preserve the deer from extinction either by a shorter season, by regulating the manner of killing, or both.

Utah Legislation.

A LARGE meeting of Utah county people, comprising fishermen, hunters, sportsmen and fish and game dealers, was held in the county court house, to agree upon suggestions to be furnished to the Legislature. The following recommendations were agreed upon, and a committee was appointed to present them to the Legislature and urge their enactment:

To the Legislature of the State of Utah:

We, the representatives of the people mostly interested in the fish

and game laws of Utah county, present the following recommendations for your earnest consideration:

1. That we be allowed to export fish and game to other States and Territories.
2. That the season for angling for trout remain as it is now, and that the angling for black bass shall not commence until July 1, instead of June 15; that seining be allowed for common fish between Sept. 15 of each year and the first day of May following, providing that each person using a seine shall pay a license and also give bonds for \$500, conditioned on the faithful observance of the law.
3. That the seiners be released from paying the commissioner's fees.
4. That the commissioner be allowed very lenient privileges in regard to making arrests or searching parties or their effects before obtaining warrants; and further, that the commissioner's and deputies' salaries be paid annually, one-half by the State and one-half by the county, that he may be able to devote his full time.
5. That no seine be allowed to be drawn in any natural stream or within one-half mile from the center of the mouth of any mountain stream or body of water connecting two other bodies of water.
6. That any or all persons be allowed to catch carp any time of the year with spear or line.
7. That it shall be unlawful for any person to sell, take, kill, destroy or have in his possession any trout, mountain herring or imported fish which have been taken from the public waters of this State, less than 6 in. long, excepting carp; that until otherwise provided it shall be unlawful for any person or persons to catch, offer for sale or have in their possession any catfish, rock bass or whitefish.
8. That Section 12 of the fish laws of 1894 be adopted, with the addition of the penalty for this offense being placed at not less than \$50 or over \$300.
9. That the present laws for the protection of game and birds remain as they are, with the exception that the season for the killing of deer be closed on Nov. 15 instead of Dec. 1.

Utah Fish and Game Interests.

[From the report of Commissioner B. Milton Musser.]

IN January, 1894, and in answer to my appeal, 200,000 lake trout eggs reached me by express from Northville, Mich., but they arrived in a heated condition and were practically valueless. I regret this very greatly, because the lake trout is a fine fish, and no doubt would thrive in our waters. Being also anxious to introduce the brook trout, or speckled trout of the East, I asked for and received 2,000 fry (about 3 in. long) from Leadville, Colo. Five hundred of these I planted in Salt Lake City Creek, and 1,500 in Utah Lake.

During the month of March last, a car with a princely consignment of 2,000,000 whitefish eggs reached Salt Lake. These were hatched on the car opposite Pleasant Grove and put in the lake at that point, in most excellent condition. I have no doubt but what they are doing well. In a letter received from Mr. Newel, Fish and Game Commissioner of Utah county, this passage occurs: "In regard to the whitefish, I firmly believe that Mr. Andrew Madsen (an experienced fisherman) saw some eight or ten of them last, as he is well acquainted with all the fish we have; he says he never saw anything like them before. They were under his boat and are some 3 in. long." This to me is most glorious news. The whitefish is one of the best fresh-water fishes. They develop rapidly and multiply to the tune of 20,000 to 70,000 to one spawner.

In August last I delicately felt my way for another consignment of whitefish for Bear Lake, assuring the Commissioner that not only Utah, but Idaho and Wyoming, would be the beneficiaries, as the north half of the lake is in Idaho and a long stretch of Bear River runs through Wyoming.

These are promised on condition that I again procure transportation. I am also perfecting arrangements to secure a few thousand landlocked salmon fry for Bear, Weber and Sevier rivers, and Utah Lake.

As an experiment I have planted in a lakelet south of this city a few black bass, crappie, rock bass, whitefish and brook trout, all of which, I learn, are doing well.

In July I planted about 100 gold and silver fish in Utah Lake; many of these were spawners.

In November following I received from Neosho, Mo., 190 rock bass; 100 of these I sent to Commissioner Crookston, Logan, to be planted in Logan River; seventy I put into Utah Lake, and the remainder in the lakelet above noted. The same car brought brook trout for Messrs. Welby, Wilson, James *et al.*, which I secured for them.

Nov. 25, 1894, Mr. J. Frank Ellis wrote me: "In compliance with your request of the 20th inst., your application has been changed from golden ides to (European) trench. These will probably be sent to you next season."

A great number of applicants for black bass spawners for private ponds and lakelets have been honored. I have seen a number of bass that weighed 5 lbs. apiece when dressed. A great many people say that they like the bass even better than mountain trout, and the local fish vendors assert that bass is the best seller on the market. I regret to learn that a large if not the largest percentage of the catches have been expressed to points in Colorado, where the shipper no doubt received a higher price for them than he could realize in Utah. This, to my way of thinking, is all wrong, and should be promptly stopped, for I have not intentionally labored for these many years to secure the best fishes for Utah waters and Utah's people to have them caught and carted out of the territory for the benefit of those who snap their fingers at our discomfiture. Let Utah's citizens first be fed, and when the supply exceeds the demands of their tables it will then be soon enough to enter the byways of our neighbors for appetites to appease. We should stop the exportation of our fish. What a crime to permit our fish and game to be exported, and oblige local consumers to eat the often tainted imported articles and pay express charges and commissions to middlemen. In my opinion the bass should be protected one year more from all takers. This was intended when I first planted them, and I had a four-years' catch-them-not clause put into the law, but the last Assembly, on the solicitation of ill-advised and selfish persons, canceled two years of the inhibition.

Among the most formidable enemies of the fish are several kinds of worthless birds, such as the pelican, blue crane, and several kinds of fish hawks, loons, "squaks," fish ducks, etc., which I am credibly informed "actually catch more fish than the fishermen." I am also told that pelicans by the thousands from Pelican Island, Salt Lake, swarm the lakes of Millard county, and that they seine the fish almost as artfully as the experienced fishermen. In imitation of fishermen, they will surround an area of water and gradually close up the semi-circle, driving their prospective prey into shallow water and on to the beach; then, after appeasing their own appetites, they load their pouches and wing their way homeward laden with food for the young. Skunks, weasels and crows, too, are very troublesome, in that they eat the eggs of the wild ducks and geese. The crows carry large numbers of eggs in their talons to the nests of their young. A very small bounty, it is believed, would result in decimating the fish and egg-eating birds and animals so very destructive to fish and game; and why, let me ask, should we spend money in prosecuting human poachers and violators of the fish and game laws, and permit worthless birds and animals, which are infinitely more destructive, to go scot free? This, I take it, is not a matter confined to one or two localities, but applies to almost every county in the State.

Many of the counties are without fish and game commissioners, and in consequence the lawless have it pretty much their own way. However, a goodly number of arrests have been made and fines imposed by commissioners and others acting under instructions from local officers.

Utah, Carbon and Grand counties are especially exposed to violations of the fish and game laws. Neither has a fish and game commissioner to enforce the statute. I venture the assertion that there are more infractions of particularly the game law in the three counties named than in all the other counties of Utah combined. Within the last two or

three months there have been three shipments of venison (the last shipment amounting to 11 tons) and several consignments of deer hides aggregating, I am told, several tons, all from Vernal, the hides being consigned to Chicago. I believe the last shipment of 11 tons of venison was in violation of law, and the lawless could have been arrested and the venison confiscated had the county officers promptly done their whole duty in the premises. Being handicapped for funds, I could not personally undertake the arrest and punishment of the offenders, and with all my urgent appeals by wire and mail to effect these ends, those whose plain duty it was to execute the laws seemed stolidly indifferent, and permitted the offenders with their unlawful booty to escape over the Utah line. The officers knew that the business was unlawful (as the railway officials would not handle the meat), yet they witnessed its reloading and the freighters wending their way through Carbon and Grand counties without protest. When the venison reached Grand Junction, Colo., Sheriff Innis promptly arrested the men in charge and seized the venison and held the whole outfit subject to the order of the local court. The trial was held, the chief law breaker was jailed for sixty days and fined \$300, the venison was confiscated and sent to Denver and disposed of according to law. Had our officers promptly acted, no doubt several offenders could have been convicted and the venison saved to Utah, where, without question to my mind, it rightfully belonged, which conclusion is made more apparent by the fact that the single conviction secured at Grand Junction was effected on the sole testimony of witnesses from Utah, who, at my urgent invitation, went from Price to Colorado to testify in the case. Uintah, Carbon and Grand counties should each have a wide-awake and thorough fish and game commissioner. The general outlet for these counties is the Rio Grande Western Railway, which runs through Carbon and Grand counties, while Price is the nearest shipping point for the people of Uintah county.

The Kennel.

FIXTURES

BENCH SHOWS.

- Feb. 19 to 22.—Westminster Kennel Club's twentieth annual dog show, Madison Square Garden, New York. James Mortimer, Supt.
 March 3 to 6.—City of the Straits Kennel Club. R. Humfrey Roberts, Sec'y, 6 Merrill Block, Detroit. Entries close Feb. 20.
 March 10 to 13.—Chicago.—Mascoutah Kennel Club's bench show. John L. Lincoln, Sec'y.
 March 17 to 20.—St. Louis Kennel Club's show, St. Louis. W. Hutchinson, Sec'y.
 April 20 to 23.—New England Kennel Club's twelfth annual show. D. E. Loveland, Sec'y.
 May 6 to 9.—Pacific Kennel Club's fifth annual show. H. W. Orear, Sec'y.

FIELD TRIALS.

- Feb. 10.—West Point, Miss.—The Field Trial Champion Association's first trial. W. B. Stafford, Sec'y.
 Sept. 2.—Morris, Man.—Manitoba Field Trials Club. John Wootton, Sec'y.
 Oct. 28.—Greene county, Pa.—The Monongahela Valley Game and Fish Protective Association's second annual trials. S. B. Cummings, Sec'y, Pittsburg.

THE BULL TERRIER CLUB'S RESOLUTIONS.

In the last issue of FOREST AND STREAM Messrs. Foote and Schellhass made a reply to the extraordinary resolutions of the Executive Committee of the Bull Terrier Club of America. It may be questioned as to whether they acted wisely in dignifying with a reply such a display of peevish ill nature and bad taste. The more correct treatment might have been to ignore it entirely as an act of super-officiousness, ill-temper and bad judgment, which meant no more than resentment, and had no force outside of the minds of its authors.

But, accepting the resolutions as an expression of temper and opinion of the Bull Terrier Club, what a harmful intolerance of legitimate criticism is displayed by it; what an intention is shown to intimidate all opposition; what a determination to have its own wishes prevail, regardless of the wishes or interests of all others!

The Bull Terrier Club has not been long in existence, nor has it been long in the American Kennel Club, and for these reasons alone it might not have been amiss for it to have assumed only the same rights and privileges as all other clubs, instead of adopting a policy of intimidation, a policy which is sure in the end to recoil disastrously on it; for on the one hand any number of "be it resolved" have no vitality when they proceed from arrogance and assumption, but on the other hand they do lower the standing of the body which passes them.

Every delegate had a perfect right fully and freely to discuss the A. K. C. affairs, and the right was equally good whether a delegate was for or against cropping.

The liberty of speech has been held dear by all Americans, even some years before the Bull Terrier Club in its feeble way tried to muzzle it.

Any direct censure of Dr. Foote and Mr. Schellhass for their action as delegates of the A. K. C. is quite as direct against all other delegates who voted in favor of the amendment against cropping. To single out those two men for expressing the sentiments of the anti-croppers cannot separate them invidiously from others who did the same thing. It is really a censure of the A. K. C.

When men have the manhood to maintain what they believe to be right, when they are striving to promote the general good, when they are in authority to express their minds and to act officially as they are instructed to do or as they deem best, no upstart opposition should have a grain of weight against them. The A. K. C. affords legitimate channels for legislation, and in those channels is the proper place for official action.

The A. K. C. has not only power to abolish cropping if its members deem it for the general good to do so, but it has the power also to discipline—even to the point of suspension or expulsion—any club or clubs which are inimical to it or which do not know what constitutes decent behavior. Once sanction the doctrine that one club is at liberty to censure the delegates of other clubs because those delegates do not agree with it, and harmony and progress is at an end in the A. K. C. jurisdiction. If one club censures the delegates of another, that club in turn can censure the censor; so that what should be a dignified federation of clubs might in time degenerate into a modified Donnybrook Fair procedure. If the kennel world is to be one of public interest and progress, the right-thinking delegates should see that the new order of intimidation, impotent though it be, is brought to a quick end. There is a vast difference between legitimate criticism and gratuitous abuse.

OUR FIRST DOG.

Editor Forest and Stream:

We were two little boys, living on a new farm in the woods. We wanted a dog. Of course we did. There was never a live boy that did not want a dog, but mother did not want a dog, and the more she did not want him the more we did want him.

After five years of asking and being refused by mother, there came a litter of puppies to one of our intimate friends and neighbors, and we were offered one of them. Then we laid siege to mother and plead the cause to such effect that she consented, and no doubt we love her better for it to this day.

The puppy's mother was a smooth-haired Black and Tan terrier and his father a long-legged "yaller dog." The pup was colored after his mother, but shaped like the father, and as we bore him home in triumph one bright Sunday morning we agreed that he was the handsomest pup and was bound to make the smartest dog in the world.

The pup was consigned to a box in the kitchen and we went to church, but our thoughts that day ran more on the pup than on the church services.

When we returned from church one of the neighbors was waiting for us, a man whom we had always feared and hated on account of his evil countenance and bullying ways. He said he had the promise of that pup, had come for him and was going to have him. There ensued a war of words, which ended by the fellow going away full of threats against us and swearing he would kill the pup rather than let us keep him. Next morning the pup was christened Watch and given the liberty of the premises. Ten minutes afterward the sounds of a great commotion were heard in the barn lot. The mothers of a half dozen broods of young chickens had combined to defend their chicks from the pup, whom they took for some strange varmint. When we got there we ran six old hens in a heap, squalling, pecking, spurring and flopping, while from the midst of the mass came puppy yells of agony and terror. Scores of little chickens were "cheeping" and running everywhere, and several lay where they had been trampled to death in the battle.

After the affair was over mother said she would not be troubled that way, and Thomas should come and get the pup. Then, for the first time in our lives, we rose in open rebellion and said that Thomas should not have the pup. We even went so far as to declare that we would kill Thomas before we would give up the pup. Then we plead for the pup and laid the whole blame on the old hens until our tears were too much for mother, and we carried our point.

A few days later an uproar broke forth in the hog lot, where we found the pup was being chased by some furious old sows, and in immediate danger of being torn to pieces, for he was too badly rattled to get out of the inclosure. Armed with clubs, we sprang to the rescue, thinking nothing of danger to ourselves. While I clubbed the vicious brutes, brother grabbed the pup and threw him over the fence; but in spite of my clubbing, one vicious old sow sprang at my brother as he took hold of the fence to climb over and caught him by the seat of his trousers. He held to the fence, the sow held to the trousers, and I plied the club over her head with all my strength.

Presently suspenders and buttons yielded to the strain and brother got over the fence, leaving the trousers with the hog, which soon tore them to shreds. Here was trouble indeed, for the loss of those trousers would be charged to the pup; but when father and mother heard the story, they were too glad over our fortunate escape to regret the loss of the trousers.

Next washday the indigo bag disappeared, and we found the pup trying to make a meal of it. Mother said indigo was poison and hoped it would kill the nasty pup. His mouth was thoroughly dyed with the stuff. Full of anxiety and almost hoping against hope, we washed out his mouth as best we could with soap and water, the pup resisting to his utmost, and his sharp teeth drew the blood from hands and fingers in a number of places. Many a laugh have we had over it since, but there were no smiles in the party at the time. After the washing we concluded a dose of tincture of camphor ought to be given, so I held him on his back between my knees, and held his mouth open with both hands, while brother poured the camphor from the bottle. I don't know just what happened next. I know the bottle was broken, and the pup went through a lot of contortions which we thought were his death struggles, and nothing but the thought of the broken camphor bottle and the punishment that was sure to follow kept us from yelling for help. The pup ran under the house and refused to be called out. We could not bear the idea of him dying under there all alone, so I crawled under after him. There was barely room for me between the ground and the floor, and the pup met my approach with snaps and growls. I did not hesitate, but grabbed him by an ear and backed out.

Father now appeared on the scene and sent us to the woodhouse, which was our steady job when there was nothing else to do. The pup ran away toward the barn and we saw no more of him that day; but the thought of his dangerous condition and the fear of being brought to judgment over the broken camphor bottle made it a day of misery for us.

That night we thought best to explain about the camphor, take the consequences and have it off our minds, which we did, and were let off without punishment.

Next morning the pup showed up, seeming entirely well; so once more life looked bright to us. A few weeks later the pup took a sudden and great aversion to me; would not come near me, and was very suspicious. I could not account for it, until brother said it was the camphor I had put on my sore toe a few minutes before; and we afterward always found the pup suspicious when we had any odor of camphor about us.

Things from now on ran fairly smooth with us until the latter part of the summer; but one afternoon brother came to me looking so troubled that I asked him if he was sick.

"No," said he, "but Watch is."
 "He will get over it in a little while," said I.
 "No, he won't," said brother. "He is awful sick. He's going to die. He's thrown his insides up."
 At that I laughed, but he broke into tears, and said, "Come out here and see if you don't believe it."
 I went out and found a handful of intestines on the ground and the pup making violent efforts to eject the

rest of himself. It looked like a hopeless case, and we stood helplessly by waiting for the end, which we thought must come very soon. After several minutes of violent effort he threw up the head and two feet of a chicken. Then we remembered that we had killed a chicken for supper about an hour before. Neither of us said a word. We just went back to the woodhouse and sawed wood.

In spite of his mishaps and many puppyish pranks that often got him into disgrace, he grew apace and learned a lot of good dog sense. He was never gifted to the extent of some of the dogs we read about, but he knew enough to spot any stray hog that got with ours, and to note any change of the farm animals from one field to another. If he was with us when such changes were made he considered it all right, but otherwise he was after the stock as soon as he saw them in a different field. He was alert and full of watchfulness for our interests, and saved many a young chicken from the "varmints" that used to prey on them.

One day he "treed" a mink in a big pile of rubbish close by the barn. The whole family, hired man and dog surrounded the pile and proceeded to tear it down. In spite of our watching, the mink slipped out and was 60 yds. on his way to the woods before he was seen by any of us, and but for the dog we would have torn the pile down and been wondering to this day what ever became of that mink. Just as the mink was getting out of sight over a little knoll, the dog saw him and giving an excited yelp straightened himself in hot pursuit. Dog and mink disappeared over the knoll, followed by the writer, armed with grandfather's old three dollar shotgun. The chase was alongside a rail fence. Seeing his legs were too short to save him, the mink climbed the fence and when the boy saw him was running along the top rails, coming toward the boy, who laid the gun along the top rail and waited motionless until the mink was within 2 ft. of the gun muzzle and coming right toward it. The dog was keeping him so busy he did not notice boy or gun. Then the boy pulled the trigger and the mink was knocked 15 ft.—that is, part of him was; the rest was spattered all round. The charge struck him fairly in the breast and laid him wide open from the collar to the tail.

Then the boy let out a lusty whoop of triumph and threw his ragged old straw hat into the air and the pup pounced on the biggest piece of mink and shook it into several more pieces.

For nearly ten years this dog was our constant companion on the farm, but at last disease overtook him, and as the whole family stood around him one bright Sunday afternoon, while his eyes grew dim and the loving and faithful old heart ceased beating, none of us were ashamed of the tears that dampened all our cheeks. We buried him in a neat box at the side of the garden. Peace to his bones.

O. H. HAMPTON.

Beagle Field Trials.

NANUET, N. Y., Jan. 30.—*Editor Forest and Stream:* We have now had beagle field trials for five or six successive years; and practical results toward the advance and betterment of the breed as are liable to accrue from such work should have manifested themselves by this time in a tangible form. Has it?

A mild "yes" and an emphatic "no" would each be suitable answers. Having used and put to a practical test such ideas as have been advanced heretofore, I think the time has come when new theories should be introduced and reduced to practical working methods, to acquire the purpose of a specialty club, i. e., advancement of the breed.

As bench shows are now conducted, a useless dog for all practical purposes may become a prominent champion. The same principle applies to field trials, inasmuch as the most wretched specimen in form may acquire high honors there, and how does either one advance the breed in the broad sense of the term?

With a view to overcoming what is now a radical weakness (from this standpoint) I propose introducing at next quarterly meeting of the National Beagle Club a scoring system for reducing each dog's field and bench qualities to an average, thereby establishing and recording each dog's actual merit in both forms, winners, losers and all.

Under such a system each entry at trials will be first scored for its actual bench show merit by a practical judge of such form. Then the dog to pass into the hands of judges for field quality form and each dog scored at the termination of each heat. Those scoring above a certain average (for field work) to pass into the second series, the same to apply for third series with a higher average. The winners of each class to be those scoring the highest combined average of both field and bench qualities, and awards to be rendered by the field trial committee.

Under this system each owner to receive a certificate of each dog's work and form, and unless radical defects may be discovered in my calculations, the most practical results can thus be obtained in advancing a breed by a specialty club.

This, of course, is a somewhat brief synopsis of a radical change and is a subject matter for reflection and discussion, and eventually to be reduced to a satisfactory working system.

I bring this matter out at this time for two reasons: First, to draw from the many members and breeders and others a liberal exchange of views through the ever available and obliging press, and secondly to give other beagle clubs than the National sufficient time to consider, act or adopt the scoring system if deemed advisable.

H. S. KREUDER,
 Proprietor Rockland Beagle Kennels.

United States Field Trials.

WEST POINT, Miss., Feb. 4.—*Special to Forest and Stream:* The grounds are in fair condition after the recent heavy rains. Birds are plentiful.

There were ten starters in the Pointer Derby: Sister Sue, Wrestler, Nabob, Rip Saw, Tory Jessamine, India, Ridgeview Cash, Virginia, Cracker Jack, and Hessie D. The judges were A. Merriman and Theo. Sturgis. Following were the winners: First, India; second, Nabob; third, Rip Saw; fourth, Tory Jessamine; fifth, Sister Sue.

There are 12 starters in the Setter Derby: Sam T. Forzando, Harwick, Feu Follet, Tory Fashion, Bob Taylor, Arapahoe, Domino, Gleam's Ruth, Conor, Accelerando, Marie's Sport.

B. WATERS.

The Altcar Produce Stakes.

FOR dog and bitch puppies at \$20 each, half forfeit; or if declared out by Sept. 1, \$5 forfeit; or if declared out by June 1, only \$2 forfeit. Entries, which must be accompanied by \$2, close March 15. Second forfeit of \$3 must be paid on or before June 1. Third forfeit of \$5 must be paid on or before Sept. 1; balance \$10 must be paid on or before 6 P. M. the night of the draw, viz. Oct. 20.

Moneys: To winner, \$100 added by the Altcar Coursing Club of America and 35 per cent. of all moneys; runner up, \$50 added by the Altcar Coursing Club of America and 25 per cent. of all moneys; third and fourth, 10 per cent. each of all the moneys; four winners of two courses, 5 per cent. each of all moneys. (Should more than thirty-two dogs start, division of moneys will be made satisfactory.)

Conditions: Breeding and date of birth of puppies and breeder's name must be furnished the secretary at time of entry. All payments of forfeits must be made promptly to the secretary-treasurer.

Ten per cent. deducted for expenses.

T. W. BARTELS, Sec'y-Treas.

City of the Straits Kennel Club.

DETROIT, Mich., Feb. 1.—Inclosed please find advance proof of our Premium List, which will be issued on the 3d inst. More interest is being shown this year, locally, than ever before in the Dog Show and we are getting a number of inquiries from outside, and I am very sure that we will have one of the finest exhibitions of beagles ever had in America. Will you please notice that our entries close on Feb. 20.

R. HUMPHREYS-ROBERTS.

The premiums are \$15 for first and \$10 for second in mastiffs and St. Bernards; and \$10 and \$5 for all other classes, with \$3 for third in pointers and setters.

POINTS AND FLUSHES.

We have received from the Olombia Publishing Co. a copy of a work entitled "Heads, or In the Wilderness," which professes to treat of an outing in the Adirondacks, but which in reality is devoted to the introduction and advocacy of a religious doctrine. The outing features serve as a vehicle for presenting and advertising the doctrine in a pleasing form. It would seem the better way, if the doctrine has merit, to strip it of pretense and present it by itself. Told as it is here the new doctrine is not clearly to be comprehended.

The following is taken from a copy of the New York *Clipper*, published many years ago: "The Mayor of Janesville, Wis., is becoming perfectly desperate. He issues a formal proclamation in the words following, threatening death to some of his fellow-citizens: 'Take Notice! All persons residing in the city of Janesville, owning or having in his or her possession any dog or bitch, and suffering the same to run at large without being securely muzzled, so as to prevent their biting, will be killed, if found running at large after April 15.'"

The correspondents who have no names to sign, or having names do not care to sign them, would do well to ponder over the reasons why anonymous queries are not answered in our columns.

The sheep industry of South Carolina is receiving special consideration by the State government. Recently a bill was passed by the House in substance providing that a dog found "committing any depredation," such as stealing eggs, killing poultry or sheep, "or destroying any other property," "or showing symptoms of hydrophobia," upon any premises other than those of the owner of the dog, could be killed lawfully, and the proof that he was so depredating shall amount to a full and complete defense. In respect to the matter of hydrophobia or rabies no proof is required, the owner of the premises being the sole judge of whether the dog is afflicted with rabies or not. The bill, shorn of its circumlocution, provides that an owner can kill any dog which comes on his premises if he chooses to do so.

Mr. A. J. Gleason, manager of the Kinloch Kennels, Kinloch, Mo., will take some of his dogs South soon to give them a term of schooling on quail.

An excellent opportunity for securing a really first-class field dog for Southern shooting is offered in our advertising columns this week by Mr. C. Du Bois Wagstaff, Babylon, L. I. Mr. Wagstaff advertises two dogs, pointer and setter. Among other new advertisements the Seaforth Kennels advertise the St. Bernards champion Melrose King and Sir Hugh at stud, also puppies for sale. Henry Hood, East Orange, N. J., offers a prize-winning bull terrier brood bitch, and the Standard Kennel, Georgetown, N. Y., beagle bitches. "Pointer Dogs," Cincinnati, advertises a brace of field dogs.

We have received for the Manice Dachshunde challenge Cup, to be competed for at the New York show, the entries of Mr. Manice's Princetta, Junetta and Minnie, and Mr. Matthews's Polly Finders. The entries properly closed with the A. K. C. entries. It is possible that other entries may be accepted later, if so we shall announce them next week.

Yachting.

[Other yachting news on first page.]

ACCORDING to the London *Daily Chronicle* of Feb. 4, Lord Dunraven has gone to Sandringham to confer with the Prince of Wales, commander of the Royal Yacht Squadron, as to his future action.

UNDOUBTEDLY the one weak point of the committee's report is that in which it expresses a confidence that will be shared by very few—that Lord Dunraven is eagerly awaiting an opportunity to do what little is still left to him in the way of an honorable amend by a full and frank apology. We have very little hope that the anticipations of the committee will be realized, or that Lord Dunraven will even now admit that he is and has been in the wrong. Some criticism has been directed against the committee because it has dealt so leniently with his Lordship, and because it has not proposed some punishment adequate to the offense of which it has actually found him guilty.

Whether the committee is wrong or right in this we do not propose to argue; it is quite enough that it has to all appearances conducted a fair and impartial investigation, in which the whole truth has been laid bare; the question of its future dealings with Lord Dunraven is one that may well be left to the New York Y. C. as a body. That in the continued absence of a retraction and apology some fitting punishment will be inflicted can hardly be doubted from the present temper of the members.

An interesting question that suggests itself in this connection is the possible action of the Royal Yacht Squadron. Thus far the Squadron has devoted its efforts solely to keeping clear of the whole matter; but it is quite obvious that it must sooner or later take some positive action either indorsing or repudiating its chosen representative. The position is a very plain one; the Royal Yacht Squadron has guaranteed to the New York Y. C. that Lord Dunraven was a gentleman and a yachtsman fully worthy to represent it. This representative is now in the position of having publicly preferred charges of foul dealing against a member of the New York Y. C., its representative in the international races. These charges having now been proved groundless, the Royal Yacht Squadron can in no way ignore the public acts of its representative, but must express itself in approval or disapproval; in fact, in our view of interclub ethics, the club indorsing a challenger should be prepared to accept full responsibility for all of his actions throughout the entire contest. It is only by the enforcement of this reasonable rule that clubs holding valuable challenge trophies can be protected from challenges by improper or irresponsible individuals. If a club is prepared to indorse as its representative a man of unknown or doubtful reputation, it must be held strictly to account for his conduct.

The methods pursued by Lord Dunraven are only too characteristic of his whole career as a yachtsman—erratic, vacillating and altogether devoid of any rational principle. The charges made by him have one plain meaning, and one only: that Mr. C. Oliver Iselin has been guilty of fraud and cheating. In making his charges, no matter how they were worded, he must have known, as all the world did, exactly what they meant; and yet he has shirked and squirmed and quibbled over simple English words until, in his examination by the opposing counsel, he was compelled to admit that *cheat* spelled cheat and was synonymous with fraud. What little respect he might have claimed by boldly formulating his charges and standing by them has been forfeited by consistent cowardice throughout; by his denial that in making such charges he was imputing fraud to Mr. Iselin personally; by his announcement on his arrival in New York that he did not come as a complainant, but only to aid the club; and by his sudden and unexpected disappearance when the only honorable course open to him was obviously to remain until the conclusion of the inquiry and then to make the most complete apology possible. From first to last, his conduct in the matter has been craven and childish, and utterly lacking in that boldness which of itself commands a certain amount of respect, even from an adversary.

At last the long-expected report of the special committee, accompanied by the evidence, has been made public; and every one interested may form his own conclusions from the evidence. The report itself is in every way an able one, and save in the foolish and abortive attempt to secure absolute secrecy for an indefinite time, the whole work of the committee reflects the highest credit upon the five gentlemen to whom this unpleasant task was allotted by the New York Y. C. The report is clear, logical and conclusive, and no comment of ours could add to it in any way. The committee has seen fit to go no further than to pass upon the evidence, and has left the question of the punishment of the offender entirely to the club, contenting itself with fully exonerating Mr. Iselin and opening to his defamer a way for an apology. Incidentally it will be noticed that the report itself refutes the various "exclusive" rumors of the daily papers as to the proposed action of the committee which have appeared from day to day since the closing of the examination. The committee, in concluding, take pains to score severely, but deservedly, the New York *Herald* for the surreptitious publication of a part of the testimony.

There are many yachtsmen, British as well as American, who have feared above all things a "Scotch verdict"; that after such a lapse of time the truth as to Lord Dunraven's charges could not be ascertained, and that the dispute would live and rankle for years. To all such the evidence will be an agreeable disappointment, as from its nature and extent it is as convincing as could possibly be desired. On the side of the protestant the evidence is weak and faulty in the extreme, amounting to nothing more than that Lord Dunraven and several of his party thought that Defender was too deeply immersed. There is absolutely nothing in their presentment of the case to justify the serious charges of foul play and fraud.

The evidence for the defense, on the other hand, is not only most voluminous, including the direct testimony and cross-examination of witnesses by the score and the sworn depositions of others; but it deals with actual facts and figures, with surveys of the yacht made at different times and by independent parties; every detail of her ballasting is brought to light, and it is shown beyond doubt that such a fraud as is charged was clearly impossible. The evidence of Lord Dunraven alone would go far to convince most men that he had no case, but the evidence on behalf of Defender must convince all who take the trouble to read it.

APART from the many vital points, there are some side issues which are of little importance, and which it is needless to waste time and space in discussing; the principal one being the apparent attempt to suppress the whole matter and Lord Dunraven's letter to Mr. Kersey, the latter's interview with ex-com. James D. Smith, and the cable message to the secretary of the Royal Yacht Squadron. There is more or less mystery about all this correspondence, which to all appearances is not worth the trouble of attempting to clear up.

In our opinion the most important of the side issues is that raised by Lord Dunraven in his charge that his request that the Cup committee should place men on each yacht until they could be measured was disregarded. As originally made, this charge reflected severely on Mr. Fish, the member of the committee who sailed on Valkyrie. Mr. Fish very wisely said nothing until the proper time came, and then he gave before the committee a clear, succinct and business-like statement of Lord Dunraven's first complaint, producing a written memorandum made by him at the time and submitted to Lord Dunraven for his approval. It is only necessary to compare the bold, positive and straightforward story of Mr. Fish with the lame and uncertain statements of Lord Dunraven on the stand, failing to remember about the memorandum until all the details were recalled to him, to agree with the conclusion of the special committee that no demand was made by Lord Dunraven that men be placed aboard each yacht.

The Dunraven Inquiry.

The special meeting of the New York Y. C. called to receive the report of the special committee appointed to investigate the charges made by Lord Dunraven against Mr. C. Oliver Iselin was held on Jan. 31, with Com. Brown in the chair, and a very large attendance of members. The meeting was called to order at 9 o'clock, the members of the special committee being all present with the exception of Mr. E. J. Phelps, who was out of town. In his absence Mr. J. Pierpont Morgan read the report for the committee: The body of the report is as follows:

Upon cross-examination Lord Dunraven admitted in substance that he judged by the eye solely, and that the Defender might not have been sunk more than 2in.; that he could not be tied down to a definite statement in this respect; that the discharge hole mentioned was the only mark by which he was enabled to verify the accuracy of his observation; that in observing the vessel on the morning of the 7th, through the glass, he saw only her starboard side, the pipe hole being on the port side; that there was then a ripple on the water of 3 or 4in.; that at the distance of 200yds. he could not accurately estimate a difference in immersion; that the only other opportunity he had of observation that morning was when he rowed out to the Defender to put his representative on board, and passed round the port side; that he thought the bobstay bolt was about 12 or 14in. above the water on the 6th, and some 8 or 10in. on the 7th, judging from observation alone; that he thought the l.w.l. was lengthened by the increased immersion about 1ft., though he did not judge from that, but only from the apparent depth of the vessel in the water as compared with his recollection of her in the basin the day before.

The testimony of Mr. Glennie, who appeared before the committee in person, and of Mr. Ratsey, whose *ex-parte* statutory declaration was read, was also produced on the part of Lord Dunraven. These witnesses spent the night of Sept. 6 on board the City of Bridgeport with Lord Dunraven, and at about 6 o'clock in the morning of the 7th they rowed around the Defender in a small boat. Their evidence was to the same general effect as that of Lord Dunraven, on the point of the apparent increase in the immersion of the Defender.

Mr. Glennie placed the apparent immersion at about 1½in. more on the 7th than on the 6th.

Testimony to the same effect was also introduced in the shape of an *ex-parte* statutory declaration of Mr. Watson, the designer of the Valkyrie, who testified that on the morning of the first official measurement, at Erie Basin, he plainly saw above water the pipe hole mentioned by Lord Dunraven, but did not see the Defender on the morning of the race, and that on the day of the remeasurement he again saw the pipe hole above water.

Similar *ex-parte* declarations from Capt. Cranfield and Sycamore, of the Valkyrie, were also read. They confirmed from general observation the statement of Lord Dunraven as to the apparent increased immersion of the Defender, but neither of these witnesses saw the Defender except from the deck of the Valkyrie, at a distance of about 300yds.
